(d) Others maintain that the scientific study of the NT is bringing us more than ever face to face with the Founder of Christianity, and removing all suspicion of any conflict between the religion of Jesus and the gospel of Christ. In the historical Jesus they see 'a person, who is not only equal to the place which Christian faith assigns Him, but who assumes that place naturally and spontaneously as His own' (J. Dewney, Jesus and the Gospel, 1908, p. 374). In many passages which have been misunderstood, the love of Man reveals His consciousness of Himself, of His vocation, and of His claims upon men in startling and unpalatable language. So far from being unknown, His known figure in his life is fragmentary as the records of His life confidedly are, His portrait is singularly complete, and it is instinct with self-evidencing Divinity. It is from concrete historical facts that the great ideas of the gospel derive their value and interest. The original impulse of Christianity, the motive-power which from the first ensured its success, did not emanate from the Church's will to be believ- but was communicated by the Church through his transcendent personality. The cause cannot have been less wonderful than the effect; the victorious ideal must have been supremely real. It is contended that the resurrection of Jesus, illuminating all His teaching and justifying all His claims, made the Christian faith inevitable. In that stupendous event God gave His Church a supernatural, super-human Lord and Saviour, and in every age the inner testimony of the Holy Spirit, transmuting the faith once delivered to the saints into a vital, personal, irreparable experience, establishes the conviction that the gospel of Christ, like the Christ of the gospel, is a Divine Fact, the same yesterday, to-day, and for ever.

While the gospel may be studied as a whole or in parts, some conception of its entirety and immensity is needful for a due appreciation of any individual aspect of its teaching. The Gospel of the Earthly Life, or the Common Humanity; the Gospel of the Work, or the Resurrection; and the Gospel of the Person, or the Incarnation. 'The life of Jesus would not be a gospel to us if it were not a revelation and a promise of human goodness' (ibid., p. 78). The view of the gospel which should give place to the other, says Wellhausen (ibid., p. 119). And there is not one of the Gospels which would have been written, there would be no Gospel at all, that has not been not only the death but the resurrection' (p. 119). The Easter faith of the Apostolic Church was inseparable from the Easter fact. 'No critic can assail the essential fact that something happened, shortly after our Lord's death, which sufficed to convince His disciples that He was alive, and still alive' (J. F. Booth, The Apoplectic of the NT, p. 47). All the theological demonstration of the divine significance of Jesus is grounded in the historical fact that He rose again from the dead' (p. 47).

2. Gospel and Law. —It has always been felt that the charm and power of the Gospel lies in its antithesis to Law. From the beginning of His ministry, Jesus evoked the wonder of His hearers by His 'words of grace,' (Lk 4:32). What makes His message to men 'glad tidings' is the forgiving love which differentiates it from the awful majesty of justice. Not that He ever spoke a word in disparagement of Law, whatever He might say of human traditions. His followers never imagined that He intended to relax their moral obligations; rather they felt that He inextricably raised their duties to God and man. But Law could never be His last word. While the scribes counted the multitude who knew not the Law according, Jesus gave them again news of forgiveness to make them blessed. In the Apostolic Church it was not the thunders of the Law, but the music of the Gospel which caught the ear of mankind. Paul knew from the hour of his conversion that he must testify the gospel of the grace of God' (Ac 20:24). 'Grace' and 'Gospel' were his inevitable words, the one occurring some 80 and the other some 60 times in his Epistles. To the 'hard pagan Roman world,' with its deep weariness and asated lust,' he published an exhortation of grace abounding over all (Ro 5:20). In Paul himself lived success and power under Law and Gospel, and believing both to be Divine, he made it his theological task to harmonize them in thought, and to substitute for the laws of man the laws of grace, as the laws of the spirit of life in Christ Jesus' (Ro 8). On the whole, it is probable that he has not misunderstood the yoke which Jesus called easy and the burden He deemed light, but that the teaching of grace are an interpretation only, and not a transforma-
GOSPELS.—The justification for including an article on the Gospels in an Encyclopedia of Religion and Ethics lies in the fact that the Four Canonical Gospels have had and still have in the development and maintenance of Christianity. In the past few years much has been done to reconcile the so-called Evangelistic stock: 'When the dead, his disciples remembered that he spake this; and they believed the Scripture, and the word which Jesus had said' (Jn. 20:8). The reminiscences of the disciples sayings and acts which in the light of later events were seen to be of significance were repeated to the younger generation that gradually took up the companions of the Ministry. The object of the Evangelists was not biography, but edification. The Gospel record passed through a full generation of pious reflection and meditative treatment before it began to be written down and so fixed for all time. This explains to some extent the selection of the Evangelists and the method of treatment. Above all, it helps us to realise what we get when we come to the final results of the purely literary criticism of the Gospels. Our Second Gospel may be the work of John Mark, the companion of St. Peter, and it may embody some things which he had heard from St. Peter's mouth. But even so the narrative has lost much of the personal note; it is far too even to be more personal reminiscence. The tale of St. Peter's denial, for example, may be substantially true, but the narrative in Mark does not read like St. Peter's own first confession of the story. It is not a tale told for the first time. We are not here suggesting that any written document in Greek or Aramaic underlies St. Mark: the narrative may have been written down for the first time by the author, but some of the tales which he is putting on paper had been repeated many times before he word of mouth. It is not to be denied that all this lets the opportunity for errors of detail. 'These things his disciples did not know (οι σφυγνοὶ) at the first,' says the Fourth Evangelist; 'but when Jesus was glorified, then remembered they that these things were written of him, and that they had done these things unto him' (Jn 12:27). The Gospels took their shape in an atmosphere of unblushing and unquestioning faith; they were compiled by men writing in the light of subsequent events. Under such circumstances it is hard for memories to be dryly accurate, it is easy to feel that the more obviously edifying form of a story or a saying must be the truer version. The eye-witnesses of the Word, of whom St. Luke speaks (I), had...
GOSPELS

known Jesus the Nazarene for a friend, but they had learned to believe that He was the Only Son of God, and that He was now waiting until the fullness of the time, at the right hand of His Father. He had lived among them as man with man, as a master with his disciples, and at the time they did not fully realize the experience they were going through. Now they felt that they would be fools and blind if they failed to see the deep significance of occurrences to which they had paid so little attention, and words of which they had only half understood the meaning. The real wonder is that any intelligible picture of the events has been preserved to us.

The origins and literary sources of the several Gospels.—The four Gospels are not, even in a literary sense, four independent works. The Fourth Gospel is most conveniently treated apart. But the three Gospels, according to Matthew, Mark, and Luke, obviously have something in common; they must either copy one another or make use of a common source. The first question is whether this source (or sources) was written or oral. The opinion of the present writer, most unhappily, is that it was a written source. In the Gospels, the common matter is not mere floating tradition, the property of all the Christian community. Had it been this, it is natural to think that the writers identically related by the Matthew, Mark, and Luke would have been to a larger extent the critical points of the Ministry, and not a capricious selection of anecdotes. The story of the Resurrection, the words doom the Cross, the narrative of the Last Supper—in these we might have expected all our authorities to agree, even in detail; but they do not agree. On the other hand, the detail could be found in the stories of the Nativity. But the details of the Galilean Ministry are hardly mentioned. It is the peculiar merit of St. Mark's Gospel, from the point of view of the historical investigator, that it deals mainly with a cycle of events quite foreign to the life and interests of the growing Christian communities.

Nearly all the 'peculiarities' of Mark, i.e., those incidents and expressions which were not adopted into the compilations of Matthew and Luke, are of such a nature as to be unaccountably offensive to the second and third generation of Christians. And, in dealing with the irreducible remainder, it must never be forgotten that all our MSS of Mark go back to a single copy which breaks off at 16. The so-called 'last twelve verses' (16:9-20) are a later Appendix, designed to supply the lacking conclusion. In other words, our Mark tradition goes back to a single book or roll imperfect at the end, and not improbably torn or defaced elsewhere. In a manuscript taken up after the feeding of the 5000, and the 'loaves and fishes' (4:31-33) taken up after feeding the 4000, but which left the details of the Crucifixion and the Resurrection vague.

A written source, on the other hand, is perfectly definite, but not necessarily authoritative. Where the Evangelists simply copy their common source then we (or, as it were, their predecessors) work as never to alter it, they would not have dared to supersede these documents or traditions by their own new Gospels. They would have been mere scribes, or, at the most, harmonists like Tatian.

But we can go one step further. In the parts common to Mark, Matthew, and Luke, there is a good deal in which all three verbally agree; there is also much common to Mark and Matthew, and much common to Mark and Luke, but hardly anything common to Matthew and Luke which Mark does not share. There is very little of Mark which is not more or less adequately represented either in Matthew or in Luke. Moreover, the common order is Mark's order; Matthew and Luke never agree against Mark in the transportation of a narrative. In other words, Mark contains the whole of a document which Matthew and Luke have independently used, and very little else.

This conclusion is extremely important; it is the one solid contribution made by the scholarly of the 19th cent. towards the solution of the Synoptic problem. The present writer believes that we may go on, and claim the Gospel according to Mark as itself the common source. According to this view, no written document underlies our Second Gospel, and the document which the First and Third Evangelists have independently used to form the framework of their narrative is St. Mark's Gospel itself.

Those who do not accept this conclusion fall back upon the hypothesis of an Ur-Marcus, an earlier recension or edition of our Second Gospel. This hypothesis is based on the biographical details of the public life of Jesus Christ of which there is little trace elsewhere. In the extant remains of very early Christian literature we find the doctrines of the Crucifixion and the Resurrection; we find the arguments from prophecy; we find the ethical teaching of the Sermon on the Mount; and as early as the middle of the 2nd cent. we find the accounts of the stories of the Nativity. But the details of the Galilean Ministry are hardly mentioned. It is the peculiar merit of St. Mark's Gospel, from the point of view of the historical investigator, that it deals mainly with a cycle of events quite foreign to the life and interests of the growing Christian communities.

1 First clearly formulated by the great classical scholar Lachmann in 1802, as Wellhausen has reminded us in his Betrachtungen to the Georg Nannen's Die drei Gospels (1880). Lachmann's words are: 'Markus Evangelium oder der Tod von Jesus Christus, mit einer Reihe von Handschriften untersucht. In modern, it is a matter of suitable composition and of genuine archaism that is not the autograph, still less was it identical with the copies used by the First and Third Evangelists; and in a few cases the points where they agree against our Mark may represent the true texts of the Second Gospel. Yet it cannot be too strongly stated that such points are few and unimportant, and that the text, as we have it, appears to be unaltered in essentials. It should be remarked, however, that we do not know how much is lost at the end; it may have been much more than a

2 See Hawkins, Revue Synoptique, p. 117 ff.

3 E.g., 'Messias' and 'Dalmanutha' (MT 28:29, 30) are merely primitive mistranslations. [MT 28:27-29]
single leaf. Possibly a large part of Ac 1:18 (including the story of Rhoda, the servant at St. Mark's mother's house) may have been based upon the part now missing.

At the same time the historical value of the Gospel according to St. Mark will be given below. All that has at present been alleged is that it is a main line of history and that the whole Gospel cannot be used as it stands, and that it does not appear itself to be based on earlier written documents. It is important to notice that the establishment of the relative priority of Mark is based on the comparison of extant documents one with another, and is quite unaffected by the view we may take of the history of the Gospels or their ethical value.

- The Third Gospel is not a book complete in itself. It is only the first portion of a larger historical work, which was apparently designed to be executed in three volumes. The third volume is not extant; in fact, there is very little reason to suppose that it was ever actually written; but the absence of an adequate peroration at the end of the Acts of the Apostles (which forms the second volume of the series) shows us that a further installment must have been contemplated. The date of the First and Second Gospels can apparently be determined within narrow limits. On the one hand, the Gospel and the Acts contain details drawn directly from the events of the last days of the apostles, a work published in A.D. 53 or 54; on the other hand, the literary evidence indicates that the author of the Gospel and of the Acts is none other than that companion of St. Paul who travelled all the way from Antioch in Pisidia and Philippi to Thessalonica, and are largely quoted in the latter portion of the work.

The Gospel and the Acts may therefore be assigned to the decade 60–100; we shall not be far wrong if we put the date c. A.D. 80.

(e) The evidence which convicts the Third Evangelist of having used the Apocrypha (not always with complete accuracy) is very well brought together by Schmiedel in Stenoga. Bibl. art. "Johannas" and "Lyaminas"; see also Burkitt, Geop. Hist. pp. 101–10. In the opinion of Theodore of Tarsus in his treatise on the composition of the Gospels (A.D. 270) it is not only an anachronism, but further it is illegal if the author of Acts drew his information about Thessalonians from Josephus (Jad. xvi. v. 1); (f) the introduction of the name of a Jewish medical authority, in the context, is in my opinion an anachronism, in the context, the 16th year of Titus (A.D. 289) appears to be due to a similarly inaccurate use of Acts xx. vii. 43.

(g) The evidence which tends to show that the whole of Luke and Acts is the work of one author, including the travelling diaries, is very strong. The growth of the gospel (A.D. 159–161) is in no way affected by its final form (A.D. 161–162). Its value, as we shall presently see, in the light of the evidence of other writers, is also remarkably great. The author of Luke and Acts would be aware of the original evidence of some of these writers, as is shown by the mention of Polybius, Livy, and Theophrastus. The author of Acts would be aware of the evidence of other writers, as is shown by the mention of Polybius, Livy, and Theophrastus.

The evidence which tends to show that the author of Luke and Acts is none other than that companion of St. Paul who travelled all the way from Antioch in Pisidia and Philippi to Thessalonica, and who was probably the one who wrote the letter to the Philippians and the Polycrates of Thessalonica. Yes, but he was actually there or in the immediate neighbourhood, and keeping a diary. When, on the other hand, he comes to describe the political situation in Palestine about the time he himself was born, we find him falling into error—error none the less real for being excusable. We do not know under what conditions he had access to the works of Josephus; he may have had the opportunity for a rapid perusal of them, but with but little time to make notes or extracts for his future use. For the ordinary events of secular history a Christian writer may make use of the Gospel of Mark, and be dependent on the ordinary channels of information. For the events connected with the rise of his own sect he might have special sources to draw upon. He may have corresponded during the course of his life with those who had themselves seen the Lord. A comparison with Matthew makes it highly probable that St. Luke also used the document called Q (see below) in addition to the Gospel of Mark. At the same time, the fact that he uses Mark as his main source for the Gospel history seems to the present writer to make it unlikely that he had much personal intercourse with those who had been the companions of the Ministry, men who could themselves have supplied the skeleton of a narrative on their own reminiscences.

3. The composition of the Gospel according to Matthew.—The Gospel according to Matthew, unlike the Third and second Gospels, is probably an extant work, but not with much precision, nor are we in a position to name the compiler. Something, however, can be gathered about the sources which he used, and the class and circle of ideas in which he moved. Like St. Luke, he was a competent writer; he treats the wording of his predecessors with entire freedom, rearranging and combining them and the whole, without giving due credit to the original sources. This makes the reconstruction of his lost hypothetical sources an extremely hazardous, if not impossible, task. There cannot be a greater error in Synoptic criticism than to suppose that the Evangelists as if they had worked like the harmonist Tatian, who made up a single narrative by piecing together the words of the several Gospels almost without alteration.

The happy circumstance that Mark, Matthew, and Luke have all survived, enables us to discover that Matthew and Luke are based on Mark; but, if Mark had not been actually extant, we would have much doubt whether modern criticism would have been able to reconstruct it from the other Synoptics. This consideration should render us very cautious in making statements about the contents or arrangement of the other sources on which we may imagine Matthew (or Luke) to have been based. It is, in fact, practically certain that, besides Mark, another document was used in common by Matthew and Luke, of which the main contents were a collection of sayings of the Lord. This document is usually supposed to have been what Papus calls the Logia composed by St. Matthew; since Wellhausen (1890) it has been generally called Q, i.e. Quelle. But, before we attempt to reconstruct the lost materials out of which the Gospels according to Matthew and Luke may have been built, we ought to examine the demonstrable procedure of the First and Third Evangelists with regard to (a) the OT, and (b) St. Mark's Gospel.

(a) In the case of St. Luke the first part of the answer is simple. St. Luke uses the Septuagint, the ordinary Bible which the Church inherited from the Greek-speaking Jews. This is notably the case in Lk 1 and 2, where the I.XX., and not some Hebrew or Aramaic document, is used. This document is slightly coloured the style and language of the whole narrative.

(b) About the same time Salmon and J. A. Robinson were using the symbol Q. This notion blazed us to only (Salmon, Oeuvres Éclairées, 1897, p. 84); possibly Salmon wished to include it in a letter to G. W. R. For the rest, see the note on the Synoptic. 3

3 Compare the use of Matt. aevum in Lk 1280 and Gn 1834. But this is only one instance out of many.
The quotations peculiar to the First Gospel have wholly different characteristics. They are mostly based on the Hebrew, some of them showing curious dissimilarities, for the most part preserved in the LXX. The Hebrew basis is in part approximately preserved as 'Out of Egypt have I called my son' [Mt 2v2], a quotation of Hos 11v1 that differs both from the LXX, which has 'Out of Egypt I have called back his children,' and the Targum, which has 'Out of Egypt I have called them son.' The quotations in Mt 27v9,10, alleged to be made from 'Jeremiah the prophet,' but really based on Zec 12v10, even its presence to a confusion between the Hebrew words for 'potter' and for 'treasurer.' This confusion exists in the MT, but the LXX has another reading, 'I am a target for them,' which is more usual in the Temple official. Thus the Evangelist must have derived his curious interpretation from the Hebrew, and not from the Greek Bible or from current Jewish exegesis. At the same time, seeing that in this passage (27v9-10) he assigns words taken from Zechariah to Jeremiah, and that in 13v10 he appears to assign Ps 80 to Isaiah, it is improbable that he was guided by the late conceptions of the Prophets. Equally clear is it that the words, 'In his hands shall the nations break' (Mt 1k10), are taken from the LXX of Isaiah 49, and that the words, 'savior of Israel' (Mt 21v9) is taken from the LXX of Ps 80. These last passages show that the Evangelist was after all not unfamililiar with the Greek Bible. The explanation (the surprising part) is the influence of the Hebrew text in a Greek Gospel. This influence does not make the stories peculiar to this Gospel historical or even probable, but it does tend to show that they originated in Palestine.

(b) The way in which our First Evangelist has used the Gospel of Mark has been so carefully investigated that little more is needed here than a statement of results.

Mt. shortens the narrative of Mk., retaining the main features, but cutting down details and (like St. Luke) suppressing the mention of the various emotions of our Lord, e.g. anger, annoyance, amusement.

Besides the long discourses, Mt. introduces into the Markan narrative certain stories not known to us from other sources, such as Peter walking on the water, Judas and the piece of silver, the earthquake at the Crucifixion, the earth opened at the tomb. There are grave difficulties in making out a claim for considering any of these stories as serious history. At the same time, it should be remarked that their tone and language suggest a Palestinian origin, e.g. the story of the earthquake speaks of Jerusalem as 'the Holy City' (Mt 27v52-54).

In view of the Palestinian origin of the elements peculiar to Mt. it is worth while once more to emphasize the remarkable fact that the Passion narrative in the First Gospel, both in the selection of incidents and in their relative order, follows unquestioningly the corresponding narrative in Mark.

In striking contrast to all this is the procedure of St. Luke. He freely omits large portions of Mk., and in the Passion deserts Mk. for another story of the last scenes. But the sections of Mk. which are found in Lk. are given in the same relative order; and, although (as in Mt.) some is antedated, yet this is not in the same cases as the interpolations found in the Markan stories. There are fresh incidents in Lk., but they are kept separate.

Thus in general plan and arrangement the Gospel according to Matthew is a fresh edition of Mark, revised, rearranged, and enriched with new material; the Gospels of Jesus but also he is a work of historical work, made by combining parts of Mark with parts derived from other documents.

4. Attempted reconstructions of Q.—From the way in which Mt. and Lk. have treated Mk. we may reasonably infer the way in which they have severally treated the lost source Q. We shall expect to find in the 'g' present in Q preserved by Mt. alone, but the general plan and sequence of the work we must gather from the position that the various sections occupy in Luke. If we find certain of these sections occupying the same relative order in Mt., there is a strong presumption that this order is really the order of Q.

(a) In Lk 6v5-8, a non-Markan block, we find (1) Sayings of Jesus found in Mk. or Lk., and ending with the 'Upon the Rock,' the Centurion's Lad, the Widow of Nain, (4) Sayings about John the Baptist, (5) Sinful women, and (6) women who ministered to Jesus. Of these (1), (2), and (4) occur in Mt., and in the same relative order (Mt 9v1-10 - 11-17). We may, therefore, assume that (1), (2), and (4) are Q, and that Q contained not only the Sayings of Jesus but also the narratives of Q, and Q is in this order. Starting from this (it is the one thing about which there is reasonable certainty), we may infer from (2) that Q contained not only the Sayings of Jesus but also the narratives of Q. This makes it likely that the Temptation narrative (Lk 4v3-12 = Mt 4v1-12) also comes from Q, and that it was followed by a mention of 'Nazareth' (Lk 4v21 = Mt 4v14).

(b) But when we have said this we have said almost all that has high probability about Q as a literary whole. Simply to refer to Q every Saying of Jesus found in Mk. or Lk., and in no case zigzag through or make a comment. This might well be a form of the Gospel of Mark, and Q is a form of the Gospel of Mark.

(c) But when we have said this we have said almost all that has high probability about Q as a literary whole. Simply to refer to Q every Saying of Jesus found in Mk. or Lk., and in no case zigzag through or make a comment. This might well be a form of the Gospel of Mark, and Q is a form of the Gospel of Mark.

1 As Lk. usually (and, for example, Lk. 7 when he has dropped in, he probably did the same when he was not sure whether or not there is a parallel in Q.)
Mt. makes to Mk., very few of them interrupt the actual course of the narrative. The 'Sermon on the Mount' occupies three whole chapters, but in time and place it merely corresponds to Mk. 5, Mt. 8-9, and Lk. 10-17. Mk. and Lk. have a like framework; they have been torn from their original context and fitted into Matthew's revised edition of Mark, to serve as a Christian commentary on Jesus' teachings; Mt. received them as history on the authority of the Church. Neither does he accept the narratives as they stand, for they are full of marvels which he finds incredible. The Evangelist, instead of attempting a general consensus of tradition, only goes back, for the general framework of the narrative, to the single witness of Mark. What is there, we must ask, in the Gospel of Mark that enables us to regard the story told as in any way historical?

P. W. Schmidt, in his art. 'Gospels' in EHR (23 131, 138), answered this question by pointing out certain Sayings of Jesus which are at least superficially inconsistent with the beliefs about Him held by the Christians of whom the Gospel were written and by whom they were canonicalized. Schmidt's method here is perfectly sound; the only question is whether some of his 'foundations-pillars' (as he calls them) are laid before in a document which he otherwise valued. It seems better not to assign such pieces to Q and to suppose that the Evangelists derived them from some other source, with or without the context and nature of which we are not in a position further to determine.

Gospels have been variously considered. Some writers speak of 'the Synoptic Gospels' and of 'the Double Synoptics,' meaning by the former phrase the incidents or sayings found in all three Synoptic Gospels, and by the latter those found in Matthew and Luke. The phrases are somewhat misleading, as they inevitably suggest that the portions comprised under the Synoptics are better attested than which are found in one document only. But to those who hold that Mt. and Lk. actually used our Mk. and another document besides, it is evident that the consensus of all these Synoptics reveals itself into the single witness of Mark; and the consensus of Mt. and Lk. is in many cases only to be regarded as the single witness of the lost document discussed in the preceding paragraphs.

Thus the story of the 'Dead Sea' twice rests really on no more evidence than the story of the blind man at Bethsaida, i.e., upon the witness of the Gospel. As similar is the parable of the sower, which is literally no more attested than the parable of the Vineyard, which is given in all three Gospels. The only additional evidence is to be found in several passages, mostly short striking sayings, which appear to have been placed in the lost document, as well as in St. Mark, e.g., Mk. 3:4, 21:9, 32:4, 11:11, 12:10, 15:22. To these we should probably add the parable of the Sower. But even here the double attestation is merely accidental, and some of the sayings in the above list would have been spoken by Jesus on several occasions.

The historical worth of St. Mark's Gospel—St. Mark's Gospel being our main source of information for the general course of the Ministry, it is important to determine its value as a historical document. It is obvious that what we have to rely on is internal evidence. If the picture presented in this Gospel be in essentials true, it will give an essentially reasonable account of the Ministry. But in this connection 'reasonable' does not necessarily mean what is likely to happen at the present day. We must first become acquainted with the historical and the contemporary of Jesus and His Apostles, before we are in a position to judge whether their reported sayings and doings fit into the history of the time.

If so, that is, if we are finally under the need of giving some demonstration of the general historical character of the picture of Jesus sketched in the Synoptic Gospels has begun to be recognized. Even now many things of which it seems to reside how narrow the channel by which the Gospel history has filtered down to us, or what the general rules are by which we may to a certain extent discriminate between what belongs to the historical figure and what must rather be referred to the legendary clothing of it. A methodical discrimination is especially needed by the modern critical student of the Gospels, and for this purpose the dependence of each Gospel text upon the oral or written traditions of the Church. Neither does he accept the narratives as they stand, for they are full of marvels which he finds incredible. The Evangelist, instead of attempting a general consensus of tradition, only goes back, for the general framework of the narrative, to the single witness of Mark. What is there, we must ask, in the Gospel of Mark that enables us to regard the story told as in any way historical?
time.  The Jews would never have gone to war, if they had not believed that the Kingdom of God would some day be set up; and if the Gospel be historical, it should be dominated by the belief in the approaching Kingdom of God.

2 3. In the Church, the portrait of Jesus in Mark is His secret Messiah-Messiah. He comes before the world of Galileans and Jews in general as a herald of the approaching Kingdom of God, but He Himself is conscious that He will be the Christ or Messiah, i.e., God's anointed Victor, when the Kingdom comes. This is avowed publicly for the first time when He is being tried before the high priest; the avowal at once seals His fate, and the title in a secularized form is placed up above Him croce. Previously to this, no one beyond the inner circle of disciples had taken Jesus to be, or as claiming to be, the Messiah. The Evangelist believed that the secret was known to the demons, but it was not known to men. If the Gospel of Mark is to be regarded as historical, then the idea of the secret Messiah-ship ought to be historical also.

To discuss this property would need a separate study, and only the heads of the arguments can be indicated here. (1) The idea of Messiah is essentially different from that of prophet or seer. Properly speaking, it cannot be 'claimed'; the Messiah be he himself or Messiah will be it be some way - evident King of Israel and Judge of the nations. Until Bar Cochba in A.D. 135, who lived in the full tide of Christianity, no Jew is known to have regarded himself as Messiah; then the crowds found a leader; but that Jesus, the Prophet of Galilee, had thought Himself to be Messiah, they lost interest and asked for Barabbas. (2) On the other hand, it is difficult to explain how the followers of Jesus, even after the crucifixion, could accept as Messiah Him who did not claim it for Himself. (3) The exactness of the correspondence with Mk.'s presentation of Jesus as one who was to the Herald of the Kingdom of God, but to the inner circle of disciples the Christ—a secret they were expressly ordered not to divulge (99). This notion, though it is the only way in which the historian can possibly conceive the genesis of the doctrine of Jesus' Messiah-ship, was foreign to the thought of Gentile Christians, for whom the Lord Jesus was Christ from the moment they first heard of Him. That it forms the leading feature of Mark's portrait is, therefore, a strong claim upon us to regard the portrait as historical, i.e., as derived from real reminiscence, and not, as from mythical fancy.

But this is all that can be claimed for the Gospel of Mark—that it gives us an impression of Jesus derived from one who had been with Him. As regards external events, the kind of information given varies in different parts. The scene in Gethsemane reads like the account of an epic event, possibly in this case the Evangelist himself (14, 28); hardly any one would say the same of the story of the Gerasae Demoniac (5, 26). Further, the first is more than a string of anecdotes, loosely connected together, not always perhaps in relative chronological order. From 5—10 the narrative is continuous, the only real breaks being 7; and from 10 to 11 the narrative is divided into days, and we see very little reason to doubt the substantial accuracy of the reckoning, except for the otherwise unexceptionable liturgical— the Last Supper is regarded as the Paschal Meal, against internal probability and all other strains of the portrait of traditions of Jesus in Mark is His secret Messiah-Messiah.

A feature of the Ministry which must rest on real reminiscence is the long period spent out of Galilee (6th Term, 8th a)—a period spent in controversy with Jews in evangelizing Gentiles, but in waiting in safe retirement till it was time to go up to Jerusalem for the Passover.

A picture of Jesus as first having been the Herald of the Kingdom, and then choosing the time to go to Jerusalem in the full expectation of being killed there, and so being somehow an acceptable victim, the final sacrifice, crowned with His Elocut and bring in His Kingdom), is more 'orthodox' than a view which regards Jesus as primarily an ethical teacher; but it is also more in such Mt. and Mk. have no idea from elsewhere of Jewish contemporary ideas, and it explains better the enthusiasm and devotion with which the inner circle of Jesus' disciples continued to regard Him. This is the view set forth in the Gospel of Mark; we may reasonably regard it as the historical view, and the Gospel as a document of historical value.

The Gospels of Matthew and Luke, taken by themselves, may also fairly be regarded as documents of historical value. If we derived our knowledge of the Gospel history directly from Mark, we should still possess in essentials a historical view of our Lord. But we find on investigation that this is the case, so far as the general outlines are concerned, only in proportion as Matthew or Luke has preserved the framework given by Mark. To this framework Mt. and Lk. have added many details, many of them no doubt genuine, drawn from Q and the other sources; but all these sources (including Q) are for us mere collections of fragments. Indeed, so far as any construction can still be traced in them, they seem inferior, and not superior, as historical documents, to Mark. Of course, if we really possessed Q, it might prove to be equal or superior to Mark; but we know Q only by the bits which blend into it, and has no specific incorporation—often, it may be (especially in Mt.), out of their context and out of the order in which they were arranged.

6. The Fourth Gospel.—It will not be necessary here to investigate in detail the external evidence for the Fourth Gospel. The belief that it was written by the Apostle St. John was fully established as early as the decade A.D. 170-180, and clear indications of its use, especially among some of the Christian 'Gnostics,' can be traced back to a period some fifty years earlier. It is true that these indications are weak just where we might have expected them to be most precise.

1 See B. W. Bacon, Beginnings of Gospel Story, p. 126.
2 See B. W. Bacon, Aesopus Minotaur I, p. 442.
3 For instance, Albert Schweitzer lays stress on Mt 1389 ('Ye shall not have gone over the cities of Israel, till the Son of man be come'). It is quite legitimate to argue that this remarkable saying must be genuine, and therefore, as it occurs in a Q-context, that it must have stood in Q. It is further arguable that it shows that Jesus at one time expected the public manifestation of the kingdom (possibly, therefore, not Himself), to take place during the first historical journeys of the apostles, i.e., during the period indicated by Mk 6:7. At the same time, when we remember that Q is for us a series of fragments, and that even in Mt 10 there is a section (v 17-19) taken from Mk 6, i.e., from sayings of the very latest period, it must remain equally, if not more, probable that Mt 1389 belongs to the latest period, and that it refers to Jesus' own expectations, which were not realized in glory after His Passion. What seems not quite legitimate is to assume that Mt 10 was spoken in historical sequence just before Mt 11 and before Mt 10 the author was no longer convinced of the historical veracity of these traditions, because they comply just this relative position in Matthew. Schweitzer (p. 980) actually quotes Mt 10 with the idea that his readers that this verse is Mt 1389, torn out of its context.
Polycearp, according to tradition, a disciple of St. John at Ephesus, does not quote at all from the Fourth Gospel, either in his Epistle or in the printed report of his conversation with Nicodemus; and the utmost that can be claimed is that certain phrases in a single passage in his Epistle are parallel to some leading phrases in Jn.1. This peculiarity in his text is easily excused at the stake; and he may not otherwise qualify. And, as regards Baptism, the Evangelist tells us that the disciples of Jesus baptised their converts (4:1), and gives us the conversation with Nicodemus (3:1-8). As regards these, that except a man be born again he cannot see the Kingdom of God (3:3). If we are to regard the Fourth Gospel as a narrative of events, we can only say that the Evangelist has given a false impression of what actually occurred.

It would be easy to go on to criticize the history and geography of the Fourth Gospel. As Matthew Arnold said, "‘Bethany beyond Jordan.’ (19) is like ‘Willebadessen beyond Trent.’ But the most serious point against the work from the point of view of objective history is the allusion "Designated to Jesus in His discussions with the ‘Jews.’ Taking the narratives as they stand, the sympathy of the non-Christian reader of the Synoptic Gospels naturally grows with Jesus against the Pharisees or the Sadducees. We feel that the adversaries of Jesus are narrow, unkind, unintelligent. To such an extent is this the case that protests have been raised by more than one distinguished and learned Jew, to the effect that the Synoptic Evangelists misrepresent the teachings of the Rabbinic religion. But in the Fourth Gospel it is quite different. Here the present writer cannot but think that the sympathy of the non-Christian reader must go with the Jewish side. To heal on the Sabbath was considered to be a breaking of the Sabbath. According to Mark (5:3), Jesus defends His action by saying that the Sabbath was made for man, not man for the Sabbath; but, according to modern, the exasperates the Jews by a dissertation about the Father and the Son, asserting to His adversaries that He who did not honour the Son (i.e. Himself) did not honour the Father (9:6). One occasion, when accused of ‘bearing witness of himself,’ He is made to say that He has two witnesses in His favour, viz. Himself and the Father (9:27). Can we wonder that the Jew exclaims ‘What? Is thine own Father glorying in thee?’ It is quite inconceivable that the historical Jesus of the Synoptic Gospels could have argued and quibbled with opponents, as He is represented to have done in the Fourth Gospel. The only possible explanation is that the work is not history, but something else cast in a historical form. From this point of view the question of the authorship of the Fourth Gospel is a matter of secondary importance. It is of the highest importance to ascertain that the Gospels are not mere narratives of events, but historical documents, but the value of the work depends upon the nature of the traditions or sources to which the writer had access. But for a work of philosophy or historical history the qualifications required in the writer are mental, rather than local or temporal. We do not need to ask how near he stands to the events, but whether he sees them in their true proportions. For we have not done with the Fourth Gospel when we have made up our minds that neither the narrative nor the discourses are to be regarded as objective history, as matters of past fact. The question remains why the Church adopted the Fourth Gospel into the NT Canon, when so many rivals were excluded. In the answer to this question lies, we believe, the reason which gives a permanent value to the work. It was not made after the Gospels, but to the discipula Jesu that the spirit that gives life, and that the words of Jesus which are spirit and life (v. 6). The Sacramental expressions are

GEPES

cording to the Hebrews,' nor did philosophical thought avail the document commonly called the 'Oxyrhynchus Logia.' What was it that the 'Gospel according to St. John' had that these had not? We believe the answer to be that the doctrine of the Person of Christ set forth in this Gospel expressed the mind of the Church in the best possible terms, while the Gospels which failed to become canonical failed mainly because the doctrine of the Person of Christ which they contained failed to satisfy the requirements of the Church. The Church of the Fourth Gospel is not the Christ of history, but the Christ of Christian experience. Life and truth are one. To know the Gospel of John is to know 'Christ after the flesh' (2 Cor 5:14), because he saw both his Lord and his Lord's adversaries under eternal imperatives.

It is because the Evangelist views the Gospel history from this subjective standpoint that he allows himself such freedom in remodelling the external events. The old discipline needs no documents... The whole is present in his memory, shaped by years of reflection, illuminated by the experience of a lifetime. He knows the Christ far better than he knew Him in Genesee or Jerusalem half a century before. The adversaries of Jesus have become his own doubts and unfaithful oppositions; the questioners of Jesus, such as the Woman of Samaria. It is his own questions, his own ignorance, which receive their solution at the hands of the Lord who has come with His Father to make an abode with him. He knows the Lord to be true, and the knowledge of Him to be Life eternal; and therefore all opposition, however specious, is unjustifiable and blind. The Son of God is a Lamp to him who beholds, a Mirror to him who perceives, a Door to him who knocks, a Way to the wayfarer. The true meaning of life could never have been revealed to man if Jesus had not first been revealed to some. It is all a different order of thought from the Synoptic Gospels or objective history.

The substance of the last few sentences has been quoted out of the work which above all other surviving fragments of early Christian literature has the closest similarity to the peculiar elements of the Fourth Gospel. This work is the apocryphal Acts of John, or rather, we should say, the doctrinal section of that unequal piece of writing. But near as the 'Gospel of John' and the 'Acts of John' are in many ways, their differences are also fundamental, and it is in great part because of these differences that the 'Acts of John' was condemned and forgotten, while the 'Gospel of John' survived to be the spiritual food of many generations.

For, although the Fourth Evangelist is no chronicler of events, although he did not say the Logos, the Word of God, whom to know is eternal life, yet he firmly holds all the while that this Christ was manifested in time as a human being, a real man of flesh and blood, that we feel, and, above all, really suffered and really died, before He rose again from the dead. As we have seen, the Evangelist is careless of events; but to him the Death of Jesus on the Cross was not a mere event, but a something essential, a thing which really came to pass in the eternal order of things. That is why he sets forth the doctrine that the Crucifixion was a delusion—the Jews gather round the Cross and mock, but Christ is not really there; similarly also, the 'Gospel of Peter' tells us that Christ felt no pain, and apparently His Spirit is somehow caught up at the last. By a true instinct this specious teaching was rejected by the Church of the 2nd century. The Passion of Jesus Christ must be real, not a stage-play; and, if it were to be real, Jesus Christ must have been a real man. In no early year than 19th century was the real humanity of Jesus so emphasized as in the Fourth Gospel. That Jesus was a real man is an obvious inference from the Synoptic narrative, but in the Fourth Gospel it is set in the forefront. The Fourth Gospel that tells us that Jesus was tired, and asked for water to drink (Jn 4:7); and that He wept at the tomb of Lazarus (11:33). If we ask what proof there is that Jesus really suffered, the answer is very ready, that the Fourth Gospel declares Him to have said, 'I thirst' (19:28). Furthermore, we are told, with the most solemn protestations of accuracy to be found in the whole work, that the corpse of Jesus presented a truly human appearance (19:33-34). It was no phantom.

This is the main feature of the Jesus of the Fourth Gospel from the Jesus of Gnostic speculation. It was the Fourth Gospel which pointed out the six weaknesses along which alone the Church could walk. On the one hand, the Church was not prepared to surrender historical reality to a philosophical speculation. The devotion of the first disciples had been kindled by Jesus of Nazareth. It was the belief that their dear Friend had become alive again, and that He had really appeared to them alive after death, which gave them the power to combine on earth into a society, and afforded them enduring hope for the future. It was essential that the Living Christ whom they continued to serve and to wait for should have been a real man who had lived and died. Otherwise He was no firstfruits of the human race, but another species altogether. On the other hand, Christianity is essentially monotheistic, and it was so all the more consciously and passionately while the whole world outside was given over to the heathen cults and the deified Emperor. Whatever else Jesus Christ might be, the Church refused to make Him a demi-god. Here the various forms of speculation which we generally denominate 'Gnostic' were ready with terms and conceptions that should bridge the gulf. More than one school of thought, both Jewish and Greek, were teaching that the Word which proclaimed the true Man was in the beginning with God and was itself Divine, that it would come or had come to those who were worthy of it. According to Jn 1:18, the living and incorruptible God in the three elements, viz. spirit, water, blood. From the 'water' we are begotten, by the 'blood' we are sanctified, and the 'spirit' breath is the internal element that opens to us the existence of which was demonstrated to the onlookers by the seven-fold ray of the soldier.
that cannot be scientifically demonstrated, for the simple reason that the rivals of the canonical Four have not survived in full. But the abiding interest which each and all of the Four have enjoyed during eighteen centuries is enough to show that the Church chose well. And it should not be forgotten that those of the non-canonical Gospels which we know enough to publish are of a sensible inferiority. Marcion's Gospel is in every inferior to Luke, and the Gospel of Peter is inferior to any of the Synoptic accounts of the Passion. It is, in fact, because the Canonical Gospels paint such an eternally fascinating Portrait that we welcome every scrap that may claim to give another view, however indirect, of the actual events of Christ's passion and death. In one respect, we venture to think, the modern historical investigator is more fortunate than from general considerations he might have expected. It is fortunate indeed that the Gospel according to Mark should have been included in the official Canon. Many of the special ideas and tendencies of the First and Third Evangelists are in close touch with the ideas and tendencies of 2nd cent. literature. The theology of the Fourth Gospel met the wants of the Church; it pointed out the way along which the modern Christian thought and feeling might run together. In any case, the Fourth Gospel is unique. But it is difficult to understand what attraction was offered to Christians of the 2nd cent. by the Gospel of Mark which the Gospels according to Matthew and Luke did not offer, either singly or taken together, in a more eminent degree. Probably its traditional connexion with St. Peter may have had a determining share in recommending it, and the appeal of Irenaeus to historical tradition against Gnostic theories may help us to understand how such an old-fashioned book as the Gospel of Mark, St. Peter's 'inter- preter,' should have survived. It is, we find, very little quoted before the 2nd cent. The actual process by which our Four Gospels arrived at their present rank of pre-eminence is quite obscure. From about A.D. 120, the Macedonian Gospel-Cynics enjoy practically unchallenged supremacy, as we see from Tatian, from the Muratorian Canon, and from Irenaeus. Somewhat earlier than Tatian must be placed the interpolated edition of the Four Gospels, which seems to have been set forth in Rome, and from which the greater 'Western Interpolations' in Greek and Latin Biblical MSS. are ultimately derived. This brings us back to about A.D. 100; but the literary history of our Gospels during the first half of the 2nd cent. is unknown. Justin Martyr used all four in his Dialogue in the middle of the century, and Marcion certainly used Luke about 130-140. Earlier still are the allusions which indicate a use of Matthew by Ignatius. But there is nothing to show that Marcion was acquainted with any other of the Canonical Gospels than Luke, and very little to show that Ignatius used any other Canonical Gospel than Matthew; while the verbal inaccuracy of Justin's quotations suggests that even in his day the 'Memoirs of the Apostles' had hardly yet taken their place beside the Law and the Prophets as part of the written Word of God. At the same time Trypho, Justin's Jewish opponent, is quite aware that the way to be acquainted with Christian doctrine is to read what is written in τοιούτοις στοιχείοις (Tryph. § 10). Thus 'The Gospel' has already become the name of a book. It is fairly certain that the formation of the Gospel Canon was a process rather of exclusion than of inclusion. Of the works of 'many who took in hand' to write of Jesus Christ (Lk 1), the Four Canonical Gospels were certainly the most popular. The rest either failed altogether to attract, or were discovered to teach heresy. Whether the Church made the ideally best choice, from the point of view of the modern historical investigator, is a matter
GOSPELS

by Titus in A.D. 70 is an event that might have been expected to influence the language used in documents later than that date. Mk 21:5 does apply an adverbial sin to the siege. Mk 18:14, of which Lk 21:21 is an adaptation, does not fit the historical details of the siege, nor indeed does anything in Mk. imply acquaintance with the Jewish War. We may therefore put Mk. before A.D. 70.

Mk. is difficult to date because of its dependence on Mark. Mt 27—28 merely indicates the existence of a Christian community in Jerusalem, but Mt 17:27 might be held to imply the continued collection of the Temple-tax. Yet a Palestinian Gospel earlier than 70 would hardly have been based upon the Greek Gospel of Mark; Mt. was probably compiled when the Church of Jerusalem became a Greek—speaking community, i.e. in the generation that grew up after the war. Q is earlier than Mt.; it may have been compiled about the same time as Mk.

We may distinguish four periods of 30 or 40 years each, reckoning from the Crucifixion.

I. A.D. 30-60. Oral Period. No written 'Gospel' appears during this period, nor any formal shaping of the Gospel history as St. Paul's accounts of the Lord's Supper (1Co 11:23) and of the Resurrection (15:20) do not appear to have any literary connection with what we read in our Gospels.

By the end of this period the idea of the Fourth Gospel (Rev. 19:16) is fully established.

The influence of the Gospels on the Church.—The fact that the Church came to accept the Four Gospels is a proof that each of these works satisfies in its own way the Church's requirements. Had it been otherwise, the Gospel in question would have never attained to canonical. At the same time, it would be absurd to regard the Church's requirements as being in any way occupied with details; these the Church has learned from what the Evangelists have supplied. The Church's picture of Jesus Christ is not unfairly summarized in the so-called Apostles' and Nicene Creeds; it is the written Gospels that have preserved for us the winning personality of the Son of Man.

The history of Christology was not a simple advance from an original unitarian 'pelianthropy' to the ultimate recognition of the Deity of Christ. Naturally it took many generations of Christian thought to evolve a form of words which should satisfactorily define the exceptional nature of the Founder of the new religion in terms of current philosophical conceptions. But from the first there existed the sentiment of devotion, the temper of mind which was sure that no title was too high to give, no homage too high to pay, to the Son of God, who had been sent from Heaven to overcome death and open the gates of everlasting life to those who believed on Him. For the first thirty years or so all Christians were converts; those who doubted how far the message was true did not become Christians at all. And, unless the exact literature gives a totally false impression of the general state of mind among Christians, the interest of the nascent Church was not in the least directed towards the past. In the words of the earliest written Christian document that we possess, the converts had 'turned unto God from idols to serve a living and true God, and to wait for his Son from heaven, whom he raised from the dead, even Jesus who delivered us from the wrath to come' (1Th 1:9-10). Those who had entered the Church by baptism were to set their mind on the things that are above, 'where Christ is, seated on the right hand of God' (Col 3:1). It was true that the Christians, in consequence of their belief, submitted to new rules of conduct; and that these rules consisted in a practical reminder of the words of the Lord Jesus who had taught 'sweet reasonableness' and long-suffering (1Cor 13:4) and as lovingly (1Cor 13:13), rules such as: 'Fifty, that ye may be filled; forgive, if ye be forgiven of your father in heaven.' The Gospel was not a formal code, still less a biography. No pictures of early Christianity have been conceived more fundamentally false, both to the spirit and to the letter of historical fact, than those which represent St. Matthew or St. Peter as delivering catechetical lectures on the 'Life of Christ.'

The actual course of events was very different from what the first generation of believers had anticipated. The End, so confidently awaited, was not yet. One by one the companions of the Ministry went to their graves, and, when the cataclysm of the Jewish War broke up for ever the one community in which there could have been common first-hand knowledge of how our Lord had lived and moved among men, the great majority of Christians were Greek-speaking inhabitants of the Levantine cities, a population far removed in spirit and in culture from the provincial Judaism of Galilee. What wonder that Christianity began to mix with alien elements and to appear in forms which alarmed the more conservative believers of the Ministry. To the gentle Gentile Christian in the 1st cent., Christ was the 'passion,' the messenger from God, who had come down to earth with tidings of immortality, and now was waiting till the appointed Day when He should appear in glory in the clouds of heaven. It is not surprising that to many a believer the melancholy story of Jesus the Nazarene was a stumbling-block, and that His sufferings were incredible. All the more was this the case among those who had attempted to find an appropriate place for Jesus Christ in the various philosophical theories of the Cosmos, which thoughtful men had devised and were devising. Christian sentiment and learned speculation alike welcomed what we call, indeed in the Christian Church, the Messianic hope; but (πρόηγος) is not the name of a sect. It is a theory of the Person of Christ which takes many forms, and which has entered into the theology of many schools of thought. Some, like the writer of the Acts of John, denied that our Lord had any material existence; others were content to deny that He felt the pains of death. Apollinaris of Laodicea, condemned by Eusebius, denied His birth; but all were alike in this, that they regarded Jesus as having been in no sense a real human being. It is a theory incredible, almost inconceivable, to us; but we have learned to know Jesus Christ through the written Gospels. In the earlier sections of this article we have attempted to sketch what we conceive to be the literary origins of the several Gospels. What we wish to emphasize here is the private, individual character of the earlier documents. That St. Luke's Gospel was a private venture is sufficiently indicated by the Preface. That St. Mark's Gospel was so is sufficiently indicated by the narrow escape it ran of being lost altogether. The Gospel we call St. Matthew's has a more formal, official tone; and it bears marks of a Palestinian origin, i.e. it comes from the one region where we have a right to expect independence of spirit, in structure and much of its wording and material. It is based on Mark—a clear proof that even in Palestine no regular effort had been made to hand down a summary of the outward events of the Ministry.
Thus the Gospels fell into their place as the charter of the Christian religion, a fixed standard open to the inspection of friend and foe. And the earliest criticism on the theories of Jesus our Saviour in the Gospels is noticed by Justin Martyr, “that your Christian precepts out of what is called the Gospels are good, admirable, so admirable indeed that I doubt if any one can keep them—and I speak from personal knowledge of these writings.” Moreover, we note Christians specially wonder why you expect to get any favour from God when you set your hope on a man who was crucified (Tryph. 10).

This simple and obvious spirit of criticism touches the essential point. The real humanity of Jesus was crucified in Judea, and the soaring ethical principles that He taught, as it were by the way, are those that are the chief characteristics of the Gospels, and it is the Gospels which secure these things as an inalienable possession of the Christian Church. Moreover, Trypho’s criticism is unanswerable, if the Gospels be regarded as mere law-books, as a code of morals. The Pentateuch is a law-book; it is possible to obey it to the letter, and those who obey it were not, in fact, the people of God, but the people of the law.

The idea of a heavenly kingdom as an earthly paradise is all too ready to be believed. The earthly paradise is promised for the observance of the Decalogue (Mt 5:17), and that, unless the righteousness of the Christian exceeds the legal requirements, he cannot enter the Kingdom of Heaven (Mt 5:20). Moreover, such a kingdom is not an affair of divergent sources or of rival schools of Christian ethics; it is essentially characteristic. The Gospel is not intended to introduce us to a code by which all men are to regulate their conduct; it is intended to introduce us to Jesus Christ, whose commands differ for each age and for each individual because He dealt with priests, kings, and peasants. The love of God and the love of our neighbour were the ethical principles of Jesus; but to turn His sayings into a fixed code of rules is to put the Gospel in the place of a rationale command. We do not get rid of the real difficulties of the Gospel, if we make jottings of all the miracles and leave the Sermon on the Mount.

The Gospel ethics need criticism more, not less, than the Gospel miracles; and for this reason, that it is more for the ethics than the miracles that the Gospels are permanently valuable. We need to put the Gospel morality into its due relation to time and place; if Christ said, “Give to every one that asketh thee,” and “Unto him that smiteth thee on the one cheek, offer also the other” (Mt 5:40, Lk 6:29), we need to understand the social conditions of Christ’s day, and those of our own also, before we can turn these maxims into a rational command for fellow-believers. It has ever been a mark of true Christianity to seek to apply the words of the Gospel to the changing needs of our time, not when which is none the less important upon the Church because it is always difficult.

But the Gospel morality is not the Gospel, any more than the Didache or the Church Fathers is the Gospel. Christ stands or falls, lives or dies, with the personality of Jesus Christ; and the Gospel is our introduction to Jesus Christ. From the Gospel according to Mark we may learn who Jesus is; from outside it we can say what part He played in human history. From the Gospels according to Luke and Matthew we may learn something of what Jesus Christ taught. From the Gospel according to John we...
may learn what His followers declare to be the real significance of His life. It is the great charm of Christianity that its innermost doctrine is revealed in the persons of the Founder, rather than crystallised into a set of propositions or ordinances. The propositions and the ordinances may be necessary, but, as it seems to me, as we have seen, forms the ground idea of the Fourth Gospel. But they are exhibited in action; like the Laws of Nature themselves, the Doctrines of Christianity are a true deduction from the courses of events.

See also art. BIBLE, vol. ii. p. 574.

II. GENERAL HISTORY AND INTERPRETATION OF THE SYNOPSIS OF MARK.—Albert Schweitzer, Von Erlebnis im Werke, Tübb., 1916 (Eng. ed. by W. Montgomery), The Quest of the Historical Jesus, London, 1920. In an essay of very interesting views, the most instructive contribution to the general treatment of the question during the 19th century, see also A. Loisy, Jésus et la tradition évangélique, Paris, 1910 (an admittance of a very extensive influence from the 'archaeological' point of view); J. Wellhausen, Einleitung in die drei ersten Evangelien, Berl. 1911, Das Evangelium Marci, 1909, Matthäus, 1904, Lucas, 1909 (four books forming one comprehensive Commentary on the Synoptic Gospels, with Introcul, prefixed—liberal and stimulating—introduction, and considerable assistance to the student in the Evangelists, Gött. 1910 (the book with which Schweitzer's eminence closes, but well worth study for its own sake—archaeological and historically sceptical). The outline given in K.: A. Drews, The Church Story, Eng. ed. by G. D. Burn, London, 1910 (the most noteworthy exposition of the general historical conception of the historical Jesus, compelling the future investigator to examine the reasons for treating any part of the Gospels as actual history); R. W. Bacon, The Beginnings of Gospel Story, Yale, 1906 (a Commentary on Mark, the most scientific exposition in English of the anti-christological point of view); F. C. Burkitt, Earliest Sources, etc. (archaeological), The Gospel History and its Prejudices, 1911 (this book, as first published in 1906, was an expansion of the first draft of the present article).

GOSPELS (Apocryphal).—1. Importance.

The most important problem to the student of religion is the claim to teaching of the Founder of Christianity. Since He wrote nothing, no one can discover this only by reading what others, near to the events, wrote about Him. It is natural that much of His teaching be 'take in hand to draw up accounts of their Lord'; on the face of it, it is improbable that the four Gospels 'received' by the Church contain the whole authentic tradition on the subject. Moreover, St. Luke in his preface (Luke i) expressly declares that his work is based on many earlier writings, and implies the existence of others which he has not scrupled to pass by. Such fragments as remain to us, purporting to give an account of these events, claim to be judged on their own merits, without fear or favour derived from the Missionary Church Fathers in succeeding centuries, and the whole story can be rightly understood only when a searching study of these remains has taken place. See preceding article.

2. The term 'Apocrypha,' originally a title of honour given to writings for a select circle, 'hidden from the multitude,' is used in analogy with the O.T. Apocryphal books to describe these remains. It was only by degrees that it became a term of reproach, as implying exclusion from that public reading in churches which was reserved for the official or canonical books, and other extraordinary books, of greater or less effect, as, 'Apocrypha esse ponendum' (Jerome, Prolog.

Galateus, end of 4th cent., after giving a list of the canon). Down to the end of the 2nd cent. the process was not completed, for Eusebius (A.D. 150) found the 'Pseudepigrapha' (see below) used in public reading in the church at Rhessus near Antioch (Euseb. Hist. i. xii. 3); and in 415-410, Bishop Eubulus put the four hundred copies of Tatian's Diatessaron taking the place of the Four Gospels in the churches of his diocese. But, once the exclusion was confirmed, Clement's seal of 'imaginary' 1 was overthrown, while the translation of the Italian 'Gospel of Barnabas' (1667) has illuminated a forgotten corner of Church History. It is thus as hard to lay down conclusions as to write a history of the politics of the present time, for the scene is always changing. Moreover, the evidence at present, both external and internal, is very fragmentary. Though we know by name nearly fifty of these 'Apocryphal' Gospels, not one-tenth of their contents is extant.

4. The evidence.—The external evidence consists of statements of Church Fathers, and cannot rightly be regarded as impartial. To know its worth we must consider how much knowledge we possess concerning the special characteristics of the witnesses who give it. For instance, no one can read the works of Clement of Alexandria and later Fathers without being aware of their knowledge of the martyrdom of James and John (quoted by Georgios Hamartolos [see Moffatt, Introd. to Lit. of NT, 1911, p. 603 ff.]), Jerome, inquisitive and inquiring as he was by nature, was ready to go to any length to avoid the suspicion of heresy, and to this he sacrificed his own reputation by his attack on Origen's memory. Origen's daring criticism and profound love of truth for its own sake are tempered, as a rule, with a scrupulous caution and desire to avoid offending 'weaker brethren,' or marred the splendid unity of the Church he lived to serve. Eusebius is the safest guide; but even he was writing from a later standpoint, and for a public to whom the canon of the Gospels was soon to be a sacred and established fact. If men objected to the bias of 20th cent. criticism, it is surely needful to remember that prejudice is not only of to-day, but played a large part in the estimates of the early Fathers and Church Fathers in succeeding centuries, and more than in the subject under discussion. Some of the chief witnesses cited were plainly speaking from halo-ray, and had no personal acquaintance with the facts related; e.g., there is no evidence that Irenaeus of Lyons knew anything at first hand of Syrian Christianity; and all scholars admit that the 'gospels' of the Syriac church were passed over by his credulity and bigotry. (Epiph. Hær. xlv. 1)
GOSPELS (Apocryphal) 347

actualy confusing Tatian's Syriac Diatessaron with the Hebrew Matthew; yet many would rely on his authority to discuss the nature of the latter Gospel. In the case of the Apocryphal Gospels, we are thrown back upon the internal evidence afforded by the external fragments; and our estimate of this must depend largely on inferences drawn from it. In question, though we are able to correct our results by a critical view of the external evidence.

3. Contents.—(A) Parallel Gospels.—(a) Gospel according to the Hebrews and slain 'Repasalw' (Cod. Tisch.) (Euseb. III. XXV. 3, 5, xxvii. 4, xxxiv. 6, and St. Matt. xxi. 14, and Syriac Thaophanius [IV. xiii. 234, ed. Lees, London, 1842]; Origen, in Job. ii. 6, in Matt. xv. 16, in Jer. xv. 4; Clem. Strom. ii. 98 [PG viii. 967D]; Origen, in question, though we are able to correct our results by a critical view of the external evidence.

GOSPELS (Apocryphal)

The Gospel of the XII. Apostles. Gospel criticism to-day leans steadily to a disbelief in a Hebrew Gospel underlying our St. Matthew, though admitting that when the sources employed may have been a Greek collection of discourses (from the Aramaic) with narrative links. It is probable, therefore, that the Gospel of Thomas, which calls it the 'punctum Archimedes' of the whole Synoptic problem, taking the place usurped by St. Mark, nor Reisch, who regards it as a 'tertiary' production several times removed from the original (the Logia of St. Matthew in Hebrew), is right.

Internal and external evidence alike point strongly to the view that the Gospel of the Hebrews is an independent parallel version of the events described in the Synoptics (esp. in St. Matthew), and possibly formed one of the sources in the hands of St. Luke. The style is like that of the 'apocalypses' and primitive. Sometimes the nearest borders on the grotesque and draws near to the methods of current Jewish Apocalyptic, as in the famous saying ascribed to Christ, 'My Mother the Holy Spirit took me by one of my hairs to the great Mount Tabor' (Jerome, de Vit. Illust. ii. Orig. in Joh. ii. 6; cf. Bel and the Dragon), which is probably for the later unknown story that Mt. Tabor was the scene of the Transfiguration. The words ascribed to Christ at His baptism, 'that have I not learned unless this be ignorance' (Jerome, adv. Pelag. iii. 2; cf. Jn 8v. 32), are certainly very ancient. The context of the tale of the rich young man and the reference to Peter as 'Simon the Elect' (Jn 1:42) is from the Hebrews. The 'Mark' narrative (Mark xv. 14) have all the marks of genuineness, and many of the sayings peculiar to this Gospel bear the proof of their origin on their face — e.g. 'Never let us depart hence' (Mark iv. 12). The history of the literature of which it formed a part. The most remarkable feature is the strong anti-Jewish bias (which induces the author to make Herod the 'general of the strong Johannean flavour, and the absolutely unique version of the Resurrection appearances, present a startling contrast to all other accounts.

In these respects, as in many others, it closely resembles the narrative in the Gospel used by the author of the Syriac Didascalia (A. D. 215-260), with which Harnack identifies and loves it. Though entirely parallel with the Synoptic accounts of the Passion, it contains no fewer than 28 additions to the Mark narrative (some of these are early attested in MSS of Mk.), and both in its verbal and in its historical variations it is largely (Harnack gives eight examples) influenced by the correction found in the Fourth Gospel. According to the date of the Crucifixion is Nisan 14, as in Jn 19v. 14). After Mk 16v. the author forsoaks the Synoptic account altogether, and presents a version of the Resurrection of which cannot be paralleled from any of our Gospels, though it more in common with the scene of the Fourth Gospel than with Mk or Lk. With Mk 16v. the author makes a story of an appearance to 'Peter, Andrew, and Levi, son of Alphaca,' who have gone fishing on the sea of Tiberias, but this and all other appearances of the risen Christ are supposed to take place on one day, and that a week after Easter (Nisan 21), when all the disciples have gone to their own homes, disturbing the news of an empty tomb, brought by Mary Magdalen and the other women. Save in the description of the first opening of the tomb in the 'garden of Joseph' and the preaching of Christ to the 'spirits in prison' (cf. 1 P 2; 1 Pet 3), which is implied in a question addressed to the 'Cross,' which follows the risen Lord from the tomb, there is little fantastic or legendary matter in this work. The heretical, docetic element, too, is in the background, though it appears in the remark concerning Christ's being silent, as having no pain, and in the significant change of the only sentence suggested: 'Power, why hast thou forsaken me?' (but cf. 'at the right hand of power,' Mk 16v.). It contains the germ, but not the fruit, of the later Apocalyptic, as seen in the full in the Qur'an and the 'Gospel of Barnabas.' This is just what we should expect from the Synoptic account of it.

Harnack seeks to prove not only that the Didascalia uses this Gospel as the principal au
authority and derives all its citations from its contents, but also that the story of the sinful woman in Apost. Const. i. 14 (a work based on the Didas-
caske, now included in the canon of the Fourth Gospel, but found only in late MS's, and entirely unlike the style of the Fourth Gospel, is readily from the Gospel of Peter—whence Papias, who had not seen the Gospels, but from Hermas, has been found, also borrowed it. The undoubted mixture of Johanneic and Synoptic elements, which forms so marked a feature in the Gospel of Peter, the peculiar style of this fragment, and the Syrian origin both of the Gospel of Peter and of the Didas-
caske, undoubtedly lend a very strong testimony to the disputed text, and thus confirm our theory: if we accept Harnack's dictum that D gives us by far the best text of the Johanneic passage, and that the glosses in D—e.g. to Mk 6:6 (the story of the man working on the Sabbath)—are taken direct from our Gospel of Peter, hence their anti-Jewish tone. Certainly the style of Jn 7:3-10 is far more closely akin to that of the Gospel of Peter than to any other extant writing.

Whether this be so or not, the most interesting fact about the Gospel of Peter, as about the 'Logia of Jesus' ascribed to him, is that the so-called peculiar language and attitude of the Fourth Gospel were not so peculiar as is commonly believed. The author of the Gospel of Peter, writing 30 years before our date (180 a.
d.C.), did not scruple to correct all four Gospels, and, while making no use of the Gospel according to the Hebrews, is constantly found employing terms far more akin to the Fourth Gospel than to any of the others, though he treats Mark always as his principal authority. He wrote, therefore, when the Gospel tradition was still fluid and the Canon by no means fixed, but already the special attitude on this point was evident. Our Fourth Gospel we well known and popular among his hearers. When Harnack supposes that Justin used the Gospel of Peter under the name 'Memoirs of Peter,' he is being a view which cannot, in the present state of our knowledge, be disproved.

Two other writings ascribed to Peter must be carefully distinguished from this 'Gospel.' Neither is strictly a Gospel at all, though the first did place words in the mouth of the Master Himself. This is the 'Preaching of Peter,' quoted by Clement (Strom. III. vi. 41, xii. 46, v. 45, etc.) and Eusebius (de Princ. Pref. viii., and in J. Hill. xiii. 17, as cited by the Gnostic Gnostic, and condemned by Zosimus (v. 3. 2 and x. 6) and Nicephorus (I. 5. 1. 46). Other quotations, as in Greg. Naz. ('Ov. L. 1. 10), are uncertain. This was the work of a cultivated Gentile Christian of Alexandria, who wrote before Justin or Aristides composed their Apologies (A.D. 140-150). The attitude towards miracles is Alexandrian; that towards the Jews and the Scriptures, which include no N.T., is akin to the Ep. of Barnabas; that towards faith is Johanneic, not Pauline. The book is thus a near contemporary of the Gospel of Peter, but it has no connexion with it. Here, as in the Gospel of Peter, the Apostle is made to speak in his own person. Von Dobschütz thinks it was written for mission preaching, as a supplement to Mark's Gospel, by others who did not know Mt 18:19-20 and saw the need of completing it by carrying on the Memoirs of Peter, which Mark had been privileged to transcribe.

The other is the 'Petri' or 'Duo Text' (described by Rufinus, Symbol. Apost. i. 30-38, and identified by Hilgenfeld with the ecclesiastical 'Canons of the Apostles' 3rd cent.) and by Harnack with the Didache (2nd cent.) cannot be described from the existing evidence, but it has no claim to be called a 'Gospel.'

(c) The Sayings and Words of Jesus: The New Testament of Oxyrhynchus (1896); The New Fragments of a Gospel (1898); and The Fayum Gospel Fragment (1896).—The first three were discovered and published by Grenfell and Hunt, from the papyri found in the rubbish-heaps outside the city of Oxy-
rhynchus; the last from a MS in Archdeacon Raine's collection at Vienna, first discovered and translated by Bickell (Z. T. K. 1876).

The first has eight sayings, called by the discoverers 'Logia.' They have, on the whole, a mystic, ascetic tone, especially the (1891) worth saying: 'Lift the stone, and there thou shalt find me—see the wood, and there am I.'...Logion 3 has a very Johanneic sound: 'I stand in the midst of the world, and in the flesh was seen of men....' Harnack ascribes these sayings to the Gospel of the Egyptians. Taylor, perhaps more plausibly, suggests a connexion with the Gospel of Thomas in its original Gnostic form, which is the more probable, since the new Fragment of 45 broken lines, found in 1903, has an introduction, describ-
ing its contents as 'The time which the Lord spake to....and to Thomas.'

The problem is further complicated by the fact that the first of these 'Writings' appears to come direct from the Gospel according to the Hebrews; and a fragment of a Gospel found near a contains a passage, 'When will thou manifest thyself to us?' (cf. Jn 4. 20), followed by the answer, 'When ye shall be stripped and not be ashamed'—an idea dependent on Gn 2:18-20, and akin to, if not taken from, that in the Gospel of the Egyptians (see below), with which also the dialogue form here and in no. 5 of the Logia of 1903 and in a new frag-
ment of a conversation on purity between Jesus and a Pharisee (found in 1903) cor-
responds. These and other indications, which give a Johanneic colour to several of the sayings, even in the verbal sense, seem to point strongly to the conclusion that the Logia of 1891, and probably also the Logia of 1897, in spite of the 'Hebraic rhythm and sound,' which many have noted, belong to an anti-Jewish and ultra-spiritual Gospel as the Gospels, related both to the original form of the Gospel of Thomas and to the Gospel of the Egyp-
tians, the latter of which borrowed some of its material from the earlier gospels according to the Hebrews. This was already the view of Jewish critics (e.g. Joseph Jacobs) in 1897, and the evi-
dence is greatly strengthened by the new finds.

All are agreed in placing these collections in the 2nd cent., and it is quite probable that some of the remarkable 'Words of Jesus' therein contained may be genuine sayings of the Master.

The Fayum fragment contains a much mutilated version of Mt 29:22, Mk 14:24, Lk 20:30, Jn 13:1-12. The whole is well restored by Zahn, who thinks it a scrap of a homily on Lk 22:39. New words are introduced for 'cook' and 'crow.' Others ascribe it, with less reason, to the Gospel of the Egyptians. It may be dated with confidence to A.D. 200.

(3) TRANSITION GOSPELS.—(a) The Gospel of the Egyptians (Clem. Strom. III. v, 11, xii. 3, xii. 3, xx. 37; Origin. in Luc. i. 1; Hippol. Philos. v. 7; Epph. Hor. lxv. 2; Or. Socr. 33, 63; II Clement [Soter. A.D. 140]. xii. 2, 6, perhaps also x. 2, 3, 3, v. 2, 4, v. 2, 2, v. 2, 12, vii. 5, 11, xi. 7; cf. Oxyrhynchus Log. 5 [1897]. New Gospel Fragment [1903]).—Despite confident assertions to the contrary, the state of our knowledge at present hardly justifies a decided conclusion concerning this mysterious writing. The history of its criticism is a study of the employment of the dangerous 'argu-
mment from silence.' It is regarded by Origen as
the first of the heretical Gospels, and is treated by
Clement as apart from other Apocryphal Gospels,
though it is hard that he should have overlooked
it [cf. fig. 69]. In the present work it is not
likely to be regarded as of great importance.
This does not imply serious doubt. Hippolytus
says that it was used by the Naassenees to
support the view of the Diatessaron—transmission of souls by
Epiphanius had only heard that it supported
Sabellian erroneous notions concerning the essential
unity of the Trinity. Clement found that
Cassian's Euchologia and ascetic followers main)tained it,
interpreted it to support their extreme views on the sin-
fulness of marriage. Lightfoot (Apostolic Fathers,
London, 1880, I. p. 226) and most other modern
critics have concluded that Soter of Rome (A.D. 140)
had this Gospel before him in writing our II Clement,
and quoted largely from it. We have seen that the
discovery of 1902 and 1905 points strongly to a
relationship between this Gospel and the Paralipomena
of Oxyrhynchus. Clement's quipstions imply that the
Gospel was largely composed of dialogues, in which
Soter took a large part (and Celcis before A.D. 180),
judging at Christian divisions, remarked
on the existence of a sect which gave high honour
to this otherwise secondary figure. Harnack
sees it as an effort to compete with other Gospels,
His chief argument lies in the name sarx ev
Apostoloi, which he regards as synonymous origin-
lally. 'Soter' and 'Gospel' are not rigid, only later super-
vised by the importation of the foreign Gospels of
Mark, Matthew, and Luke. The other point
he finds in its use at Rome in A.D. 140. But it is not
probable that the Alexandrian Fathers, who alone
quote it, reckoned themselves as Egyptians at all;
and this Greek Gospel was as foreign to the 'people
of the land' as any of the others. Moreover, it is
necessary to consider the Greek text as a B. It is quite possible that we may have to accept Boush's
view that Soter quotes, as a rule, only the sources
which are primarily addressed to the Church of the
Egyptians was based, which existed in the form either of
oral tradition or of a written collection like the Egyptian Logia.

(5) SUPPLEMENTARY OR HAGGADIC GOSPELS
(conceived as a whole by Eusebius, III. xxv.,
Dioscorus, Galatian; also by Pope Leo XIII. in 1846.)—
These fall into two cycles: (1) those dealing with
the Infancy; and (2) those dealing with the Trial,
Death, and Resurrection of Christ.

None of these Gospels exists in its original form,
but only in orthodox recensions of late date.
Though most are of heretical origin or contain her-
etical tendencies and sources, they are not
written to compete with the orthodox Gospels, but to satisfy
curiosity, where these are silent. They are not intended,
therefore, primarily to mislead opinion, but are used
by the Gospels, whose aim was to modify history in the
interests of a theory. These Gospels, in various
versions, are so much the best known that they
have often become regarded as the Gospels of the
Gospels, and are used as such in late recensions of
the whole class. Eusebius (III. xxv. 7) spoke of them
as 'altogether worthless and impious'; and his verdict has been re-sounded through the centuries down to our own times, and
reappears in a violent attack by Bishop Elliott
(Cambridge Essays, 1858, p. 153) and many other
orthodox divines, whose words apply well to such
as the Gospel of Thomas, and are apt to be very misleading when used of the whole series of
Apocryphal Gospels.

(1) INFANTY GOSPELS.—The numerous versions of
the Infancy Gospels fall into two groups, which spring
from two distinct sources: the first orthodox, the
second Gnostic—while the two have been combined
to produce a third.

(a) The Protogospel of James, now extant in
Greek and Syriac, has passed through many
changes. The name is of the 16th cent. (M. H.
James), but the original form of the work (chs. 1–17
= 'Book of James' (Origen, in Matt. x. 17) was
probably known to Clement of Alexandria and
almost certainly to Justin (Tischendorf, Zahn,
Harnack) etc. It was written before A.D. 140 by a
Jew not of Palestine. To this was added the
Gnostic Apocryphon Joseph (chs. 18–21), in which
Joseph is the speaker. It was probably composed
in A.D. 250 (Lipsius). A further addition was the

In A.D. 376 the whole book was probably known
to Eusebius (Herm. lxxv. 5, lxxvii. 7), and perhaps
also to Gregory of Nyssa. The so-called Latin
Gospel of pseudo-Matthew (1–17) is merely an ortho-
dox edition of the 'Book of James', which took
its place in the West, probably about A.D. 120.
The de Nativitatis de Nativitatis Jesus Christi, which
above the B version of this Latin Gospel; on this, too, the 'Golden Legend' of the
18th cent. is based, and a later recension of it, with
many additions and Gnostic touches appears
in the Arabic History of Joseph the Carpenter,
a translation of a 4th cent. Coptic original; while
another version of this legend, transformed by the
new doctrine of the efficacy of prayers to holy men
and the teaching of the Ascension and Exaltation,
appears in the Transitus Marcius, a Syriac Gnostic work of 280-380, recast by a Catholic Christian in 416, extant also in Greek, Latin, Arabic, Ethiopic, and Sahidic—"the firm foundation," as Eusebius calls it, "of all the unholy adoration of Mary."

(b) The Gospel of Thomas (Origen, in Soc. i. 1; A.D. 273). From DCC II. (1890) 706, from which Hippolytus quoted and which Cyril denounced. This Gospel was probably composed in 180-190, though it used some old traditions, one of which appears in the Infancy Gospels (Lipsius, p. 705), while another is referred to in Iren. (Adv. Haer. i. 6.1. xvi. 3 (A.D. 190)).

The original was cut down and altered by Catholics in order to "elicit the miraculous stories of the childhood on the Catholic side" (Lipsius, p. 705); but very much remains to testify to its original character. The story deals with the life of Christ only until he reaches the age of 12, and then leaves it in the hands of the canonical narratives. The object is to show that Jesus was and knew Himself to be the Logos from His birth (in its Jewish aspect). The Infancy Gospels find the Babe declaring this in His cradle; probably this comes from the original Gnostic Gospel of Thomas.

(c) Gospel of Thomas (Tertull. de Præscript. xix.), possibly identical with Evangelium Veritas (Iren. adv. Haer. iii. 1), was probably a treatise on the Gospels written in A.D. 160.

(d) Gospel of Apelles (Adv. Haer. xxiv. 2) contained Bœhis's Logion 43 (cf. 1 Thes 5). Apelles was a friend of Marcion (180-190).

(e) Gospel of Enoch, or the Watchers (tradition) (Epith. Haer. xxvi. 2; Philaster, Haer. xxxvii.), an Ophite, Gnostic, and pantheist Gospel. The scene here, as elsewhere in class D, is laid "after the Resurrection." Enoch is described as seduced by Satan, the father of Cain.

(f) Gospel of Judas Iscariot (Iren. adv. Haer. xxxi. 9).—The betrayal is treated as a meterological action, delivering evil fire on the Jews and Demiurge (Epith. Haer. xxviii. 1). Judas is thus the "perfect Gnostic!"

(g) Gospel of Caristus (Epith. Haer. li. 7).

(h) Gospel of Thaddæus (condemned with others in Deor. Galasii).—Thaddæus is perhaps regarded as one of the 70 disciples, who went to Edessa.

(i) Gospel of Bartholomæus (Jerome, Proseem. in Matt.; Deor. Galasii).

(k) Gospel of Andreas (Deor. Galasii), perhaps identical with the Gnostic Membra Angeli, attacked by Augustine (de Adv. Haer. iv. 2). Augustin (de Adv. Leg. et Proph. ii. 14) quotes an unknown Marcionite Gospel as making Christ say to the Jews: "You who are before me, and ye prate (cul culculantes) about the dead!"

(m) Besides these we possess a Muhammadan Gospel of Barnabas, based on a Gnostic Doctrinal Gospel (condemned in Deor. Galasii), now extant in an Italian MS at Vienna. A Spanish version once existed, but is now lost. This book is mentioned by Yolton (Narvarent, London, 1719); it was found by Cramer, and purchased by Prince Eugene of Savoy. The stories of an Arabic original are probably mythical. A wide spirit of tolerance and charity pervades this astonishing production of a Christian mystic who became a Muslim. It probably dates from 1300-1500.

The death of Judas Iscariot, substituted for Christ on the cross, is described in detail, and is probably a feature of the original Gnostic Gospel of Barnabas.
GOSSIP.—The word in its original use indicated a person who had become related (sib) to another through a common relation in the service of God, as a kinsman, and was a woman for a child in baptism. It then broadened out to embrace those who were related to one another through common interests of some sort. It was next applied to the talk of those who were thus related, and finally to the speech of friends, neighbours, and acquaintances about persons and matters which were of common interest to them. Gossip is essentially a social vice, and is therefore a measure declined, but the instinct continues to exist, and satisfies itself with the personalities of the cheap or gutter press, journals which report the latest scandals and doings of others, the details of divorce cases, and the articles of the ‘lounger at the Clubs’ can supply. Finer minds find satisfaction for the gossip instinct in histories, biographies, and reminiscences. Among the French this type of literature has been brought to a high state of perfection. In their Mémoires, gossip has almost attained the dignity of an art.

It is far from just to indulge in indiscriminate condemnation of the practice of gossip. It is a social product, and can be destroyed by putting to silence only by a universal and absolute individualism, in which no one cared for what concerned another. It is irrelevant to say that gossip should be confined to things and should not deal with persons. There is little interest in things, except what comes to them in relation to persons.

Besides, persons can be interested in things, and it is they who make up the social community out of whose relationships gossip arises. So long as men and women live in society, and have the power of speech, they will talk of the sayings and doings of others. It is surprising how much can be said in defence of gossip. Not only is it a necessary outcome of social life and social instinct, but, in spite of its occasional disruptive effects, it helps to vitalise social life, strengthens the links that keep society together, and lessens the arctic chill of a growing individualism. It is the school of social criticism, through which men and women form and express their judgments, and determine many of their social actions. It is the vehicle of the social conscience. It may err, and does err repeatedly, but its errors do not destroy its social helpfulness. It assists in forming and preserving the moral tone of a community. The practice of gossip also provides for the expressed or unexpressed, magnanimity, and gentleness. The charity that ‘takest not account of evil; rejoiceth not in unrighteousness, but rejoiceth with the truth’ (1 Co 13:5) would have few opportunities of showing itself, and of perfection itself in a social world in which gossip was unknown. It may even be said that, in so far as Christianity has affected the alienations and separations of society, bridged the
GOTRA

founders of families, their place is taken in the Brahmanical theory by other three ancestors, Bhrigu being superseded by Jamadagni, and Angiras by Gautama and Bharadvaja. In the Satapatha Brahmana, the total is forty-nine. Seven of the Vasis, Brighu, Ajas, Binas, Yastkas, and others, Ayitas, Mitrayus, Siyndrus trace their origin to Jamadagni; ten (Ganapati, Unatyas, Balrampuras, Sonarkshis, Vannadas, Prabhadras", Pratibhavas, Brighru, Kaypas, Agnisuras, Dvipatamanis to Gautama; nine (Bharadvajas and Agnisuras, Mudagiras, Vypurnididasr, Garbhas, Haritas, and others, Sikharas, and others, Kaypas, Kaypas, Samprada-Sairas to Bharadvaja; two (Brighru, Gaganaputra) to Aruni, twelve (Chalukyas, and others, Sratapada-Kamakritas, Dhanalakshas, Ajas, Robhitas, Agitas, Pitams-Vatika
draxas, Kshas, Agmatanmis, Rejas, Yenas, Bakshakkratas, and others) to Vashishta; four (Kajariyas, Sidhavara, Basnac, etc.) to Kaypas; four (Vasishyas, Usampanys, Purakaras, Ksdinas) to Vashishta; and finally, a forty-ninth, the Agastya, to Agastya.

In a passage quoted by Ribhadaka, the number of the gods is given as twenty-four, viz. the Saptavatas, Ks吠as, Ganesas, Adisesha, Bharadvajas, Gatosas, Samarakas, Ralaks, Ajas, Agnisuras, Ksana
draks, Vashishta, Vatikas, Kuska, Kuksas, Gribhakkausas, Mahamanyas, Amanrikas, Patkugas, Sanso
dras, Samapatas, Sakhitas, Rohita, Vayjaghrapadaya, and Jamadagnyas gotras.

In a passage of the Kathopanishad, also quoted by Ribhadaka, we find the names of thirty-two gotras corresponding in part with the above, and it states that the complete number of gotras is forty.

To fix the number of gotras at eighteen, as is done by a modern Hindu writer, cannot be considered as other than a hypothesis based upon Brahmanical legends. Chemical Rao, the writer in question, holds that the original eight families of gotras were supplemented by ten more, and that the latter consisted of Brahmans who had for a time followed the vocation of Ksatriyas, and had become Brhamans again, regarding themselves as descended either from Bhrigas or from Ajas. They rank as Karasasutras or Karasasutras (Karaka = separate, = isolated), and may intermarry with any other family. Their names are: Vashishta, Mitra, Yastka, Ratnas, Mudagira, Vypurnidira, Harita, Kaypa, and Saksita.

Closely connected with the gotra is the pravara, i.e., the invocation of Agni by the name of the rishi-ancestors of a Brahman who consecrates the sacrificial fire. The officiating priest whose duty it was to call upon Agni Harivrinkhana, to the deity who carries the libations to heaven, pronounced the names of the rishi-ancestors (drgy) peculiar to his gotra. In order to show that he, as the offering of worthy forbears, could sit and perform the sacred action. It was a law that the number of the drgny or pravara-rishi, whose names were thus pronounced, might be one, two, or three, but no other. Thus, e.g., of the gotras specified as descendants of Jamadagni in the above list from:

1. Dr. Ludwig, Die Mentholituration, p. 178.
3. Sahakadharasutra, s. t. Gotra.
5. According to the Gotrapramayapak (in Aksavade-

Satbhadru, Bombay, 1873, pp. 54-65), the gotra priye the following six families: Vasis, Brighuas, Yastkas, Mitrayus, Vaprias, and Sonarksha, while the Karasasutras are also six in number, viz. Hari, Kunja, Ma
dhav, Vypurnidira, and Mudagira.

6. Dr. Ghuny Narayana, in Bv. Sr. S. XII. 10. 15. The degrana, i.e., a person who belongs to two gotras, must, according to Asak, Sr. S. i. 4. 17, in performing the pravara, utter the names of not three, but of six ancestors; this is the case of the so
called laleva, the son lawfully begotten of the fatherless man, and therefore belonging to the gotra of his bodily as well as to that of his adoptive father. Cf. the section "devasa" in the Pravara of the Karsiyas in the Pravara, Rs. S. XII. 10. 15, pp. 185-195; see further, the Ksetrap, ed. B. N. Sastri, Madras, 1896, p. 144.

VOL. VI.—23
GOTRA

the Aksavaya Srvasta Srito; the Vadata invoked Agni as Bhargava, Chayavan, Apavane, Aurna, and Jamadagni; the Arpipas, as Bhargava, Chayavan, Apavane, Arpichana, and Anupa; and so forth.

The Kshatriyas and the Vaishyas, according to the Brahmanical theory, were required to pronounce the gories of their consorts (paribrahmacarya). Similarly, if sacrifice was offered by a king, the officiant named the king's ancestors, but those of his paribrahmacarya; though the king's rajaveda forbears might also be named. According to other sources, however, the pravasa was firmly established among both the Kshatriyas and the Vaishyas—Manasa, Alla, and Faurvavatsa being named as the dressers of the former, while Agni was invoked by the latter as Bhulandana, Vatsaapi, and Makkutra.

To the above-mentioned pravasa lists are annexed specific discussions regarding the gotra between which intermarriage was permitted or forbidden. In general, persons belonging to the same gotra, or having the same pravasa, are not allowed to marry one another. The recognized rule is that individuals are regarded as same gotra, i.e., belonging to the same gotra, if they have in common even one of the rishis invoked in the pravasa.

A Kshatriya must not marry the daughter of another Kshatriya; but he is likewise prohibited from marrying the daughter of a Tur, or from marrying a group of the Kshatriyas (Kshatrishyavati, and Asiata) and that of the Sanskars (Sanskars, Anuradha, and Upalata) contains a common ancestor, Aritvi. The gotras of the Briharta and the Agniratha are in part exempt from this rule. Thus, the seven gotras trading their descent to the Gotras of the Briharta, Agniratha, and Sunakasya may intermarry; and, similarly, the Piyandavas, Muddalas, Vigniyanidiehas, Kathavas, and Agnirathas are permitted to marry one another, as also with the Jamadagnyas, etc.

2. The data regarding the gotra in ancient India.—It is hardly possible to decide how far the legendary and theorizing traditions of the Brahmanas and more especially the pravasa lists, contain historical elements corresponding with the actual facts of genealogy. The prote-ancestors of the gotra must be regarded, not indeed as real personalities, but certainly as eponyms whose existence was taken for granted, and to whom the entire spiritual heritage of the priestly tribe was ascribed. We must assume that the hereditary character of the priesthood was already recognized in the Vedic period; such songs, religious traditions, and sacrificial customs as had come to be linked with the name of a particular rishi were in the North and again in the gotra. The determining condition of joint-membership in any given gotra was spiritual connexion and inheritance, mere physical descent being of less importance; for, through the gotra was transmitted from father to son, yet not all members of a gotra were blood-relations.

Many a Brahman, when asked by his guru to what gotra he belonged, could only answer, like Shaktiyana, the son of Saktiya: "I know not, teacher, of what gotra I am." In such cases the teacher gave his pupil a name taken either from a deity or from some ancient tradition, and also, as some writers say, the name of a gotra, and we must suppose that the pupil thereafter regarded himself as belonging to the gotra thus imposed.

The duality as to physical descent made it necessary to formulate the rule that, if the pravasa...
of blood-relationships in the third and fourth degrees, is represented as being a general practice. But even by the time of the first life of King Menander (2nd century B.C.) marriage outside one's own gotra had come to prevail: Gobhiraputra expressly says that a pupil who has completed his study of the Vedas should, with his father's consent, take a wife who does not belong to his own gotra. Hiranyakeshin likewise recommends marriage with one of another gotra; and with this agrees the Manusmrti, which, however, expresses the regulations in different terms, requiring that the series of ancestors involved in the sacrifices shall not be the same for both husband and wife.

The prohibition of marriage within one's own gotra had manifestly become the rule by the time of the Dharmasastra: thus, in the code of Manu we find that a maiden who is not married is looked on her mother's side, and does not belong to the same gotra on her father's, is recommended to the twice-born as eligible for marriage and the community of the household ceremonies; the Apastamba forbids a father to give his daughter to a man of the same gotra as himself, while Gantamata and Vasistha permit marriage only between those who have not the same gotra.

Presumptive evidence to the effect that marriages within the gotra were prohibited in the 3rd cent. B.C. is found in the Kautilya, in which the author, who, as we may assume on the ground of Jacob's convincing elucidation, was the minister of Chandragupta, the founder of the Maurya dynasty, in that work the idea of a house is changed from that used by its calling, and to marry girls of his own caste, but of a different gotra.

These requirements could not, of course, fail to affect the customs connected with marriage, and, more particularly, with cordtship. According to the Kautilya the gotra were named bridegroom and bride—obviously in order to show that there was no legal obstacle to the proposed union.

Nevertheless, it seems doubtful whether the regulations were strictly obeyed. It was at all events found necessary to grant exemptions: thus, certain gotras had the right to intermarry with all other families. These gotras, as we have seen, were above all the so-called Kevala (or separate) Bhraguvas and Agnirasaas, belonging to the gentes said to be descended from Bhrgu and Agnir.

It was clearly no fortuitous or arbitrary circumstance that the right of exogamy should be connected with the Brahmans and Agniras in particular. The Bhrguvas and Agnirasaas, in virtue of their relation to the Aitareya gotras, were more closely allied to the warrior than to the Brahmans caste; even according to the Brahmaic tradition, in which the union of the Vse and the Vaitapayis, together with the Kasyapa and the Vasishthas, to the mendicant, the original and truly ancient gotras; while the other gotras, as the Makabhras, put it, because great by the merit of their works.

In this passage we light once more upon the antagonism that prevailed between certain gotras—a problem which was in no sense confined to the matters of ritual already referred to, but made itself felt also in political life. That rivalry for political supremacy was the main factor in the conflicts between the Vse and the Vaitapayins need hardly be doubted. The former were in possession of a secret doctrine a bhrgavan—the twenty-five stotras—nearly all in the course of this account that the Bharaskas always chose their parikritas from among the Vasishths.

The struggle for the influential and lucrative office of parikritas was the all-powerful adviser of the

1. Sutra, ii, 2. 3. 6. 16; for the divergent interpretations of the commentators, cit. G. Bihler, SBE xxv, 73, note.

6. Weber, p. 44.
monarch and the ruler of the national fortunes, seemed to have laid hidden the mutual antagonisms of the gotras. While the Vashishtas, by reason of their knowledge of the stoma-bhajya-maxims, seemed to the Bharatas the most eligible candidates for the office of Vahana, others, on the contrary, maintained that these were the ground of their distinctive scholarship, as, e.g., the Atreya \textsuperscript{1} on account of their familiarity with the Bhāratas, and the Atri \textsuperscript{2} on account of their knowledge of the Saṁvedna, and so on. To each gotra pertained a particular deity and a particular Veda.\textsuperscript{3}

It is obvious that the followers of the Āthārva-veda, the magic songs of which are in very many cases designed to meet the needs of kings, had the best chances in the competition for the post of purushottama. As the Āthārva-veda was associated in the closest way with the warrior caste,\textsuperscript{4} the gotras which adhered to that work stood in the most intimate relations with the king. In the Pārīṣṭas to the Āthārva-veda the claim of these gotras to the office of purushottama is vindicated in the most positive terms against the rivalry of the others:

\begin{quote}
Let those who would conquer the whole world in a just manner choose as his teacher (gōtra-purushottama) a Shākya endowed with learning and good qualities. \textsuperscript{5}
\end{quote}

As adherent of the Śrāvaṇa, the teacher of the Vaisnavas, would bring his sons to rule; as adherent of the Pāñcavāt, the teacher of the Viśnu-veda, would bring them to greater power; and as adherent of the Viśnu-veda, the teacher of the Śaiva, would bring them to still greater power; and therefore let the teacher (i.e., the king's purushottama) be as a learned Śrāvaṇa, \textsuperscript{6} as a learned Pāñcavāt, \textsuperscript{7} and as a learned Viśnu-veda.\textsuperscript{8}

\textsuperscript{6} According to the Vaishnavas, ignorance or negligence has an adherent of the Śrāvaṇa as teacher, whereas the Mahāvīra and the Śaivas have a Pāñcavāt as teacher, whereas the Śaivas have a Viśnu-veda as teacher.\textsuperscript{9}

As little as a painted man [makes] his way, as little as a dancer [dances], so let the teacher just as little as a painter, a dancer, and a teacher attain to power and honour by having as his teacher an adherent of the Pāñcavāts. If the teacher be a Śrāvaṇa, who knows the Śrāvaṇa, the kingdom will increase in money and corn: of this there is no doubt.\textsuperscript{10}

If we may assume from the foregoing that the gotras tracing their descent to Bhirug and Āgīrca were closely connected with the warrior caste, whether in virtue of their standing as purushottamas or in virtue of blood-relationship, we have, on the other side, good reasons for supposing that the Kapāryas and, more particularly, the princely families of ancient India were regarded as belonging to the nāgavādānādā caste.\textsuperscript{11}

In accordance with the Brāhmanical theory, as already noted, the priest, when performing a sacrifice of a king, named either the jātajīva ancestors of the king himself or the ancestors of his ārya-puṣṭta. If sometimes the arrogance of the priests led them to regard their own ancestors as more worthy to be named than the king's, yet the inference that some have drawn from this, viz., that the gotra of the purushottama was transferred to the priest, must be rejected without qualification.\textsuperscript{12}

When the Brahmans, a sect of the Śaiva family, called himself Gautama, it was not because among the Śaivas the office of the purushottama was vested in the Gotra, but because the Śaivas traced their origin to Gautama, the descendent of the Gotra Śāriputra, the Aryan.\textsuperscript{13}

\begin{quote}
The priest of the Aryan was held in special honour; cf. Wikipedia, p. 58.
\end{quote}

Yet this is still the case at the present day. In a modern list (Gotra-Śri: A list of Brāhmaṇs Gotra, Allahabad, 1904) we find the following categories attached to each gotra: sādhu, upādhyāya, śātā, śrēṣṭha, purohitā, śīla, dātā, devadātā; thus, the Brāhmaṇs of the Śrāvaṇas, who are largely in the ascetic order, have as its sādhus, the Dākaṇḍis; its śātā, Śrāvaṇas, Brāhmapākas, Kāśikās; its purohitā, Dākaṇḍis; its śīla, Śrāvaṇa; its dātā, Śrāvaṇa; its devadātā, Dākaṇḍis.

\end{quote}

\begin{quote}
Examples of the practice are found also in the Jātaka; thus, in the Sarvajnaṭṭīkhāra (Jāt., ed. Rauh, 152 f.), Sarbādhika the ascetic ascends to heaven (Śrī Kaṇḍuka); and in the Alabandākhyāna (Jāt., ed. Rauh, 152 f.), the Sūri, the father of the child, who was born in the city of Kaṃṭha (Śrī Kaṇḍuka). In Sanskrit poetry it is a favourite rhetorical device to give the husband or lover of a woman the title of addressing his wife or sweetheart by the name of some other mistress; cf. Kumārdevamukha, iv. 6. Similarly, Raghuvamsa, xix. 24: Dīna-[et al., tr. Gray, New York, 1904, p. 93]; woman's presence likewise seem to the present writer to imply that it was the custom to address a person by his name of birth.

for the family of Mahāvṛata was connected neither by gotra nor by pravara with the two families with which, as just indicated, they intermarried.

In the list of the Brahmanas, the earliest adherents of Mahāvṛata, there is no gotra name, To this, the Brahmanical literature, the following: Agnidevaśyāna, Kāśyapa, Kātiyāna, Vāstavikā, Mahāvṛata, Pārīkṣiṣṭa, Gāndhāra, Aklāṇa, Vaśyāni, Vajyāṃśagata, Āsita, Ugrāryāṇa, Bhrāvyāni, Rājana, Vaiśayāni. Considerably worth noticing is the fact that a large number of the gotras enumerated in this list, and in the list from the Pāli Canon given above, belong by origin to the Agniratan, or, e.g., the Vāsai, trace their descent to Bhrāvyāni; while others, such as the Vaiśai, (Vaiśai and Vaiśai), claim to be descendants of Vaiśai, or as the Kāśyapi (Kāśyapi), Opanāna, (Opanāna), who similarly claim to be the offspring of the moon.

The Brahmanas, taken as a whole, i.e., a caste, marry only within their own ranks; no Rajput marries a woman who is not of the Rajput caste. In several cases, however, the system of exogamy is so constituted that a male must marry a woman of his clan other than their own. Thus a man of the Rathi caste must not marry a woman of even the most distant relations belonging to the Rathi caste; and, he should defy this ordinance, the children of the marriage are not accounted pure Brahman.

The Jātis, who likewise consider themselves as descendants of the Kṣatriyas, and in many respects stand on an equality with the Rajputs, are as a tribe strictly endogamous, but they resemble the Rajputs also in being divided into gotras or gote, and these, again, are exogamous. The Deswai, Man, Dali, and Bārwal gotras, for instance, do not intermarry; and the like holds good of the Mās, Bāl, and Kṛishnānāj gotra of the Rajputs.

The question whether the gotraism that is characteristic of the lower Indian gotra prevails also among the superior races of the Panjāb, i.e., whether the latter also observe certain tabus regarding plants, animals, or other objects revered by them, is difficult to answer with absolute certainty. In reference to this point H. A. Rose writes as follows:

1 A few instances have apparently survived among the Agniṣṭhas, and there are possibly stray cases among the Jats of the southern plains, the Gurjaras, Rajputs, and other castes, even the Kṣatriyas, but the evidence is not strong. In these cases, however, the names remain, the instances of respect paid to the totem itself being too few and uncertain.

6 Much more distinct traces of totemism are met with among the highly organized Vaiṣyā caste, as, e.g., the Komi, the Pali, and the Turku, the last of which is known. If an individual of this caste wishes to eat a fruit which is taboo for him, he may do so only on condition that he performs every year in Oyu (p. c.) the funeral ceremonies for his totemic ancestor.

The more highly developed—the more completely Hinduized—a caste is, the more do gotras resemble the totemism of the Brahmanas, and we venture to believe that the resemblance is due not so much to an actual community of descent as a Brahmanical influence, by which the present-day gotras have been shaped in the Brahmanas and preserved as such as this has been by the continuity of the castes' existence, the latter having been left unaltered by the evolution of the Indian race.
as to the desire of complying with the rules formulated by the theory.

Among the lower Hindu castes and the indigenes specially among the Dravidian peoples of S. India, we find almost universally a system of subdivision into small exogamous groups—in part also known as gotra (=gotras)—akin to that of the Brahmanical gotras. The Brâhmanical clans in recognizing descent in the male line, so that children belong to the father's gotra, not the mother's, while a woman passes by marriage into the gotra of her husband, and persons of the same gotra cannot marry one another. These groups are distinguished from the gotras of the higher castes, however, by their undisguised adherence to totemism. Each of the exogamous clans bears the name of an animal, tree, plant, or some other natural or artificial object, and the members of the clan are not allowed to eat, to cultivate, to burn, to carry, or in any other way to make use of that particular object. Thus—to give a few specially characteristic examples—all the Bihals venerate totemic beasts, and avoid injuring or eating them, and, when they pass their totem, they make a ceremonious bow, while the women veil their faces. Of the Bihals, the women clan takes its name from its totem, the moth, and its members do not injure moths. Among the Gollas, a large shepherd caste of the Telugu people, the members of the gotra called Raghuvana (various meanings) are protected from using the leaves of the sacred fig-tree as plates for their food. Of the exogamous gotras of the Kurubas—a caste of peasants, shepherds, weavers, and masons—who are said to be of totemistic origin, and retain their totemistic character to the present day, the Ariyana gotra is of peculiar interest. The name Ariyana means 'saffron' (turmeric), which was originally taboo to them; but, as this led to much inconvenience, they substituted the korra grain for saffron, though still retaining the original name of the gotra.

4. Origin of the gotras.—The sociological sense of the term gotra has been derived from the Vedic usage ('cow-stall') as follows. In ancient times the Indus family, even when—in consequence of its numerical increase—its property had been greatly subdivided, would still continue to use and occupy jointly the land reserved for grazing cattle; and we may therefore conclude, it is said, that the Brahmanical gotra was in its origin simply a community of this kind, i.e. a family whose members enjoyed joint rights in a particular paturagrah. This hypothesis does not hold in any degree account for the most characteristic features of the gotra, which, in fact, can be explained only by comparison with the gotra of the aboriginal tribes of India.

In view of the remarkable correspondence which, notwithstanding fundamental differences, exists between the eponymous Brahmanical gotras and the totemistic gotras of the inferior castes, the question naturally arises whether, as is the case with the gotra system, too, it is in some degree the result of an inner connexion, a process of reciprocal influence, between the higher and the lower races. It is certain, for one thing, the Brahmanical theory—the desire on the part of the lower races to observe its regulations, and in this way to invest a particular caste with a higher dignity—has tended to assimilate the gotras of the lower castes and the native tribes to the Brahmanical gotras. But, conversely, the latter seem to have acquired their peculiar character only by contact with the Dravidian tribes; for, the practice of exogamy is the common feature of all gotras, whether of the higher or of the lower castes, and as it finds no mention in the Veda, it must have come to prevail only after centuries of development, as a result of the fusion of Aryan and Dravidian tribes.

Now, exogamy is intimately related to totemism, and might gain ground even among the Brahmanical gotras all the more, if totemism is, whether inherited from remote ages or adopted from the aboriginal peoples, not known among the Brahmins themselves. Among the names of peoples found in the Veda, a number are taken from animals and plants, as, e.g., the Matsya (fishes), the Ajsa (goats), Sigra (horse-radish), etc. Of the Brahmanical gotras, the Kâmissa, whose name signifies 'toad', trace their origin to a being closely connected, or even identified, with Prâjapati; their tribal ancestor was Kûrma—another word for 'turtle'; some person Prâjapati formed all created things. The legendary progenitor of the Sagard gana, King Ikâyiku, whose name means 'gourd', and seems to point to a taba relating to this fruit, is a descendant of Kâmissa. The gotra of the Kaundinya, which traces its descent from Vasiṣtha, and to which belonged, as we have seen, Mahâtāmas, the founder of the Jain sect, takes its name, as does the gotra of the Kapis; from the ape; and in the passage of the Kottapatyakṣa where it is said to the tortoises are prototypically used, the genital parts of an ape, 'Tortoises are Kâmissas, apos are Kaundinyas; Kâmissa, let go the Kaundinya, thou hast effected copulation,' we have an allusion—in terms of the塾的关系 and matrimonial relations subsisting between the two human families. If, then, as seems probable from the foregoing, totemistic ideas were not unknown among the ancient Indian gotras, it becomes quite intelligible that ancestor-worship and exogamy, as found among the less civilized aborigines, should have come to prevail in these races.

GOVERNMENT.—In the treatment of this subject, attention has usually been directed to three main problems: (1) What is the origin of government? (2) In whose hands may the authority be vested, and in what way may its machinery be best exercised? Or, more shortly, What are the forms of government, and which is the best? (3) What is the sphere of government, or when is State interference justifiable? The last of these is a question comparatively new in the history of political discussion.

1. The origin of government.—Since, in the light of modern historical criticism, it cannot be denied to Lycurgus, Solon, and Numa Pomphilus appear, not as the inventors of new laws, but rather as the 1. The passing of the totemistic ideas, in fact, directly implies the practice of marriage between blood-relations.

2. Cf. Böttiger-Reh, a.n., i. 'Ikâyiku.'

reformers and codifiers of laws and customs already existing, or, in some sense, as a necessary consequence of the constitution of the country in which the celebrated States of antiquity have given their constitutions (wherein they ascribe these to the work of a single individual), and we find that three main theories, not very rigidly separated from one another, have been suggested of the foundation of sovereignty and the origin of government. The first and most ancient is the establishment of civil society. Of these, the first (a) traces government to the Deity. Of a State created by God and under His direct supervision this theory obviously affords a complete explanation, but it also applies to States which were only in an indirect sense thought of as founded by the gods and governed by them. Another form of this theory bases temporal sovereignty on a Divine right.

The second main theory (b) founds government and sovereignty on the consent of the people expressed in an unwritten contract between them and their chosen sovereign, wherein they have reserved to themselves the right of resistance should they abuse the authority they have entrusted to him. According to the third, the theory of contract, (c) government is based upon expediency, and may be traced through different stages of development. The first stage of this theory is illustrated in the Hebrew and Assyrian systems, in which the government was derived from the consent of the people.

(a) The typically theocratic State (the word 'theocracy' first appears in Jos. c. Apoc., ii. 17) is that of the Jews, which in the narrow sense was the work of God, and, by the conditions of its existence, was wholly sacred and inviolate. Founded by Jehovah and directly governed by Him, the kings were no more than His servants, who, encouraged by His prophecies, enjoyed no personal right of initiative. In this attitude, however, to their Creator, and in respect of the covenant which they had made with Him, the Hebrew people stand practically alone in history, so that theirs may be looked upon as a State of a unique kind. With the Greeks and Romans it was less so. The idea of a government which has been the subject of a sovereign descent to kings in Israel, while in Rome they were usually chosen by popular election; but the people of both races, while believing in a Divine government, used to seek habitually by various rites and sacrifices to know the will of the gods and to propitiate their favor, yet looked upon this government as indirect and the State as a human institution, which men had great power to make or to mar. It cannot be said to have been otherwise regarded in the Middle Ages, although the tenacity of medieval opinion was to trace all power to God. For this was done in a spirit of piety, with no suggestion of a political theory. It was held to be separate as Christ had separated them. After the Reformation it became common to read into certain lines of the NT a glorification of temporal sovereignty (I P. 2:23). St. Paul required that every soul should be subject to the higher powers, for these are ordained, he said, of God (Ro 13:1). Forgetting that the Apostle referred to Nero, an Emperor of Rome who owed his election to a section of the people, forgetting, too, the words of Christ Himself (Mt. 28:20), the theologians of the time based upon this authority the whole, which excluded the, converted to good citizenship, a doctrine that kings and rulers were the anointed representatives of God, divinely appointed and responsible to none. See and Divine Rule.

(b) Political absolutism, in the form in which it brought sorrow and misfortune to the Stuart kings, was defended as a philosophical theory by Hobbes, who incorporates with these principles the celebrated doctrine that civil society owes its existence to a contract. The social compact theory was supported later by Locke and Rousseau, their version of the theory differing largely from that expounded by Hobbes. The latter held that the covenant to form a society was between man and man, and not between the people and the sovereign they chose to govern them. This left the way open for the assertion of a Divine right in the king, which necessarily implies passive obedience in the people. But absolutism like this, said Locke, is no form of civil government at all (On Government, ii. § 90). 'No man in civil society can be exempted from the laws of it' (§ 94). The original contract was between sovereign and people, the latter giving up their natural liberty and submitting themselves to a chosen ruler, who, on his side, agreed to rule justly, and in accordance with fixed laws publicly established: only so long as he did his part were the subjects bound to give obedience and loyalty (§ 181). Finally, in the people there lay a supreme ultimate power to alter the legislature.1 The principle of the contract is sometimes put in another way, as by Locke (§ 97), and in the general tenor of the Contract social: every man on joining a society tacitly promises to submit to the determination of the majority—the only condition on which the original contract can have any meaning. Hooker puts it thus:

'Men know that... set up a state and government... except they gave their common consent... to be ordered by some whom they should agree upon... [and] if it be observable there were no reason that one man should take upon him to be lord or judge over another' (Eccles. Pol. i. 2. 6).

The contrast theory, in the form in which it asserts the sovereignty of the people, dominated political thought during the 18th cent., and has in its time furnished argument and backbone for several successful revolutions. No one would now attempt to claim for this contract any historical justification whatsoever. The compact is not a fact, but an idea, in which we read into things to explain them (Kant, Works, ed. Rosenkranz, Leipzig, 1838-42, ix. 160). No State of whose history we have record is known to have been founded in any such manner; and the further back we go the less the consent of the people would seem to have been sought and their wishes regarded in questions of a political nature. Consent has, of course, rightly been held to be one of the most sacred foundations of government. Physical preponderance being usually on the side of the numerical majority, the many are controlled by the few, only because public opinion supports the rulers. Without the consent of the people no government can stand; by force alone no society can be held together. The stronger is never strong enough to be always master, if he does not transform his force into right and obedience into duty' (Rousseau, Contrat social, I. ii.). In this sense society really does depend upon a contract of a kind.

(c) While neither the theory of Divine right nor the theory of contract affords in itself any satisfactory explanation of the origin of government, the second is built upon what seem to be facts concerning the beginning of society. On these facts is based also the third theory, which holds the government on expediency. Whether we follow Aristotle in thinking that man is by nature a social being, or hold with Hobbes that his disposition is anti-social, whether we suppose that the state of nature was one of peace (as Rousseau asserts) or a war of all against all, in the fact of the establishment of society there seems to be sufficient proof that this state of nature was one

1 On the question of a so-called right or a moral duty of resistance, see Revolution.
not satisfying to primitive man. Where there is perfect freedom, all are equal and subject to nobody; one man is king as much as another (Locke, ii. § 152). But the individual stands alone against the world; his property and person can be ill defended. Thus, as Locke says, "government is hardly to be avoided amongst men that live together" (§ 106); it arises, since no human being is safe, out of the needs of mankind. (Plato, Rep. ii. 369.)

We find man, then, being drawn into union with his fellows either through love of his kind or through love of himself. Outside of society certain instincts of man's nature, good and bad, remain unsatisfied, and only within it can his various powers be developed and his love of approbation, his desire to excel, be gratified. Historical inquiry has made it clear that no proof can be brought forward of any contract having been drawn up at this time; on the other hand, its results throw some light on the beginning of government.

The statement is found in Aristotle that primitive society shows us nothing but kings and monarchies, and that for this reason all nations represent the polity of their gods as monarchical (Pol. ii. 11). He tells us, too, that at an earlier period still, before the time of the tribal or archaical government was universal, and that this institution was generally the result of military necessity. The first of the needs of primitive man is the means to defend himself against attack. Thus, we may conclude that the father of a family or head of a tribe was at first chosen by his kinsmen as a leader in battle against other tribes. In times of peace he was its judge, and at all times was acted as priest to discharge the religious duties of his tribe. People grew accustomed to this exercise of authority, and the leader was made perpetual. The leader was now called king.

The course of this development has been observed in many savage tribes. Aristotle saw it even among his inferiors. Kings at Lacedaemon are merely military commanders in expeditions beyond the frontiers, and enjoy also as their prerogative the superintendence of religious observances. The form of kingship may be described as nothing more than that of the lord of the camp, in which the religious charge is exercised.

It was not kingship at all according to medieval ideas, for it conveyed the power of life and death only in the field. But, in this incomplete sovereignty of the Lacedaemonian State, and in the organization of other polities lower in the scale of civilization, we have historical proof that government, in the case of these States or tribes, was indeed a question of pure expediency, arising out of man's first necessity—that of defending himself against attack. It is the exercise of no great celerity to conclude that, in the case of States of whose early existence we have no record, government has been evolved in a similar manner.

The form of government, or the manner in which the sovereign powers of the nation are vested and exercised. On the question of the various forms of polity there has been comparatively little discussion of opinion since the time of Plato and Aristotle. The latter (Pol. III. vii.) makes the following classification, based upon the discussion of the former. There are, he says, three pure or normal forms of government—kingship, aristocracy, and polity (or, to adopt Siddwick's tr. of the term, monarchy, constitutional government). These three pure or altered forms, or corruptions of normal polities, are the principal forms of government. To these corresponding three pure forms there is a disposition, constitutional government being subject to the good of the community, and use the sovereign power for that end. To these correspond three altered forms, or corruptions of normal polities, viz., oligarchy, democracy, and tyranny. However, the power of the State is used in the private interest of the rulers. Thus, in oligarchy, the rich, usually a wealthy minority, rule in their own interest; in democracy this is done by the poor (viii.). In like manner, a tyrant uses his power only for his own ends. The government of a State is called a monarchy, an oligarchy, or a democracy, according as the sovereign authority is in one person, in a few persons, or in many (vii.).

A government, however, is not always consistently in spirit what it is in name. Frederick the Great regarded himself as a servant of the State in democratic Athens, Pericles ruled as a king. Where the government of a republican country slips, as it often does, into the hands of some one leading man, or, perhaps, of a few leading men, we have no longer pure democracy, but rather an aristocracy or monarchy. Hobbies seems to deny the possibility of a pure democracy which he says (de Corporis Politico, ii. 6): "A democracy in effect is no more than an aristocracy of orators interrupted sometimes with the temporary monarchy of one orator." Indeed, in every polity it is in effect the strongest who rule. But the Aristotelian classification still holds good, although the further objection has been made to it that it takes for granted a distinction between governor and governess which has not always been very clearly marked. In a democratic State the power is constantly changing hands, and as aristocracy and monarchy, the same may now rule, now fall back into the ranks of those who obey. Considerations like these have caused several writers—Rousseau among them—to use the term of "democracy" in a very wide meaning indeed. For Rousseau it signifies not ' an aristocracy or democracy only, but in general all governments directed by the public will which is the law,' the necessary condition of being that government should be regarded, not as identical with the sovereign power, but as the administrator of that power, in which case monarchy itself becomes a republic (Contrat social, ii. 6, footnote). Distinctions are thus sometimes lost sight of, both in theory and in practice; still, the form of the supreme power does give the stamp to the political life of a State, because, if for no other reason, it determines to a great extent the limitations of a State's activity.

The familiar terms which are employed by Aristotle in classifying the various forms of government refer to conditions which have long ceased to exist—to the small city-states of Greece, and a society based upon the slavery of a large part of the population. But in other respects too they no longer bear precisely the same meaning which they had for early Greek writers or for modern philosophers. By monarchy, for example, we understand limited or constitutional monarchy—a conception, by the way, not wholly unfamiliar to Plato, who, in the Statesman (562c), selects for special praise ' a monarchy, when bound by good regulations or laws,' and also, in the Laws (638), says that it is wise to combine the monarchical and democratic. A monarchy not so limited by fixed laws we should call despotism; but despotism, again, we do not identify with tyranny. Then our modern representative democracy is something altogether different from the government of the whole people by the whole people which Plato and Aristotle held in the strongest detestation, while, on the other hand, the form of government towards which all systems at that time tended.

Plato thought that political knowledge must always be confided to a few. His favourite polity was monarchy, and the government of the philosopher-king is the ideal of the Republic. Tyranny he thought the worst government of all, and the tyrant to be the most hateful of mankind. In his turn Aristotle's discussion of this question differs little from what we find in Plato, as regards either the subject-matter or the opinions expressed. Kingship too
considered 'the primary or most Divine form of government (Pol. VI. I.)' aristocracy the next best form of government. The hereditary virtue 'all men render willing obedience ... he and his like should be perpetual kings within their States' (III. xiii. and xvii.). But a person, and, still more, persons, of such virtue are rarely to be found; hence the difficulty in the greatly increasing size of States, in view of which he confessed that in his own time it was perhaps no longer easy to establish any form of polity but democracy (VE. xvi.). As a practical substitute for the ideal State, he recommends constitutional government as the polity 'most generally attainable and most desirable' (VE. ii.). The true end of equality, he says, is that neither rich nor poor should have the supremacy (VE. ii.). Hence the best practical, political constitution is one in the hands of the middle class (VE. xi.). They are the arbitrators between rich and poor (VI. xii.), and are more conformable to reason, more capable of constitutional action, than any other part of the population (VI. xi.). In this democracy, political privileges were to be given to men of moderate means, the poorest class in the community being excluded. But Aristotle did not see a polity of this kind fully put into practice. His was an age in which enormous power had got into the hands of demagogues, and all citizens were absolute sovereigns, as a system resulting in the practical supremacy of the masses. In this state of affairs the commons were, he complained, 'superior even to the laws' (VE. xiv.); and his analysis is exhaustive regard to the popular opinion that individual liberty is exquisitely, or even necessarily, a fruit of these democratic institutions (VE. ii.).

What is the best form of government? Many persons hold with Samuel Johnson that forms of polity have little power to influence happiness, and that it does not matter a straw that we should live under one kind of constitution rather than another. On more philosophic grounds, Kant thought that the form of the State did not matter, if the spirit of right and freedom were there (Perpetual Peace). Pope's well-known solution of the difficulty—'What 'er be best administered is best'—is only verbally sound, and does not answer to the problem. Which constitution is likely to be best administered? Which will be most helpful to progress? And to an individual of pre-eminent virtue 'all is right'? A heartfelt answer can be given, because the stages of political progress and degrees of intellectual and moral capacity depend upon varying conditions, and require institutions so different that in a primitive state of society even despotism can be and has been, justified. There is, accordingly, no ideally best polity; but most writers on the subject think with Aristotle that the question is one which every statesman and student of practical politics ought to consider. It is his business not only to know the best constitution under actual conditions, but to seek what form of government most nearly approaches the ideal (Pol. VI. I.).

Monarchy came first in the history of polities, and has continued to the present day as the cause of all governments. Nor is it difficult to understand how this should be. The rule of one is obviously the most suitable form of polity in a rude state of society. But it has never developed. Even under more advanced conditions, there is something to be said in favour of absolutism. The sovereign is not hampered by the necessity of securing the assent of minister or people; under no other constitution can the executive act with such force, consistency, and rapidity. Unfortunately, however, as Aristotle pointed out, monarchical power, king to king, is owing to the frequent incapacity of kings (VIII. x.). Whatever powers the exigencies of ruder times may have called forth, it is certain that nowadays exceptional administrative skill or general capacity rarely shows itself in royal families. There are few States, however, at the present day in which this constitutes a danger. Modern monarchy is limited to such an extent as to lend, in the opinion of many observers, more and more in the direction of democracy. In those cases where the sovereign power remains absolute, it is generally limited by a bureaucracy.

In aristocracy, if it be a true form of that polity, the government is in the hands of a class who are morally and intellectually superior to the rest of the community, and have the wealth and leisure to enable them to acquire special knowledge. They have been properly called governors by profession. Hence some of the most remarkable administrations in history have been aristocracies, at least in name. Looked at from our modern point of view, they are rather to be called bureaucracy, with its virtues and defects of bureaucracy—experience and a more or less mechanical energy on the part of the governors; on the side of the governed a certain passivity of the kind which is produced in a people by despotism.

John Stuart Mill criticizes aristocracy and monarchy from one point of view. To a great minister, he remarks with some truth, it is almost a phenomenon in modern Europe as a great king (Representative Government, p. 46). This is, of course, the difficulty which confronted Aristocracy and was declared insuperable by him—the problem of finding persons pre-eminent in both talent and virtue. It is a difficulty which time has removed in its own way. The aristocratic form of government has lost their former sovereign position in the State. In every country they are now subordinate either to monarch or to ruling people. No example of this monarchy has survived to the present day; still less do we see a modern government of the best people, in the old sense of a pure aristocracy.

As to the merit of democracy, there is considerable difference of opinion. It suffered a good deal in reputation during the excesses of the French Revolution. So great a statesman as Burke stigmatized it as the most fatal form in the world (Reflections on the Revolution in France, 1790). But, in the judgment of unbiased persons, there is no necessary connexion between democracy and violence, and popular government in its higher aspects is now generally admitted to exert a stimulating influence upon education, and to foster in a striking manner the growth of patriotic spirit. These results, indeed, were seen in ancient Greece, in the high intellectual standard attained by the average Athenian citizen, and the sacrifices he was willing to make for the State from a sense of duty. None the less, Plato decided against democracy, on the ground that such a polity was 'unable to do any great good or any great evil' (Statesman, 305). His criticism draws attention to a serious defect under which this form of government labours. Its executive is often weak, its conduct of foreign affairs timid, and, if there are changes of administration, ever open to the charge of inconsistency. Indeed, on all questions the difficulty of pursuing a consistent policy results in a lack of vigour in republican authority, which has been ascribed partly to the absence of the pomp and splendour which surround royal throne, and partly to the fact that presidents and ministers are regarded rather as servants than as heads of the republican State.
John Stuart Mill was so convinced that large assemblies are attended only for advertisement, but also for the direct work of legislation, that he advocated the formation of a legislative committee to which the business of drawing up bills might be entrusted. A democracy, government is not troubled by doubts of this kind; it goes to the task of making laws with zeal and self-consciousness. Its strength is supposed to lie in the chief defect of government by a majority of the people is not a paucity of laws but the danger of class legislation, or what is called the tyranny of the multitude. It is, of course, true that ill-considered legislation is not an evil peculiar to government by a majority, and that the numerous interests represented tend to counteract this danger in a democratic State. At the same time, in all large assemblies, ignorance and incapacity are likely to be more common than knowledge and administrative skill, and self-interest will be found a more powerful motive force than the love of justice. For this and other reasons, Rousseau held that pure democracy was a government which might be for gods, but was too perfect a government for men.

It is agreed nowadays that enlightenment, education, and progress are not necessarily the fruit of popular government, nor the means of other forms of policy. Aristotle too, many centuries ago, decided against the vulgar belief that liberty is to be enjoyed only under a representative government; and his system, that is, in which the supreme authority lies with the representatives of the people. What is to be found here, and not under other forms of policy, is 'an open field for natural talent.' This, as has been well pointed out by D. G. Ritchie, is the true defence of democracy. Men being equal neither in capacities nor in character, and their respective merits being ascertainable only by actual trial, democratic institutions are defensible in so far as they offer the best means of obtaining a genuine aristocracy or government of the best (Philosophical Studies, p. 338).

To what extent may the form of government be said to be a matter of choice? According to the old dictum that constitutions are not made but grow, there is no choice at all. But the truth behind this dictum and its converse seems rather to be that constitutions are made, that they are the work of human reflection and contrivance, and that at the same time they also grow, and in directions which men cannot always either influence or foresee. Institutions are, in fact, a matter of choice within the limits left by the circumstances and aptitudes of a people. Their permanence depends on the manner in which they are adapted to the requirements of the people, and continue with the lapse of time and the growth of the nation so to adapt themselves. Even within those limitations, however, the choice of the form of policy is not one wholly dependent upon human foresight; nor is the task of adapting it to peculiar needs entirely achieved by the skill of statesmen or legislator. Not a little must be attributed to chance. Plato hits upon this truth in the Lesece (709): 'Destinies and accidents happening in all sorts of ways legislate in all sorts of ways.

The importance of the kind of policy has been differently estimated by various writers. Rousseau believed that institutions are all-important, and that as soon as they are good, a people will show themselves to be so under just and suitable government. Montesquieu, while laying great stress on the necessity of institutions being in conformity with the spirit of a nation, held, on the other hand, that these insti-
private life, the region in which we can legislate, and that in which legislation is useless or pernicious. The standpoint with which the Greek was familiar was that according to Socrates, which is: 'in the legislature, virtue; such a life is not to be regarded as a bondage but as a means of preservation (Pol. VIII. x.). This is sound doctrine. Aristotle said so long ago, to make life good. It is not characteristic of liberty that every citizen should act as he chooses. Rather the citizens should live, and live well, which is: in the community, virtue; such a life is not to be regarded as a bondage but as a means of preservation (Pol. VIII. x.). This is sound doctrine. Aristotle said so long ago, to make life good. It is not characteristic of liberty that every citizen should act as he chooses. Rather the citizens should live, and live well, which is: in the community, virtue; such a life is not to be regarded as a bondage but as a means of preservation (Pol. VIII. x.).

In Great Britain, political theory, owing to various causes, is strongly individualistic in character. It ignores our obvious debt to society. In the extreme form of individualism, found in Bentham, Mill, and Spencer, the State is regarded as nothing, the individual as everything. For these writers, for Spencer especially, all restraint is an evil, while the sole function by which government may justify its existence is that of protecting individuals from aggression and punishing criminals—of acting, as Huxley says, the part of chief policeman (Administrative Nihilism). This theory, which Ritchie traces to Lyceophon, the sophist, we have in a somewhat similar form in Hobbes and Locke. The office of the sovereign power, says the former, is the procuring of the safety of the people and their enjoyment of the contentiments of life (Leviathan, p. 322). Mollesworth's ed.—'contentiments' being a very comprehensive word. At the beginning of the first Letter on Toleration, Locke defines the term in a very peculiar language. Nothing is suggested, in individualistic theory, of any action and reaction between the individual citizens and the State, or of any relation between sovereign and subject other than that of force and obedience—an external contractual relation in the opinion of Hobbes and Locke. According to Bentham, the principle of utility ought to govern society, whose business it should be to secure the greatest possible amount of happiness to men; law for him is a necessary evil, government a choice of evils (Principles of Morals and Legislation, p. 49). For Bentham, as for Mill and Spencer, society is no more than an aggregate of individuals, and the last of these writers says frankly that the liberty a citizen enjoys is to be measured, not by the nature of the governmental machinery, but by the relative paucity of the restraints it imposes (Hobbes, p. 15). From this point of view the presumption must always be that the government is in the wrong, and can be called upon to justify itself on every occasion where it actively interferes with man's liberty. The cry of Emesborn is not less unambiguous: 'The less government we have the better,' he says, 'the fewer laws, and the less confined power' (Essays on Politics). This is a fair conclusion from the premises that all coercion is immoral and destructive to freedom; but the logical outcome of principles like this is a call for the struggle for existence—in other words, anarchism. The reasoning of Mill and Spencer is based upon the hypothesis that every increase in the power of the State necessarily implies a corresponding decrease in the liberty of the individual citizens: State action, according to this view, being always opposed to the action of the individual. It is clear that any such statement of an inverse ratio as existing between governmental power and individual freedom depends upon an erroneous conception of liberty. Freedom from restraint and from the meddling of governments is not liberty. It may be more safely defined as the privilege of living under fixed standing laws, formed in the interest of all persons, and, above all, capable of affording them the fullest opportunity of self-development and progress. The more just the constitution, the greater the amount of freedom which can be left to the citizen. Formed to make life possible, the State exists, as
ent stages of political development, its power being necessarily far reaching in a backward state, which is the case of many of the States of Europe, is not of paternal legislation. Hence, generally speaking, the sphere of government cannot be determined from theoretical considerations; nor can this administration or that be judged except by the results of its activity. In a well-ordered society it is not likely that State interference will be carried too far. As Samuel Johnson said of tyranny, 'mankind will not bear it.'

See also art. STATE.

LITURGY.—Frequent reference has been made in this art. to the Dialogues of Plato (especially the Republic, the Statesman, and the Laws) and to the Politics of Aristotle. The origins of government, the theory of contract, and such questions are discussed in the works of Hobbes; in Hume's 'History of England,' and in Rousseau's 'Contrat Social'; Hume's 'Essay,' and the political writings of Kant. Among theological writings, Butler's 'Analogy' must not be forgotten. On the Divine right of kings, see the Memoires historiques de Louis XIV. (Ouvr. de la Conf. de l'Ambass., 1724, vol. 1); and Bossuet's 'Politique tirée des progres paroles du Divin souverain' (Ouvr. de Bossuet, 1806, vol. xxii.).

Among classical works mention must also be made of Montesquieu's 'De l'Estate' et du Gouvernement des Etrangers,' and his 'De l'Esprit des Lois' (London, 1768-96). A book which is of great value to the student of politics is J. C. Bremser's 'The Theory of the State' (Eng. tr., Oxford, 1886). Another bearing a similar title is Bossuet's 'Philosophical Theory of the State' (Eng. tr., London, 1874). Reference may also be made on general grounds, to H. Stiglich's 'Elements of Politics, and Political Economy of the United States' (Eng. tr., London, 1881); J. C. Bremser's 'Philosophical Theory of the State' (Eng. tr., London, 1874).

3. Christian.—(1) In the NT.—In the NT the two Heb. terms already mentioned are embraced in the word 'grace.' Classical writers use the word in a sense which gives pleasure or delight, or loveliness or charm. Beauty in motion is very much the sense. The profounder meaning of the word in primitive Christianity—viz. the unmerited Divine love which stoops to pardon and bless the guilty—is, in part, a heritage from the OT, but it draws its characteristic intensity from the fact of redeeming love in Jesus Christ, which is not found on Jesus' own lips, but His message and personality are laden with the thing. Thus in the Sermon on the Mount the Father makes His sun to rise on the evil and the good (Mt. 5:44), the Kingdom is promised to the poor in spirit (v. 5), comfort to the mourning (v. 7), perfect satisfaction to those who long for righteousness (v. 9). In the grace of the Father, the grace of the Father in heaven is assumed. Apart from very explicit utterances like the parables in Lk. 15, the attitude of Jesus to the needy—to the paralytic (v. 21), to the woman that was a sinner (Lk. 7), to the dying malefactor (Lk. 23)—conveyed to them and to bystanders the blessed sense of a Divine love mingled with infinite mercy. The Kingdom, into which He calls men, is not something they are to earn or make; it is a gift pure and simple, and with the conditions of entrance human wisdom or riches or righteousness have nothing to do. Even the conception of reward, though employed frankly, is placed in a light which reveals its inadequacy to set forth the principles of Divine action, for the reward is pictured as an hundredfold what men have sacrificed (Mt. 10:6). Jesus is conscious of being the medium of grace, and in Mt. 11:29 He puts Himself forward explicitly in this character. He must eventually die to ransom many (Mt. 20:28). Thus to His mind the central fact of the world is the dying of the Christ of God in order to establish in a sinful world the Kingdom—the new order-world which shall fully express Almighty Love.

Throughout the NT, grace is the first thought and the last—the atmosphere in which Christians live and move. Their message to the world is one of grace, and missionaries setting out to preach are
GRACE

of the Fourth Gospel, while he prefers to speak of the Divine love (9th 18th, and Ep. passim), declares grace to be the new specific feature of the Christian religion as contrasted with Mosaicism (17th). It is further noticeable that the NT seems to warn Christians of the unspeakably grave consequences of neglecting the Divine grace or receiving it in vain (2 Co 6, Ho 6)."

The early centuries exhibit a marked process of tension between Eastern and Western thought. For the Greek Fathers, who took free will for granted, morality and religion lay parallel with each other—sin not abrogating freedom but expressing it, grace not displacing freedom but encouraging its independent activity; it consists in the most part from without, but in the objective facts, external to man, of providence, revelation, incarnation, and redemption (O. Kirn, P.F.G. vii. 719). Grace saves by illuminating the intellect and reinforcing the residuary and autonomous powers of human nature. The Western mind retained the Hebrew thought of man's complete dependence on God; but, as early as Tertullian, we find predominate a concept which regards its action as the inspiration of a higher Divine quasi-physical energy or force, by which the liberum arbitrium, or free-will, is restored and his group that free will is the indissoluble, pervasive of man; sinners are in no sort of bondage, but can choose either way. Sin is only a momentary self-determination, which leaves the nature intact and can always be successfully resisted. In religion it is useful to have our will guided, though removal is not essential, and such guidance comes from the Law or from Christ's, personal example or instruction. 'Grace, in short, is the external help which makes easier the realization of the natural possibility itself' (Robinson, Christian Doctrine of Man, Edinburgh, 1911, p. 182). If Pelagius thus lowered grace to the plane of nature, Augustine (q.v.) held passionately that it liberates from a nature which is sinful through and through. Though no psychological determinist (man is free within the range of his ability), he taught that men have utterly lost the liberum arbitrium to good. Salvation, therefore, comes exclusively through grace—that replenishment with the Divine life which anew creates in us the good will for Christ the man has brought down to earth, the powers which give us back liberty to express freely the new nature. Grace is the action of which in restoring moral power we cannot co-operate, or, in Augustine's significant phrase, to gratia gratias data, is due everything that can be called salvation—faith and love, freedom from concupiscence, the good will, and, very specially, the gift of perseverance (granted only to the elect). Grace is the effecting in time, and within the Church, of God's eternal predestinating will, whereby He resolved to save a certain (but to us unknown) number out of the mass of perdition, it works preveniently, preparing men and leading them out of sin; co-operantly, producing in them good volitons and good action (this is justification, for the primary effect of grace is to make the free-will moral). It is irresistible, the Word of the ineffable, the irresistible efficacy. This might seem to leave no room for merit, but Augustine teaches unequivocally that the final destiny of individuals is solely

recommended to the grace of God (Ac 14th). When believers pray, it is as the throne of grace (He 4). As they survey the past or anticipate the glorious end, everywhere they see grace preparing, executing, perfecting the redemption of the world (Gal 1, Ro 13, 1, Co 15th). It is but grace, as he is vividly aware, which called him personally, made him an apostle, and bore him to the ultimate mission of grace (Gal 14th, Ro 15th, 1 Co 15th). But it is also the supreme causal agency by which Christian life everywhere is evoked, sustained, and augmented. This constitutes an indirect basis for the answer to the two points of view. (a) Grace is the active disposition in God to which everything that can be called salvation is traceable (Ro 11, Eph 1, Gal 1). The sending of God's Son and the acceptance of His obedience as availing for the guilty are both due to grace alone. Because of Christ's death, in which the Divine righteousness was manifested once for all—for grace contains wrath at evil as a subordinate element—God in His mercy is able to forgive freely. In St. Paul's view there is no antagonism between grace and righteousness, as is far from making righteousness superfluous, grace actually bestows it by way of gift; for, if righteousness could be attained by the works of the Law, God were debtor to man, and works were made nothing of none effect. The gift of grace can be received only by faith (Ro 4), i.e. by the willing and humble appropriation of the grace, which places sinners in a right relation to God, exterminates an obedient love by which fear is banished. It is not that God has ceased to demand works and holiness in the sense of salvation; faith is receptive, not meritorious, and grace is equally its received content and its producing cause. Since Jesus, indeed, grace and faith are the two ends of the same chain, the description of grace as the closest bond between past historical events and the mercy of God thus apprehended by the believer, grace is bound up with the person of Christ; apart from this reference to the historic figure and His experiences of life and death and resurrection, it would have no tangible or permanent significance for the religious life of which he speaks or writes is that of Christ as well as God; Christ is its eternal subject (3 Co 9), its medium and pledge, and its present all-sufficient source (10th). There is no ground in St. Paul for describing grace as acting on the lines of a natural force in the production of the religious life; it is simply another name for the operation of the Spirit, and to him the Spirit, as it has been put, 'means the gracious power of God which evoked faith in Jesus as the crucified and risen Christ and then mediated to the receptive, obedient life all that the Lord was and did for his own people' (J. Moffatt, Paul and Paulinism, London, 1910, p. 37 f.). The relationship of free access to the Father, into which men are thus introduced, is one which one spec facts can have no end; as grace is the basis of election (Ro 11), so, too, it reigns through righteousness unto eternal life (Ro 9, 7-8). In a derived fashion, the word is also employed to designate the fruit of grace in redeemed lives, whether this be the spiritual status into which Divine love lifts men (Ro 5), or the new supernatural character (cf. 3 Co 8). Generally speaking, grace is felt to be the death of legal religion, for in trust responsive to God's bestowal of Christ men now see that the free life of grace is the only true life of hope. It is thus clear that in Jesus and Paul alike the thought of grace implies the complete fusion of the moral and the religious ideal. The writer...
GRACE

Duns Scotus criticizes sharply the notion of a 'habit' produced in the soul by grace, and tends to evaporate grace as much into a co-operative principle which renders free moral action well-pleasing to God. The absolute freedom of God and man are placed in unconditional opposition. Grace heightens the privately achieved goodness of man; hence the scope of grace, in the religious brooding (grace as infused love) consists rather in a 'secret, wonderful, and ineftable' Divine energy than in the impression of Christ, living, dying, and risen for His people. The graciua inspirations is really a communication of the Divine essence, and its ethical and personal character is still further overlaid by its being referred exclusively to the Divine omnipotence. See, further, the following article.

Augustine's doctrine of merit left a door open to Semi-Pelagian conceptions. Before his death, destination and the bondage of the corrupt will had been rejected by those who feared their moral effect. The Semi-Pelagians (Loots has pointed out that they might with nearly equal justice be called Semi-Augustinians, since they held that man requires Divine grace for good action) taught that God adds the will, sin having impaired freedom but not destroyed it. In 629, a synod of Orleans defined a position which is Augustinian on the whole; but it was silent as to the irresistibility of grace, and left it to the dispensers of predestination without evii. Unconditional predestination seemed to make the Church's means of grace superfluous, and this could not be borne. In the 9th cent., Gottschalk's advocacy of a logical Arminianism was firmly put aside. Nor can we ignore the growing tendency to fix on sacraments as the proper vehicle of grace. Ct., further, art. PELAGIANISM and SEMI-PELAGIANISM.

In the Middle Ages.—In medieval Scholasticism, no writer is so Augustinian in tone as St. Thomas Aquinas, who, however, combines the older thought of predestination with an Aristotelian and deterministic idea of God. God alone, he holds, can convert the sinner, as being the Prime Mover of all things. Gratia creativa and gratia creatura are distinguished, the first being the freely-imported movement of God, the second a supernatural 'habit' infused into the soul's essence, and constitutive of its nature. Conversion comes through free will, which yet cannot turn to God except as, by the causarium gratiae, He turns it to itself. Faith, grace is grace from the standpoint of Divine causation, gratia co-operans the same grace from the standpoint of human consent or volition (Summa, li. 1, qn. 109–111). Acts are meritorious only as they issue from co-operating grace, in accordance with the secondary causation of the human will. What infused grace (gratia gravius fassum) does is to heal the soul, give power to will the good, grant perseverance, and finally conduct to eternal glory. The remission of sins follows on moral renovation. There is a sense in which man can prepare himself for grace, though not by merit; but, after the will has regained through grace the capacity of self-movement, it can acquire merit (eritutum de conyugio or de condonatio according as it is considered as proceeding from free will or from the grace of the Holy Spirit). In this scheme the Augustinian conception of sola gratia (efusus) and the old Western idea of merit limit and supplement each other. August Busæus fails to bring out clearly any connexion between grace and Christ save that He exclusively merits for us the graciua inspirations, or original inspiration; thus its action on the soul is in no sense psychologically mediated, and it appears most characteristically in the sacraments, as a Divine force impinging on or imparted to the soul.

(4) From the Reformation.—Luther (p. 210) broke definitely with the conception of grace as a quality of the soul, a Divinely caused inward 'habit,' and identified it with the work of God presented in Jesus Christ, which sinners experience primarily and essentially as forgiveness. By this he has laid the foundations of the theology of the Reformation. The Divine favor in Christ is brought home to us by the gift of the Holy Spirit, working in and through the Word or Gospel, in which God Himself deals with us as He deals with Christ to be our own. Grace is this loving will of God. The sacraments are efficacious signs of it. It is true that Luther's sacramental doctrine partially deverts this great conception, in so far as he regards that sacraments present a peculiar additional grace over and above that which is made sure in Christ as the embodied love of God. At bottom, however, 'the certainty of forgiveness in Christ was for him the sum of religion' (Harnack, Grundriss der Dogmengeschichte, Freiburg, 1891, p. 308). For Calvin also (see CALVINISM) grace and faith are vitally correlative, although his underlying deterministic philosophy of unconditional predestination led him at times to equate grace with 'the good pleasure of God.' In both Reformers, an end is made of human merit as contributory to salvation. We cannot here discuss the later Calvinistic and Arminian controversy. It is enough to say that the grace of God is not particular, irresistible, and inalienable (see, further, art. ARMINIANISM).

II. The NT message and its echo in Reformation preaching both imply a conception of Divine grace wholly drawn from and determined by the felt redeeming influence of Jesus Christ. Disregard of the fact of moral personality, as though religion could be passed into the soul like a stream of electricity, is invariably caused by or causes the thought of grace as a secret Divine energy, due solely to omnipotence, and acting on the human will with irresistible pressure—a quasi-physical force, stored within the Church, and applied to the soul-substance in its subconscientious depths. But a coercive force, for which the will is only a medium of transmission, cannot ever be one with human experience, or fulfil itself in volition as our act and possession. We must seek, then, to regard grace as a force which produces faith in accord with the laws of an ethical and rational nature, and at the same time resolves the native tension and conflict of the moral life. 'Only by relating grace to personality and personality to grace is it possible to have a spiritual conception of either. Grace is grace and not a force precisely because it is the succour of our moral personality' (J. Oman, Expositor, 1915, p.
GRACE, DOCTRINE OF (Roman Catholic)

367. If our relation to God is to be moral, it must be also personal.

Probably the best analogy to the unity found in life’s actual movement between the dependence on grace imparted by faith and the moral dependence on which is the experience of ‘falling in love.’ In both cases there is an impulse personal to which it is liberty to yield to: the one a name for embodiment, the other by self or independence by itself, as alternating or rival phases, but each supported and constituted by the other. Similarly, religion begins when we encounter a Power or Reality which subdues us purely by its spiritual content, not destroying freedom but raising it to the highest point. In this experience, moral life is in principle the personal, for a man is good not in so far as he abounds with all influences, but as he opens his nature to the highest. Submission to grace—i.e. to God’s loving will, which is His essence—is thus the limiting case of an experience of receptiveness and liberty fused in one, which is fundamental to all moral life. Only through grace do we become personalities in the highest and fullest sense. The supernatural order and self-righteousness must cling to all life of which the finite self is centre.

Catholic and Protestant conceptions of grace are eventually incapable of being merged in a higher unity. To the Catholic, grace is ethical in aim, yet at the same time a purely spiritual and immediate, dispensed through an infallible and hierarchical institution, and charged with a mysteriously sanctifying power which is manifest supremely in the Sacraments. To the evangelical Protestant, grace is the free active love of God to sinners, so personally present in Christ as to elicit faith by its intrinsically persuasiveness. It is no more supernatural force emitted by Deity—which might have no relation to Jesus, or even to the Father—than the Father’s will of saving mercy exhibited in the person of His Son. Grace, in Christ, is not caused by any sin, nor do we fall away. Nor are there two acts or forms of grace, one imparting remission of sins, the other by way of supplement changing the inward nature and inspiring power for goodness; on the contrary, the need of more dynamic, rich in all true and triumphant morality, flows from the transforming apprehension of the fatherly grace held forth to us in Christ. Grace, therefore, is both a gift and a challenge. We cannot face and feel the saving power that is in Jesus, and know that in Him we are meeting God, without the uplifting consciousness that the righteous Father is summoning us to be one with Him in His righteousness and in the purpose of His kingdom. By the grace of God I am what I am,” forms the heartfelt confession of all believers, of whatever school; and the words, read in the light of concrete experience, are an expression both of utter indebtedness to God, who by taking us to be His children has wrought whatever in us is good, and of complete ethical liberty. See also art. HOLY SPIRIT.

H. R. MACKINTOSH.

GRACE, DOCTRINE OF (Roman Catholic).

The doctrine of grace, as understood and taught at present in the Roman Catholic Church, is the rational development of the principles contained in the Scriptures, as interpreted by the traditions of the primitive Church, and worked out in its present form through a long series of theological controversies. For chief authorities it claims, among inspired writers, St. Paul; among the Fathers of the Church, St. Augustine and St. Thomas Aquinas. As it is based entirely on the traditional Catholic notion of the supernatural order of the human soul, it must be preceded, if of all, form a clear and accurate notion of that basic concept.

1. The supernatural order: sanctifying (or habitual) grace. In agreement with these, and kindred, to those of the Greek, mostly Platonic and Aristotelian, philosophy, the Christian revelation implicitly assumes that, whereas the human soul is apparently doomed to decay and death, the human soul is naturally simple, incorruptible, and intellectual, and consequently made for all truth. Therefore, no other end may be considered as commensurate and proportionate to its natural aptitude than a possession of the plenitude of truth, which is God Himself. Some kind of vision and possession of God after this life is, accordingly, the only destiny that may give plenary satisfaction to the aspirations and aptitudes of the human soul. But, while that pure presence of the God of Nature (such as we may assume to be that of the souls consigned to Limbo) should suffice to satisfy the natural exigencies of the human soul, and make nothing more to the individual soul than the said natural possession of the Supreme truth (provided the soul should have proved itself worthy of it by its conduct in this earthly life), nevertheless the whole of the Christian revelation is based on the assumption that it was, from all eternity, the munificent and gratuitous decision of the Lord to call man to an even higher destiny, not only to a natural but to a supernatural and Divine reward.

He was called upon to know, to possess, to enjoy his God, in the contemplation of His essence, of the revealed mysteries of His intimate selfhood, of His Deity—not only as Prime Maker and Prime Mover of the natural universe, but as God Trine and One of the Christian revelation. Man was, therefore, to be admitted into the sanctuary of the Divine Self, to become a partner and an associate of God Himself in His possession of Himself, to partake of the Divine and infinite beatitude, on the same footing and in exactly the same way as God Himself, viz., by enjoying, conjoined with Him, the very same essentially beatifying object, the very same infinite perfections. The only difference should be that, whereas the enjoyment which God has of Himself is infinite, the enjoyment which man would have of God, on account of the inherent natural limitations of the human soul, would be necessarily finite in degree, although not less Divine in its kind, because not less Divine in its object.

As a consequence, according to the decision of the Creator of the universe, which we have just recounted, two orders, essentially different in kind, but mutually co-ordinated, should mingle their essences and unite their activities in this our world, for the working out of the sanctifying of the individual soul—the natural order to which man belongs as a natural being by his body and his soul, and the supernatural order to which he was called by God and into which he is introduced by the Divine efficacy of grace. For, since man was called to a Divine destiny, he must be made proportionate to it, he must be raised to the Divine plane, he must be somehow divinized and the God of why a ‘permanent’ and lasting Divine gift or quality must be infused in his soul, durably to abide there, until wilfully destroyed by mortal
GRACE, DOCTRINE OF (Roman Catholic)

sin—a supernatural and godlike perfection, the effect of which was to confer on the soul of man a kind of 'deformity,' mysteriously aroused in it by the all-power, through the grace of God. That permanent supernatural quality Divinely infused in the soul of man, to make him durably proportionate to his Divine destiny, by raising him permanently to the supernatural plane, is called 'habitual' or 'sanctifying' grace.

Of course, it might have been in itself sufficient to grant to man a supernatural help, an 'actual grace,' whenever it was necessary for him to perform supernatural actions—to raise him each time above his natural capacity, in order to make him participate in an act of the Divine reward; but it was more harmonious, more consistent, permanently to dignify man, to raise him, once for all, to the supernatural plane. The Scripture texts, as the Catholic Church always understood them, indicated that such had been the course selected by God, and so she always expressly held by the primitive traditions, from which the Church could not possibly depart. Hence, the early Protestant Reformers, making light of all traditions, and boldly sweeping aside all the theological documents from the 5th and 6th centuries onward, denying the existence of any internal supernatural quality infused by God, which should be called 'habitual' or 'sanctifying' grace, and maintaining that the state of grace was characterized by nothing but an 'external' imputation of justice, made by the Eternal Father, of the merits of the Redemption of Jesus Christ, the Church could not refrain from defining as a dogma of faith (Trid., session 8, can. 11) that habitual grace must be understood as an 'inherent' Divinely infused perfection.

3. The state of innocence (status innocentiae).

Accordingly, when the first human soul were created, they were endowed, over and above their natural powers, a second, a 'supernatural organism' made up of the following elements:

1. Sanctifying grace, the Divinely infused supernatural quality which permanently dignifies the human nature to make it proportionate to its Divine end.

2. But sanctifying grace does not come alone. Somewhat as the boughs of a tree will branch from its stem, from that fundamental and basal perfection, habitual grace, a number of complementary and dependent supernatural perfections communicate the various faculties of the soul. They are the virtues: three 'theological,' viz. Faith, Hope, and Charity; four 'cardinal' or moral, viz. Prudence, Justice, Force, Temperance, together with their dependent subsidiary virtues, and the 'seven gifts' of the Holy Ghost.

3. Besides those fundamental perfections, they had been endowed also with several gratuitous privileges, essentially distinct and separable from the foregoing, as a kind of supplementary dowry, destined to emphasize the munificence of the Lord. Those privileges were briefly: an infused and perfect knowledge of all things that pertained to the human sphere, freedom from any revolt of consciousness, impossibility of mortification of the body. It was commonly understood that the primitive plan of God was to let man live on earth a natural term of years, and, after having allowed him to perform some meritorious acts, without inflicting death on him to take him up to his infinite and Divine reward. Original sin destroyed that plan. God, that the whole problem of Redemption hinges: (a) the decree of God Almighty (in the present case, the decree of predestination is fulfilled: anything decreed by God must come to pass; (b) even under the present influence of actual grace, the human will remains always essential the free effect of Redemption, on the other hand, was to restore it in a new form, by creating the state of reparation.

3. The state of reparation (status naturalis reparationis).—In this new state of reparation, the gratuitous privileges of omniscience, immortality, etc., remain irrevocably forfeited, i.e. at the whole of the supernatural 'organism' which we have described above, through the effects of the fall into infidelity, and, through penance after mortal sin, to baptized Christians. This would be, therefore, the place to treat of the relation of sanctifying grace to the Sacraments, but we must not divert the reader to the various articles on the Sacraments; it will be enough to say here that sanctifying grace is first generated in the soul by God through baptism, that it is mortified in it by mortal sin, restored through penance, and increased each time by each reception of the various Sacraments, especially the Eucharist in the Holy Mass.

To sum up, therefore, in a few axioms the Catholic doctrine of sanctifying grace, we may say: sanctifying grace is an 'inherent' perfection (dogma of faith); it is understood to be 'subjected' (to inhere) in the essence of the soul; it is more commonly regarded as a 'physical' entity, not a moral participation in the Divine nature, in the sense expressed. Above all, it must be regarded as distinct from charity (although Duns Scotus and several others hold the contrary view); it is produced primarily by God alone; it is generated in the soul through the Instrumentality of grace, either 'physical' (Aquinas) or 'moral' ( Suarez and the Jesuit theologians), of the Sacraments, in and through which the Divine power acts as the primary cause.

4. Actual grace.—(1) Its existence and nature. Besides the supernatural superordinated 'organism' of habitual grace, a second, a 'supernatural organism' made up of the following elements:

1. The actual grace, the ground of that whole power which has been described above, the human soul, in order to produce supernatural actions meritorious of life everlasting, requires, each time, the help of actual grace, viz. some internal, transient, supernatural impulse from God, which enables it to perform now a supernatural action. The existence and necessity of this actual grace are emphatically asserted both by Scripture and by the universal Christian tradition; it is, moreover, a logical necessity of the philosophical system in which primitive Christian thinkers labored; it is, finally, a fact under the influence of which it made its theological evolution. Actual grace is rendered necessary by the existence of the supernatural organism of habitual grace and the virtues. Quantum cumque aliquis natura corporalis vel spiritalis posuit perfectus, non potest in sumum actionum procedere nisi movetur a Deo (Aquinas, Summa Theol. Prima Secunda, qu. 100, art. 1). At the same time, we understand also that, if the influx of actual grace is indispensable to the act of the free will, that influx must, if it is really meant to supplement, not to pervert, the nature of the will, be of such a nature as to leave the freedom of will unimpaired. In this way we are brought to formulate the two conditions on which the whole problem of Redemption hinges: (a) the decree of God Almighty (in the present case, the decree of predestination is fulfilled: anything decreed by God must come to pass; (b) even under the present influence of actual grace, the human will remains always essential the free effect of Redemption, on the other hand, was to restore it in a new form, by creating the state of reparation.

2. Sufficient and efficacious grace. The maintaining of those two exigencies—the unswerving efficacy of the decree of God and the perfect freedom of the will—will from any necessitating
impulses—has ever been and remained the dominant preoccupation of the Church throughout all subsequent controversies. The Pelagian, the first important one on record on the present subject, gave occasion for the emphasizing of the distinction between 'sufficient' and 'efficacious' graces conferred by God to every human soul, may be termed, in fact, a Catholic dogma, and that some graces do prove efficacious may be said to be a fact of experiences; nevertheless, that plain and obvious distinction was to acquire, through the discussion of the Pelagian tenets, a particular significance.

The real question at issue with the Pelagians was whether any internal grace of any description whatever ought to be considered as strictly or really necessary. God, who had called man to eternal happiness, had already, in the Pelagian view, given him, in his natural resources, as aided by the external graces of revelation and instruction, all that was essentially needed for that purpose. As original sin left in the soul no inherent blemish or unfitness, man, by making good use of these natural faculties, could work out for himself his own salvation. Internal graces (the habitual one, perhaps, and the actual ones especially) might exist, did exist; but to assume more than their utility by theology, to attempt to declare the will unfit for what it was given for, and consequently destroy its freedom. Those graces ought rather to be considered as favors occasionally conferred on the free action itself to perform with the sole natural resources of the free will, but none of them was, at bottom, indispensably necessary.

The disputations aroused by these new doctrines brought forward the towering intellectual personality of St. Augustine, who was to remain henceforth the supreme authority, among the Fathers, on all questions de Auxiliis. As the mouthpiece of the Catholic tradition, and the interpreter of the doctrines of St. Paul, he definitively established, against both the Pelagians and the body of otherwise orthodox doctors called Semi-Pelagians, among several others, the following principles:

1. The only will be saved when God has gratuitously predestined it for that purpose. (Original sin is a hinderance to the free will of the human soul. 2. As a consequence of this, the Divine action, in order to the infinite disproportion between the Divine and the natural order, no human being is capable, by his natural powers alone, of acquiring an efficacious grace; 3. Or (of) in any way meriting the first grace so that the saving power of grace may be exercised in him as being capable of being exercised by him as being capable of being exercised by him as belonging to him. 4. Actual grace is absolutely necessary for every supernatural action. 5. The actual grace granted to a man by which God accomplishes the effect of His eternal predestination, some of them being sufficient only, work often in an introverted fashion. 6. Neither sufficient grace, which never carries the assent of the will, nor efficacious grace, which is never resisted, causes any prejudice to the freedom of the will.

Thus, in the idea of Augustine, as ever afterwards universally understood and interpreted in the Church, practically without controversy, until the days of the Reformation, God provided both for the fulfillment of His decree of predestination and for the preservation of the freedom of the will, by granting to the understanding of the Church the revelation of the Divine decrees, which they were sure always freely to disobey by their own fault, and by providing for the predestined efficacious grace, which they were always freely to follow; for those efficacious graces worked, not by overpowering, but by mysteriously inclining, the will, and causing it to give spontaneous consent to the particular act. How could it be that, on the one hand, a grace, truly and really sufficient, should never in fact carry the assent of the will, and, on the other, that predestined efficacious graces, should always determine the said assent, without, however, in any way infringing upon the freedom of the will? It was a mystery, which Augustine himself embodied in the name of Jansenism, and ascribed to the doctrine of St. Paul (in particular, Ro 9), but which remained otherwise unexplained. The attempt to solve that mystery was, at a much later period, to give rise to the most confused opinions, and to the endless theological quarrels, many of which have remained undecided even to the present day.

(8) The systems. — (a) Pro-Trinitarian development. — It was long, however, before the controversy de Auxiliis was to be resumed again, when it had once brought to a temporary conclusion, by the definitive condemnation of the Pelagians, at the Council of Ephesus (431). It was the task of the schoolmen of the Middle Ages to endow the Church with a full and organized system of the doctrine, the most perfect monument of which—in fact, the standard systematic exposition of the Catholic doctrine—that St. Thomas Aquinas (1225-1274), the prince and 'sine of Catholic theologians, and especially in his Summa Theologica. For those doctors, the problem of understanding the indissoluble interaction of sufficient grace and, more especially, the falling out of efficacious grace could be reconciled with a genuinely free will appears to have been no puzzle or no particular difficulty; supposing the mystery as it was, they would all have said quietly with Aquinas: 'As it behoves Divine Providence to preserve, not to pervert, the natures of things, God will move everything according to the decrees of His will, and as the nature of things (all the more, that) God moves the human will in such a manner that its motion remains contingent and not necessary.' (Summa, prima secundo, qu. x, art. 4.) God knew how efficaciously to infline the will, without infringing on its liberty; that was enough. All He had decreed about man was its realization; nevertheless, man was and remained, at all times, perfectly free. This, however, is just what the early Reformers, Luther and Calvin, three centuries afterwards, began by denying, maintaining that the human will had been at least hopelessly perverted and weakened by original sin, that, having lost its freedom, it had not the power to resist any more, in any case, either the inclination of corrupt nature or the inspiration of grace, both being irresistible in their action. Hence the obedience of the will to consciousness or to grace—passiva, according to Luther, and libertas in actu, according only, according to Calvin—was necessary and irresistible in either alternative. As this doctrine involved the denial of the freedom of the will, it was condemned by the Council of Trent in its sene, 5, where it was declared (can. 4, 5, 6) that original sin had not destroyed the freedom of the will.

(8) Post-Trinitarian controversies. — It had been the work of the Council of Trent to reassert the dogma of the freedom of the human will; it was, however, reserved to one of the most distinguished theologians of the same Council, Michel le Bay, or Balbus (1515-1589), of the celebrated University of Louvain, to be the first to offer a solution of the mystery of the reconciliation of the freedom of the will with the infallible efficacy of the Divine decrees, which, being in many of its propositions a kind of forerunner of the latter Jansenist tenets, was, after several reproofs, finally condemned in 1586. The effect of that condemnation, pronounced by Gregory XIII, was to stamp out the Balbus doctrines in their original form; but they were soon after revived, by the middle of the 17th century, in the celebrated heresy which, from its posthumous originator, Bishop Jansen of Yperen (1585-1638), whose Jansenius was published in 1646, was to remain in history the name of 'Jansenism.' The substance of the system, as it can be definitively
GRACE, DOCTRINE OF (Roman Catholic)

tively gathered from the writings of its parent and adherents, is as follows:

Sufficient grace, which would have been sufficient indeed in the state of innocency, is eternal sin, is now, owing to the fallen state of human nature, really insufficient; for, as it is the immediate cause of the will, in the present fallen condition, necessarily to follow the more powerful delusion, it is grace, in some cases, proves less efficacious and delusive to the soul, the will will necessarily follow the greater delusion of sin, and grace will be of no effect; although it may be called sufficient 'in name,' hence, in reality, there are only insufficient and efficacious irresistible graces.

This is not the place to dwell on the various phases of the quarrel, the substance of the system being what we are mostly concerned with; it is enough to say, crushed, in spite of all, by several successive condemnations, it was finally extinguished in its ultimate form by the bull "Unigenitus," directed in 1718 against Paschatus Quesnel.

The two fundamental notions, among others, in the Jansenist doctrine of grace, those which distinguish it from the orthodox systems tolerated in the Church of England, are: the denial of the real and actual sufficiency—practically of the existence—of sufficient grace, and the assertion of the insufficiency of resistible efficacious grace, thereby acknowledging in man no other freedom but freedom from coercion, or forcible compulsion. As against these two cardinal assumptions, viz. insufficient and irresistible graces, the orthodox systems maintain, each in its own peculiar way, that sufficient grace is truly and really sufficient, so that it is intrinsically possible to obey it, although, in fact, man never followed its inspiration, and also that it is intrinsically possible not to obey the impulse of efficacious graces; although such a disobedience will never occur de facto.

In the interval of time which divides the condemnation of the Baillot propositions from the rise of the Jansenist controversy, a Jesuit theologian, Luis Molina (1536–1600), published, in the year 1588, a book entitled "Libri arbitrii cum gratia donata, divina prescienctia, providentia, praedestinatione et repugnatione concordia," in which he propounded the following solution of the problem of sufficient and efficacious grace (qu. 14, art. 13, disp. 40):

"Sufficient grace gives to man all that is necessary for a supernatural action; by assenting to or dissenting from its impulses, man takes nothing away from it, but contributes to its determination. The free will can neither make a simultaneous concourse, without which no action of any kind would be possible. Hence, in the Molinistic system, the 'determining' cause of the election of the free will was, in each case, that will itself, God being free to choose whom he will. Therefore it is impossible, 'like two workmen carrying the same stone, or pulling the same part of the same rope' by the way, long before rejected by St. Thomas Aquinas, in the very words afterwards used by Molina."

This doctrine was, from the start, received with marked disfavour by the older Jesuit theologians, and with an outburst of indignation by the Thomistic school—up to that time considered the foremost authority in theological matters.

The Thomists argued that in such a system, the principle of the insufficiency of the free will in the inspiration of grace being the spontaneous choice of the will itself, the efficacy of the decree of God was thereby rendered uncertain, as depending on the arbitrary choice of man; that, moreover, the First Mover was detached from at least the initial determination, by which the will decided to accept grace and to cooperate with it, which was a metaphysical impossibility, since even the slightest degree of freedom in the will would necessarily have caused it to occur to existence from the first, and grace, and anathema is pronounced (can. 8) against any one asserting that faith alone, without such a movement of conversion of the free will towards God, is sufficient for justification. As for the question whether any one may have the certainty of being in a state of justification, the Council of Trent (sess. 6, can. 13 and 14) anathematized the Calvinistic and Jesuitical tenets that any one ought to persuade himself that he is in a state of justification, and that that sole and very persuasion is the only cause of the said justification. Hence it may be legitimately
inferred that from a Catholic point of view only a moral and human certainty can, ordinarily, be entertained of that fact.

(7) Another class of graces, the very improperly and improperly called 'gratiae', embraces those supernatural privileges or 'charisms', sometimes granted to a chosen few, to work miracles, to prophesy, to speak foreign languages, and the like. Each of these privileges will be incapable of the act of another kind. With those graces we have nothing to do here, but merely remark that they are not more gratuitous than the ordinary graces (habitual and actual) with which we have been dealing thus far; any one of the latter, by the very fact that it is of a Divine order, is necessarily gratuitous and does not depend on act as first, and second, and third, as Grace, but is possible, by making good use of one grace to merit another, for, if Nature cannot, grace can merit grace. See art. CHARISMATA.

(8) To seek kind of acts must the action of efficacious grace be understood to extend, or what kind of effects can be obtained only through grace! This is the last question that we attempt to answer, briefly mentioning the acts of the Church or the decisions of the Catholic theologians on the various points.

Grace is not necessary—as is commonly admitted—for acquiring even a vast and extensive knowledge of natural truths, as much a knowledge is within the natural capacity of the human mind; but a certain and exhaustive knowledge of all the truths pertaining to the natural order of things could obviously not be understood to exist in any human mind otherwise than through a special favour of God. For supernatural truth, although it is intrinsically possible for any one to recognize the truth of any doctrine or dogma of faith which is properly explained and proved to him, an acceptance of it, through a supernatural motive, can be the effect only of a double actual grace both in the mind and in the will (2nd Council of Orange, can. 8 and 9; and Trid., sess. 3; can. 8). It is a dogma of faith that man, even in a state of sin, can do some good works, and therefore that the actions of sinners are not necessarily all sins. This dogma has been repeatedly asserted, against Wulff and John Hus, by the Council of Constance (sess. 15); against Luther and Calvin, by the Council of Trent (sess. 6, can. 7 and 8); by Pius V., Gregory XIII., and Urban VIII. (prop. 36, 38, and 40 of Baldis); and against Quenel, the last of the exponents of Jansenism, who was condemned by Clement XI. (prop. 44, 45 E.). The same authorities condemned also the assertions of Jansenius and Baldis (prop. 22) that all the actions of indubes are sins.

By the condemnation of the 35th proposition of Baldis, it became a doctrine of faith that it is intrinsically possible to love God above everything, as Author of the natural order of things by a natural love; such a supreme natural love of God, however, could not be so efficacious, in the present fallen condition of man, as to entail a perfect fulfillment of all the precepts of the natural law; for, although in the state of innocence such a thing would have been within the natural, unimpaired resources of human nature, after original sin only a state of perfection was possible to the fallen man to realize the supreme perfection of non-corrupted nature. If, at the same time, we remember that for any precept imposed on him man always receives a sufficient grace, we see that it cannot be inferred, from the above doctrine, that some of the precepts imposed by God are impossible to man. It is true that the 2nd Council of Orange (sess. 6, can. 18), and by Innocent X., in the first of the celebrated "five propositions" of Jansenius. Man, in a state of mortal sin, cannot for ever resist all other temptations and avoid all other mortal sins without a special assistance of God; for the very same reason that he cannot fulfill all the precepts of the natural law, as we have just stated above.

In a state of justification, man is capable, through ordinary graces, of avoiding each venial sin individually; but only through a special and distinct grace will he be capable of avoiding all his sins for all his life (Trid. sess. 6, can. 23); that special privilege, however, is universally understood, propounded by Domini, to have been granted to the Blessed Virgin.

The Pelagian doctrine that man may merit the first grace by his good works, performed without the help of grace, and the idea that he can prepare himself for it, so as to create, on the part of God, some kind of obligation to confer on him, were both condemned by the 2nd Council of Orange (can. 3, 4), as the effect of condemnation reiterated by the Council of Trent (sess. 6, can. 5 and 6)—because no one, except through the use of grace, can make himself in any way worthy of a gift of the Divine order, since no nature it infinitely exceeds every human capability. As a consequence, the only orthodox sense that can be attached to the expression "in se est Deus non denegat gratiam," is the following: to him that through the help of prevenient, supernatural grace does all he can God will not refuse the grace of justification. Sincerely, human, and natural honesty alone does not make any man, in any way, entitled to the gift of grace and of justification. That it should be impossible for man to rise without grace from a state of mortal sin is a doctrine that was denied by no one, not even by Pelagius; it was defined as a dogma of faith in the 2nd Council of Orange (can. 14 and 19).

Each supernatural action requires a corresponding natural action of God on the free will, even if no kind of motion can take place without the action of the Prime Mover; but, since the presence of grace, either habitual or actual, does not remove the inherent defectibility of the human will, a 'long' perseveration appears to be a special help from God (Orange, can. 10 and Trid. sess. 6, can. 2). Final perseverance, involving the conjunction of a state of justification with the last instant of life, is also certainly the effect of a very special favour of God, as the canons just quoted imply; in fact, it coincides with priesthood itself, of which it is the necessary and inseparable effect; it does not, however, consist properly in a peculiar motion, or distinct impulse, but ought rather to be described as the result of an ensemble of circumstances brought about by the merciful Providence of God, as an effect of His Divine predestination—circumstances which, of course, will vary with each individual soul.

Lubac.—The literature on the subject of Grace is well-nigh inexhaustible, and we shall therefore limit ourselves to the mention of the most prominent names and works only (ed. Cath. Encyc.).

St. Paul, Epistle to the Romans, ch. iii.-xi.; Augustine, de Pontifici: moribus et veritatis, de Spiritu et Litera, de Petitione justitiae hominae, de Gratia Pelagii, de Gratia Christi et de peccato originali, de Corruptione et gratia, de Predestinatione sanctorum, de Domino perseverantia, de Nature et gratia, de Gratia et libero arbitrio, ad Thrasium, Thomas Aquinas, Sum. Th., prima secundae, qu. cxx.-cxxiv.

Such a meal in the Serapeum witnesses to the religious character even of the social meal. And the custom of libations in pre-Christian times stamps the same religious character on every meal. The Homeric feast was not complete without the σωλήν or λυκή, the drink-offering poured out either on the hearth, the floor, or the altar, to the gods: see καλά σωλήνες, ἱεροῦ ἔσον (Hom. Od. iii. 45). It was a drink-offering and a prayer, in this case to Poseidon. The Romans practised similar rites. The second season, or dessert, was separated from the earlier part of the meal by the offering of the mole salsae, the meal-offering of salt and salt, and the libatio either to the Larres or to some one of the gods. Pilgrims witness to the early origin of the rite: Νυματαῖοι ἱερεῖς σφραγίζονται, et mole salsae supplicare (27 N. xviii. 7). Vergil refers to the libation at the feast before the tomb of Anchises:

Πάνθευς θυσίας, ἵνα λατρεύης νεών, δοσμένος σμύρνης.

The Jews, like the Greeks and the Romans, consecrated their meals with the ἱεράκας, or blessing (I E S, col. 266). The sacrificial feast at the high place of the city in 1 S 9th was delayed until the coming of Samuel to 'bless the sacrifice.' This is the earliest example of grace before meat. On the occasion of the reception of the Jewish scholars in Egypt by Ptolemy Philadelphia (285-247 B.C.), it is recorded in a letter of pseudo-Aristaeus (c. 200 B.C.) that Elisha the priest, one of the deacons, was asked what God had said; and when he said that he had said it standing. Josephus says of the Essenes:

'A priest says grace before meat, and it is unlawful for any one to taste of the food before grace be said (ἐν αὐτῷ τῷ ἑορτασμῷ). The same priest, when he hath said grace, says grace again after meat; and when they begin, and when they end, they praise God, as he that bestows their food upon them' (Ant. v. viii. 2).

The treatise Ἱεράκας proves that this custom was established by the end of the 2nd cent. A.D. Women, slaves, and children were to say grace, though they were free from other religious duties.

The blessing of the bread reads:

'Blessed art Thou, O Lord our God, King of the Universe, who created the fruit of the vine.'

Among the forms of grace after meat is:

'Blessed be the Lord our God, the God of Israel, the God of hosts, enthroned upon the Cherubim, for the food which we have eaten today.'</n
The INT witnesses to the grace before meat. Our Lord in the miracle of the Feeding of the Five Thousand blessed the loaves and fishes: ἐπίτευξαν ταῦτα καὶ ἐξήραν (Mt 16:9; Lk 9:8). In the miracle of the four (KJV 1904) 4500: ἐκείνων τῶν ἐξήραν (Mt 15:38, Mk 8:8). St. John (8:11) uses the latter term, ἐξήρανσαν. Paul refers to the practice of grace, and states clearly its spiritual meaning:

'Meals, which God created to be received with thanksgiving (ὑπὸ τῆς χαρᾶς τοῦ θεοῦ) and to glorify Him (ὑπὸ τῆς τιμής τοῦ θεοῦ) if anyone serves God with joy in his heart (ὑπὸ τῆς χαρᾶς τοῦ θεοῦ) through the word of God and prayer' (1 T 4:4).

The earliest witnesses to the practice in the 2nd cent. are Clement of Alexandria and Tertullian. Clement, in his Paedagogus (c. A.D. 150), referring to the matter of feast, says:

'It is meet before we partake of food to bless (ἐν τῷ οἴκῳ) the maker of all things and the doer of all things (ὁ θεός τοῦ παρθένου) when drinking' (βούκα). In the Stromateis (c. 200-202) he speaks of prayers and praises (ἐχαίρει παρά τινας), and readings (ἀναγίγνεται τῷ θεῷ) before eating; and praises and hymns (χαίρεται παρά τινας) afterwards (vii. 7). Tertullian, in his Apologeticum, ch. 39 (A.D. 197), refers to prayer before and after meals:

'Now prisci dissimulabunt asperum ad asperam praesagium.

'Aspri ara civitatis divinitus.'
GRACE AT MEALS

And both Tertullian and St. Cyprian witness to the use of the sign of the cross on such occasions. Tertullian, in his treatise de Corsiva (c. 211), writes: "The Western practice appears in two monastic rules. One Rule of St. Benedict says: "Ad mensam siue, ante verum non occurreret, ut simul omnes discerent verum et crearet ..." Simonsae postfactum fuerit, postea persens, qui post eum dictum (c. 48). And St. Columbanus says: "It is the custom in our monasteries for the abbot to give the first blessing, and for the novice to give the second blessing, and for the novices then to give the third blessing, and for the abbot to give the fourth blessing, and for the novice to give the fifth blessing, and for the abbot to give the sixth blessing, and for the novice to give the seventh blessing."

The earliest Western formulary is in the Gelasian Sacramentary (7th cent.). There are six orations ante cibum, and two orations post cibum. The first reads: "Benedicat Dominum, donum tui, et splendor tuus largütur suavitatem. Per tuo."
The fourth reads: "Dona nobis, Domine, dona tua, quae de tua largitati summae-septum. Per tuo."
The sixth reads: "Dona nobis, Domine, dona tua, quae de tua largitati summae-septum. Per tuo."

This later form appears also in the Leofric Missal A of the first half of the 10th century. The second form is: "Post cibos" reads: "Benedicite Domino, donum tuum sit delectatio nostrorum, etSplendor tuus larguatur suavitatem."

The Benedicto ad mensam is similar to the fourth in the Gelasian Sacramentary: "Benedictus nobis, Dominum, dona tua, quae de tua largitati summae-septum, quae vivit et regnat."

The Benedicto post mensam levatam is the first example of the manner of the benefactors in the grace: "Dona nobis, Domine, componas, sancta Deum, qui nos de tuo dono donare dignatus es, per tua planum."

The use of grace at meals is fully given in the customs of St. Augustine’s, Canterbury, and St. Peter’s, Westminster. The shorter form occurs in reference to the meal of the Lord and the four Servitors: "Dictum sanctum et sacrum sub nomen 'Benedicite' et: "Dona nobis, Domine, dona tua, quae de tua largitati summae-septum, quae vivit et regnat."

The full form of grace was used at the common meal in the refectory: "Et non omnino in ordine: 'Dona nobis, Dominum, dona tua, quae de tua largitati summae-septum, quae vivit et regnat.'"
GREECO-EGYPTIAN RELIGION

"Asa cossin.—Omnipotens et omnipotens, Deus, a quo  
nulla est dulce nihil odoriferum, misericordiam Tuam humili  
qui corporis nosse is, quia supremum est; nostram beneficium; ut corda  
nestes exhilarare; ut quae sustinui sumus alimenta, Tu  
hostes. Deo beneficium accepimus a te; per Christum  
Domini nostri."  

"Asa cossin.—Omnipotens et omnipotens, Deus, optima maxima,  
éto pospiusa absque refectis, agimus Tibi gratias, quantae  
possimae maximae; quaeque praeceperit, ut animas nostras  
recipiat; utnonnulla maxima beneficia; ut quae sumi Tibi  
plecturae perfecte intelligamus, diligenter medici-  
mus, ut ad praestanda dona impetus humani; per Christum  
Domini nostri".

The first of these, but for the et between omnis-  
potens et omnipotens, has the liturgical stomp in  
sits rhythm and its language. The second is prob-  able of later date; the language is academic, and  
the Deus optima maxima is not liturgical. Wickham  
Leigh says that these two graces stand almost alone  
(Off. Hist. Soc., vol. lili. [1860]), "Brazenose Quater-  
centenary Monograph", p. 211 f.).

There is reference to the grace in a roll describ-  
ing the feast at the enthronization of George  

Before the feast, as the minister of the Church did after  
the old custom, in syzygy of some proper or godly Caroll.  
After the feast, and before the ale and wine are brought in;  
all the Church must say grace, and by joining do syzigy  
(Ireland's Collectanea, ed. Hearne. Lond. 1774, vol. vi.  
p. 192).

The French language has preserved the old  
name bénédiction for 'grace.' To say grace is dire 
la bénédiction, or dire ses graces. The English phrase  
'Thank you' seems a reminiscence of the Jube, 
donne, beneficier of the Church. The Italian has 
benedizione della tavola, the Spanish 
beneficio la mesa.

The English grace at meals in common use is  
this:

Before meals:—For what we are about to receive the Lord  
make us truly thankful, for Christ's sake. Amen.
After meals:—For what we have received the Lord make 
as an offering of sacrifice to God. Amen.

The grace before meals has an echo of the  
'sumus sumpturis.' of the fourth form in the 
Galssen Sacramentary.

Another English grace also used in England is  
this:

Before meals:—Bless, O Lord, these gifts to our use, 
and our service of the same. Amen.
After meals:—For all and His mercies, God's holy 
same be praised, for Christ's sake. Amen.

A short Latin grace also used in England is  
this:

Before meals:—Benedictus benedictis, per Jesum Christum 
After meals:—Benedicitio benediciatib, per Jesum Christum 

French and English Roman Catholics have the  
following form:

Before meals:—Dieu, benedicte. Amen.
After meals:—Priez Dieu. Amen.

The old College grace among English Roman 
Catholics is much the same:

Before meals:—Benedicte Dominus, nos et hae deae 
sumus sumpturis per Christum Dominum nostri. Amen.
After meals:—Agimus tibi gratias, omnipotens Deus, 
pro univerbe beneficium tuis, qui vivi et regnas in secula seculorum. Amen.

The appearance in English in the following forms of  
grace:

Before meals:—Bless us, O Lord, and these thy gifts, which  
we are about to receive of thy bounty, through Christ our  
Lord. Amen.
After meals:—We give thee thanks, Almighty God, for all  
your benefits, who livest and reignest world without end. Amen.

The Graces of the Seventeenth or Godly Caroll.

It used to be regarded as the duty of the head  
of the house to say grace at his own table, as  
is indicated by a document in the Records of  
the Borough of York, 18th August 1712,  
where he omens the false modesty of the 
English gentleman:

"Our English modesty makes us shamed in all the  
Exercises of Piety and Devotion. This Humour prevails  
upon us daily; insomuch, that at many well-bred Tables, the Master of  
The House is so very Modest a Man, that he has not the  
Confidence to say Grace at his own Table: A Custom which is  
not only practiced by all the Nations about Egypt, being  
conquered by the Persian themselves. English Gentlemen who  
travel to Roman Catholic Countries, are surpris-  
ted to meet with People of the best Quality knowing  
in their Churches, and engaged in their private Devotions, tho'  
it is not at the House of Publick Worship. An Officer of the  
Army, or a Man of War and Pleasure in those countries,  
would be afraid of passing not only for his Meat be not in  
bred Man, should he be seen to go to Bed, or sit down at Table,  
without offering up his Devotions on such occasions.'

At a public dinner, the Chaplain or the Reector  
or Vicar of the parish, or some other clergyman,  
is called upon to say grace. This is also an old  
custom in some private houses. There is also  
the custom of the younger children saying grace  
on behalf of the family. Is it in reference to  
our Lord's words: 'Ye, have ye never read, Out  
of the mouth of babes and sucklings thou hast perfec- 
ted praise' (Mt 21:16)?

The metrical graces in general use in schools  
were written by John Cennick, a friend of the  
Weleys. They were first published in 1741 in  
His Sacred Hymns for the Children of God, in the  
Days of their Pilgrimage (London, 1741, p. 198).

Hymn cxcx. Before Meal:—

Before present at our Table, Lord;
Be HERE our silent prayer;
Thy Creatures bless, and grant that we
May feast in Falmouth with Thee.

Hymn cxxxi. After Meal:—

We bless Thee, Lord, for this our Food;
But more for Jesus' Flesh and Blood;
The Means to our Spirit's giv'n;
The Living Bread sent down from heav'n.

There are four more lines in this latter grace,  
but they have not come into use. The Eucharistic  
character of Cennick's Grace after Meat is lost in  
the version published in Bickersteth's Christian  
Pestimony (c. 1833). This more modern form  
reads:

We thank Thee, Lord, for this our food,
But bless Thee more for Jesus' blood;
May Benners to our souls be given,
The Bread of life sent down from heav'n.

These metrical graces in their original form  
breathe in every line the inspiration of the Bene-
dictions of the old Service Books of the Western  
Church.

GREECO-EGYPTIAN RELIGION.—II. Introductory.—The Macedonian conquest of Egypt is,  
for practical purposes, the starting-point for any  
account of Greeko-Egyptian religion. Before that  
time there had been little, if any, interchange of  
religious ideas between the two countries; such  
knowledge as the Greeks possessed of Egyptian  
gods and worship was of the most superficial  
nature, while there is no evidence, and no likeli- 
hood, that the Egyptians cared to make any inquiry  
as to Greek theology. There had been a commercial  
intercourse across the Levant which, so far as can  
be judged from archaeological finds, extended back  
to the period of the earliest Egyptian dynasties;  
and at least four centuries before the time of  
Alexander the Great a factory for Greek merchants  
didly established at the mouth of the Nile. But  
those who sojourned at Naukratis, though they doubtless reported to their friends in  
Greece such information as they were able to  
collect about the customs of the strange country.
which they had been privileged to enter, would have little chance of learning more of its religion than could be gathered from observation of the nations, and in the external details as the forms in which the gods were represented or the manner in which the festivals were conducted. A certain number of Greeks penetrated further into the interior, and were more closely united as the army; but it could hardly be expected that these soldiers of fortune would furnish any reliable account of the mysteries of their own temples. Even after the Persian conquest of Egypt, when the valley of the Nile became more open to foreigners, a Greek traveller with some pretensions to training in the collection of facts was unable to add to the existing stock of information on Egyptian religion anything more than what filtered to him through guides and interpreters; and, if a Greek student actually went to live in Egypt, in order to learn something of the wisdom of the Egyptians, his lessons would appear to have been confined to secular science. Neither Herodotus nor Plato displays any kind of acquaintance with the philosophy of Egyptian religion.

While the Greek visitors to Egypt gathered little knowledge of the Egyptian gods, they did not appear to have taken any interest in the Greek gods whom they might have studied at Nankratis. There were, in the Greek quarter of that town, a number of temples; if there existed a strong by the Greeks of the Egyptian religion, the temple of Zeus at Nankratis, is not recorded to have been visited by any visitor, nor is there any evidence of the existence of a Greek temple at Nankratis. The picture given by the Greek writers is that of a temple of Zeus, with a statue of the god inside, and a statue of the goddess outside.

It is true that a few sporadic instances are recorded in which a member of one nation would appeal to the Greek gods, either out of a desire to be recognised by the other. The Egyptian priests, on the other hand, were probably nothing loth to adopt these new followers of their gods. It was no more alien to the Egyptian than to the Greek religion to identify one of their own deities with a foreigner. Indeed, the Egyptian theology was already a fusion of many systems, drawn from all the nations which had occupied or influenced Egypt through their history. From time to time fresh gods had been introduced, only to be absorbed into the general medley of Egyptian religion; and the various rites and results of the power of the priests had tended to increase the complexity. When the priest held a commanding position in the country, it was all to their advantage to multiply the number of gods and assure fresh endowments for their new creations; when an unsympathetic ruler crushed them and took away their property, they amalgamated gods so that one worship could be supported by the revenues which were no longer adequate for two. It was a small matter to add a fresh set of identifications to those which had been formulated in the past. And the adhesion of members of the conquering race would be welcome to the Egyptian priests, not only on account of the material value of their support, but also as a guarantee that the native religion would receive recognition from the new rulers.

The general result of these tendencies was to produce throughout Egypt a popular acceptance of native gods as the equivalents of Greek ones,
with a crude and imperfect fusion of religious ideas, which formed one, though not the most essentially important, element in Greco-Egyptian religion.

At one point, however, the circumstances were in every way different—at Alexandria. The old temples of the Egyptian village of Rakotis might have been adequate for the religious needs of the new city, and fresh provision for worship was therefore necessary. The Egyptian population of the city would have been sufficient to maintain a cult of a distinctly Hellenic character; but it was drawn from sources too diverse to furnish a preponderating element in favour of any particular Egyptian deity. At the same time, there was too strong an intellectual element in Alexandria to permit of the crude equations which passed muster in the country being accepted for the capital. Above all, this was the residence of the King, who had to solve the problem of governing his mixed races of subjects without doing violence to the ideas of either Greek or Egyptian—so it Hellenic improvements into the immemorial polity of the Pharaohs—and not the least difficult item in this problem was the religious question. Practically, it was imperative that a presiding deity for the new city and an official cult for the new dynasty should be found of a character which would be acceptable alike to Greeks and to Egyptians. Of the three gods of the first Ptolemaic dynasty, Ptolemy and his advisers were equal to the task: an effective solution was reached in the invention of a new and a new religion.

2. The triad of Alexandria.—(1) Sarapis. The origin of the worship of Sarapis has been traced by different writers to various lands; and possibly even so. The description is, in some measure, matter of fact, Sarapis came into theological existence at Alexandria in an altogether unusual manner: he was virtually the result of the in some. He was the god of the philosophers who collected from all sources and fused together whatever ideas or attributes would be of service for their new conception; and the success which attended their work is shown not only by the wide acceptance of the divinity whom they formed, but by the difficulty which subsequent students have experienced in discovering the origin of either Greek or Egyptian traditions.

The type under which Sarapis is represented is distinc- tively Hellenic; and there is no reason to doubt the statement of ancient historians that the god stood in the temple at Alexandria, which determined this type, and is well known from many copies, was imported from Sicily, and was originally a Babylonian worship. The statue of this Sarapis, made by Bryaxis, was more as to the source from which the name of Sarapis was derived; probably it is not Egyptian, and it has been traced, on fairly strong evidence, to a Babylonian origin. It is not necessary to suppose that it came, with the statue, from Sicily; the name, at any rate, would be learnt at Babylon by Ptolemy and his companions, and the statue certainly did not represent a Babylon- a god, and would not have been thought by Ptolemy to do so. Ptolemy’s committee may well have selected the Babylonian form and the Egyptian as suitable elements for their new eclectic divinity, without the existence of any previous connexion between the two. Some of their reasons for the choice may be found. Though the name of Sarapis was not Egyptian, it had a superficial resemblance to Osiris, the Greek form of the name under which the dead Apis-bull was worshiped. 1

1 There may also have been a temple of Osiris at Rakotis; a early Ptolemaic religious handbook (Cairene Catalogue, Demost. Pappus,” no. 2160) mentions the House of Osiris. The name of Rakotis itself may have suggested a link in the chain of connection, as Eusebius identifies the Rakotis of a Cairo inscription (Cairene Catalogue, Demost. Inscrift., no. 2160) with the house of Osiris.

2 Ptolemy, 44 B.C., Art.), Sarapis;” further articles in Elio, 1921 (1200) 120 and by E. Schmitt (cf. 1921 (1217). 2

3 Artelis, A., Elio (1921) 22.

4 OTG III, 695.

5 A description of the work on the site of the temple at Alexandria is given by U. Bolt, D. epos de sertiz ecole de le Sarapis, Alexandria, 1850; additional details in Ad. 1854, 60.
trusted, the temple itself was of Greek architectural style; 1 and with this the scanty remains found on the spot agree. Besides the actual shrine, there must have been a great mass of other edifices around it, which served for secular purposes, such as the library and the archives, though included under the general name of the Sarapeion. 2

The records of the worship have vanished with the waste and the interesting discovery was made on the site, in the form of a statue of an Apis-bull dedicated to Sarapis in the reign of Hadrian, 3 which shows that the connexion of ideas which had originally arisen from the similarity of the names of Sarapis and Osiris still persisted. At Memphis, a second great centre of the cult of Sarapis, there was an Apis-element even more marked, as was only natural in the home of the worship of Apis; by the side of the funerary temple of the bulls there arose a Greek Sarapeum, which seems to have been the chief in a considerable group of religious or semi-religious buildings, and to which the older shrines, such as those of Apis and Ptah, became subordinated. In this case, also, excavation of the site has provided little evidence of the nature of the temple or of the worship; the architectural remains are of a very obscure character, and the minor objects found have little connexion with Sarapis. Papyri show, however, that the place harboured, besides the priests of the temples, a number of recluses, and provided an industry in dream-interpretation, the widespread interest of which in the interpretation of dreams was discovered. 4 The cult of the sacred bull, however, lasted on until Roman times, or at least, with the name of Osiris, or Osportalis, occurs regularly in demotics, and occasionally in Greek, documents. 5 At the third great temple, that of Abydos, it was not Apis, but Osiris, that seems to have had almost become a Greek translation of Osiris. Thus the stele placed over the graves in the great cemetery of Abydos, which were commonly decorated with the image of the dead man in the lower world, according to Egyptian tradition, when inscribed in hieroglyphics or demotics are addressed to Osiris, when in Greek to Sarapis. 6 Perhaps the clearest instance of the equation is to be found in a bilingual inscription, where not only the name of Osiris in the Egyptian round is given, which corresponds with Osiris in the Greek, but the name of a man Pseuseres is translated as Sarapion. 7

On the Egyptian side, therefore, it may be taken that the worship of Sarapis to a certain extent absorbed or associated with that of Osiris and of Apis; and at the same time from the Greek point of view he was identified with several Hellenic gods. As the supreme deity of Alexandrian theology, he naturally took the place of Zeus; and the compound title of Zeus-Sarapis is a common one. This equation again rested on Egyptian connexions, and through the old form of Zeus Ammon brought in the attributes of Amen-Ra from native traditions. Amen-Ra being a sun-god, Zeus Ammon Sarapis was further united with Helios—a union which was probably strengthened by the solar elements in the worship of Osiris and Apis. The traditional association of the type-statue of Sarapis linked him with Hades; and in this again the Osiris idea would be another point of contact. In view of the worship of Osiris, finally, to emphasize the universal nature of his domain, over sea as well as over land, sky, and the lower world, Sarapis assumed the attributes of Poseidon. Assertions of these identifications are to be found not only in inscriptions bearing such titles as Zeus Helios Sarapis, 8 or, carrying translation further into the Roman world, as Jupiter Neptunus Sarapis; or in types such as that found on Alexandrian coins, where Sarapis wields the horn of Ammon and the radiated diadem of Helios and carries the trident of Poseidon, to which attributes are added the staff of Asklepios and the cornucopia of Nilus; 9 but, in the more emphatic statements of a graffiti, as Zeus Apollon Sarapis, Zeus Apollon Baal, and of the emperor Julian, as Zeus, as Άσκληπιος, as Πόσειδος. 10

There are two facts which appear to point to a marked individuality in the worship of Sarapis. Although he is addressed by compound names, it is very rare to find a distinctive epithet attached to them. Practically the only special title which is given to Sarapis is that of Iason, which occurs in inscriptions at Xois 11 and Koptos, 12 and may be due to his identification with Zeus. This title recalls the manner of Zeus Julianus of him by his name of Iasios, 13 and which he assumed in Alexandria. There is hardly any variation in the form under which he is represented; usually he appears in the type which is accepted as that of his statues at Alexandria, bearing a high crown, wearing on his head the modius, resting his left hand on a sceptre, and extending his right over a three-headed Kerberos before his feet; more rarely he is shown standing with the palm of the hand on his hip. The only remarkable type, in addition to the compound one noted above, is one which is found on Alexandrian coins of the 2nd cent. A.D., and was also used on seal-rings, where a serpent is shown with the head of Sarapis, sometimes associated with a second serpent with the head of Isis. 14 The popularity of this type might be due to the connection of Sarapis with Gnostic influence; in origin it may be a reminiscence of the sacred serpent of Re, or of the representations of some of the infernal deities as they appear in the royal tombs of the New Kingdom.

The widespread popularity of the worship of Sarapis may be deduced from records of many kinds. The official importance of his temple at Alexandria, as practically the centre of the State-religion, made it the home of the great library and the depository of the archives; and the consecration of this temple was an honour accepted by Romans of high rank. 15 A more interesting light on his position in the minds of the people generally is thrown by the papyri from Oxyrhynchus, in which are found invitations to banquet at Sarapeion, or elsewhere, 16 with which may be compared the statement of Aristides, that the men make Sarapis their companion at feasts and name him as guest and host; 17 the idea of banquet.

3 The 'Serapeum-papyrus' is discussed by W. Otto, Praktorn u. Text, vol. i. 115. For some of the papyri in question is given in ibid. 119. See also H. Ricke, Die koptischen Mysterienreligionen, Leipzig, 1910, p. 71 f.
4 Codex Catalogus, 'Greek Sculpture,' no. 2767.
5 Examples in demotic are Codex Catalogus, 'Demotic. Demotic,' nos. 1179, 1180, 1181. See p. 1179. The iconography of Osiris is given in nos. 2908-11. Similar stele are found in other connexion with the names of Abydos, as in the case of the statue of the demotic and Sanchatt; but Abydos is the home of the type.
6 Cf. III. 2128.
7 E.g. Ammon brought in the attributes of Amen-Ra from native traditions. Amen-Ra being a sun-god, Zeus Ammon Sarapis was further united with Helios—a union which was probably strengthened by the solar elements in the worship of Osiris and Apis. The traditional association of the type-statue of Sarapis linked him with Hades; and in this again the Osiris idea would be another point of contact. In view of the worship of Osiris, finally, to emphasize the universal nature of his domain, over sea as well as over land, sky, and the lower world, Sarapis assumed the attributes of Poseidon. Assertions of these identifications are to be found not only in inscriptions bearing such titles as Zeus Helios Sarapis, or, carrying translation further into the Roman world, as Jupiter Neptunus Sarapis; or in types such as that found on Alexandrian coins, where Sarapis wields the horn of Ammon and the radiated diadem of Helios and carries the trident of Poseidon, to which attributes are added the staff of Asklepios and the cornucopia of Nilus; but, in the more emphatic statements of a graffiti, as Zeus Apollon Sarapis, Zeus Apollon Baal, and of the emperor Julian, as Zeus, as Άσκληπιος, as Πόσειδος, as Ηλιός ὕπερ Σαραπίου. 8 There are two facts which appear to point to a marked individuality in the worship of Sarapis. Although he is addressed by compound names, it is very rare to find a distinctive epithet attached to them. Practically the only special title which is given to Sarapis is that of Iason, which occurs in inscriptions at Xois and Koptos, and may be due to his identification with Zeus. This title recalls the manner of Zeus Julianus of him by his name of Iasios, and which he assumed in Alexandria. There is hardly any variation in the form under which he is represented; usually he appears in the type which is accepted as that of his statues at Alexandria, bearing a high crown, wearing on his head the modius, resting his left hand on a sceptre, and extending his right over a three-headed Kerberos before his feet; more rarely he is shown standing with the palm of the hand on his hip. The only remarkable type, in addition to the compound one noted above, is one which is found on Alexandrian coins of the 2nd cent. A.D., and was also used on seal-rings, where a serpent is shown with the head of Sarapis, sometimes associated with a second serpent with the head of Isis. The popularity of this type might be due to the connection of Sarapis with Gnostic influence; in origin it may be a reminiscence of the sacred serpent of Re, or of the representations of some of the infernal deities as they appear in the royal tombs of the New Kingdom.
8 The widespread popularity of the worship of Sarapis may be deduced from records of many kinds. The official importance of his temple at Alexandria, as practically the centre of the State-religion, made it the home of the great library and the depository of the archives; and the consecration of this temple was an honour accepted by Romans of high rank. A more interesting light on his position in the minds of the people generally is thrown by the papyri from Oxyrhynchus, in which are found invitations to banquet at Sarapeion or elsewhere, with which may be compared the statement of Aristides, that the men make Sarapis their companion at feasts and name him as guest and host; the idea of banquet.
GREECO-EGYPTIAN RELIGION

ing with the gods has a Homeric flavour, which may be explained by the fact that the Greek-speaking population of Egypt was thoroughly soaked in Homer. Another proof of the importance of Sarapis may be found in the frequency with which his image was used as a device on signboards; passing the seals of witnessing documents of Oxyrhynchus show six instances of figures of Sarapis out of a total of thirty-five signets, and in a collection of one hundred and ten types of sealing found at Karanis in the Fayyum, twenty-two bear representations of him; in each case, the only god who occurs nearly so frequently, is Herakle. Perhaps the most noteworthy evidence, however, is given by private letters; if the writer expressed a prayer for the welfare of a friend, it was almost invariably addressed to Zeus, but other gods are found only in sporadic instances.

But, despite these constant invocations of Sarapis, and despite the statements of Aristides, it may be doubted whether this deity was really regarded either by Egyptian or by Greek as one who took an intimate part in human affairs. To the multi-
titude, he was probably the official supreme ruler of the universe, to whom prayers might be addressed and offerings made; but he was not a domestic god, in the sense of one whose image would be placed in a household as its immediate protector. Statuettes of Sarapis in terracotta or bronze—the cheapest material available in Egypt, and therefore commonly used for the production of representations of gods for the masses of the people—are comparatively rare; in this respect he did not inherit the position of Osiris, bronze figures of whom, in all degrees of workmanship, from the very crudest to the most refined, are found in profusion among the remains of the period of the New Empire. He might be equated by theologians with Osiris and with Aphis; but the former, as Harpokrates, and the latter, as Serapis, were unlike possessed connexions with the visible world from which Sarapis was far removed. And it would appear that the real importance of the worship of Sarapis was due to the express sanction of the State, and that it was mainly followed in the great temples without exercising much practical influence on the daily life of the people.

(2) Isis.—In accordance with the religious ideas of Greeks and Egyptians alike, Sarapis had to be supplied with a consort; and for this purpose the chief of the goddesses of the Theben gods was chosen. To some extent, no doubt, their selection was guided by the fact that Isis was associated with Osiris as his wife by native Egyptian theology; but there were more important considerations than this. Probably the determining factor was the extent to which the worship of Isis has absorbed or overshadowed that of other female deities during the New Kingdom period; and a further reason for her selection may be found in her identification by Greek writers with Demeter,* which gave her a connection with a very popular Greek divinity. But the Alexandrian conception of Isis developed on very different lines from that of Sarapis. There is, of course, in her case no need for a fresh definition of power; she was sufficiently well known throughout the land of Egypt, and her temples existed everywhere. She accordingly remains far more distinctively Egyptian than Sarapis; her equation with Demeter had practically no influence on her cult, and the Greek attributes and Greek ideas which were attached to the worship of Sarapis find no parallel in that of Isis.

The most famous centre of the worship of Isis was at Philae, where extensive buildings dedicated to her and the gods connected with her, and erected almost entirely in Ptolemaic and early Roman times, are still extant; and this was one of the last strongholds of the old religion unsoaked by Christianity. As late as the middle of the 5th cent. A.D. devotees still visited the shrine, yet the importance of the goddess is more definitely shown by the fact that she was enshrined in a special clause in a treaty between the Roman emperor and the barbarian Nabatae, whereby the latter secured access to Philae at stated times for purposes of worship of Isis. These temples must have possessed extensive property and revenue; the whole of the land bordering on the first cataract seems for a time to have been donated and the income derived from the customs levied on goods passing the Egyptian frontier at Syene, while the priests collected offerings of flowers at Philae, at least as far away as Thebes. At the other end of Egypt, there seem to have been several temples of Isis at Alexandria and in the vicinity; probably her chief importance there, apart from her association with Sarapis, lay in her position as protecting deity of the Pharos, which brought her the homage of the sailors and others connected with the port. It is noteworthy that one temple of Isis represented on Alexandrian coins is of Egyptian style, whereas all the other religious buildings which appear in the coin-types of Egypt show the influence of Egypt. Elsewhere in the Nile valley references to temples or shrines of Isis are numerous; but everywhere these temples, so far as can be judged, might be classed as secondary to those of the chief local divinities or of Sarapis. For instance, the temple of Isis at Tentyra, which was rebuilt under the Ptolemies and Augustus, is overshadowed by the neighbouring temple of Hothor-Aphrodite at Oxyrhynchus the Iasion, which is mentioned on papyri, was assigned only one guard, as compared with seven for the temple of Amon at Philae. The temple of Sarapis; 7 and the frequent allusions to shrines of Isis in the villages of the Fayyum suggest wayside chapels rather than important buildings.

Isis was rarely identified in actual worship with any Greek goddess. It has already been remarked that her equation with Demeter, stated by Herodotus, had little influence on later belief, though it may perhaps be traced in some Alexandrian representations of her. Very occasionally, also, she was assimilated to Aphrodite: this was due to the fact that Harmachis, an Egyptian representative of Aphrodite, had tended in earlier Egyptian theology to become identified with Isis. This is one respect in which the development of the worship of Isis presents a marked contrast to that of Sarapis, and another is in the matter of epithets. While Sarapis, as has been seen, scarcely ever received any special title, Isis was constantly localized by distinctive names.

Thus at Alexandria, she was known as Isis Phariae, Isis Plouta, Isis Samothracia, and Isis of Mesembria; in the temple of Malakas she is mentioned; 14 in the Fayum, Isis Neoclesas 15

deity, whose priests were much in evidence at her many wayside shrines, and who kept themselves before the public for the purpose of raising money, as was rendered necessary by the enormous endowments—in doing which they turned to practical use the traditional knowledge, especially of medicine, of which they were heirs; but that, so far as her personality actually appeared in her outward manifestations, it was in virtue of her position as mother of another god—Harpocrates.

(3) Harpocrates. Harpocrates, who was the deity selected to complete the Alexandrian triad, was, like Isis, distinctly Egyptian in origin; but the lines on which his worship developed were different from those taken in her case, as we see in that of Sarapis. Harpocrates did not, like Sarapis, absorb the powers and functions of other independent deities under one name and type; nor did he, like Isis, become localized by distinctive epithets. Originally he was a special form of Horus; and, starting from this point, he gradually took over not only the name of Horus, but also those of all the other special forms which had been accepted in different districts.

There is no record of any temple in Egypt dedicated primarily to Harpocrates; where he is mentioned in connexion with any temple-worship, it is always in association with other gods, of whom Isis is normally one; for instance, at Philae the group is Isis, Sarapis, and Harpocrates; at Kopios, Isis, Harpocrates, and Pan (Min); in the Fayum, Isis, Sarapis, Harpocrates, and some form of Souchos; although individual priests of Harpocrates occur, and offerings might be made to him alone. It would appear that, to the priests, he was pre-eminent, as his name implied, Horus the child, and was not to be separated from his mother Isis.

The equation of Harpocrates with other forms of Horus involved many ramifications, which illustrate the complexity of later Egyptian religion. Under the New Empire, Amen-Ra, the predominant deity, had supplanted, by a nominal identification, many local gods; thus at Harkoepolis Magna he was regarded as the equivalent of Har-Heh; at Mendes and Heliopolis, of the sacred ram; at Saen, of Sebek, the son ofNeith; at Memphis, of Ptah; at Kopios, of Min; at Thebes, of Montu. And, in his turn, Amen-Ra had been ousted by Horus in almost every place; so that, in the Ptolemaic period, while Sarapis took the name of Ammon from Amen-Ra, Harpocrates, as successor of Horus, secured the local attributes of the gods with whom Amen-Ra had been identified.

Thus at Harkoepolis Magna, where Har-Heh had been translated by the earliest Greek visitors into Heracles, there appeared the compound Heracles-Harpocrates, who is represented on some coins with the club of the Greek hero surmounted by the hawk of Horus, and wearing a lion's skin and a modius. Another Alexandrian coin-type shows Harpocrates accompanied by a ram, which may refer to either the Mendesian or the Heliopolitan form; and terracotta figures of Harpocrates seated on a ram are uncommon. In coins of the Macedonian coinage there is a comparison of Heracles and Harpocrates in the hand and shoulders of Harpocrates placed on the body of a crocodile, derived from the union of Harpocrates and Sebek. Hypothetical statements of Harpocrates, common in terracottas, point to his equation with Min. The type of Harpocrates with the gores, formerly sacred to Amen-Ra at Thebes, shows how he had taken over the attributes of the older god in the centre of his worship. Other special forms of Harpocrates of Memphis, whose emblem is a pomegranate, and Harpocrates of

GRC EO-EYPTN RELIGION

The variety of any record of the worship of Haroprocator in the account of the imagination and habits of the inhabitants of Egypt generally, which is given by the middle period of the later Christian writers, is more than compensated by the evidence as to his popularity among the inhabitants of Egypt, generally, which is given by the middle period of the later Christian writers. The name of Haroprocator, 1 or Haroprocator (Greek, Ἐρμος), 2 a native of Thessaly, was in use from antiquity, and the functions attaching to the second, would readily suggest to a Greek mind an identification with Hermes Psychomanteus; and from this identification a type arose which represented Hermonubis in the form of a Greek god, crowned with a modius, and carrying a palm-branch and a caduceus. 3 This type was almost entirely Greek or Alexandrian, but it was occasionally varied by the introduction of an Egyptian element, the head of Anubis being placed on the human body of Hermes. 4 Another variation was produced by the substitution of a radiated discus for the modius, possibly with some recollection of the solar attributes of Horus derived from the original Egyptian name; 5 this form is the Hellenic Hermonubis, whose character with Zeus and Jupiter is the subject of a note already mentioned. But Hermonubis did not absorb the worship of Anubis; the compound name is rarely found, while invocations, and dedications to Anubis, are fairly frequent; and it was Anubis, not Hermonubis, whose name spread from Alexandria throughout the Roman world, and who was worshipped with Isis and Osiris by Roman devotees.

The equation of Hermes with Anubis, and their union in Hermonubis, did not prevent the further identification of Hermes (or his Syrian equivalent) with other Egyptian deities. The early Greek travellers had regarded Thoth, the god of learning, as the Egyptian equivalent of Hermes, and it would appear that, at any rate as late as 100 B.C., this equation was still current. There is a common confusion between Thoth and Anubis in the Fayum, as in documents from Kerkosaria (Kerkosaria et Epyos) — shrines where Hermes was associated with the sacred ibis of Thoth — are mentioned as distinct from the protectors of the dead. 6 The presence of the same idea is seen in the later Hermesiankis, the special depository of all magical knowledge, 7 and in the magical papyri of the Roman period. Hermes plays an important part in this connexion. It may, however, be noted that his identification with Anubis was remembered here also; the four shapes of Hermes in the short story of heaven are given as ibis, cynocephalus, snake, and wolf; 8 and, while the first two of these are the sacred animals of Thoth, the wolf almost certainly represents the jackal of Anubis.

A further development resulted from the Hermes-Thoth equation. Thoth had been combined, in the local worship of some districts of Egypt, with Khonsu, in virtue of common solar attributes; and, as Khonsu had been identified independently with Herakles, the Egyptian Thoth-Khonsu, or Khonsuth, as the name appears in use for a personal one, became to the Greeks Hermes-Herakles. 9 Such a combination is obviously foreign to the Greek spirit; although the spheres of influence of Hermes and Herakles might touch at one point. In the gymnasia, the two gods could hardly have been fused by any one who regarded them simply from the Greek standpoint. The same idea is traceable in a dedication to Hermes and Anubis, as well as to other gods whose names are lost, with Ammon, the head of the solar group. 10 It may also be noted that, as Elephantine, Hermes was identified with Petennis, 11 and at Pecknis in Nubia with Pantnus; 12 but, as both of these names are purely local titles, as to the commutation of which nothing further is known, it is useless to conjecture the reasons for the identification. The name of Hermopolis Parva in the Delta.

also suggests that there Hermes was regarded as the representative of Horus, the old god of the city.

The case of Hermes is fairly typical of the confusion of names and ideas which arose from the mixture of Greek and Egyptian theology. As has already been seen, the identifications made between these gods by the two nations were based more on grounds of convenience and interest than on any carefully considered principle, and so they might vary locally according to the circumstances of the establishment of each district. It will suffice to summarise more briefly the principal equations which are recorded in the cases of other deities.

(3) Zeus had been identified with Ammon by early Greek travellers in Egypt; both in the Libyan Oasis and at Thebes they became familiar with the god, whose priesthood, though despised in importance, still formed one of the most powerful corporations in the country; and, partly no doubt under the impression produced by this political influence, partly from the natural tendency to equate the god who seemed to be chief of the Egyptian deities with the one who held a corresponding position among the Greeks, Ammon was transformed into Zeus Theosios, to whom early Greek dedications have been found. The type of Zeus wearing a ram's horn as Zeus Ammon is commonly found in Ptolemaic and Roman times, having been popularised by the local legend of the birth of Alexander. In a Latin inscription from a quarry near Thebes, the title is used, in the name Jupiter Ammon Chnumis, the last obtained from the cataract-god Khnum, who had previously been identified with Ammon, and was similarly associated with the ram. Theacular attributes of Amen Ra of Thebes further led to the adoption of the form Zeus Helios in the Theban; and, as has already been seen, both Zeus Helios and Zeus Ammon were united with Sarapis.

(3) Hera, on the other hand, rarely appears in Egypt. Herodorus states that she was one of the Greek deities whose names did not come from Egypt; in other words, there was no Egyptian goddess with whom she was popularly identified. At first cataract, however, she was equated with the local goddess Sais, whose temple seems to have been known to the Greeks as the Heraion. Another Heraion is mentioned in Thebes, which was probably the temple of Nut, the consort of Osiris, and the local god of the district. Hera was considered as the ruler of the world, and would naturally follow that of Amen Ra with Zeus.

(4) Kronos was identified with Geb by the early Greek writers of Egyptian religion; but there is little later evidence in support of this identification, which was probably derived from a comparison of the theology of Heliopolis with that of Homer. There is, however, a stele from Koptos, on which the Greek inscription gives a dedication to Kronos, while the scene above shows the emperor Tiberius making offering to Geb and Nut. At Elephantine, Kronos is called Pataetius, obliquely a purely local name; and at Tebtunis in the Fayum he was equated with Soknebtetis, the local god of Geb, who is known to have been identified elsewhere with Geb.

(5) Apollo, in the system of Herodotus, was the representative of Horus in the identification being dorously based on the fact that both were sungods. In pursuance of this idea, the town of Harhebet became Apollinopolis Magna, and that of Har-ner, Apollinopolis Parva; and to the same cause may be ascribed the great popularity of Apollo as a personal name amongst the Greek-speaking inhabitants of Egypt, just as names derived from various forms of Amen were the commonest amongst those who adhered to the native language. The identification of Apollo with Haroeis occurs at Onouros, Apollinopolis Parva. An early Ptolemaic inscription from Naucratis gives an interesting triad in Sarapis, Isis, and Apollo, in which Apollo seems to take the place of Harpocrates as an equivalent Horus-form.

(6) Artemis was equated with Bast (Bubastis), according to Herodotus; and, as Bast was a cat-deity, Artemis seems to have been taken by analogy as identical with another goddess, Pakhet, who was worshipped in cat-form at the spot known to the Greeks as Spes Artemidio. There are, however, no records on monuments to show that this identification had any practical recognition in actual worship.

(7) Leto is in much the same case; Herodotus states that she had an oracle at Buto in the Delta, which presumably means that she was identified with Una, the tutelary goddess of that town; but there is no further evidence as to this, nor as to her apparent equation with Hethra as presiding deity of the town known to the Greeks as Letopolis.

(8) Athene was perhaps the one of all the Homeric gods as to whose Egyptian origin Greek writers were most certain. The town of Saia in the Delta was declared to be the mother city of Athens, and Athene to be derived from Neith, the goddess of Saia. But, though Athene was certainly worshipped at Saia by the Greeks, it was, so far as any extant evidence shows, under her Greek name alone, and in purely Greek form. At Oxyrhynchus she was identified with the local goddess Theoria (Taureis), in the temple of Nut, and the local temple known as the Theoreion, and references in papyri are, with only one or two exceptions, to Theoria simply. In art, however, it is the Greek type of Athene which is found on coins and signs of Oxyrhynchus; this is doubtless due to the fact that Theoria was a hippopotamus goddess, and the representation of such a type would not appeal to the Greeks.

(9) Ares was another deity for whom the Greeks found an Egyptian equivalent at an early date in Onouros, a warrior-god; but in this case also the identification seems to have been a literary one merely, without any practical effect.

(10) Abydos was much more important in the popular than in the official religion of Graeco-Roman Egypt, so far as extant evidence proves. Statuettes of Abydrides, sometimes of purely
Hellenic type, but more usually showing traces of Egyptian influence, are commonly found; and inventories of property suggest that these statues—usually formed part of a lady’s outfit.²

Hathor, the Egyptian goddess of love, was the natural equivalent of Aphrodite, and at least two towns of Hathor—the modern Atfih and Gebel-n—were associated with Aphrodite in the Greek. As the latter, where Hathor was the consort of Sekhmet, Greek papyri mention priests of Aphrodite and Sekhmet, and they were familiar with the coinage of the Ombos.⁴ At Dendera also, in the chief centre of the Hathor cult, Aphrodite took the place of that goddess, and the Greek dedication of the temple, rebuilt in the early years of Roman rule, is in her name.⁴

(11) Φεια was identified with the ithyphallic Min at Panopolis and Koptos, as appears from the Greek name of the former town and from dedications at both places.¹ The functions of Min as guardian of the desert roads were naturally transferred to Pan, and graffiti addressed to him are found at many points in the desert, scratched on rocks or walls by travellers and hunters, as well as more formal dedications.²

(12) Dionysos, perhaps the best instance of the divergence between literary and popular appearances of gods in Egypt. Herodotus states very elaborately the identification of Dionysus with Osiris,¹ but there is hardly any evidence that Dionysos inherited any part of the worship of Osiris, or took his place in the minds of the Greek-Egyptian population. As a matter of fact, Osiris, from the Alexandrian point of view, was absorbed by Sarapis, as has already been shown, and the only religious records which mention Dionysus in Egypt refer to a purely Greek cult, except in one locality. At the first cataract, Dionysos is equated in inscriptions with Petenemantos,² whose name suggests that he was a chthonic god. (13) Demeter similarly was identified by Herodotus with Isis;¹¹ but the literary identification did not affect popular worship.¹² The position held by Isis in the Alexandrian triad rendered it both unnecessary and unlikely that she should take the name of any Greek deity.

(14) The ptolemaic period was equated with Ptolemaic Period, perhaps in view of the record of the latter as constructor of the universe; and the great temple of Ptolemaic Period at Memphis is referred to in Greek documents as the Heliopolis. But this temple was rapidly declined in importance. Ptolemaic Period was worshipped there as Ptolemaic Period-Sokar-Osiris; and, as Sarapis absorbed the attributes of Osiris, the Sarapis grew at the expense of the Heliopolis. It is therefore not remarkable that Heliopolis, not an important god in Greece itself, plays no part at all in Greek-Egyptian worship. A record of the mixed type is, however, given by a coin of Hadrian, on which the god is shown with Egyptian head-dress and Greek robes, carrying the sceptre of Ptolemaic Period and the tongs of Heliopolis.¹³

(15) Asklepios was provided with an Egyptian equivalent in the deified sage Agathos, whom later generations had claimed as a son of Ptolemaic Period and a god of healing. A chapel dedicated to Imhotep seems to have been attached to his reputed father’s temple at Memphis, and this was called the Asklepieion by the Greeks.³ There was a similar chapel at Philae;² and the upper court of the temple of Hekate at Deir el-Bahri, on the west of Thebes, was transformed in Ptolemaic Period times into a kind of sanatorium, whose walls are scribbled over with invocations of Asklepios in his Greek-Egyptian association.⁴

(16) Hestia was, according to Herodotus, not Egyptian.³ Like Hera, however, whom he placed in the same class, she was equated with one of the cataract-deities—Anukis—of Elephantine,² but the reason for this identification is not clear.

(17) Heraclis shows more variation of form, due to his equation with two distinct Egyptian deities. It has been noticed already that he was identified with the lunar god Khonsu at Hermopolis Magna, and Apollinopolis Magna, and that in this connexion he was united with Hermes.² At Heraclis, however, he was taken to represent the local form of Horus, Har-reshit, and gave his name to the town; and then, by another confusion which has already been mentioned, he was transferred to a second form of Horus—Harpokrates—represented by the nome-coins; and a compound Harakles-Harpokrates is mentioned in a Greek inscription.²

From a survey of the foregoing summary it will be seen that the identification of Greek and Egyptian gods proceeded on the most superficial lines, and was often purely academic. A certain amount of cross influence between the two systems of theology may perhaps be discerned in the case of Zeus-Ammon, Apollo-Haroeris, Athene-Neith, Apollo-Hathor, Hermes-Isis, Pan-Min, Hepsibaoi-Ptolemaic Period, Asklepios-Imhotep, and Heraclis-Khonsu; but the equations of Hera, Kronos, Artemis-Leito, Aris, Dionysus, Demeter, and Hestia with Egyptian deities do not appear to have anything more than nominal so far as the actual worship either by Greeks or by Egyptians was concerned. In fact, the identification was practically a mere matter of convenience; the Greek section of the population, who clearly prided themselves on their Greekness, preferred to address the gods whom they worshipped by familiar Olympian names rather than use the Egyptian titles even in a Hellenized shape, though the latter class of forms occur; and the priestesses of the Egyptian temples met the wishes of the Greek worshippers by the simple process of allowing their own gods to be invoked by the Greek names, which seemed at first sight most suitable. As this process was not based on any general agreement as to the identity of various gods, except in so far as accepted traditions, such as those recorded by Herodotus, were remembered, there arose cross-identifications according to local circumstances.

4. Egyptian gods worshipped by Greeks without equation. There were a few Egyptian gods who had no recognized Greek equivalents, but were nevertheless so far accepted by the Greeks as to require mention in connexion with Greek.

⁷ Some of the coin-types may be intended to represent Demeter, though the meaning of the godesses was not much influenced by popular beliefs; they were rather academic. In this connexion the occurrence of Tripolides on coins may be noted; he is certainly not a person who had any worshippers in this sense.

Egyptian religion. These were such as offered no traits for ready identification with the Homeric gods, but possessed so much popularity among the native population that they received the attention and the worship of the Greeks.

(1) The most noteworthy example of this class of deity is to be found in the case of Bes, who, though he may have been introduced into the Egyptian pantheon at a fairly early period, did not attain a position of any importance until the time of the New Kingdom. Even then he does not seem to have received any official appointment, as would be expected by the dedication of a temple to him; but he was a prominent figure in popular magic. Similarly Geb, an earlier person of the Graeco-Roman period, Bes is not mentioned in religious inscriptions or represented on the walls of temples; but he must have been widely worshipped among the references to Geb which occur in the Fayum papyri, they are common, and bronze figures are not infrequent. Later, with the recrudescence of magic, he grew in importance, and even seems to have ousted Sethos from the chief place in the temple of Abydos, where an oracle of Bes was established and flourished till its suppression in the reign of Cleopatra. The headage to date the existence of the walls of the temple beside the earlier inscriptions to Osiris and Sarapis. At Memphis also Bes seems to have obtained a footing in the Sarapeion in Roman times, as a room has been found there decorated with figures of him and his worshippers. The graffiti of Abydos and magical papyri suggest that the oracles of Bes were given through dreams, and this may have smoothed his way into the Sarapeion of Memphis, where there was an old-established system of incubatory divination.

(2) The crocodile-god Sebek was also usually worshipped without exception to any Greek deity, at any rate in his chief seat, the Fayum. At Ombos he had been previously identified by the Egyptians with the crocodile of the Nile. He was a child of Sethos and a son of Geb with Kronos by the Greeks involved that of Sebek with Kronos, which is found at one spot in the Fayum—at Tebtunis. In the great majority of the references to Sebek which occur in the Fayum papyri, however, there is not trace of any Greek connexion; and the representations of him in the Graeco-Roman period are always in pure animal form. There was no lack of Greek settlers in the Fayum, but they seem to have been perfectly content to offer their homage to this god in his Egyptian form, only softening his name to Soutches. How closely associated his worship might be with Hellenic ideas is shown by two late Ptolemaic dedications to him, probably from Crocodilopolis-Arinoth, which were set up to mark the enclosures appropriated to schools of ichthyophagi of certain years. The temple of Sebek at Arinoth was the chief one of the nome, and in its precincts was a lake where the sacred crocodiles, his embodiment, were kept, and worshipped, providing one of the regular sights for tourists; and there were numerous other temples or colleges of priests of Sebek in the surrounding villages, such as Echmebeth, Naba, Tebtunis, and Kerkeosiris. Moreover, he was worshipped in many local forms in villages. Thus at Sopheneop Bisau there was a great temple of Sobastos—Sebek, lord of the island—in which he was associated with Isis-Nereus; the papyri from this town have furnished many references to his priests and his cults, while inscriptions record grants of corn by Ptolemaic officials and also sacred areas by a Roman prefect; he is represented as a crocodile with a fish's head, and which, shows him to have been connected with Horus, as in Upper Egypt Sebek had formerly been united with Horus in the more ancient town of Dakake. There there was a second, apparently subordinate, form of Sebek worshipped as Sokoptis or Sokopionis. Sokoptuwas was supposed to be the local type of Sebek, which he is called as Crocodilopolis-Arinoth, or Arinoth as Sokoptuwas. At Karasin, where the temple has been excavated, and has yielded building dedications under a late Ptolemy, Nero, Vespasian, and Commodus, Sebek was known as Petoscrus, a name found also at Kerkeosiris and possibly applied to the god at his chief temple at Arinoth. The crocodile-god might also be addressed by other titles than that of Sebek or compound of it; for instance, Phemsebi or Phemosebi is described as belonging to this group, and similarly Pepeus of Karasin and Petoscrus, and the catalogue of his local names does not throw light on his worship.

(3) The position of Sebek as regards the Greeks may be paralleled by that of the hippopotamus-goddess Taurt. As has been mentioned above, this goddess was nominally identified with the Greek Athene; but in actual practice she seems to have been worshipped independently. No Greek would be likely to associate them with a hippopotamus; and, if it seemed advantageous to them to pay homage to Taurt, he addressed her as Thescius.

It is very doubtful, however, whether in such cases as those of Bes, Sebek, and Taurt there was any influence exercised on the Egyptian worship by the Greek worshippers which would produce a result described as Graeco-Egyptian. The utmost that can be traced is in the modification of the Egyptian names to suit the Greek; and a similar modification, in rarer examples, is cited in regard to a considerable number of purely Egyptian deities which happen to be mentioned in Greek documents.

5. The decay of the Greek element.—The attempt of the earlier Ptolemies to plant a new State-religion in Egypt, like their attempt to Hellenise the country, was doomed to failure; the imported elements in the gods and in the human population were alike absorbed and disappeared. By the 3rd cent. A.D. the descendants of the Greek colonists, except perhaps in Alexandria, had become practically indistinguishable from the mass of the natives of Egyptian race, and in the same way the old Egyptian deities had reasserted their position, and had obliterated the Greek equivalents who formerly shared their worship.

(1) The clearest illustration of the recrudescence of native religious ideas may be found in the case of Osiris. He should, under the Ptolemaic system, have been entirely supplanted by Sarapis. But, as has already been seen, at Abydos, Osiris held his ground, at any rate amongst the Egyptian-speaking part of the population, and apparently his worship was so far recognised that Strabo records him as the god of Abydos; his name appears in demotic inscriptions as the equivalent of that of Sarapis in Greek; occasionally even Greek inscriptions of homage on the temple-walls are addressed to him instead of to Sarapis. There are other indications that he was sometimes treated by the Greeks as distinct from Sarapis; thus a Ptolemaic
GRAIL

alter is dedicated to Osiris with Sarapis, Isis, and Apis. Oxyrhynchus in Roman times there was an Osirion as well as a Sarapion, and a priestly college served Thoeris, Isis, Sarapis, and Osiris with other gods; and a late Ptolemaic inscription found in the Paphos area shows that an Osirion existed there also. About the end of the 1st cent. A.D., however, Osiris appears to be recovering the honors taken from him by Sarapis; for instance, the old Egyptian wrangles of enmity to Osiris to give water to the dead, which had been preserved in demotic texts, begins to occur in a Greco-Roman context, with translation of Osiris into Sarapis; and in the magical papyri of the next two or three centuries Osiris is a leading actor, while Sarapis is scarcely mentioned. (A) A similar revival can be traced in the cases of Apollo and Horus as against their Alexandrian equivalents Hermaphrodite and Harpocrates; and Isis had never been thoroughly Hellenized. In all these instances it is the Egyptian deity who recurs in the magical texts and remains a god of power long after the general acceptance of Christianity in the country. Isis and Horus are mentioned side by side with Jewish archangels and Jesus Christ. The importance of this apparent revival of old Egyptian ideas in the Roman period may perhaps be somewhat exaggerated at present by the comparative paucity of records concerning the worship of the lower classes of the Egyptian population after the Greek conquest. There is a fair amount of documentary evidence as to the State religion and the gods who were preferred by the upper and middle classes. But there must always have been a large substratum of fideistes who continued to write Greek or write in any form, among whom the old traditional beliefs, as well as the old language, persisted. Durandus, in fact, is not uncommon in content, as compared with those in Greek, during the Ptolemaic and Roman periods; but they testify to a survival of the Egyptian totemism which made it possible to recover its position not only as a national but as an official language even when the external sanction of Greek was withdrawn. Similarly, there must have been a steady adherence to the old forms of worship among the peasants, which is not recorded on monuments, but which caught the attention of Roman writers, and which the early Fathers of the Christian Church had to combat; for instance, the attacks of Clement point to a prevalence of animal-worship which would never be suspected from any Greek inscriptions; and it was this persistent belief which reappeared in the Egyptian magic of modern times.

Summary.—The official Greek-Egyptian worship was based on the Alexandrian cult of Sarapis, Isis, and Harpocrates. Only in the first of these three deities was the non-Egyptian element of material importance, and all derived the greater part of their local acceptance by inheritance from the native religion. The Greek inhabitants of the country frequently offered homage in the Egyptian shrines, addressing the god by a Greek name chosen on a superificial system of equation; or, if the particular deity could not readily be identified with a Greek equivalent, they were ready to adopt the Egyptian name. Meanwhile the native priests adhered to their old gods, and their faith gradually merged the worship of the country of the East with that of the West, which had been introduced, and made it in the days of its decline once more distinctively Egyptian.

No attempt has been made, in the present article, to trace the development of the worship of Egypt in Egypt. The reason for this is that the cults of Isis, Osiris, and Apollo were regarded by the early Christians as Egyptian, and the Eastern church was (in the West generally, Osiris could not be Egyptian. The account of the festival at Otricoli given by Apuleius contains hardly anything that would be recognizably as Egyptian as that of the Roman festival of Isis. Incidentally, however, it may be noted as significant that at Rome, and in the West generally, Osiris reached his climax as the universal god of wisdom and fertility. In Egypt, the osiris was the usual object of worship in Isis. In the Greek parts of Asia, and to a certain extent in Rome, the Osiris had been introduced under Ptolemaic influence; but, when the Romans had reached the point of crowning Oriental gods, Osiris was coming to the fore again.

LITERATURE.—An excellent summary account of Egyptian religion in the recent Handbook of Egyptian Religion, ed. A. D. Griffith, London, 1907. The fullest treatment of existing materials in regard to organization of worship is in W. Otto, Priester und Kult im alten Ägypten, Leipzig, 1908-09. J. von Kauter, Geschichte des heidnischen Tempels, Berlin, 1891, gives a review of the philosophical atmosphere in which the cult of Osiris developed, in bk. vi. ch. 6; see especially Kauter's introduction, which is private. For the worship of Egyptian gods outside Egypt, see G. Lafaye, Histoire du culte des dieux egyptiens à l'étranger, Paris, 1883, and A. Roehrs, De Sarapis et Isis en Grèce ailleurs, Berlin, 1903; also W. Drexler, in H. Scheller, xii. (1898) 1-24, on 'Isis and Sarapis in Asia Minor,' and the catalogue of localities of Isis-worship abroad, in Beschreibung, x.x., 'Isis.' The chapter on Egypt in T. Curtius, The Oriental Religions in Roman Paganism, Eng. tr., Chicago, 1911, pp. 75-129, gives a valuable account of the influence of Isis-worship in the Far East as well as Rome.

J. G. MILLER

GRAIL.—The Graal (Graal, 'old ones'), or Phokrides, first appear in Hesiod (Theog. 270-273) as daughters of the sea-deities Phorkys and Keto, and sisters of the three Gorgons. They are beautiful (unless in later writers, refer to the mother only), and well-dressed, one being <i>gyptos</i> and the other <i>pyrpsi</i>. They are also <i>psyron</i>-haired from birth (ἐγεραύνων χίλια), but their hair is not long. It is, however, unlikely that this phrase is spurious; and it is simpler to consider the two lines genuine, removing all difficulty by reading <i>θηρίας</i> for <i>γαλας</i> in line 270. Two sisters only are named by Hesiod—Pephrados (φυλοφρον) or Pephrado or Tephreos, and in other writers, Memphrados or Paphrido or Pephrado or Paphreos (φυλοφρον), but it is probable that a third name—Deinos or Dino—should be substituted for the word <i>paphreos</i> in line 273. In the following passage, lines 274-286, Hesiod names the Gorgons, and gives very briefly the elements of the Persians and Medes legend; but he does not represent them as hideous (see art. GORGON). In Aeschylus (Prometheus of the Caves), the Hesperides, and the early Hesperides have become monsters (θερίας), living in the Gorgonian plains of Kithene, which was in the far West, or possibly in the far East. His Phorkides are three aged maidens (θεριάς), swan-shaped (κυδωνιδες), with one eye and one tooth in common, never shining up by sun or moon. To this must be added a statement in the lost Phokrides of the same dramatist, recorded by the prooemiers of Charax (Catasterismi, 22), and the poet Hyginus (Astr. li. 12), that they were <i>pyrpsi</i> of the Gorgons; the same play also added a cave (Εἰσχρος, ed. Sidgwick, frag. 261 f.). Aeschylus' epithet κυδωνιδες seems inconsistent with his <i>pyrpsi</i> (swan-white), should be substituted; the pronouns might be quite in Aeschylus' manner. In Aeschylus the Gorgons too have become pyrpsi, not only winged, but δικαιοσύνης and δικαιοσύνης; and the sight of them is fatal to life.

After this, they are frequently mentioned, their sisters disappear from extant Greek literature till the time of the mythologists. Apollodorus (ii. 4. 2), after Pherecydes, makes them in some way guardians of the Gorgonian Parnassus.
GRAIL, THE HOLY

385

snatches away the common eye and tooth while these are being passed round, and then restores them in exchange for instructions how to find the Grail. No image of the Grail is known; the magician gives the cap, shoes, and sword. Palephatus (de Incrud. 32) makes the Grail reveal to Perses the way to the Gorgons. Hyginus represents Perses as already possessed of the cap, shoes, and sword, which he has already given to the Grail; and the tooth while the holders are passing them on to relieve guard, and throws them into the Tritonian lake. There are antithetical variations of detail in writers such as Tzetzes, Ovid, Nonnus, etc. (see the references in Roscher).

The Grail very seldom figure in art. Miss Harrison describes (Placing of Gr. Rel., Cambridge, 1903, pp. 194-96) and figures (fig. 35) a cover of a pyxis in the Central Museum at Athens, on which the Grail is represented with dolphins, accompanied by Phorikes, Poseidon, Hermes, and Perses (who is waiting to catch the eye from two of them while the third holds the tooth); they appear to be young and lovely. Miss Harrison says this is the only known representation in vase-painting. A. Rapp (Roscher, I. 1737 f.) is disinclined to accept Panaikis's interpretation of an incised stone and an amphora (the latter in the British Museum) as representing ‘Perses and Grail’; but he attains more importance to an Etruscan mirror as described in the sale catalogue of the Castellani Collection at Rome in 1854.

From the above facts it is clear that the mythus of the Grail was confused and possibly contaminated at a very early date and is extremely varied to some extent with the attempt at interpretation. The details, therefore, may not admit of any single or consistent explanation. Their parentage, complicated and obscure, is not easy to identify, and the association with dolphins connects them with the sea; sea-gods are also credited with mysterious knowledge of secrets, and are frequently of remarkable appearance. The Grail, therefore, is an emblem of the marine affinities, and in modern Greek folklore have become mermaids (see J. C. Lawson, Modern Greek Folklore and Ancient Greek Religion, Cambridge, 1910, p. 186). Hermann (Opusc. II. 1877, 178) goes so far as to make the Grail of Hesiod tide-goddesses, translating their names as 'Aferion' and 'Iferon,' apparently from ἄφερον and ἰφαρον. Similarly, ancient etymologists derive ἱφαρος from ἱφαρος; or ἰφαρος may be from ἱφαρος, and ἰφαρος from ἤφαρος (of sound). Their whiteness is easily connected with sea-fairies, and also symbolizes purity; and the epithets of Hesiod suggest that the Grail may represent the bright clouds of fine weather and especially the sunset (παζορευκος), while their sisters the Gorgons personify the dark clouds of storm and rain. This view was advocated by Roscher, and is apparently supported by Rapp, who sees in the transferable eye and tooth of the Grail, and still more in the baleful glance of the Gorgons, the flash of the lightning and its apparent passage from cloud to cloud. The Gorgons also seem to be credited with a single eye, possessed in common, by a scholiast on Ἐρέχθ. (Herm. 1738.) Mannhardt (Ger. Myth, Berlin, 1858, p. 347, Z. 1876) interprets the eye as the ray of sunlight; while Taylor (Primi Cult., 1903, p. 335) thinks that the Gorgons, one mortal and two immortal, may stand for present, past, and future, their eye being a symbol of the light of the sun. It seems also class the suggested derivations of their names from the roots of φαραιος and φαρος and ποια. The ποια would mean 'the sahen-coloured,' and ποια the 'sahn-coloured.' So might the third name ἱφαρος, if from ἱφαρος, but it is more probably ἱφαρος from ἱφαρος.

The notion that the Grail and Gorgons are volcanoes or gorillas seem fantastic, since it is now generally held that the hideous head or mask of the latter—the Παζορεύς or Ἴφαρος of Hom. Od. xi. 639—is not an original feature of them at all, but an apéry of the Grail, and probably Hipite, origin, introduced into Greece about the end of the 8th cent., and perpetuated in many various types. This conflation would not be difficult to account for in terms of the primitive storm-cloud goddesses capable of malignant glances of lightning, but it may well be due, in the first place, to some etymological confusion between names of similar sound. On these lines the latest mythologists, such as Miss Harrison (op. cit.), regard the Grail and Gorgons as originally traits of sea- or cloud-goddesses and as by-forms of each other, perhaps distinguished as causing good or bad weather. The eye and tooth symbolize their potency, which can be transmitted from one quarter to another; it is a similar conception to the common one of the 'external soul.' At an early period, probably long before Ἡσιάθος, the Gorgons acquired alien characteristics, and their duplet, the Grail, were then worked into the Perses legend in various ways. But some points in Ἡσιάθος's description would still remain obscure, such as the swan-shape of the Grail; to avoid difficulties arising from residence in a hole or cave; and these may be inventions of his own to make them monsters (τυπρεπεσια).

H. E. D. BLAKISTON.
finds more to describe in the quest than in the goal.

2. Literary development.—In the space of fifty years (approximately between 1170 and 1230) the great body of Grail romance apparently came into existence. But it was not until 1861 that complete manuscripts, most of them merely 15th or 14thcentury transcripts of the 12thcentury MSS. These MSS are found in France, Germany, and Great Britain; and early printed forms are preserved also in Spain, Portugal, and Holland. The MSS are very confused as well as scattered—some fragmentary, and some suggesting interpolations by later hands. Parts of the story connected in one MSS are found elsewhere separated and conjoined with other parts, so that the task of research has been one of very great difficulty. The Germans F. Zarneke (in Hel. Paul and W. Braune’s Beitr. zur Gesch. der deutschen Spr. und Lit. iii. [Halle, 1876] 304 ff.) and A. Birch-Hirschfeld (Die Sage vom Gral, Leipzig, 1877) made prize-winning attempts to introduce some chronological order into the chaos; and, while other scholars have not been able entirely to agree with Birch-Hirschfeld’s analysis, its still supplies a basic framework which is helpful. It must always, however, be remembered that the discovery of some hitherto concealed MS or some biographical fact might afford a key of light on the whole subject, and re-arrange the knowledge now possessed by investigators. Meantime a very wide margin must be allowed in such dates as may be conjectured from internal evidence of the MSS. Much controversy still circles round the names of Chrétien de Troyes and Robert de Boron. Of the dated works, Chrétien’s is the oldest of all, and by Robert de Boron’s works, and as the unifying head of the cycle. Birch-Hirschfeld, however, gave that place most emphatically to Robert de Boron, and of later years Miss Weston also has been inclined to take the same position. The decision is largely dependent on whether we may regard the etymology of Pese Porcel as representing de Boron’s work, and thus much of the explanation by scholars have hitherto placed it. (For Nunt’s division into ‘Early History’ and ‘Quest’ versions, and for the connexion with the Arthurian cycle as a whole, see also Arruza in vol. ii. p. 69.)

It is to be noted that the Celtic Peredur and the English Sir Galahad do not deal with the Grail as such. But they cannot be omitted in an account of the Romance literature, because of their value in the matter of tracing origins. Paxton’s (in ‘La Conte del Graal of Chrétien de Troyes (1180–86): poem printed for the first time by Polivy from the Mons MS, and contained with ‘The Elision’, Gautier, Mantevant, and Gerbert) in vol. ii. of Perceval of Gonesse (1860) gives a synopsis of the Grail MSS and a critical comment on the work (see below). The whole is accessible in an appendix to vol. l. of Furnivall’s Saint Grail, London, 1861–62.

8. The Poems Perseolus (1292–93; see above), found in the Didot MS (1301), also in a Modern MS which Miss Weston thinks both an earlier and better text; accessible in Huchon’s Le Saint-Graal, ed. by Joseph d’Amboise. Miss Weston also gives a comparison of the D and M MS in her Legend I., and Wolfram, ii. London, 1862.

9. The legend of Percival, the ‘Mystic Quest’ (as early as 1200, or possibly earlier), as early as 1200, or possibly earlier, or in the first part of a version corresponding to parts xii. and xiii. of Malory’s Morte d’Arthur, and in its second part of a version of the Parzival.

10. The moral Romanesque of Sir Perceval or the Perceval of Galles from the Thornton MS (1440) in the Library of Lincoln Cathedral; accessible in the Thornton Romance MS (1440, ed. Halliwell).

12. Sie Grail: selections from Hengest MS (13th cent.): a Welsh ‘Quest’ story (with Eng. tr. by Robert Williams, London, 1870): slightly differing from other versions, being in its first part of a version corresponding to Parts xii. and xiii. of Malory’s Morte d’Arthur, and in its second part of a version of the Perceval.

14. Sir Tristrem, by Arthur, by Wolfram von Scharfenberg (1270), written in late years of Wolfram’s life. It is the best interest in a compilation and completion of fragments left by Wolfram and some unknown author who wrote Der Jungfernd Thetisch, ed. K. A. Hala, Quedlinburg and Leipzig, 1851.

The three great names in connexion with this literature are those of Chrétien de Troyes, Robert de Boron, and Wolfram von Eschenbach. Chrétien was the poet of the court. His story is told with a charm of style and a sense of chivalry which give it a very high place in medieval literature. But he does not explain the Grail, nor does he give any suggestion of realising its deeper meaning. Whether this was merely the art of the skilful romancer, who intended to explain and deepen his theme, we have no means of knowing. His death broke the poem off abruptly, to be finished by those who may or may not have grasped his ideas. Robert de Boron was a much less skilled and polished workman. But there was a completeness about his work—especially if we may claim the French Grail and his Song for his own—enough to puzzle scholars. He evidently had a definite and comprehensive plan. He viewed the Grail as a Christian symbol, and made his story carry out the concept. For this reason some have ascribed the fusion of the Grail story with the Saga. But the exact point of contact with the Arthurian cycle remains a problem. To Wolfram v. Eschenbach it was left to give the legend its most spiritualised form. ‘Wolfram,’ says A. W. N. (Steedes on the Legend of the Holy Grail, London, 1888, p. 297), ‘makes his hero win salvation by steadfast faith.’ The Grail is here certainly not the Cup of the Last Supper. But the field of Grail attainment is the field of Christian endeavour, and its banner is charity, the charity which for Wolfram changed the meaning of the quest. ‘What does it (the Grail) mean? ’ into ‘What does my friend mean?’ the Grail. 3. Subject—matter. — It is quite evident that hundreds of stories were floating around, and that the Romance writers could pick and choose according to individual temperament and demand. But the present form is probably due to the blending of entirely different stories. These stories were, however, based on myths of the world’s early days, and were, therefore, near enough to be constantly referred to, and even being each other, while differing in detail to
make a strange confusion when brought together. Thus we get a loosely-connected mass of incident and at least three heroes—Peroval, Gawain, and Galahad. We may set Galahad on one side as quite impossible. He appears now only in the Queste and Grand St. Graal. To this fact is perhaps due the theory that he was invented by Wolfram as a means of obviating the claim of the son of Henry II, more likely in order to detach an early story from its early somewhat pagan associations and make the claim of the Church to the story more plausible because of its saintliness. The knight. Gawain and Peroval are both early heroes. In the Comte de Chretien, Gawain is an understudy to Peroval. But close investigation has led Miss Wynn of the Library Board to show that there are the heroes of two different stories which have fused, and that Gawain is the earlier of the two. It is worthy of note how much closer the connexion between Gawain and the rest of the poem is in Wolfram than in Chretien de Troyes. Persistent features—in addition, of course, to the Grail itself and the question of the 'Cul on servit'? associated with it—are: (a) The Vengeance Quest: the hero sets out with the desire to avenge the fate of his father or uncle—a quite human, and therefore, primitive note. (b) The Castle of the Grail: the hero visits a benediction-spelled castle, where he finds either simply supernatural beings such as the maidens or those—neither gods nor men—who linger under a spell from which only a select few are released. For the possibility of a certain heroic level can release them. The hero, therefore, must know or do certain things. If he fails, the castle vanishes or he leaves it unvisited and unhelped. This is obviously a contribution from the childhood of the world, when mortals were half-aware of supernatural powers, with whom man was at the mercy of their caprice. (c) The Fool Tale: this is a primitive story found among all peoples. It takes various forms, but, apart from incidental details, it is generally the story of a woman (sometimes of a young hero) whose life becomes entangled by certain events grows up away from the world and in ignorance of its ways; he returns to that world and, in spite of his want of knowledge, finds his way back to the hero-band to which his father belonged; and, in time, proves himself to be the greatest of them all. The appropriation of this well-known jack of a legend, simple or complex, forms of the story is easy to understand, whether the writer had in mind a merely charming romance or one laden with inner meaning. And so this is either the Peroval of Chretien's courtyard poem or the Paradis of Wolfram's spiritual allegory. (d) The Fisher-king: the wounded king of the Grail castle is found fishing while he waits for his deliverer. Apart from the Grail itself, and the 'question,' this has been probably the most perplexing feature of the cycle. Attempts have been made to account for the king's occupation in various ways; but all are acknowledged to be not entirely satisfactory. There is, for instance, a possible link with the fish as the Christian symbol, the fish itself appearing in the 'Early History' as that which,caught and laid on the Table, divided the pure from the impure among those who were fed by the Grail. There is also the Salomon of Wisdom of Irish folklore. And, most remote of all, there is even the Babylonian story of Adapa, the wise one and fisher (cf. W. Sturtek, Über den Ursprung der Grallegende, Pilsen and Leipzig, 1906, p. 55). (e) The Lance, the Sword, and the Dish: of these the lance is supposed to be the weapon which pierced the side of Christ, and ranks next to the Grail in the cycle. The sword is sometimes the weapon of the Vengeance Quest, but elsewhere it is sacred. The meaning of the dish is very uncertain. Indeed, there is some reason for suspecting that the romancers had taken over the sword and the dish with little conception as to what they were or might signify.

4. Sources.—As has been indicated, there is no primary form of the legend known to be extant; and there has been much speculation as to sources and originals. It may be taken as fairly certain that the Evangelium Nicodemi or Gestis Filisi (A.D. 429) and its early versions, with its early somewhat pagan associations and make the claim of the Church to the story more plausible because of its saintliness, is the original from which Chretien, Gautier, and Robert de Boron may have drawn, and which Walter Map (to whom the MSS ascribe the Queste) may have compiled; this, it is even thought, might have been the Book of Philip of Flanders, which is spoken of in the Prologue to Chretien; (b) a lost poem by Kyot or Guiot, to whom Wolfram, seeming Chretien's version, ascribes his version of the story (the rare North French poem, the Sonne de Nauvy, has been used in evidence of the existence of some such poet); (c) a lost Brutus; Robert de Boron in his Merlin refers to an 'oistre de Bretagne que on apelle Brutus, que Messire Martin de Rooster translate.' As has been shown above, all these problematical sources would again be of an ideal origin on a mass of traditional tales preserved and passed on by the bards of the time, of whom Master Bihlie or Bliheris, referred to in 'The Elucidation,' may possibly be one. The contact between East and West, and the especially close touch between England and France, in the century from which these stories come, placed the field of investigation a very far-reaching one and the search for origins extremely perplexing.

(1) Celtic theory.—In 1838 the publication of Lady Guest's The Mabinogion and other ancient Welsh MSS called attention to the marked similarity of incident between the three Welsh tales (The Lady of the Fountain, Geraint, the Son of Brian, Peredur, the Son of Peredur) and three Romances of the French trouvres Chretien de Troyes (Fisien, le chevalier au Lion, Erec, and La Comte del Graal). The bearing of this similarity on research into the history of the Grail story was at once seen by scholars, who divided themselves into partisans of either (a) the Insular or (b) the Continental school of interpretation. The former, holding that the Welsh tales were the earlier, and the other that the birth-place of the tales was not Wales but Armorica, whose kings reached them after their return from Troyes. Among the leading exponents of the Insular school were Gaston Paris and A. Nutt; and of the Continental school, Foerster and Goltz. In the main, the Insular Celtic theory has prevailed. The essence of that theory is that the stories—a proto-Mabinogion—passed from the Welsh story-tellers to France through the medium of the Breton Ias, and were set down upon and given literary form by Chretien de Troyes. Some of the stories, translated, returned to Wales, and these we have in the Mabinogion. A. Nutt, in his Studies on the Legend of the Holy Grail (London, 1888), has given many instances of what he regards as conclusive proofs that the Mabinogion were very near to the myth roots in their primitive simplicity, and that many of the most important incidents in the French cycle have affinities so close with Celtic folklore that they cannot be overlooked.

(2) Oriental theory.—This is based on the idea that the existence of a unity among the Alexander-romance literature of the Persians and other Eastern mythologies. There are, of course, characteristics which lend themselves to this theory. Rich Eastern colouring appears in most of the stories; there is
GRAIL, THE HOLY

also an Oriental conversion legend; and Wolfram’s Parzival has many features of this kind, including the introduction of Prester John and the Knights Templar. Most scholars, however, have rejected the theory that the mere existence of kindred myths proves little. The Crusades, too, with their continual movement between East and West, while explaining many Eastern features, may be interpreted in the same way. For, if one assumes the Grail itself to be a form of the last eschatological conception of the Holy-of-Dol; if, in the Mahabharata, one comes across nuns, paternosters, baptism, Good Friday; in the Perlesvaus there is a strong tincture of asceticism; and if in Wolfram, that of the German knight, and in its last ecclesiastical form, there is the dove, the Host, and the order of virgin knights, and the Grail vision is denied to a heathen. It may now be taken as an accepted result of scholarship that these Christian elements represent transformations or fusions comparatively late in the history of the Grail idea, and do not give an indication of its ultimate origin, which is much more likely to be found among the elements alluded to in the preceding paragraphs. It is conceivable that a tallisman in the form of a vessel or otherwise, and already revered on other grounds, might be changed into the Chalice of the Last Supper by contact with Christian influence, just as the shrines of certain pagan goddesses were absorbed into the cult of the Virgin. But it is inconceivable that the process should work the other way—that a vessel hallowed by immortal Christian tradition, and itself a food-producing tallisman; it is unthinkable that the Holy Chalice and the lance of Longinus should be turned to the uses of a mere vengeance-quest, as would be the case of a tallisman of a purely Christian origin for the Grail idea.

The problem remains of the time and place at which the Christian influences definitely touched the non-Christian tree and seeds so essential to great fusion. Something of this must have been due to the Gospel of Nicodemus (see above); also Redd II. 544 E., which had been known in the West for some hundreds of years. Much was also due to the Crusades; in Miss Weston’s words (Legend of Sir Percival, ii. 257) "all eyes were turned to Jerusalem," and the effort to wrest the Holy Places, the site of the Death and Burial of the Redeemer, from the hands of the infidel, captured the imagination of all Christendom. Relics of the Passion, fragments of the Cross, the Nails, the Crown of Thorns, were making their way in a continuous procession to Europe; the Holy Lance had been discovered at Antioch; numerous places boasted the possession of the Holy Blood.

It was very natural that a story of a lance and cup should take on a new colouring from the things which were moving Christendom, and that a hero whose primal quest had been for vengeance on an enemy or for the removal of an evil spell should have his goal transfigured, without altering all trace of its former character. One of the spots where the Joseph-legend was first localized, and where the "sang real" was believed to be preserved, was Fécamp. It is possible and probable that there was one of the most definite points of contact between the Christian and non-Christian traditions. But if that was so, a re-colouring of the whole matter in the interests of Glastonbury must have taken place when the Christianized story crossed the Channel and touched again the borders of the Wales from which, before its baptism, it had emerged. The reign of Henry II (1154-89) coincides with three noteworthy things: the climax of the "sang real" interest at Fécamp; the attempt to utilize the Arthurian tradition in the justification of wild Wales; and the ecclesiastical assertion of Britain against Rome, resisted by Thomas à Becket. There was a strong conjunction to Christianize the cup of Celtic legend and to glorify Glastonbury as the home of the sacred Chalice. 1

2 In 1171 the relic was discovered in a pillar, and exhibited above the Holy altar of the Abbey. See Le Roux de Lincy, Rien sur l’abbaye de Fécamp, Rouen, 1845, p. 70 E.
and the ambitions and necessities of Henry II. may have helped to give the legend its final form and home. It was a convenient thing that the sanctity of Glastonbury should rival that of any Continental shrines; and that the antiquity of its traditions should be widely known and revered.

The Grail legends, however thoroughly Christianized, always retained a flavour of heterodoxy; they were, fully or universally received the sanction of the Church. This has been accounted for in different ways—by the fact that they involved too high a claim for the British Church; or because they were so largely coloured by the adventures, and, therefore, by the reputation, of the Knights Templar; or because they embody elements derived from pagan faith. Some of the ancient ecclesiastical suspicion may have gathered round the theme was possibly intensified by the controversy regarding the denial of the cup to the laity. The deprivation caused wide-spread resentment, and the Grail may have taken to itself fresh glory as the symbol of an unsatisfied desire.

St. Gall's Eadmer's ingenious reading of one form of the story—in which he interprets the Fisher King as the Pope, Perceval as Dominic, Galahad as Francis, the wasted land as Britain under the invading Saracens—is, if unconvincing as an interpretation, at least a proof of the ease with which the story can be made to fit a theory. In early days it may have been equally easy to use it to convey an impression, if not definitely to advocate an opinion.

6. Significance and symbolism. Is there any hypothesis that will synthesize these different ideas, and which, actually and historically, even if semi-unconsciously, might have served for a basis of fusion? The likeliest of those that have been suggested is the idea of the quest for the secret of life: it is sufficiently ancient, persistent, and close to the abiding instincts of men. The Adonis rites were concerned with the death and the quickening in the natural world. Some of the ancient mysteries were the expression of the human hunger for the supreme secrets, and a promise of its satisfaction. May not some forms of this quest, and some dreams of its goal, have hidden themselves among the Celtic races, to emerge again in tales about the quests of heroes, the deliverance of a blighted world, or the achievements of a cauldron of plenty? Meanwhile there had come down another line of development the story of another Cup, hollowed by its connexion with the most sacred Name, exalted by the sacramental principle now accepted throughout Christendom, revered as the means whereby souls questing for life found life. Et, Eimer Dei unis substantia, and God and life were together in the cup of sacrifice. So the two life-quests met, being aided in their fusion at once by certain convenient resemblances of external form, by historical causes alluded to above, and not least by underlying unity of essential idea. Through this fusion there was fashioned one of the richest influences which have ever inspired music, poetry, and art; and an abiding symbol for the moral and spiritual idealism of pilgrim humanity. Seen from different standpoints, the Grail became the emblem of mental purity, or of triumphant faith, or of solitary heroism, or of gracious charity; the radiance of it became the radiance of that ultimate perfection which is the aim and reward of those who attain. It is noteworthy that Robert de Boron, before the tradition had time to be deeply esotericized, and Richard Wagner, who has given us a special social role of the Grail, should alike be able to see the spiritual significance of the Grail idea. While the symbol has still a special meaning for

''Godly hearts th industry of gold, Still the blood of faith do hold,''

it also expresses in the most comprehensive way, by virtue of its ancient origins and devotional wanderings, the purest desire and best attainment of the human spirit.

LITERATURE. In addition to the books and articles mentioned above in text and notes, see Lit. appended to art. ARNULF, ARNULFIC CYCLE. Of those mentioned there, the most useful is the present connection are those of Birch-Hirschfeld, A. Nett, and Jessie L. Weston. E. Wechsler (The Sage in the Holy Grail, Halle, 1905) gives a very complete bibliography. See also J. L. Westen's second vol. of St. Perceval Studies, London, 1888; A. Nett's smaller book (popular, but sufficient), The Legends of the Holy Grail, do. 1885; Sebastian Evans, In Quest of the Holy Grail, do. 1896; Paul Hagen, Der Gral, Strassburg, 1886 (also an art by A. Nett, S. Nr. 6, 1885). On the connection between the Grail stories and J. G. von Hahn's Arcanum Expulsionis et Re-Economic Formula. Among modern critical expressions of the Grail idea, the most striking, next to Tennyson's, is that of R. S. Hawker, The Quest of the Sangrani (an unfinished fragment, Exeter, 1864; reprinted in Pastoral Works, London, 1895). A fine practical and devotional treatment is given by J. H. Skrine, in Sermons to Parishes and Masters, London, 1906, p. 211ff.

J. M. E. Ross and MARGARET ROSS.

GRANTH (Skr. granthka) 'book, treatise, code, or section' [Plaita, Hindustani Dictionary, London, n.d., s.v.].—The term granth generally refers to any book, especially to a religious book. In the Sikh religion the Granth denotes the general body of the Sikh scriptures, which comprise two main parts: (1) the Adi Granth or original Granth, which was compiled by Guru Arjan, the fifth Sikh guru, from the writings of Baba Nanak, the founder of Sikhism, and many other religious reformers; and (2) the Dasam Pādahā Bālā Bāī, or Granth (abbreviated to Dasam Granth), or 'Granth of the tenth Pādahā,' viz. Guru Govind Singh, the tenth and last guru of the Sikhs. All Sikhs have the authority of (1); but that of (2) is confined to the extremist sections of the Sikh community. From Granth is derived granthswā, 'an exponent of the Sikh scriptures,' 'a reader or custodian of the Granth' (see Ernst Trumpl, The Adi Granth or Holy Scriptures of the Sikhs, London, 1877; and Max Arthur Macauliffe, The Sikh Religion: its Sacred Writings, and Authors, 6 vols., Oxford, 1906).

The Adi Granth in its present form was compiled by Guru Arjan (1561-1606), but after his death some of Teg Bahadur's verses were added to it, with a single dictich of Guru Govind Singh. The compilation included not only the extant writings of the earlier gurus, but also those of many bhagats, or devotees, such as Ramānanda and his disciples, Dāhni, the Tāj, Pipa, Ravidēsa, Kabir, and Nanak, as well as Khālīq Yādā, the Shāhīm pījā, and Dāhmi. Those of the last-named are of special linguistic interest, as he is considered the first Marāthi writer. Further, Guru Arjan appears to have added a number of compositions composed for the occasion by various bhācchā (Bābīs), or professional bards; but these are of little interest. The Granth itself comprises a Jāgīr, or introduction, by Nanak himself, the Su-dār, or extracts from the Bād Aṣāt and Bād Gūjāt, which are used as an even-song by the Sikhs, the So-pūrkhā, or further extracts from the Bād Aṣāt, by Guru Rām Dās, and the So-hild, or extracts from the Bād Gūrē, Aṣāt, and Dāndhanurā, which

1 Baba Nanak, Angad, Amar Dās, and Ram Dās, predecessors of Arjan.
2 Macauliffe describes these as pāngayris of bards who attended on the gurus or ascetics, and rewarded those who sang their praises.
3 The Su-dār or So-dār is claimed by Macauliffe as one of the Rākhiāa, a collection of the hymns recited at sunset by the Sikhs. The hymns in this collection were composed by the Guru Nanak, Amar Dās, Ram Dās, and Arjan, in the two modes called cecilistical interest to serve should alike be able to see the spiritual significance of the Grail idea. While the symbol has still a special meaning for...
GRATITUDE

are used as a prayer before retiring to rest. The morning service of the Sikhs consists in the recitation of the Japji, followed by the Anda Vir, which was composed almost entirely by Guru Nanak, though it includes some stanzas by Guru Angad. Anda Vir meant originally a dirge for the brave slain in battle, but the term came to mean a song of praise. Anda Vir were composed in stanzas called pasis, "ladders," which were chanted by professional minstrels. The Granth of Guru Govind Singh contains its Japji, the Akal Ustad (or praise of the owner), the Vachan Kirtan, which is a wonderful drama, in which the Guru gives an account of his parentage, his Divine mission, and the battles in which he had been engaged. His militant character is illustrated by the inclusion of three abridged translations of the Devi Mahatmya, an episode in the Markandeya Purana, in praise of Devi, the goddess of war. Then follow the Gurbani, which is the collection of the compositions of the ten Gurus, and accounts of 24 incarnations of the Deity, selected because of their warlike character; the Haudre de shobh (a collection of warlike proverbs and maxims); the Shastar Nama (a list of weapons used in the Guru's time, with special reference to the Creator's attributes; the Jaam Charit (or tales illustrating the qualities and defects of women); the Zafarnama (an epistle of the Guru to Aurangzeb); and several metrical tales in Persian. According to Thompson, the body of the Granth contains over 100,000 Edges, including those from which extracts are inserted in the following parts, and a 31st Edge, called the Jaiwar, which was composed by Teg Bahadur. Among these Edges, or modes, are distributed the verses of the various gurus, and to each Edges sayings of one or more bhagats are appended, but without a fixed arrangement. The first three Edges are the most important. Macaulay's account agrees in essentials. He describes the hymns of the gurus and saints as arranged according to the 81 Edges in which they were arranged, and adds (vol. i. p. 1): "The first nine gurus adopted the same Nanak as their ram de phume, and their compositions are distinguished by mahakshie or quarters. The Granth Sahib is blessed to a city, and the hymns of such guru to a ward or division of it. Thus the compositions of Guru Nanak are distributed in the first Ward; the compositions of Guru Angad the second Ward, and so on. After the hymns of the gurus are found the hymns of the bhagats under their several muscular measures." But, despite its varied origins, the Granth is to the Sikhs the embodiment of their gurus.

The Granth is concluded with a bhagat, which comprises a number of Shloks, and minor pieces by various gurus and bhagats. Owing to the diversity of the languages, the book is not written in any one language, but in various vernaculars of modern India. Thus Namdeva wrote in an old form of Marathi; and the Brahman Trilochan closely resembles him in style. Jaiwai used a curious mixture of Sanskrit and the modern vernacular, while Ramadheva's idiom is the old Hindi, differing little, if at all, from that of Kabir and his disciples. His successors were all natives of the Panjab, and he used an idiom closely resembling the Hindi, doubled by phrases and expressions of the Panjabis, to whom they owed as much as religious teachings. The result is that parts of the Granth, e.g. that of Govind Singh, which is in pure Hindi, are unintelligible to the modern Sikhs.

The metres of the Granth, which is wholly in verse, are either old Prakrit metres or of a later type, the verses being measured by quantity only, and they are always set in long prose lines. The nature of the Granth is not obscurely indicated in the fact that of "grace" and "gratitude" are as root one and the same term, and represent the

GRATIÆ.—See CHARITIES.

GRATITUDE.—There are many human emotions that can be understood only when directly in connection with the social nature of man. They presuppose the fact that man dwell together in communities—have common interests, share common experiences, run common risks, and find unity to be power. To this class belong the tender emotions—those that are excited by concern or regard of one person for another, and that are essentially of a cementing and beneficent kind. Supreme among these is love, which carries along with it parental, filial, and similar affections—a love of kinsfolk, love of country, and the like; next are friendship and the allied feelings of esteem and admiration; then come the benevolent affections or affections of good-will, including sympathy, compassion, pity, and the like; and last of all may be instanced gratitude, which has distinct relations to all the others just enumerated.

1. Nature and Origin of Gratitude. Gratitude has been defined as "that delightful emotion of love to him who has conferred a kindness on us, the very feeling of which is itself no small part of the benefit conferred." (Thomson, op. cit., i., 94, xliii.) The definition, though correct so far as it goes, is not adequate; it does not reach the root centre of the conception. We wish to know what is the nature of the emotion which initiates, and how it manifests itself.

(1) First, then, we observe that what arouses the emotion is not the magnitude of the benefit conferred (although this may react upon it), but the display of friendliness, affection, and good feeling on the part of the benefactor—such manifestation of good-will and kindly consideration for the recipient as cannot be claimed or exacted. There is no claim, properly speaking, in true gratitude: giver and receiver both gain, but neither claims. Hence, gratitude is not, as some have so frequently represented it to be, mere 'bread and butter' affection; nor is it the prudential 'regard for favoured company.' These are purely selfish considerations, marks of an unworthy calculating egoism, which debase the emotion and transform it into what is mean and ignoble. Gratitude is an unselfish joyous response to kindness—a response that is immediate and spontaneous; the ultimate meaning of which is that human nature is so constituted that affection and unity between persons is the foundation of it, ill-will and enmity (all indications to the contrary notwithstanding) being abnormal and deprived. Hence the biting force and odious character of ingratitude. 'Now, blow, thou wintry wind, thou art not so unkind as man's ingratitude.' (As You Like It, ii. vii. 174 ff.) Now, why? Not simply because the ungrateful man does not fully value one's gift (that would be a small matter), but also because he throws back one's good-will with coldness and thereby cuts one off from a place in his affections: in him, as Kant puts it, 'the duties of philanthropy are always recognized, and the want of love is transmitted to a title to hate those by whom he has been first beloved.' (Metaphysics of Ethics, tr. J. W. Sempie, Edinburgh, 1886, p. 805.)

The nature of gratitude is not obscurely indicated in the fact that "grace" and "gratitude" are as root one and the same term, and represent the
Gratitude

391

reveres and the opposite side of the same fact—more clearly expressed, perhaps, in Greek, where the one word <i>εὐχαριστεῖν</i> is expressive of both. The Greek term shows that the emotion is essentially a social one, and works in the atmosphere of unity and love, and is, therefore, a species of 'brotherly affection.'

(2) On all hands it is allowed that gratitude is a joyful and pleasant emotion, though there may be in it an element of pain—more especially when it begins to solicitate for the object of it. But, when this is granted, the source of the joy is matter of dispute. It has sometimes been maintained that gratitude arises either from our appreciation of the value of the gift or from some kind of affection; or from recognition of the fact that the benefactor has sacrificed something for our sake. This needs examination. There is no doubt that the value of the gift frequently comes in to augment the joy which we experience, especially when the benefit takes the form of freeing us from pain or from an embarrassing situation. It is equally indisputable that a well-balanced nature esteems sacrifices that are made on its behalf. But, although these facts may be necessary to the full explanation of the intensity of the joy that some cases of gratitude exhibit, they do not account for the essence of the emotion itself. For example, a munificent gift that brings a man domestic comfort, where puerility and pinching have been the order of the day, may be no less delightful than a gift of an equivalent amount that will not be grateful for it unless, with a cheerfulness and satisfac-

392

tion, and that in a very marked degree, for it is a gift to the heart of a man who is himself a benefactor. The gratification of a benefactor, though it may be tinged with the considerations of the occasion, is due to the generosity of the giver and not to the pietas of the recipient. Therefore, the former aspect of gratitude as a source of joy may be considered as necessary for an adequate explanation of the latter.

(3) From all this it will be at least apparent that, in gratitude, there is an element of admiration, by the recipient, of his benefactor as a man who finds it in his heart to bestow what cannot legally be claimed of him, and who is moved by non-envious altruism. Generosity and disinterestedness are by their very nature impressive, and admiration is conditioned by mutual respect.

(4) From this it will be apparent, also, that gratitude is near neighbour to sympathy: it is not sympathy, but it involves it. Unless the recipient could place himself in the position of the giver and realize his kindly feeling and good intention towards him, gratitude could not arise; nor could the benevolence that actuates the giver have its effect. Take him to himself the situation and the responding good will and tender affection of the recipient. What sympathy does is to enable us to realize, whereas gratitude is the rend and the ability to present—the reason.

Feeling or sense of inferiority.—It has often been a question keenly debated, whether gratitude does or does not smug in a position of inferiority hurtful to his self-respect, and conse-

sequently, whether it should not be looked upon as a clinging and undesirable emotion. At any rate, in old Greek days, it was very much regarded in this light; and one of the reductio of the high-minded man (μεγαλεύοντος) of Aristotle is that, if he has to receive a favour, he hastens to pay it back with a greater, so as to escape from the disagreeable feeling of indebtedness.

'lt is his nature,' so we read (Rhet. Hoi. i. 2. 54 τ.), 'to confer benefits, but he is Sanchez to receive them; for the former is the part of a superior, the latter of a suitor. And, when he has received a benefit, he is apt to confer a greater in return; for thus his creditor will become his debtor, and he in the position of a recipient of his favour.' It is thought, moreover, that such men recognize those on whom they have conferred favours better than those from whom they have received them; for the recipient of a benefit is inferior to the benefactor, but such a man wishes to be in the position of a superior. So he is to be reminded of the one, but dislikes to be reminded of the other.

In like manner, Cicero, in the Latin world, discusses rather coldly on the topic of benefits—when they should be received, and how and in what manner they should be conferred. As might be expected, he views the matter from a shrewd, practical, common-sense standpoint, and indulges in sage counsel of the prudential stamp, delivered from the moralist's platform, without much lecturing and with little sympathetic interest (see de Officiis, l. 14-17). And even Seneca, in his de Beneficiis, does not get rid of this feeling of inferiority in the recipient—only by the process of stimulating, and suggestive though his treatise be.

Now, that 'giver' and 'receiver' indicate two different relationships cannot be denied. The situation is a delicate one as between recipient and bestower; it may, further, be allowed that 'it is more blessed to give than to receive.' But, when the gift takes the form of a personal grace, will, in which, therefore, the giver imparts himself, and when the responding gratitude in the recipient is the offer of his self in exchange (which even sincere 'thanks' always implies), there is no galling inferiority involved—certainly not such as would infringe on one's self-respect—but an exchange of love, generous and free, in so far as each self is given and each is accepted or received. Surely, if it is not derogatory to our dignity to learn of a person wiser or better than ourselves, it is not derogatory to our dignity to receive a benefit from one who is friendly to us and who has both the power and the will to confer it. As finite beings, we are naturally limited in our ability to supply our own needs; and, as such, human beings are bound to each other in mutual obligation from our birth to our death, nobody being excepted. Thus, for example, all need help, impose no derogatory inferiority on any. On the other hand, if the gift bestowed were accepted simply because of its extrinsic value—simply because, for example, it is a certain desirable sum of money—then disparaging inferiority would, indeed, be implied in gratitude (we have demeaned ourselves); but, inasmuch as the real origin of gratitude is to be found, not there, but in the gift of the giver's own self, it is altogether different. Hence, paying back the benefit or favour at the very earliest moment, so as to rid oneself of a distasteful obligation, becomes an irrelevant consideration here, and the thought that it vitiates, if it does not actually destroy, the noble emotion. The idea of paying back, so far as it really enters into the situation, is simply readiness on the part of the person benefited to braid the benefactor, should necessity arise: the rend and the ability to present—the reason.

GREECE, GREEK RELIGION.

[This text discusses the religious and mythological traditions of ancient Greece, emphasizing the role of the goddesses and the influence of religion on society and culture.]

"Yet, feeling of dependence is only the other side of gratitude—the Creator giving Himself freely to the creature, and the creature responding to the significance of this by dedicating himself unreservedly to the Creator. Love craves for love, and rests in it when found."

WILLIAM L. DAVIDSON."
for the religious history of the 10th and 9th centuries B.C. in the Homeric poems, and of the 8th and 7th centuries in the poems of Hesiod and in the "Homer" hymns; it is less true of the great Lyric movement which followed upon that, when the greatest poets devoted themselves to the composition of songs for festal-religious occasions or to compositions for the dedication of temples or altars. Besides these, whose great names and fragments of whose great works survive, there was another less distinguished group of special "hymnic" poets, who composed hymns for the service of certain mystery-cults, and whose compositions were preserved as liturgical documents by the priestly families that administered them, such as the Sententious ethical-political poetry of the 8th cent. — the eloquence of Theognis and Solon — is instinct with religious emotion and reflection. And the greatest product of the poetic genius of Hellas — the tragic drama — is of a religious character in respect both of its origin and much of its subject-matter. Finally, the later learned poetry of the Ptolemaic period — the Cassandra of Lykophron, the hymns and other works of Callimachus, the Epic poem of Apollonius Rhodius — is full of antiquarian religious lore. At this period, our subject is more deeply indebted to the great prose-writers of Greece, the philosophers, historians, and orators: among the philosophers, especially to Plato, who more copiously than any of the rest devoted himself to the religious psychology and cult-phenomena of his period; among the historians, especially to Herodotus, who is the intellectual ancestor of the modern anthropologist and student of comparative religion, and whose presentation of the facts of history is coloured with religious conviction. The works of the Attic orators are of special value for our purpose, first because the classical orator was more apt than the modern to dilate on religious themes and appeal to religious sentiments, as religious ideas were so closely associated with political and social life; secondly, because we are more sure of the orator than we can be of the poet or philosophic writer that his words are attuned to the average pitch of popular belief and sentiment. It is true then that all the great fields of Greek literature make their several contributions to the material of our subject. And besides the works of the great masters, the student has to reckon with the secondary and parasitic work of the later school of such imitators, which is even more replete with the special information upon which the history of Greek religion can be built. The study of it is, in fact, almost coextensive with the study of Greek literature itself.

But amidst this profusion of material we must specially mark the works of those ancients who wrote direct treatises on the various religious phenomena — on the gods, the cult-practices, the theologic and mythologic systems of the Hellenic societies. The earliest of such works that have come down to us are the poems of Hesiod and the Homeric School — the Works and Days and the Theogony — while of parts of the "Homeric" hymns the special theme is the attributes and functions of the various deities. It was not till the period of scientific activity after Aristotle that definite treatises in prose on different departments of the national religion began to be rife. A chapter on sacrifice by Theophrastos is mainly preserved for us by Porphyry. The writers of "Atheids," or Attic history and antiquities, who belonged mostly to the 4th century, are in this field; Philochoros, the chief of them, wrote "On Festivals," "On Sacred Days," "On Divination," "On the Attic Mysteries"; Isteus, the slave and friend of Callimachus, on the "Manifestations of Apollo" and "On the Cretan sacrifices"; while the hymn of Kleitos was, if we may judge from the fragment that remains, occupied with the problems of religion and the circle we hear of other contributions to the history of Greek religion, such as the treatises of Herakleitos, probably the pupil of Aristotle, usually called "Poetics," on the "Offerings of Zeus and Apollo," and "On Oracles"; and a work by an unknown Sokrates of Kos on the important subject of "Inoculation-titles of the gods." Lastly may be mentioned here a treatise of Apollodoros, νταν ιδι, which, if it is to be identified with the author of the "Bibliotheca," was probably a learned account of the popular religion rather than a metaphysical inquiry.

Of nearly all this scientific post-Aristotelian literature only isolated fragments survive in quotations by later writers, lexicographers, and scholiasts, who were, no doubt, more deeply indebted to it than they always acknowledged; but it is some compensation for our loss that the work last mentioned, the "Bibliotheca" of Apollodoros, has been preserved — a rich storehouse of myth and folklore with some infusion of actual cult-record. Among the later writers the subject is introduced to the geographer Strabo for many incident details on cults and ritual, still more to the philosophic moralist and litterateur, Plutarch, a man of earnest religious feeling and some knowledge of original thought, who knew the religion of his country at first hand and at a time when it was yet alive, and who devoted it so much attention and some literary industry: hence we must rank high among our ancient authorities his "Questions Graeco" and his treatises "On the Pythian Oracle" and "On the Cession of Oracle." Again, much deutily but varied information is afforded by the compilers Athenaeus (in his "Deipnosophistae") and Stobaeus (in his "Florilegium"). But of higher value than all these, or, in fact, any work that has been bequeathed to us from antiquity, is the "Descriptio Graeciae" by Pausanias, composed about A.D. 180; for he travelled somewhat as a modern anthropologist, relying partly on earlier literature, yet using his own eyes and ears and his own notes. His ruling passion was the study of the folk-religion and the religious monuments; so that it is due mainly to him that we know something of the village-religion of Hellas as distinct from that of the great cities, and can frame working theories of the evolution of the mythologies, even in the monumental ages, of various growths of the polytheism. The lexicographers Harpokration, Hesychios, and Suidas contribute facts of value, especially in their citation of cult-appellatives, words belonging to the magic value of the special name or title whereby the deity was invoked, throw a revealing light on the significance and power of many a worship, and help to frame our conception of the complex character of many a divinity. Again, the various collections of scholia on the classical texts are a rich quarry for our reconstruction of the fabric of Hellenic religion. Of chief value among these are the scholia on Homer, Pindar, Eschylus, Euripides, Aristophanes, and Theocritus, while Servius’ Commentary on Virgil tells us even more about Greek cult and mythology than about Roman; and high in this class of our authorities we must rank a work of late Byzantine date, the commentary of Theodores of Lykophron’s poem "Cassandra," for his scholia are charged with remote antiquarian lore derived from good sources.

Finally, we gather much of the knowledge from the controversial treatises of the early Christian Fathers, written with propagandist zeal in the heat of their struggle against paganism. They reveal to us much of the religion that they strove
to overthrow by the exposure of its vileness and its absurdities. But their statements must be used with cautious criticism. Their knowledge was by no means always—on the contrary, very often—theirs alone, as a case in point, the case of Clement of Alexandria, converted priest, who wrote books in the Graeco-Roman style. Their statements, for instance, about the Greek mysteries are often vague and unconvincing, while in their desire to include them all in a general condemnation they confuse Anatolian rites with Eleusinian. And they are perversely blind to the often beautiful ritual, the noble ideas, and the higher moral elements in the older Mediterranean religions. Nevertheless, if we make due allowance for prejudice and exaggeration, works such as the Protomecetis of Clement, the treatises of Aratus or Democritus, the apocryphal works of Proclus and Symmachus, must be ranked among the primary sources of our history.

A special but very important chapter in the later history of Greek religion is the account of the growth and diffusion of the religions brotherhoods, especially the Eleusinian, in the Hellenistic period. For these we have something of direct historical evidence in the collection of the records of the Eleusinian mysteries. These have been damaged by the Hellenistic period, but still provide a wealth of information about the religious practices of an ancient period. They were engraved upon gold and silver in tombs of Crete and South Italy, and probably a product of the 8th century B.C.

The evidence from inscriptions is the most important literary source of the 7th century. The inscriptions, being dry State documents, do not reveal to us the heart of any mystery or the religious soul of the people, but rather the State organization and the exact minutiae of ritual and sacrifice from which we can reconstruct an image of the inward religious thought. And many a local cult of value for our total impression of Greek religion has been lost and is only preserved in these inscriptions. But the needs and aspirations of the private man are better attested by the private dedications attached to the votive dedications commemorating Divine benefits received.

Yet, amidst all this wealth of evidence, there seems one thing lacking: the text of Greek church service, which is comparatively little preserved. One or two hymns, and a few fragments of the religious history of the 7th century,—to which we may now add the important recent finds of the poems of Pindar; a strophe of an ancient hymn to Dionysus, sung by the Chorus of the Chorus of the Women, composed for the Delphic service; a newly discovered hymn of the Koresentes in Crete; a few formulae of prayers quoted or paraphrased by later writers—all this appears meager material when we compare it with the profusion of documents of the public and private religion that are streaming in from Babylonia.

But, in respect of another source of the history of religion, namely, the monuments of art, our Greek material is unique. For the greatest art of Hellenes was mainly religious, the greatest artists were working for the religious service of the State. And it is the surviving works of sculpture, painting, and architecture, both public and private, which are the most instructive and illuminating. The surviving religious sculpture and ritual unrecorded in literature, but also with an impression, hard to gain otherwise, of the religious consciousness of the people, and serve also as witnesses to the strength of the religious feeling. Therefore the study of Greek religion as much as the art and archeology as with the literature.

A summary sketch of so manifold a theme as that with which this article deals will be of more value if it can present the facts in some kind of chronological sequence. We may conveniently distinguish four periods: (1) the pre-historic period, beginning with the colonial expansion of Greece, and ending before the Persian invasion; (2) the period extending from 500 to 338 B.C., including the greatest century of Greek history; (3) the period from 338 to 300 B.C., beginning with the colonial expansion of Greece, and ending before the Persian invasion; (4) the Hellenistic and Graeco-Roman period. The chronology of these periods is established by the absence of any record of date for the institutions and diffusion of most of the cults, and for the growth of certain religious ideas, nor can we safely date a religious fact by the time of the individual who first mentions it: a detail of ritual, a myth, a religious concept attributed only by Pausanias or a late scholar, may descend from an age far anterior to the Homeric. A sketch of the most important literary and artistic works of each period as yet reach back to a period earlier than the beginning of the 7th century.

I. THE PRE-HISTORIC PERIOD.—For determining our view of Greek religion in the second millennium B.C., when Hellenism was in the making, the poems of Homer and Hesiod are of priceless value, if they are used with cautious and trained criticism. We depend mainly on the general indications of comparative religion and anthropology, which may sometimes guide us rightly in this matter, especially if the anthropological comparison is drawn from the more or less adjacent communities rather than from the Anti-Poles. We depend also on the evidence of the monuments of the Minoan-Mycenaean religion, revealing glimpses of the practices and faith of a people of high culture, whom no world would dare to call, at least in the earlier stages of their life, Hellenes, but from whom the earliest Hellenes doubtless adopted much into their own religion.

1. Sketch of Homeric religion.—The poems of Homer present us with an advanced polytheism, a system in which the divinities are already correlated in some sort of hierarchy, and organised as a divine family under a supreme god. These divinities are not the mere daimones or naiads, such as were in the main the old deities of Rome, vague and dimly-outlined forces, animate yet scarcely personal; but rather concrete and individual beings of robust and sharply-defined personality, not spirit but immortal beings of superhuman substance and soul, conceived in the glorified image of man. The same thoughts are dominant in the poems, plasticly shaping the figures of all the divinities, except occasionally some of the lower gods, such as the river-god Simias. Even such the vague group of nymphs, female daimones of the hill and the mountain, while lacking individual characteristic, bear the anthropomorphistic name, 'Brides' or 'Young Women,' which is the root-meaning of νύμφης. Though the gods and goddesses
are shape-shifters, and may manifest or disguise themselves in the form of any animal—birds by choice,—yet their abiding type is human; nor has Homer any clear remembrance of a 'cow-faced' Hera. A father of children at least Hera βοών was Hera 'of the large ox-eyes,' and Athene γαστόν is the goddess 'of the flashing eyes.' And his divinities are moralized beyond the human passions, as well as the artistic emotions. The highest among them are not imagined as Nature-powers, bound up with or immanent in the forces and depictions of the natural world, for such a description applies only to his wind-gods, and nymphs and gods of river and sea; also, though more loosely, to his Helios, the god of the sun; so being, in fact, that count little in his religious world. It scarcely applies to Poseidon, though his province is the sea; it does not describe at all his mode of imagining and presenting Apollo, Hera, Athena, Hermes, and others.

There is no hint that these divinities were conceived by him as Nature-powers, or as evolved from any part of the natural world. The great god Zeus, though specially responsible for the atmospheric and celestial phenomena, is not identified with the thunder or even with the sky, though a few phrases may recall the primitive animistic conception of the divine Sky. His religious world, in short, is morphologically neither a system of polytheism nor one of pantheism in which a divine force is regarded as universal and immanent in the world of things, but is constructed on the lines of personal theism.

Again, in spite of one or two frivolous and licentious passages, the religious tone is serious, and in many important respects accords with an advanced morality. The deity, though jealous and revengeful, is at the same time compassionate and earnestly solicitous for the good of man; his displeasure is aroused by those who scorn the voice of prayer, who injure the suppliant, the guest, or even the dead guest; besides, the term 'Olympians,' who are general guardians of the right, there loom the dark powers of the lower world, who are specially concerned with the sanctity of the oath. Much also of the religious reflexion in the poems strikes us as mature and advanced: notably that passage at the beginning of the sixth book of the Iliad, that it is nourished by the gods who bring evil to men, but that it is the wickedness of their own hearts that is the cause of all their evils.

Finally, the Homeric ritual appears as on the higher level of theism. We can detect in it no trace of savagery, and but little contamination of religion with magic. The sacrifice is more than a mere rite; it is a friendly communion with the divinity; and the service is solemn and beautiful with hymns and dances. The cult is furnished with altar and occasionally with temple and priesthood, but not yet, as a rule, with the idol, though this is beginning to appear.

This slight sketch of the Homeric theology is presented here in the belief that the Homeric poems enable us to catch some glimmer of the religion of the centuries preceding the first millennium. This belief is based on the conviction that the poems represent a Greek society existing near the date 1000 B.C. It is, of course, opposed to the view still maintained by some scholars that they are in the words of a much later period, and that the religion which they enshrine may be such as was in vogue in Attica about the epoch of Peisistratos. But the evidence of Homer itself, above all in his earlyote 1 to this theory, and still more so are the arguments that may be drawn from the history of Greek religion; for, at the period of Peisistratos, certain religious forces were rife, and certain religious phenomena prominent, about which Homer is entirely silent.

Still less reasonable is it to imagine that Homer constructs a religious world out of his own brain. We must suppose that his religious world is and remains a social and contemporary. Only we must guard ourselves against the serious error of supposing that he reflects the whole. Much is, doubtless, missing in his account, which we may be able to supply from Herodot and other sources by means of reasonable hypotheses.

The assumption is then, that the Homeric poems present us with a partial picture of the religion that prevailed among some of the leading Greek communities before the Dorian invasion of the Peloponnesian and the Ionian colonization of Asia Minor.

2. Pre-Homeric period of religion. —Now, when we consider how slow of growth and enduring are the forms and the moral and metaphysical concepts of religion, we have the right to believe that part of what Homer records on these matters is the inherited tradition of an age some centuries earlier than his own. It is probable that those earliest Aryan immigrants from the north—Achaeans, Doryopes, Minyans, and others—who by mingling with peoples of aboriginal Medes and of the Minoan-Mycenaean culture, constituted the happy blend that we call the Hellenic race, had already arrived at the stage of personal theism, and that Hellenic religion proper does not start with a 'godless period,' when the unseen powers were only dimly outlined in the vaguer and more interesting characters of what is called 'magic.' We now know, from the valuable discovery of a cuneiform inscription, that the Iranian people had evolved such personal deities as Mithras and Varuna before 1400 B.C. 2 And we have the right to suppose that their Western kinsfolk, who were forcing their way through the Balkans, perhaps only a century earlier, were at least at the same level of religious imagination. We can best understand the picture of the religious world of Homer, and also the later cult-records, if we believe that the kindred tribes coming from the north brought in certain personal deities, some of whom were common to more than one stock, and one at least may have been common to them all. This would best explain the supremacy of Zeus, the Sky-god, and the fact that the god of Heliopolis, derived from the mountain that dominates the northern frontier, near to which the people who were to lead the history of Greece had at one time temporary settlements, and which they regarded as the throne of their high god. The wide geographical area of his cult cannot be naturally explained on the assumption that at any period in Hellenic history he had been merely the special deity of one particular tribe. And, as regards two other high gods at least, Apollo and Poseidon, we may be reasonably sure that, already in the pre-Homeric period, certain tribes other than the Achaeans had these cult-figures; in the Hyperborean ritual, which reflects at points the earliest days of Hellenism, we can follow the track of Apollo's invasion from the north; and the evidence is fairly clear that Poseidon was equally a northern immigrant, being the special tribal deity of the Minyai.

We must not then apply to the pre-Homeric period of Greek religion the formula 'one tribe, one god,' but must realize that religion already surmounted in some degree the tribal barriers; for, though the spirit of tribal exclusiveness was strong throughout the earlier periods of

this polytheism, certain families and certain tribes having the special prerogative of certain gods and jealously excluding strangers, yet the fact of the common possession of the worship by various tribes contained the germ of religious expansive-ness. Moreover, at some age indefinitely earlier than the Homeric, the conception of the high god had expanded both mentally and ethically: the deities of the special possession of worship by various tribes was probably of divine personalities; and the student of Hellenic religion must often abandon temporarily the quest of origins in his investigation of the composite whole.

4. Proto-Hellenic period.—The very high development of this Mediterranean civilization from which Hellenism drew so much of its own life is evident both mentally and ethically. To the Hellenic world, and it is likely that Hades was only an emanation from him. We may also regard the Hellenic deities, *Zeus* and *Hera*, as a conventional and crystallized phrase descending from an older poetic tradition, and we are justified in interpreting it as a phrase belonging to the higher plane of things.

We must also suppose that the anthropomorphic view of the personal deity of which Homer is so attractive a spokesman, had asserted itself in the period before his. Unlike the early Roman, the early Hellenic divinities could be regarded as married, and ideas derived from the life of the family could be applied to them, although we can often discern that many of the myths concerning divine relationships—the sisterhood of Artemis to Apollo, for instance—do not belong to the earliest Hellenic episode. Another sacred centre of the family life in the pre-Homeric society was doubtless the hearth and the heartstone in the middle of the hall; there are allusions to its sanctity in the Homeric poems, and the cult-records attest the great antiquity of this religious fact; although the development of the personal goddess *Hestia* can be traced back to the earliest period—the worship, for instance, of *Zeus* and *Hera*, the god of the earth, and *Hestia* in the courtyard of the old *Aryan* house the kinmen gathered for worship. Another sacred centre of the family life in the pre-Homeric society was doubtless the hearth and the heartstone in the middle of the hall; there are allusions to its sanctity in the Homeric poems, and the cult-records attest the great antiquity of this religious fact; although the development of the personal goddess *Hestia* can be traced back to the earliest period—

3. Minoan-Mycenaean religion.—But any account of the Hellenic polytheism of the second millennium demands a critical study of the Minoan-Mycenaean religion as well, and, before we can decide what part of the Homeric and later systems belongs to the aboriginal Aryan-Hellenic tradition, we must know what the northeners found in the lands that they conquered or occupied. We know now that they found in many centres a culture superior to their own and a religion of the acinum *Zeus* and *Hera*. The Hellenic tribes, on the other hand, were on the move, and we may surmise for it a religious origin, where its name—such as *Aphrodite*, *Demeter*, *Athena*, etc., perhaps *Mycene*—is derived from the personal name or the shrine of some divinity. In these cases the temple must have been the nucleus around which grew up the secular institutions; and the deity of the temple would become supreme in the political religion. Athens had won this position at Athens and probably elsewhere in the immemorial pre-Homeric past; and this explains her character in the Homeric poems as the divinity who more than all others inspires political wisdom and counsel. Various indications point, in fact, to the belief that the earliest developments of the city-state's worship was bound up with the cults of *Zeus* and *Athena*; for no other divinity was ever styled *Polemos* or *Pallas* by any Greek State; and this agrees mainly with the presentation of the Homeric poems and the early epic tradition.

3. Minoan-Mycenaean religion.—But any account of the Hellenic polytheism of the second millennium demands a critical study of the Minoan-Mycenaean religion as well, and, before we can decide what part of the Homeric and later systems belongs to the aboriginal Aryan-Hellenic tradition, we must know what the northeners found in the lands that they conquered or occupied. GREEK RELIGION

and marking probably the Hellenization of Attica. The singular features of the ritual and the association, preserved in its legend, of Attica with Crete indicates a high antiquity, when agriculture was the chief basis of the political as well as the religious life.

We may believe that other cults besides the two just named played a part in the political growth of the pre-Homeric world. The market-place, the cradle of political oratory, had become sacred ground, as Homer himself attests; and this consecration was probably marked by the presence of some εγκυμον, a sacred stone of Hermes, for instance. Apollo, also, had early divested himself of the aboriginal character of the god of the wood and of the homeless migratory host, had become a builder of cities, and had established himself in the city's streets with a change in the meaning of his title Αἴων, once an appellation of the Way-god who guided the host through the wild, now of the deity who guarded the ways of the city; and already, before Homer, his shrines at Pytho was beginning to acquire wealth and political importance as an oracular centre of consultation.

5. Earliest ethical religion.—The theistic system had been turned to good account in other directions than the political, before it appeared on the canvas of Homer. The whole morality of early social life had been nurtured and protected by it; for we may regard the ethical religion of Homer—unless we regard him as a man or as a group of men to whom a special revelation had been made—must reflect in some degree a tradition that had grown up around him. Witness then that current conceptions about the gods had ceased to be inspired merely by fear; a milder sentiment had come to infuse religious thought; the deity was regarded not only as the preserver of the gods but as a being to whom vengeance, but as loving mercy and compassion, and a protector of the weak and destitute. The cult of Zeus Εἴδωλος, the guardian of the stranger and the wanderer, had already arisen; and the sanctity of the oath taken in the name of the deities of the upper and the lower world was the basis of much private and communal morality.

6. Art and as aspect of religion.—Other parts of the higher activity of man had been consecrated by the polytheism of which Homer inherits and develops. The closest imagination of the Hellenes appears to have perceived a daemoniac potency—a σέμα—of religious in the art of the Greek and the charioteer, who must have belonged to the Homer popular theism. The latter group had grown up at the Boeotian Orchomenos, an old centre of the Mycenaean culture. It may be that at one time they had no other than the purely physical significance of vegetation-powers; but we understand their value for Homer only if we suppose that before his time they had come to be associated with the arts and the delight of human life. We discern also that the higher deities, Apollo and Athena, though by no means merely functional or departmental powers, had acquired the special patronage of song and art.

7. Proto-Hellenic ritual.—It seems, then, that even in the earliest period the polytheism was no longer on the most primitive plane; and we gather the same impression from what is revealed to us of the earliest forms of Greek ritual. The Homeric and Hesiodic poems are full of information concerning the religious service with which the poets were familiar; what they tell us then apply for the period of the 11th to the 8th century. But ritual takes long to develop, and, once fixed, is the most abiding element in religion. It is not too bold then to take the Homeric account as vouching for a tradition that goes back at least to the later centuries of the second millennium. The sacred place of worship might be a natural cave, or a ναός, a fenced cleft in a grove containing the sacred tree or holy pillar or heap of stones, whence gradually an artificial altar might be evolved. The latter had become, some time before Homer, the usual receptacle of sacrifice, and was a prominent feature in the Minoan-Mycenaean religion, which usually associated it with a sacred tree or pillar, or the sacred tree or the deity's presence or a magnet for attracting it, but not with any iconic statue or idol. Theistic religion could content itself with such equipment, but, if the anthropomorphic instinct is strong in it, it prompts the construction of the temple or the house of God. And temples must have been found in the land in the pre-Homeric period; the few that have as yet been revealed in the area of Minoan-Mycenaean culture were built, with one exception, within the royal palaces, and must be regarded as domestic chapels of the king, marking his sacred character as head of the religion of the State, the character with which the legends invest Minos and king Aiakes. The earliest that have been excavated are the temples of Hera at Argos and Olympia, and these are now dated not earlier than the 9th cent. B.C. But the traditions of the earliest period, that of Deukalion and of that of Athens on the Athenian Akropolis suggest a greater antiquity than this.

With the multiplication of temples special priesthoods must also have marked the professional priest had already arisen in pre-Homeric times; Homer knows of the brotherhood called the Ζευσίδαι, who tended the oracular oak of Zeus at Dodona, who slept on the grove and washed their feet; and he mentions others who were attached to special deities, and two of these at least administered cults without a temple, the priest of Zeus of Mount Ida 8 and the priest of the river Skamandros, 9 of each of whom he says: 'he was honoured like a god among the people.' These words suggest a high and sacred position. Yet these two priests are also warriors fighting in the ranks, which is the mark of a secular priesthood; and there is no legend or any hint of evidence suggesting that a profession endowed a political and social power in the pre-historic, that we know was never achieved by them in the historic, period of Greece. The evolution of many of the earliest Hellenic institutions evidence is almost wholly lacking. But on general comparative grounds we can surmise that the religious character of the monarchy was most prominent in the earliest times; and that, as its secular power and functions developed, the priest-expert was attached to the συνέδρια to assist in the national cults, over which he retained a general supervision. We have a scarcely a hint, either in the earlier or in the later days of Greece, of any conflict between Church and State; we know that at least historic Greece escaped asceticism; and its earliest societies, whatever their danger or their struggles may have been, had escaped it by the days of Homer. 9 Bearing on this point is the other negative fact that for this earliest age we have little or no evidence of the prevalence of what is called 'shamanism,' divine seers, ecstatic outbursts of wild prophecying, by which a society can be terrified and captured. The professional ψευδός, the prophet or soothsayer, existed as distinct from the priest; but his methods generally—as far as

1 At Gournia (see Huxley, Crete the Forerunner of Greece, London, 1906, p. 103 f.).
2 Ημ., v. 126.
3 He is aware, however, that a δοσολογία, an oracle mandate, might be delivered against the royal house (Il., ii. 280).
4 Ημ., v. 77.
our earliest witness informs us—were cool and quasi-scientific.  

The ritual at the altar in the early period, with which we are at present dealing, consisted of an oblation to the deity of an animal victim or an offering of fruits and cereals; the sacrifice might be accompanied with wine or might be wineless—

a sacrificial meal in which the victim was consumed, the latter being perhaps the more ancient tradition.  

We may interpret the earliest form of Hellenic animal-sacrifice as in some sense a simple tribal or family communion-meal with the deity, whereby the sense of comradeship and clan-feeling between man and god was strengthened and nourished. This is the view that Homer has inherited and it endures throughout the later history of the ritual; it expresses the general genial temper of Hellenic religion—a trait which Robertson Smith marked as characteristic of other religions of the same social type.  

Similarly, the description given us by Theophrastos and Pausanias of the ancient ritual of Zeus Polies on the Athenian Acropolis reveals to us a typical example of the civic communion feast.  

Such a sacrifice is merely a transition into the divine circle of the practice of the common feast of the city. But we can also discern a mystic element in the Hellenic ritual text, which is evidently based on a tradition indefinitely older than the poems: the sacrificer is separated from the rest of the assembly; the entrails are the innermost part of the life which has been consecrated by the victim. He is justified in supposing that the object of this solemn act was to establish the real and corporeal communion of the worshippers with the divinity.  

Similarly the site that lies deep beneath which is well attested of the later ages between the “chthonian” and the “Olympian” ritual—to use these two conventional terms for convenience—was almost in the but it is period of the polytheism. In the first type of sacrifice, where the offering was made to the other divinities, the victim’s head was held down above a hole in the ground—a βίβλος—and the blood from the severed throat was shed into it. In the second, where the upper powers, whose realm is the air or the sky, were the recipients, the victim was held up erect off the ground, his face lifted towards the sky, and in this attitude his throat was cut. Homer shows himself aware of this form of sacrifice; and that the other, the chthonian, was also in vogue in his time is to be inferred from his account of the ritual performed by Odysseus in honour of the shades, where he mentions the βίβλος, the sacrifice of black sheep, and the triple libation of honey, wine, and water.  

For the ritual of the dead in the Greek religious tradition was closely modelled on the service of the other divinities. The triple libation is known to have been part of Minoan-Cretan cult, as the available finds in the cave of Mount Diktae attest.  

And a shrine with a βίβλος in the middle of the cella has been found at Priene in Crete, consecrated to a chthonian goddess, the foundation of which is ascribed to the 9th century B.C.  

From these indications and from the great prevalence attested by later records of chthonian cults in which we can discern features of great antiquity, we can safely say that the earliest period of Greek religion was not wholly characterized by

the brightness of ritual and geniality of religious feeling that appear on the surface of Homeric poetry. Homer himself was aware of the dark world of powers who had lost their way and punished sinners even after death. Long before his time, we may suppose, gloomy worship, such as that of the θεός Μαλκύς described by Pausanias,  

at Myrina in Lycia, of which the sacrifices were performed by night, was in vogue in parts of Greece. Mother Earth, prophesying through phantoms, dreams, had been of ancient age at Delphi and elsewhere, and that was long before Homer’s work began.  

There are strong reasons also for believing that the cult of hermonin, who was a part of the pre-Homeric religion, as it was a prominent part of the post-Homeric. The elaborate tendencies of the dead attested of the Mycenean period by the graves discovered at Tiryns and Mycenae might easily develop into actual worship, when it was maintained through many generations, as it was at Megiddo in Asia. Doubtless, the common and promiscuous worship of the dead was a morbid development of the later polytheism. But Homer, who is generally silent about such cults, and, in a well-known passage about that of the Taini-Brothers,  

seems to ignore deliberately their divine or semi-divine character, almost reveals his knowledge of the worship of Hero,  

and certainly was aware of the Attic cult of Theban Polytheism that refers to it is the work of an interpolator.  

It is a difficult question how we are to estimate and how far the Hellenic ritual has been modified on this important point of religion. Even if we trust it so far as to say that the Acheans at least practised no real worship of the dead, it yet remains probable that it is at Sparta, especially, and there in the lands in which they settled (see θέατος Σερβόσκειος Καρν).  

It is important to emphasize this gloomier side of Greek religion; it is not accidental to exaggerate it, as has been the tendency of some modern writers in a pardonable revolt against the old shallow theories of orthodox criticism. We have reason to suppose that at no period of his history the ordinary Hellene was ever known as a ghost-ridden, worried and dismayed by demoniac terrors, or by morbid anxiety about the world or his destiny after death; at least he will not appear so, when we compare his religious and mythological records with those of Babylon, Egypt, and Chris tandem.  

For we are assured that the pre-historic Hellene was weaker-minded and more timid in such matters than the later. He may even have been stronger-minded, and at least as willing to eat a sacrificial meal in company with the θεός Μαλκύς or with the nether-Zeus or the nether-Earth-Mother and with his departed family-spirits as were his descendants at Sparta, Myconos, and many other places.  

The earliest myths have little of the gothic element. Homer, indeed, himself was cognizant of the form of terror as a black stench capable of turning a man into ants or worms,  

and the ancient folklore of Argolis was aware of a bad spirit, called a μάρτυρ, that once ravaged its homes.  

The early popular imagination was sure to have inherited or to have evolved such creations of fear; and a black earth-goddess with a horse’s head and snake-locks who lived in a dark cave at Phigaleia, or the nether-Zeus who, in the Mycenean period, was a sufficiently terrifying personality.
Greek Religion

But, happily for the Greek imagination, the divinities of the world of death, abiding below the earth, tended to take on the benign functions of the powers of vegetation. In the world of the lower gods, man is called by the ill-omened name of Hades in cult, but Plouton or Trophonios or Zeus Chthonios—names implying beneficence; for the Hellenic god, in his lower aspect, is Demeter, the goddess of the vine, and the sickle, the green leaves of the corn, and the sacri-

fice, the driving out of the scapgoat, blood-magic for controlling winds or finding water—no reasonable critic will call all these things post-Homeric because they may not be mentioned in Homer, or suppose that the pure-minded Hellenes were seduced into borrowing them from the Orientals, or that they were spontaneous products of a later degenerate age. The view taken of them by those who have in recent times applied comparative anthropology to the study of Hellenism is the only one that is possible on the whole: these things are a surviving tradition of a mode of religious thought and feeling proper to the aboriginal ancestors of the Hellenic race, or immortal indigenous products of the soil upon which that race grew up. There is no cataclysm in the religious history of Greece, no violent break with its past, no destruction of such certain forms of the Eleusinia may have been that of a secret society organized for agrarian purposes. At any rate, there is no proof that the primitive mind of the Hellenic brooded much on the problem of death, or was at all possessed with morbid feeling about it; and in pre-Homeric times he must have been freer from care in this matter than he was in the later centuries, if we accept the view of certain scholars that the elaborate ritual of ἄθλος, or purification, which was mainly dependent on the life of the Hesiodic society, of which Homer is supposed to be the spokesman, had some of the cathartic rules and superstitions that are found broadcast in later Greece. It may not have elaborated or laid marked stress on them; it may have had no strong sense of the impurity of homicide, nor devised any special code for its expiation. But, if it was esteemed vital, any instinctive feeling for the impurity of birth and death, and for the danger of the ἀθάνατον arising from certain acts and states, it was almost unique among the races of man. Only, a progressive people does not overstrain such feelings.

Cruder religious conceptions in the earliest period.—So far, the religious phenomena discoverable with certainty in the earliest period of Greek history indicate a theistic system of a somewhat advanced type. But doubtless we must reckon with the presence of much else that was cruder and more savage. When we find in the later records ample evidence of the lower products of the religious imagination—the products of an animalism, a polytheism, or polydaimonism; more inarticulate and uncouth embodiments of the concept of divinity; or darker and more cruel ritual than that which Homer describes as the sacrificial dance of the Dactyls; the driving out of the scapegoat, blood-magic for controlling winds or finding water—no reasonable critic will call all these things post-Homeric because they may not be mentioned in Homer, or suppose that the pure-minded Hellenes were seduced into borrowing them from the Orientals, or that they were spontaneous products of a later degenerate age. The view taken of them by those who have in recent times applied comparative anthropology to the study of Hellenism is the only one that is possible on the whole: these things are a surviving tradition of a mode of religious thought and feeling proper to the aboriginal ancestors of the Hellenic race, or immortal indigenous products of the soil upon which that race grew up. There is no cataclysm in the religious history of Greece, no violent break with its past, no destruction of such certain forms of the Eleusinia may have been that of a secret society organized for agrarian purposes. GREEK RELIGION

in a treatise on the subject by De Waele. Later Arcadia was full of the products and of the tradition of this early mode of religious imagination; besides the herds which Demeter at Phigaleia, we hear of the worship at the same place of a goddess called Eurynome, represented as half-woman, half-goat, and bringing the animals belonging to it.  The Roman period have been found at Lykosoura in Arcadia, apparently representations of divinities partly theriomorphic. The first mythologists who dealt with the primitive forms of Hellenic religion interpreted this special set of phenomena in the light of totemism; but progressive students have now abandoned the totemistic hypothesis on the ground that there is little or no trace of totemism in any Greek or any Aryan society, and that theriocracy, or the direct worship of animals, needs no such explanation. Also, as recently pointed out elsewhere, the theriomorphic concept of divinity can, and frequently does, coexist at certain periods and in certain peoples with the anthropomorphic; nor can we say with assurance that in the mental history of our race the former is prior to the latter, or that generally the anthropomorphic was evolved from the totem-god.

II. Functional deities; polydaimonism. In attempting to penetrate the pre-Homeric past, we have to reckon with new phenomena, which, though revealed in later records only, has certainly a primitive character, and has been regarded as belonging to an age when the concept of definite personal divinities did not yet exist. It was Usener who first called attention to a large number of local cults of personages unknown to myth or general literature, and designates what are called proper names, such as Hermes, Apollo, Zeus, but by transparently adjective names, expressing a particular quality or function or activity, to which the essence of the divine power in each case was limited; such, for instance, are Βυχτίς, Βυχτίαιος ἱππος, Κοντις, Κένος, being nothing more than 'the hero of the ploughshare.' In Arcadia, the 'tree who strikes the beans grow' on the sacred way to Eleusis, 'the hero who gives the good return of corn' at Tanagra, for these he invented the term Σωμοφόρης, meaning a dweller of a single function only, and for them to whom only a momentary function, and therefore only a momentary existence, seemed to appertain, he applied the term Αμελλής, 'momentary gods'; an example of this type might be Μέγας, 'fly-chaser,' in Arcadia and Elis, who at the sacrifices to Athena or Zeus was called upon to chase away the flies that would worry the sacrificers, and who existed only for the purpose and at the time of that call. We may compare also for vagueness and inchoateness of personality certain agglomerates of deities having no definite single existence, but grouped by some adjective functional name, such as θει Ἀμφίπορος, 'the deities that aver evil,' at Sikyon; θει Παννοής, the goddess of birth in Attica; the θεοί Πανάρχης, the goddess of just quittal, at Halirrhothia. Such forms seem to hover on the confines of polydaimonism, and to be the products of an embryonic perception of divinity, cruder and dimmer than the robust and bright creations of the Homeric period, to which so rich a mythology and so manifold a personality attached. Another fact seems to fall into line with these: in some cult-centres the deity, though personally and

anthropomorphically conceived, might only be designated by some vague descriptive title like θεί and θει, as occasionally at Eleusis; or θεσμος, 'the Mist,' the goddess at Phigaleia, or Παρθένος, 'the Virgin,' on the coast of Caria, and in the Chersonese: even as late as the time of Panormus the islanders called their highest god by any other name than θει Ειρησ, 'the Greatest.' And it has been thought that the well-known statement of Herodotus, that the Pelasgians had no names for their divinities, was based on some such facts as these.

The importance of these phenomena would be all the greater if Usener's theory were true, that they represent the crude material out of which much of Greek polytheism has grown. But in any case they claim mention here, because they are the products of a mental operation or instinct which must have been active in the earliest period of Hellenic religion.

12. Animism or Animatism. In another set of facts, also attested by later researches, we may discern the surviving tradition of an animistic period. A large part of the Hellenic as of other religions reflects man's relation and feeling towards the world of Nature, his dependence on the fruits of the earth, the winds, the waters, and the phenomena of the sky. The trend of the higher polytheism in the Hellenic world was to set divinities above and outside these things, which he or she directs as an intellectual will-power. But we have sufficient evidence of another point of view, which is the origin of this primitive animistic belief, from which the deity is imagined as essentially immanent in the thing, not as a distinct personality emerging from it. The Arcadians who worshipped Zeus Kwonos, or Zeus Arkeos, at Mantinea, or the people at Gythion in Laconia, who called a sacred meteoric stone Zeus Karavis, or the fallen Zeus, or the Athenians who worshipped Demeter Xidhe, 'Demeter Green Verdure,' reveal in these strange titles an attitude of mind that is midway between Animism, that religious perception of each object as the essence of a phenomenon in Nature as in itself mysteriously alive and divine, and 'Theism,' which imagines it controlled by a personal deity. At the stage when Demeter could be named and personified, when the idea of 'Verdure,' the anthropomorphic conception of divinity, though certainly existing, was not yet stable. But there are other cult-facts reported to us of a still cruder type that seem to reveal Animism pure and simple and the infancy of the Hellenic mind. The Arcadians, always the most conservatis and backward among the Hellenes, in their colony of Trapezus 'offered sacrifice to the lightning and thunder and storms'; it seems that for them those things were animate and alive directly, just as the Air—Bos—was for the Macedonians. Again, through all the periods of Hellenic religion, the worship of rivers and springs only as certain points approached the borders of Theism; sometimes offerings were flung directly into the water, and prayer might be made 'into the water'—we must not say 'to the river-god,' but to the divine water.
Greek Religion

We discern these two different ways of imagining divinity in the worship and ideas attaching to Ἴδως, 'Sun,' and Ἑρως, 'Hearth.' As regards the former, we have reason to suppose that his religious prestige was higher in the Homeric than in the later age, and that the exalted position as a great political and cultured god which he enjoyed in the later history of Rhodes was a heritage from the Minoan religious tradition. In Homer's poems we find him personal and anthropomorphized; but we may well doubt if he was so far for the average worshipper as to kiss his hands to him every morning, or bowed to him on coming forth from his house, and who, regarding him mainly as animate or 'Living Sun,' found it difficult to develop him into a free and complex individual person.

As regards Hestia the facts are still clearer. In her worship, which belonged to the aboriginal period of Greek religion, she was at first, and in the main continued to be, nothing more than 'Holy Hearth,' the Hearth felt as animate; nor was the attempt to anthropomorphize her into a free personal goddess ever wholly successful, for reasons that will be considered later (p. 404).

Magic.—Now, that which is here called 'animate religions,' the religious feeling which may inspire gods, but is more liable than pure theism to be associated with magic; and it is reasonable to believe that magic was in vogue in prehistoric Hellas. It was in antitype and counterpart to religion, but practised for purposes of the community as well as for private ends. It is true that the records which tell us about things are all of a period much later than Homer's, and that he is almost silent about such matters. But we know now how to appreciate Homer's silences, and remember that Homer himself kissed his hands to him every morning before he went to bed. The Homeric poems show no consciousness of the existence of the ritual of magic in the Greek world of the period; and it has been argued on this ground that the Achaean society of which they are the record believed that some of those records reveal facts of immemorial antiquity in Greece. The Thesmophoria, one of the most ancient of the Hellenic ceremonies, was partly mystical; that is, it included rites that had a direct efficacy, apart from the appeal to any divinity—such as the strewing of the fields with the decaying remains of the pigs that had been consecrated to the earth-goddesses and thrown down into their vaults. So also in the Thesmophoria of Athens and other Greek communities, the ceremony was higher in the pre-Homeric stage, and the ritualistic whipping and transference of sin belong to the domain of magic rather than to religion.

We may also deal with the elements in the titles of officials at Athens called the Ἑλέαστρατος, and of those at Corinth called Ἀρμαραστρατος, both words denoting 'wind-drivers,' 'those who charged the winds to sleep.' In fact, the description of the rite performed by the magicians at Kleoëna, as according to Clement, averted the sky's wrath by incantations and sacrifices; or in Pausanias' account of the operations of the priest of the winds at Tityne in Sikelon, who endeavoured to assuage the tempests by singing over them the spells that Medes used. Doubtless these officials were only maintaining the practices of an indefinitely remote past, such as are also reflected in legend of the ancient Salmoneans, of the Thessalian and possibly Minyan origin, who drove about in a chariot imitating thunder and, while thus preternatural to the weather-magic, they are not much later than Homer. Whether these figures were to have pets also to have practiced harmless magic (II. 21. 740); and the poet may have regarded the Muses' epithets as the special home of magic (see Od. H. 329). 10 See Od. v. 835-355; and of, as Ekalos (Greek).

The case may be to have pets also to have practiced harmless magic (II. 21. 740); and the poet may have regarded the Muses' epithets as the special home of magic (see Od. H. 329). 10 See Od. v. 835-355; and of, as Ekalos (Greek).

GREEK RELIGION

general grounds for believing that it was a feature of the earliest Greek religion are confirmed by some special evidence derivable from the legends and cult-records. It is generally impossible to date the birth of a myth, but some can be discerned to belong to an earlier stratum than others: such are the legends concerning the human sacrifice to Zeus Lykos in Arcadia, to which is attached the story of King Lykos and the banquet he offers to Zeus on the flesh of his own son; the Achaeans or Minyan story of the sacrifice to Zeus Lykos of the king's son of the house of Athamas; Lykooe's sacrifice of pilgrims and the dedication of their skulls to Apollo on the Hyperborean pilgrims way at the Achaeans' Pagastai; the sacrifice of a boy and a maiden to Artemis Telesphoros by the Ionians on the southern shore of the gulf of Corinth. A careful study of the legends of these various rites will convince one that they belong to the earliest period of Greek religion. The last example is specially illuminating: the human sacrifice is here practised by the Ionians in their ancient settlements in the land afterwards called Aegais; and its cessation is connected with the arrival of the cult of Dionysos and the return of the Bacchantes. The purpose and significance of the rite differed probably in the different cult-centres. In most cases we may infer it as circular, the dedication to an offended deity of a valued life, the life of a king's son or daughter, as a substitute for the life of the people, such vicarious sacrifices being a common human institution; in a few cases we may discern an agricultural motive, the blood being shed as a magic charm to secure fertility; finally, in the ritual of Zeus Lykos we may detect a man sacrifice, in which the fresh flesh of the victim, whose life was mystically one with the god's and the people's, was sacramentally devoured. This ghastly practice is only doubtfully disclosed by legends and by interpretation of later records; a faint reminiscence of it may also have survived in the Argive story of Harpylyke and Klymenos. But a closer parallel to it will be noted in the Thracian Dionysian ritual. 

Summary account of the first period. - A detailed account of the pre-Homeric religions age must at many points remain doubtful and conjectural; but certain definite and important facts may be established. Anthropomorphism, in a degree not found in the earliest recorded religion, was already prevalent, even dominant, and nearly all the leading personal divinities of the earlier polytheism had already emerged; only Dionysos had not yet crossed the border from Thrace; Asklepios, dimly known to Homer, was merely the local deity of a small Thessalian community, Pan merely the daimos of flocks in remote Arcadia. Cretan religion, also personal in its imagination and mainly anthropomorphic, had left its deep imprint on the mainland; and its divine personalities, such as Rhea, the mother of the gods, and Aphrodite, were soon adopted by the northern immigrants, but not at first into high positions. The deity was generally idealized, not as a spirit or a vague cosmic force, but as glorified man, and therefore the religion became adaptable to human progress in arts, civilization, and morality. But much in the animal world still appeared sacred and weird; and the deity might be at times incarnate in animal form. At the same time the religious imagination was still partly free from the bias of personal theism, and produced vaguer divine forms, of some force and power, but belonging rather to 'animalism' or polydaimonism than to polytheism. Finally, a study of all the facts and probabilities may convince a careful student that the origin of Greek polytheism as a whole from simpler forms cannot be forged back to the second millennium, which is the starting-point for Hellenic history proper, we cannot discern the 'making of a god' (unless we mean the building-up of his more complex character), nor do we start with a godless period. We may well believe that in the history of mankind theism was evolved from animism or polydaimonism; we may believe the much more doubtful theory that anthropomorphism arose from a previous theomorphism; and there may still be some who are convinced that theomorphism implies a totemistic society. But, at any rate, those evolutions had already happened indefinitely before the two strains, the Northern and the Mediterranean, had blended into the Hellenic race. The higher and the lower, the more complex and the simpler, forms of religious imagination overlap together throughout Hellenic history; and the higher, though dominant, never wholly absorbs the lower, both being an intellectual tradition of an indefinite past. Much work on the origins of Greek religion has been wasted because its chroniclers have attempted to unlock many of its mysteries by the key of totemism has been abandoned by those who recognize that many of its views concerning this social phenomenon and its religious importance, prevalent in a former generation, were erroneous. We can now pursue the inquiry nearer the borderline of the historic period, as it is conventionally termed.

Introduction of worship of Dionysos. - As early as the 10th cent. B.C., and probably earlier, a new religion with a new and imposing divinity was intruding itself into the Hellenic lands from Thrace and Macedonia. Dionysos and the Thracian ritual-legend of Lykos are known to Homer; but the poems suggest that he was not yet definitely received into the Hellenic pantheon. Yet there are reasons for believing that Boreas had received the alien worship in Asia, the Minya, speech, before the incoming of the 'Boioti': and Attica before the Ironic emigration; while in the Peloponnesus the demigod Dionysos, the avatar of the god with the names of Peneus and the Proest dynasty. In spite of local opposition and its natural antagonism to the nascent spirit of Hellenism, which was now tending to express itself in certain definite and orderly forms of mood, thought, and feeling, the new religion won its way victoriously, taking Thebes for its Hellenic metropolis, and some time afterwards securing its position at Delphi, where the priesthood and the Apolline oracle became its eager champions. It was distinguished from the traditional Hellenism in regard to its idea of divine personality, its ritual, and its psychic influence, that is to say, the mood that is evoked in the votary. In the first place, the figure of Dionysos belonged indeed to personal theism, certainly in Hellenic cult and probably in the Thracian; but he was less sharply defined as a concrete god. For instance, Apollo or Athene; he was vaguer in outline, a changeable power conceived more in accordance with daimonistic, later with pantheistic, thought, incarnate in many animal and plant forms and operative in the life-processes of the vegetable world; and an atmosphere of Nature-magic accompanied him. 1

1 See Ond. v. 36-119; cf. generally ch. iv. and v.
GREEK RELIGION

The central motives of this oldest form of ritual were the birth and death of the god—a conception pregnant of ideas that were to develop in the religious future, but alien to the ordinary Hellenic theology, though probably not unfamiliar to the earlier Cretan-Mycenaean creed. But the death of this god was partly a fact of ritual; he was torn to pieces by his mad worshippers and devoured sacramentally in the bell or the goat or the boy that they rent and devoured was supposed to be his temporary incarnation, so that by this savage, and at times cannibalistic, communion they were filled with his blood and his spirit, and acquired miraculous powers. By such an act, and—we may suppose—by the occasional use of intoxication, of wine or of meat—son of fowl, and the sexual rite, which might show itself in a wild outburst of mental and physical forces, and which wrought up the enthusiastic feeling of self-abandonment, whereby the worshipper escaped the limits of his own nature and achieved a temporary sense of identity with the god, which might swell him even after death. The priest of the deity might be used for the practical purposes of vegetation-magic, yet was desired and proclaimed for its own sake as the servant of the god. He was made to undergo the process of immortality; he was made an angel, or a god, possessed no morality, and could ill adapt itself to civic life; its ideal was supernatural psychic energy. The process whereby it was half-captured and half-covered by the worshipper, was one of the most interesting chapters in Hellenism.

II. SECOND PERIOD: 600 B.C.—It is convenient for the purposes of religious study to mark off the period between the 8th century, and the 6th as the second period of Greek religion, in which we can observe the working of new forces and the development of older forms into new life. By the beginning of this period the fusion of the northern and the Mediterranean population was mainly complete, and the Hellenic spirit had acquired its distinctive character. The 7th, 6th, and 5th centuries witnessed the diffusion of epic literature, the rise of lyric poetry, the emergence of the symposium, or idol, in religious, and, generally, the development of civic and civic life; and it is essential to estimate the religious influence of these forces.

2. Influence of Epic and Lyric Poetry.—The influence of Epic and of the later Hesiodic literature to the shaping and fixing of Hellenic religion was much fruitful and effective cannot be doubted. Only, we must not accept the exaggerating view of Herodotus 1 that these two poets were really the founders of the anthropomorphic religion, following the orthodox Hesiodic theology, and determining the names and functions and shapes of the special divinities. By such a statement some scholars have been misled into regarding the Homeric poems as a kind of Greek Bible, which in respect of religious matters it might be hetero to disbelieve. We know that local temple-legend and local folklore could always maintain their independence of Homeric or Hesiodic authority, in respect of the titles of the gods, their relationships, and genealogies: Artemis was not even mentioned in the Iliad, and the same parentage of Zeus or Zeus the same spouse. The early epic poets gathered many of the gods and shrines, but there was much that they did not gather, and which survives in the development of special local polytheism in Greek theology, and no orthodoxy and no heterodoxy in the sense that it was moral to believe or immoral to disbelieve any sacred book. Therefore, the special purpose of Homer and his followers was to intensify the anthropomorphic trend in Greek religion, to sharpen and individualize the concepts of divinity, and to diffuse throughout the Hellenic world a certain uniformity of religious imagination. To their work partly, as well as to the higher synthetic power of the Greek mind, we may assign the loss of the local varietjes of myth and cult-titles, in spite of the various elements that the divine personality may have absorbed from earlier cult-figures and cult-forms in the various cult-centres, the sense of the individual unity of person was not lost so long as the same name was in vogue; hence Apollo Lykeios of Argos could not be a different person from the Apollo Patroos of Athens, nor could hostility arise between them. That is to say, the higher religious literature imprinted a certain precision and definiteness, the psyche of the leading divinities and endowed them with a certain essential connotation; for example, the dogma of the virginity of Athene and Artemis, always presented in the highest poetry, prevailed so far as to suppress the maternal character that may have attached to them in the pre-historic period, and of which we can still discern a glimmering in certain local cults. 2 To be less of strange are the divine characters the rising lyric poetry, which was growing up with the decay of the Epic, and which, in obedience to the laws of natural development, or rather to the discipline of art, was developing fixed types of song and music appropriate to special festivals and worship, must have contributed much. The 'espeia' metre was adapted to the invocation of the gods, or the hymn sung at the libation—the εὐδεία of Zeus; and the solemn gravity of the spoudaiak form attributed to Terpander fittingly expresses the majesty of the high god, 'the cause of all things, the Leader of the world.' 3 The pneuma and the σκιά became instinct with the Apolline, the dithyrambos with the Dionysiac spirit. 4 The earlier Greek lyric was, in fact, mainly religious, being composed for public or private occasions of worship; its vogue was therefore wide, and in some communities, such as Attica, the songs of these compositions formed part of the national training of the young.

2. Idolatry.—Another phenomenon of importance at the beginning of this second period is the rise of idolatry, the prevalence of the use of the ἱερων in actual worship in place of the older aniconic σταυρος, which had sufficed for the Minoan and the Homeric world as a token of the divine presence or as a magnet attracting it to the worshipper. This important change in the object of cult may have been beginning in the 10th cent., for we have one indication of it in the Homeric poems, and recently on one of a series of vases of the early geometric style in the post-Minoan period near Knossos, the figures of an armed god and goddess are depicted on low bases, evidently idols, and perhaps the earliest of any Hellenic divinity. 5 Henceforth, although the old fetish-object, the aniconic σταυρος, lingered long in certain shrines and holy places, the impulse towards idolatry became imperious and almost universal, exercising a mighty influence on the religious sentiment of the Hellenes both before and after the triumph of Christianity. The worship before the idol intensifies the anthropomorphic instinct of the polytheism, and was at once a source of strength and a cause of narrowness. It brought to the people a strong conviction of the real presence of the concrete individual divinity; as it gave its mandate to the greatest art of the world, it evolved the idea of divinity as the ideal of humanity, expressive in

forms of beauty, strength, and majesty. On the
other hand, it was a force working against the de
gree of development of a more mystic, more imma
terial religion, or of a consciousness of godhead as an
abstract principle, of a mind that was to rise out of the
vaguer religious perception of those half-personal
daimones or numina, which never wholly faded from
the popular con
3. Progress of anthropomorphism.—It is in-
teresting to mark within this second period the vari
ous effects of the new regime. Anthropomorphism. 
Those functional daimones and the innate amorphous
lightness of religious perception, in which the Roman
indulgences remained, and to be attracted into the
stronger life of personal
Theogony. Once perhaps only a vague func
tional power that nurtured children, becomes
identified with Artemis or Gē; Ψυή, 'Divine Ver
dure,' when the cult was introduced from the Maec
thian Tetrapolis to the Akropolis of Athens—
if this, indeed, is a true account of its career—could
maintain herself only as Διανήμερος Δίσην. Again, the
name Ψυή comes to be applied to even the most
shadowy of those functional powers, to Μηθύρρος,
'the Fly-chaser,' the most limited and momentary of
them all; to Μεθύμνη, the daimon of good harvest,
said to guard the belly of one who wore his hair in a
tail; and to all of them Ψυή means they were imagined as
semi-divine men who once lived on the earth.
Even the most intemperate of these spirits, some of those
which mark mental phases or social conditions,
such as Βοῖος, Λόφος, Φίλα, Friendship, Εἴρηρη,
Fecundity, became often for the religious imagnation
personal individuals with human relationships; thus Εἴρη
merges almost as a real goddess with the
traits of Demeter, Φίλα on a relief in the
Jaeckelin collection is individualized as the mother of
Zeus Phileus, the phase of the heliophytic
theogony. Others such as Διάνος, 'Compassion,' or
'Worship,' remained in the border-land be
 tween animating forces and personal deities.

But we observe in many cases that the name
itself was an obstacle to the emergence of a con
vincingly personal god or goddess; and, where this
is the case, the personality never could play a
leading part in the advanced religion. Thus
Εἰρήν bore a name that denoted nothing more
than 'the Ear,' considered as animate and
holy; Greek anthropomorphism did its utmost for
her, but never or rarely succeeded in establishing
her as a fully formed personal goddess. The same
phenomenon is observable in regard to Gē, Halos,
and Selene; it was easy to regard them as animate
powers, and as such to worship them; such wor
ship they received throughout all periods of Greek
religion, but they exercised no direction of the
moral, social, and spiritual progress of the race;
for their names signified not substances
unlike and alien to man that they could not with
conviction be imagined as glorified men or women.
It was otherwise with such names as Apollo, Hera,
Athens, which could become as real and individual
as Midian and Themistocles; and it is these humanized
personalities that alone dominate the higher
religion of Greece. The spiritual career of
Demeter began only when men forgot the original
meaning of her name and half forgot that she
was only Mother Earth. The Αργαί, being mere
'Winds,' were scarcely fitted for civic life; but
Boreas, having a personal name, could become a
citizen and was actually worshipped as Ποιησις,
'the Citizen,' at Thourioi. 4 A curious and un
scientific distinction that Aristophanes makes
between the religions of the Hellenes and the
Barbarians 1 has its justification from this point of

4. Influence of the 'Poles' on religion.—The
spirit of the Poles, the dominant influence in Greek
religion throughout this second period, worked in
the same direction as the anthropomorphic in,
sage, giving complexity, variety, and individuality,
and an ever-growing social value to the idea of
godhead. The deities of the wild enter the ring
wall of the city, and shed much of their wild
character. Apollo Lykias, the wolf-god, enters
Argos and becomes the political leader of the
State, in whose temple a perpetual fire was main
tained, symbol of the perpetual life of the com
munity. 2 And the advanced civic organization
tended to transform the primitive theocracy or
thoriorchic ideas that still survived. Proofs of
direct animal-worship in the later period are very
rare and generally doubtful; for the ancient writers
employ the term 'worship' carelessly, applying it
to any trivial act of reverential treatment. 3 In
the few cases where we can still discern the animal
receiving cult, we find the anomaly explained away
by some association established between the animal
and the anthropomorphic deity or hero. Thus the
wolf became a right of Argos; if, indeed, it ever was—
but might be revered here and there as the occasional incarnation of Zeus
Apollo, or as an apotropaic sign of the
isitive population of the Troad may once have 'wor
shipped' the field-mouse, though the authority
that attests it is late and doubtful. One
and when Apollo becomes in this region thin,
the guardian of the Εἰρήν and the protector of their
crops, he takes a title from the mouse (Ζαυς-Εἰρήν or
ψαλιστός), and the mouse is carved at the side of the
and the anthropomorphic iconography hint
that the rest of the species not to injure the corn, or
as a hint to the god that mice needed regulating.

The serpent worshipped in the caverns, or in some
hole or corner of the house—vaguely, in 'Aryan'
times as the Earth-daimon or Housen-genna—
became interpreted as the embodiment of the
ancestral Ezechithites of Athens, or Kyreus of
Salamis, or Zeus Κήρες, the guardian of the
household possessions, or Zeus Μηθύρρος, the nether
god. When the very human Asklepios came to
Athens towards the end of the 6th cent., he
brought with him certain dogs who were ministers
of healing; and the Athenians offered sacrific
cial cakes both to Gē, Halos, and to his dogs, which
partook of his sanctity. 5 This may appear a
strange imbecility; but at all events we discern
in these facts the prevalent anthropomorphism
dominating and transforming what it could not
abolish of the old theocracy; just as we see the
coin-artist of Phigaleia transforming the unear
the type of the horse-headed Demeter into a beautiful
human form of a goddess wearing a necklace with
a horse-hoof as its pendant. The sacred animal
never wholly died out of Hellas; but it could
maintain its worship only by entering the service of
the human gods.

The expansion of the civic system in this second
period, due to extended colonization and com
merce, induced a development of law and the
expansion of moral and religious ideas. One of
the most vital results of the institution of the
Poles was the widening of civic life. In the
theory the city was a congregation of kinmen,
combinations of tribes, phratries, and families,

1 They worship Sun and Moon, we worship real Gods such as Apollo and Hermes, Plut., 410.

6 Proo-Demokr. Leg. deor. n. 16.
wider or narrower associations, framed on a kinship; and it gradually evolved the belief, pregnant of legal and moral developments, that every citizen was of a certain family or clans and that the family was knit together by the worship of the hearth in the hall and of Zeus - the god of the earth - in the courtyard of the house. This cultus was given a new character by the establishment of the cult of Zeus on the Areopagus. The great divinities of the State, Zeus, Athena, Apollo, Demeter, Persephone, and perhaps later, Hestia, were also venerated. The religious and social organization of the family was thus strengthened. The Polis also organized and maintained the kindred festivals of commemoration and ancestor worship of the Heraíon, and of the deceased were the All-Souls celebration of the dead which was held at the end of the month in the night of the, the festivals of the, the joint festival of the phratries, while the provision of the dead was a matter of the consolidation of the scattered groups into the single city. The festival of the Oikouraion, the union of all the houses, and of the Agon, the all-Athenian festival of Athens.

The picture that these facts present of a State religion is that the family and the kinship are mainly drawn from Athens, of which the religious record is always the richest; and it reflects-undoubtedly the system of the other Hellenic States as well. Many of their records attest the belief that some one of the high divinities was the ancestor or ancestress of the whole people, and this ancestry was generally understood in the physical and literal sense. Thus Apollo Hérós was the divine ancestor, being the father of Ion, of the Ionian population of Attica; and even the non-Ionic tribes desired for political purposes to affiliate themselves to this god. In the same sense he was called Perseus, the Father, in Delos. Zeus was the hero of the Arcadians, and was worshipped as Hérós at Tegae; Hermes also was ancestral god of part of the Arcadian land, and identified with the ancestor Alkis. These religious fictions came to exert an important influence on morality, and also to develop a certain spiritual significance, which will be considered later.

The public religion is further emphasized by the prevailing custom, which appears to have gathered strength in this second stage of worshipping the hero or the mortal ancestor of the State, the tribe, or the clan. The first clear evidence of this in literature is in the poem of Arkturos of Miletos called the Iliad and of the IVth cent. B.C., and in which the apotheosis of Achilles is described. But there is, as has been said, strong reason for believing that the practice of heroizing the dead stems from the time of Homer.

2 Diod. v. 18, 2; Macrob. iii. 6. 2.
3 R. D. B. 1689, p. 94.
4 Paus. vi. 47. 4.

Nevertheless, of the multitudes of hero-ancestors cultivated in the Achaemenid Persia, the greater number are probably post-Homeric. We find the Delphi oracle giving vigorous encouragement to the institution of them, and in the 9th cent. B.C. cities begin to negotiate and dispute about the possession of the relics of heroes. Some of these in the archaic period may have been real living men dimly remembered; some were fictitious ancestors, like Arkas and Lakedaimon; some may have been faded deities, such as were Rudabolos at Eleusis and Prophorion at Labadeia. But all were imagined by the worshipper to have been once men or women living on the earth. This, then, becomes a fact of importance for the religious thought of the world, for it engenders, or at least encourages, the belief that human beings might through exceptional merit be exalted after death to a condition of blessed immortality, not as mere spirits, but as beings with glorified body and soul. Furthermore, certain ancient heroes, long revered as the people as the primeval parent or the war-leader of their forefathers, became identified with the high god and merged in his being; Erechtheus shares the altar and even the title of Poseidon and Zeus; Alkyoneus of Arcadia becomes Hermes; Agamenon in Laconia at last is fused with Zeus. Nor in this second period were such heroic honours reserved for the remote ancestor or the great king or warrior of old, but were sometimes paid to the recently dead, to the men who had served the State well by arms or by counsel. On the assumption that the costume of the hero is a real man — and any other theory of him is less natural—his case is the earliest recorded instance of the heroizing of a historical personage. A great stimulus about this time was given to this practice by the expansion of Greek colonization, the greatest world-event of the period, which reacted in many ways on religion. As the inventory of the temples and the kinship is mainly drawn from Attica, of which the religious record is always the richest; and it reflects undoubtedly the system of the other Hellenic States as well. Many of their records attest the belief that some one of the high divinities was the ancestor or ancestress of the whole people, and this ancestry was generally understood in the physical and literal sense. Thus Apollo Hérós was the divine ancestor, being the father of Ion, of the Ionian population of Attica; and even the non-Ionic tribes desired for political purposes to affiliate themselves to this god. In the same sense he was called Perseus, the Father, in Delos. Zeus was the hero of the Arcadians, and was worshipped as Hérós at Tegae; Hermes also was ancestral god of part of the Arcadian land, and identified with the ancestor Alkis. These religious fictions came to exert an important influence on morality, and also to develop a certain spiritual significance, which will be considered later.

1 The other view, still held by some, that Zeus-Agamenon is the earlier fact and Agamenon the hero he later, does not bear criticism.

Greek Religion

bordering on veneration, and such as might inspire actual worship.

We may safely assume that the growing interest of the State in hero-cult intensified the family aspect of the State-religion; the hero as the glorious kinsman is invited to the sacrifices of the higher deities, and to the festa in which the god himself is the host.

It is important for the student of religion to mark the consequences of this close association of the civic religion with the idea of kinship that held together the family and tribe. These have been estimated more at length elsewhere; it is only a few examples which are here presented.

Where a family-bond exists between the deity and the city, the spirit of genial fellowship is likely to prevail in the ritual and religious emotions, and the family meal might become the type of public sacrificial meal with the god. Such a religion is adverse to proselytism; for, as it is the sacred prerogative of certain kindred stocks, its principle means the exclusion of the stranger. Its religious and moral feeling is naturally channellised; the whole group must share in the moral guilt of the individual, and the sins of the fathers will be visited on the children. It affords a keen stimulus to local patriotism, and quickens a keen ardor within the city; it has at the same time the natural result of narrowness of views. Yet, in the course of religious evolution, we must regard the old Hellenic conception of the god, the Father of the tribe or the city, as pregnant of the larger idea of God the Father of mankind—an idea which had already dawned upon Homer at a time when the tribal spirit of religion was still at its height.

A further result of such a system is that the State-divinities became also the patrons and guardians of the family morality, Zeus and Hera, for instance, being held responsible for the regulation of the marriage and of the duties of married life; and olympian records present the high God as the protector of the father's right, of the tie that binds together the family, the kinship. While such a religion was a living force, it was not likely that the family could assert itself against the State; to marry healthfully and early, to beget vigorous children as defenders of the State and the family graves, to cherish and honour one's parents, to protect the orphan—these were patriotic duties necessary for the development of State-religion, and strenuously preached by the best ethical teachers of Greece. The State being the family writ large, private and public morality could not clash. The brutal action of Kroesus in the Anatolica is equally an attack on the religion of the State and on that of the family; and it was not till the 6th cent. that the relations between the two were clearly defined.

6. Influence of advanced religion on law.—Of still greater interest is an important advance in criminal law, discernible as early as the 8th cent., which may be traced partly to the growth of the city, with its extended idea of kinship, partly to the growing intensity of the belief in the power and significance of the spirits of the dead.

In the most primitive period of Hellas, the shedding of a kinsman's blood was already a heinous sin; but the slaying of one outside the kindred circle was ordinarily neither a sin against God nor a social crime. But, as the public mind of Greece became penetrated with the feeling that all the deities were interested in its welfare, the slaying of a citizen became a criminal act of which the State, and no longer merely the clan of the slain man, would take cognizance. This expanded concept of law is reflected in the expansion of an ancient and most significant cult, the cult of Zeus Meilichios.1 This was the underworld god, who was angered and must be appeased by kindred blood was shed: as the idea of kinship was enlarged, any civic massacre might arouse his wrath, and rites of atonement might be offered to him. This keener sensitiveness concerning the sanctity of human life was accompanied by a feeling that bloodshed might imprint a stain on the slayer that rendered him ritually unclean, that is, temporarily unfit to approach the gods or men; it was also fortified by the growing fear of the ghost-world, which seems to have lain more heavily upon the non-Homer's men. It is hard to give the dates for this section of the mental history of Hellas. The first record of the notion, which is nowhere explicit in Homer, that homicide in certain circumstances demands purification, is derived from the Astylopis of Arkilides, the epic poet of Miletos in the 8th century;2 Achilles, having slain the worthless Thersites, must retire from the army for a while to be purified in Lebros by Apollo and Artemis. We mark here that the slain man was no kinsman of the slayer; in a true society the root of kinship was a member of the same Achaean community, and therefore the slaying brought a religious impurity upon the hero; and we may believe that the narrative reveals an idea which was to be developed. But, in passing, we must recognize the possibility that these apparently new manifestations may be only a revival of immemorial thoughts and feeling, common in the older non-Hellenic societies, and only for a time suspended.3

7. Influence of Delphi and Crete.—In this post-Homeric development of a system of purification from bloodshed, the legends suggest that Crete and Delphi played a momentous part. In the great island, the cradle of European culture, the cult of Zeus Meilichios took on itself such cathartic ideas, probably of Dionysiac origin, and probably in the pre-Homeric period the influence of Crete had reached Delphi; while the legend of the migration of Apollo Delphinus from Crete to Delphi, and the story that the god himself must go to this island to be purified from the blood of Python, belong to the second period with which we are dealing.

We have reason to believe that the Delphic god —through the agency of his local priesthood—was assuring the effect of representation of the State-religion, and that he was the mediocrity of the Aegisthe, a time and place of the god. The ritual of Pieria as determined by the Delphic god is always the same as the good citizen.

2 See OS I. 64-69; for the religious evolution of the Greek laws concerning homicide, see Pusey, Religion of Greece, pp. 129-129, 130, 131-131.
3 See OS I. 685.
GREEK RELIGION

members were not indeed pledged to perpetual unity, but at least to a certain mutual forbearance even in their warlike nature. The chief regulative functions of the oracle were concerned with questions of the institution and administration of cults, with the domain of legislation, colonization, and morality and conduct. In the sphere of religion, it doubtless emphasized the necessity of purification from bloodshed; otherwise it had no high religious message to deliver; but it was enthusiastic for the propagation of the cult of Dionysos, and it authored and sometimes encouraged the growing tendency towards the posthumous worship of distinguished men. In the sphere of morality its standard was generally high and its influence beneficent, especially—if we can trust the record—in the period when it played the part of a State-Confessional and in its utterances reflected generally the progress of Greek ethics and the spirit of an enlightened humanitarianism. But its chief religious achievements were to bring some principle of unity and authority into the complex and shifting aggregate of Greek polytheism and to deepen the impression on the Hellenic mind of the divine ordering of the world; and the fruits of this teaching we gather in the works of Attic tragedy and in the history of Herodotus.

In view of the history of other temple-institutions of like power among other peoples—the Mesopotamian, for instance—we may be surprised that the Delphic priesthood made its first attempt to impose Apollo as the supreme god upon the Hellenic States. The author of the Homeric hymn, composed partly under Delphic influences, exalts Apollo as high as he dare; but the power of Delphic utterance is Apollo presented as more than the minister of Zeus, the mouthpiece of the supreme Father-god, the tradition of whose supremacy among the Aryan Hellenes had been fixed fast by Homer and the Homeric.

Nor did the Delphic Apollo succeed in achieving a monopoly of divinization for the spirit of local independence was opposed to any divine monopoly in any department of life. And other oracles, such as some of those on the Asia Minor shore, acquired considerable prestige, especially in the later period when the influence of Delphi had declined. But from the 8th till the beginning of the 5th cent., the Pythian is the only one of the many mantic institutions that is to be regarded as a vital force of Pan-Hellenism.

8. The games of Greece.—As another important phenomenon belonging to the earlier part of this second period we note the emergence and development of the great Hellenic games, which were always associated with the worship of the gods or heroes. These also must be reckoned as among the strongest Pan-Hellenic influences, evoking and strengthening the consciousness of nationality.

For in the 5th cent. B.C. the whole of Greece, eastern and western, was represented at Olympia, Pytho, the Isthmus, and Nemea; here was maintained the 'truce of God' between the jealous or hostile communities; and as Olympia one in every four years the Pan-Hellenes offered a common homage to their aboriginal Father-god.

We must, then, regard the games and the Pythian establishment as momentous factors in the religious national life, as tending to evolve a religion of a broader compass than those of the narrow tribal type of the remote past. And they concern the higher mental history of the race because most of them, and notably the Pythian, included competitions in art and literature; thus they assisted in establishing the generally Hellenic theory of the divine significance of the artistic and intellectual life.

or accidental homicide. The earliest that we know of was the law-court " Διορσία " established at Athens, the result of the great Delphic god, to try cases where homicide was admitted and justification was pleaded. In this as in other Athenian courts, as well as the same offence, rites of purification were often an essential adjunct of the ceremony. The typical legend that enshrines the early ideas of " Διορσία " and turns on the question of justifiable homicide is the story of Orestes, which had spread around the Peloponnese and penetrated Attica as early as the 8th cent. B.C., and later became Pan-Hellenic. Apollo as a divine agent appears in it first, as far as we have any literary record, in the lyric of Semonides, and at some indeterminate date in this period undertook the purification of the matricide.

These cathartic functions and the general demand for their exercises must have greatly enhanced the influence of Delphi in the earlier part of the post-Homer period. Its power doubtless strengthened even more by the great secular movement of Greek colonisation. With wise foresight the god had undertaken the guidance and encouragement of this activity in the earliest days when the Hellenes were pushing across the sea; for it seems as if the first Greek settlements on the Asia Minor coast, the Troad, were due to his leadership, if not to his inspiration. The legends that associate him with the Dorian migration into the Peloponnese are too powerful to be rejected. And after that movement, when the Delphic priesthood might be thought to shine as a Greek history, and the Hellenic race was rapidly establishing that chain of colonies across and around the Mediterranean which were to diffuse Greek culture throughout the world at large, the power of Delphi and the Delphic oracle reached its zenith. For it is clear that it was the prevailing fashion to consult the Pythian Apollo as to the choice of a site. Hence it came about that in so many Greek cities Apollo was worshipped as " Δίαν κυριάνης," that is, as the divine founder, and that the flourishing communities of Delphi's offering for the shrine.1 Was it by some accident or by something essential in his early cult and character that the god was able to play this momentous political part, such as no other deity has ever played in the secular history of his people? The cause may lie far back in the dim antiquity of the Apolline cult, when he was specially Cythereus, a god of the road, the leader of the migratory host. And in pre-Homer times, if not aboriginally, he was already an oracular god; nor was any occasion so urgent for a consultation of the local oracle as when the people were setting forth on their perilous path to find a new home.8

The Delphic oracle.—In the spiritual history of the Hellenic race in the early historic period, when we mark a growing consciousness of nationality and of kinship in the various stocks, is very much a record of the career and activity of the Delphic oracle; and this is too complex and lengthy a theme to be more than adumbrated here.3 Due partly to the local position and the immemorial sanctity of the oracle, partly to the devotion and the grateful remembrance of the powerful Dorian States in the Peloponnese, the Pythian worship of the god, Apollo, and provided the chief religious centre and the strongest bond of spiritual unity in the Hellenic world. For political unity it could do little, owing to the centrifugal bias of Greek politics; yet the Delphic Amphiktyony, the most powerful of those religious confederations that are recorded here and there in the early history of Greece, contained within it the idea of a moral and cultural bond among all the states of the archaic Hellenes. It is worth noting that the famous " Delphic oracle " is really a conglomeration of various oracles, each with its own history and derivation; and that the god of Delphi, in whom the oracle of Apollo was first convened, was not originally a god of the Delphians but of the neighboring Chalcidenses. The Delphic oracle, like the Olympic, was not a local or a national institution, but a pan-Hellenic one, and its influence extended over the whole Greek world. It was the supreme religious institution of the Greeks, and the oracle was the highest and most venerable of all the religious authorities in ancient Greece.
GREEK RELIGION

There were other festal and public meetings of a more exclusively religious purpose, such as the great Pan-Ionic festival of the Dalian Apollo, that also served to deepen in the various States the consciousness of spiritual unity, and often, where the great hymns composed hymns for the occasion, to exalt and illuminate the ideal conception of the divinity: the Dalian festival, for instance, of which the splendor developed in the early 5th-Hellenic age and with the growing prosperity of the new Ionic colonies, must have contributed much to the building up of the peculiarly Hellenic ideal of Apollo; and the Homeric hymn, inspired by this occasion, is the earliest record of the national consciousness of the Ionic race.

9. Diffusion of Dionysos-worship.—Another religious phenomenon, peculiar to Ionia and Caria, and for the spiritual history of Hellenism, is the diffusion of the worship of Dionysos. Faint though indubitable traces of this can be discerned in the pre-historic period, but it begins to be palpable and important only in the early history. Its significance has already been indicated in general outlines (see above, p. 402). Having entered Attica from Boeotia and been absorbed in the Attic State-religion some time before the Ionic migration to the Asia Minor coast, in the 8th and 7th centuries B.C. it gained its highest and most popular status in the State-religion of the Peloponnese and of the islands, and the more distant colonies.

The Hellenic culture of Dionysos forms one of the most interesting chapters in the spiritual history of Hellenism; the taming of the wild Thracian god, the transformation of him into a civic deity, the disciplining and the adaptation of the Mysteries into a State ritual, were not the least among the achievements of the Hellenic genius. And as the State-religion of those centuries had no eschatological theory, so it seems to have discarded everywhere whatever eschatological promise the Dionysiac religion proclaimed on its entrance into Greece. Yet, in spite of the chastening influence of the civic spirit, the worship preserved much of its distinctive tone and religious power, evoking a special mood unknown in the other cults, while even the savage form of sacrifice, in which the god was devoured in human or animal incarnation, survived with some modifications in Ionia down to a late period. The history, then, of the Dionysiac religion concerns the account of the development of the sacred ritual in the Mediterranean. It concerns also the history of Hellenic culture; for one of its most delightful relics is the music, accompanying the Dionysiac hymn known as the dithyramb, which is usually regarded as the parent of Attic tragedy. Its main contribution to the polytheism of Greece was its stimulation of the warmer and stronger religious faith; and its special later service to popular religious theory was the refining and heightening of men's thoughts and sentiments concerning the life after death and the powers of the lower world, with whom the mild and genial god was generally identified or associated.

10. Orphic 'thsiae.'—But the highest importance of Dionysos is found rather in the esoteric than in the public aspect of Hellenic religion. For, perhaps as early as the 7th cent., the cult of Dionysos was raised to a higher power by the rise and diffusion of the Orphic brotherhoods, of which Plato, who developed this deity under various mystic names. The study of Orphism is of the greatest interest and complexity; and here it is possible to indicate only its general features and significance. The teachers of the EsotERIC doctrines are the first propagandists or missioners that we can discern in the pre-Christian Mediterranean world. For they had a definite message, and they founded the secret and hidden brotherhoods of the Orphic religion. They preached apatheia or, at least, a universal abnegation of the popular political religion, they preached it, if not to all mankind, at least to all the Hellenes. It was a message framed not so much of new ideas, whose real import we have been able to gather in part from the now famous gold-tablets found in the graves of Crete and South Italy, and containing parts of the mystic Orphic liturgy and creed that is a product at latest of the 6th, if not of the 5th century B.C. Combining this evidence with some passages in Pindar's Odes and Plato's Dialogues, we can recover in outline the doctrine of early Orphism. It proclaimed a theory, unfamiliar to native Greek mythology and religion, that the soul of man is divine and eternal; that the body is its impure prison-house, where it is in danger of contracting stain; that by elaborate purifications and abstinences the soul might retain its purity, and by sacramental and magical methods the pure soul might enjoy in this life and in the next full communion with God. Occupied with the problem of the life after death, the Orphic mystics evolved a concept of premonition, a mode of posthumous punishment temporary and purificatory; also, if we can trust certain indications in Pindar and Plato, they may have been aware of a more specially of a triple cycle of lives both in this world and in the next. Students of religious philosophy have noted here the striking resemblance to Buddhist theologies. But in addition to the Persian and Indian speculation could have cast its influence so far westward at so early a time.

It is of more immediate importance for the religious history of the Greek people to determine —if we can—the measure of success that these missions achieved, how far they succeeded in captivating the masses or the elite of the people. They certainly did not succeed in penetrating the inner circle of the Eleusinian mysteries; there is no evidence that they even tried, though it is likely that they did; but we may surmise that their influence was at one time strong at Athens, as Aristophanes proclaims as a generally accepted tradition that Orphism was the apostolic founder of all mysteries. They were evidently powerful in Crete; but the chief arena of their activity and the chief scene of their secular and political influence was Western Asia Minor. Of the Orphic mystery society, Pythagoras was the greatest convert, and the Pythagoreans clubs their militant orders. The career of these forms a page of general Greek history. Their downfall relieved Greece from the danger of the establishment of Orphism as a secular power, which threatened the Hellenic spirit with a bondage that would not be due to the pharisaic formalism of the priest. Henceforth the Orphic religion was a private influence only, and we have no evidence to determine precisely how great it was at any particular epoch. Pindar was deeply touched by it; Eschylus and Sophocles, so far as we can see, remained unmoved, while Euripides may have been at times attracted and at times repelled, but was in no sense its champion. Plato in a well-known passage 2 protests strongly against the Orphic mystery-mongers as spiritual quacks destitute of all moral worth, in magic and trade in promises and threats concerning the other world. Whether this moral estimate of Orphism was just or not, there is no doubt that Plato's theory of the soul as expressed in the Phaedrus was indebted to the Orphic metaphysics. And the part played by these preachers

1 See Orphism.
2 Page 1090. The mystic formula used in the Attic marriage-service, 'I have left of them, he found a better thing, mine have been derived from Orphic sources (see Farnell, Higher Aspects of Gt. Rel., p. 321.).
GREEK RELIGION

of purity and salvation in the later spiritual history of Greece was certainly of high importance. They mark the beginning of a new era of individualism in religion; for the concern was with the personal soul and its destiny.

II. Eleusinian mysteries.—The Eleusinia, or Mysteries of Eleusis, were a more national and unifying institution than Orphic, but of somewhat similar influence and purpose (see art. MYSTERIES). Originally they may have been mere tribal mysteries of an agrarian society to which only the adult members of the Eleusinian community were admitted. But, when our earliest record reveals them, namely, the Homeric hymn to Demeter, which cannot be later than the close of the 7th century, they have already enlarged their borders and their scope. For they appear there as appealing to the whole Hellenic world, and their special promise to the initiated is the happiness of the soul after death. Having once transcended the tribal limits, they seem to have imposed no conditions on the aspirants for admission except the possession of Hellenic speech and purity from actual stain; the initiation was open to women and occasionally to slaves. Nor does their influence in any degree have waned until the introduction of Christianity. Many scholars have laboured to solve the problems concerning their ritual, their doctrine, and their significance. It has been thought that their chief attractiveness may have lain in their preservation of a higher sacramental conception of the essence that underlies the ordinary public ritual; that the initiate drank of a sacred cup in which were mystically infused the very life and substance of the kindly Earth-Mother with her own kinship of her offspring. And, when their own perceptions of an agrarian society were the transfiguration of the deities who were the transactions of an agrarian society with the new apprehensions of the great powers of the nature-world, the more remote and the symbolic. To imagine the thrill and the force of these rites, one must imagine a medieval Passion-play performed with surpassing stateliness and solemnity. Those who saw these things in the Hall of the Mysteries at Eleusis may have carried away with them an abiding sense of a closer communion with the benign powers of the nether world and a resulting hope of a happier posthumous lot. We must regard them as the highest and most spiritual product of the pure Hellenic religion, investing it with an atmosphere of mystery and awe that was generally lacking in the public cult, and which was unperturbed at Eleusis by any violence of moral necessity such as marked the Orphics and some of the Orphic rites.

We may believe that they exercised a healthful influence on the moral and spiritual temperament of the Hellenes; but it is not clear that they definitely proclaimed any higher moral theory, nor do they appear, like the Orphics, to have preached any dogma of metaphysics or theology. But, like the Orphics, they tended with the development of the Orphic mysteries. For they appealed to a far larger public than the ordinary cults of the city; and, while Pan-Hellenic in this sense, they belong to the domain of personal religion; for they satisfied the personal craving of the individual for closer fellowship with the deity, and soothed the troubled apprehensions that were growing up in this second period concerning the individual destiny of the soul. Yet, as regards Attica and Athens at least, and probably as regards Hellas, they are not to be ranked, as the Orphics may be, among the disruptive forces of individualistic religion undermining the social fabric of public worship. For the Athenian State administered them by the help of Eleusinian officials in its corporate capacity; and one of the catechumens—the so-called Orphic—was held to exercise the most probable view, on behalf of the whole youth of the city.

In the Great Mysteries the agrarian significance, though discoverable and associated with simple agrarian magic, was overshadowed by higher and more spiritual religion. And elsewhere in the State-festivals we note the same phenomenon of progress in the second period. Old-world utilitarian rites of agriculture and fertility were often taken over by the expanding Hellenism of the 5th century, and received an artistic elaboration that disguised their original significance for the primitive peasant and raised them to a higher plane of social religion.

This interesting process can be best studied in following the detailed records of the Lydian Kermata and Hyakinthia, the Delphic Pythia, the Attic Panathenaea: we can feelingly appreciate in these the potent influence of the religious art, the music, and the art of early Greece, shaping and elevating men's imagination of divinity. By the close of this period the Hellenic national consciousness has realized itself in respect of intellectual culture, ethics, and religion. Zeus Hellenios, the tribal god, is becoming Pan-Hellenios. The age of Pan-Panathenaeism is at hand and much to the growth of Pan-Hellenism; Pellastratos probably something to the idea of a national religion, in that he seems to have worked zealously for the organization and expansion of the Eleusinian mysteries. The cult of Dionysos has penetrated the leading communities and most of the by-ways of Greece; and nearly everywhere he has been partially tamed, and the Menads have been either suppressed or disciplined to the more sober purposes of civic worship. But the two most striking phenomena in the spiritual history of the 5th century were, first, the rise and expansion of Ionic philosophy and physical speculation; and, secondly, the development of a new form of literature that came to be known as the Attic Drama. Both of these must be reckoned with among the forces affecting the life of the popular religion.

The relation of Greek philosophy to Greek religion is a great and complex subject, the theme of many modern treatises; and in this slight sketch of the whole history of the polytheism there is no room for more than a few very general observations. So far as the new speculation, which gave birth to the free secular science of Europe, was preoccupied with questions of the physical origins of things and with elemental theories of cosmogony, it would not necessarily clash with any orthodox prejudice of the average Hellenes. For he had no sacred books which dictated to him any views concerning the origin of the world or the constitution of Nature, and which he would have considered immoral to disbelieve. In fact, when Heraclitus boldly declared that 'neither God nor man made the cosmos,' there was no authoritative Greek myth or theologico-dogmatic gain to gainsay him. But the great philosophers of the 5th century—Pythagoreans, Empedocleans, Xenophanes, and Heracliteans—were also directly concerned with the philosophy of religion, with speculations on the nature and the true definition of godhead; and some of the surviving fragments of their works express ideas and sentiments in sharp antagonism to the concepts and ritual of the contemporary polytheism. The main trend of their speculations ran counter
GREEK RELIGION

...to the anthropomorphic theory of divinity; and they tend to define God not as a person, but rather as the highest spiritual or metaphysical, or even physical power or function of the universe; and there is a common tendency in the 6th cent. thought away from the theistic to the pantheistic view. Pythagoras is said to have explained the concept of God in terms of mathematics, and to have been willing to accept the personages of the popular polytheism as a condition of finding their true mathematical equation. 1 But this philosopher stands apart from the other leaders of this first period of Hellenic free thought. The mathematical mind is often a prey to mysticism. And Pythagoras was the most powerful champion and apostle of Orphism, the founder of those secret societies which threatened the secular and the intellectual freedom of Greece. Equality on its mystic and on its rationalistic side the Pythagorean teaching was in tendency inimical to the public religion of Greece, though many of its sects appear always to have compromised with it. But it is in the fragments of Xenophon that we find the most severe protests against the current religious conceptions of Hellen: his verses quoted by Clement 2 polemize strongly against the folly of anthropomorphism, which is the master-passion of Greek polytheism; and, if one or two of his quoted utterances seem to claim monothelism, it is clear that for his higher thought Godhead was not a person but a cosmic principle or a noetic idea. On the whole, the attack may be given of the religious theory of Herakleitos so far as this is revealed at all in the fragments. It has, indeed, been recently maintained that he tolerated and found a place in his system of the contemporary polytheism; 3 but it is probably a truer view that he regarded it with half-disguised contempt and used its terms and figures only on occasion as literal analogies. He is still the most striking figure among the prophets and teachers who are scorning exclamations against the excesses of the Bacchic ritual, the methods of purification from blood, and the folly of idolatry. 4

In this early speculation of the 6th cent., however, the parting of the ways has not yet been reached for physical science and religion; the cosmic theory is expressed in spiritual and animistic rather than in materialistic terms: for Empedokles, Love and Strife are creative principles; in the view of Thales the magnet has a soul, and all things are full of divine power, even вечные. The movement of Ionič thought was indeed adaptable to a high pantheistic or animistic creed, but not to the present polytheism of the Hellenes, though most of the philosophers do not appear to have been vehement protesters. And at first their protests could have influenced only the minds of a few; nor before the 6th cent. was the popular State-religion obliged to take notice of it.

13. Rise of Tragedy.—The other phenomenon referred to above as marking the close of this period was the rise of Tragedy. The question of its influence on the whole popular religion belongs to the history of the 6th century. What concerns us chiefly at this point is its close association with Dionysos-cult. The traditional view, that it actually originated in some mimetic form of Bacchic ritual, is in the opinion of the present writer still the most realistic. Though this is now denied by some scholars, 5 But, even if its connexion with Dionysos-worship is a secondary or accidental fact,

4 For example, "Dionysos, the Saviour" (Krauss).
5 See Riezmann's "Origen des Tragedie", Cambridge, 1910; and the present writer's criticism of his theory in Hermathena, 1912.

It is still a fact of importance for the history of Greek polytheism. The records concerning Thespis the founder of the Attic trigonium, or triacontagon, and the ancient Dionysiac legend; the statement of Herodotus concerning Kleisthenes, the tyrant of Sikyon, who gave to Dionysos the tragic choruses that hitherto had been sung at the festival of Adranos 1 are sufficient proofs that this greatest of all the literary achievements of post-Homeric Hellas was dedicated to the god already in the 6th cent.; and throughout the glorious career of the Attic stage Dionysos remained its patron-god. His worship, then, must have received a strong stimulus from literary forms of literature, which rapidly achieved popularity, and appealed directly to a larger public than any other. His character thus undergoes a singular transformation; the wild god of barbaric origin comes to take rank by the side of Apollo and the Graces as a divinity of culture and religion; and the history of the dithyramb, the Dionysiac hymn, which may have been the parent of the drama, and which was wedded to a peculiar mode of music and rhythm, is an important chapter in the history of European music.

III. THIRD PERIOD: 500-338 B.C.—The third period of Greek religion may conveniently include the 6th cent. and that part of the 5th which ends with the downfall of the system of civic autonomy at the battle of Charonea. For the history of Greek religion, as of Greek culture, it is of the highest interest, being the richest in respect of religious movements and literature, and the most forceful and momentous in regard to the influences at work. In the sphere of external history, it witnessed such world-crisis as the struggle of Hellas and of her races for independence and fall of the Imperial city-State, and the emergence of Macedon as a world-power; in the sphere of culture, it witnessed the culmination of the greatest plastic art of the world, the blooms and maturity of the Attic drama and Pindar's lyric, the diffusion of education and the spirit of inquiry through the activity of the Sophists, and the higher development of philosophy and science. To show how the religious practice and theory of the higher and lower members of Hellenic society were affected by the events of this era, is the object of this chapter. For the greatest period of human history is a necessary, but a difficult, task.

5. 5th cent. religion contrasted with the Homeric.—If we take Athens as the typical religious community of this period, and compare the structure and forms of the State-polytheism with that of the old Homeric world, we find the personalities of the pre-historic pantheon still worshipped and cherished; no cult of that epic world had as yet fallen into desuetude; nor had the most civilized city of Hellas discarded the immemorial rites of the simple peasant religion, the worship of rivers and streams, and some of the most naïve practices of Animism. And it is clear that this conservatism was not hieratic convention, but a living faith, expressing a religious intuition of the people, who were as yet untouched by the cooling influences of the new philosophic age of the 6th cent. In fact, for the greater part of the 5th cent. the life of the polytheism was probably stronger than it had ever been in the past. It was strengthened by the admission of a few new figures and by the development of some of the old. 2

GREEK RELIGION

It is rather in respect of its spirit, tone, and outlook that the religion of the 6th cent. presents some striking contrasts to the Homeric. Its anthropomorphic character is, of course, great art-power; but it reveals a deeper conviction concerning the part played by moral agencies and powers of nature in affairs of mortals. The writings of Herodotus expound a religious view of history, of which only faint indications were found in the earlier epic literature. The historian of the 6th cent. regards the momentous contest of Greece with Persia as a conflict of moral forces, the issue being worked out by unseen powers such as Nemesis, Violence, and Justice, with Zeus as the righteous Judge; and, in weaving into his narrative the stories of Aesklepius heroes and the Eleusinian deities, Hebeton to the help of the Hellenes at Salamis, he doubtless represents the faith of the average Greek. A similar view was also impressed on the religious imagination of the people by oracular utterances, such as that which was imputed to the prophet Baktis at the oracle at Delphi, with 'Arany, 'Decest,' as a tempting deed standing by Asia. In this scene we trace also the influence of the famous tragedian of Aeschylus, the Persics, which in the last act of the Prometheus bounds the Pandromous conviction that pronounces moral judgment on the great event. The same view is expressed and the same tone heard in the striking poem of Pindar's eightfeet Pythian ode, where he extols over the triumph of the Hellenic hero, the armed Peace of Hellas, who has cast insolence into the sea, even as Zeus quelled the monster Typhon. 2

3. Pan-Hellenism. The Hellenic confederate effort against Persia was the nearest approach ever made by the Hellenic race to Pan-Hellenic action; and in a striking chapter of Herodotus, exalting the loyalty of the Athenians to the cause of Greece, emphasis is laid on the name of Zeus Hellenios. This is the highest political title of the Hellenic people, and its history is interesting. Originally the narrow tribal name of the god of the Hellenes, a small Thessalian group under the leadership of the Aesklepal, it was transported to Aigina by a migration of the same tribe, whose ancestor Aias was the high priest of Zeus Hellenios; already in the 6th cent., when the denizens of Hellenia fell from the title before the title may have had on a wider meaning. But it was the danger of the Persian wars and the part played in them—we may believe—by the men and the old heroes of Aigina that brought the cult into prominence, investing the cult-name with a wider significance and a more potent appeal. Here, then, we have the missive that might be realised by the poet, the artist, and the thinker, but never by any statesman or State. Another cult belonging to the same range as this was that of Zeus Eleutherios, the god of Hellenic freedom. Having driven out the Persians, they raised an altar to Zeus the god of the free, a fair monument of freedom for Hellas. These lines of Simonides commemorate the dedication of the Greeks after the victory at Platea, when they had purified the land and its shrine from the pollution of presence of the barbarian heroes of sacred fire brought from Delphi. The significance of this has been pointed out elsewhere by the present writer; the fight for liberty was prompted by more than a mere desire for possession, by an idea inherent in the

GREEK RELIGION

at Eleusis, aspiring thus to make the Hall of the Mysteries, a recent architectural work of the Periclean school, the center of a Pan-Hellenic faith.1 And their attempt in great measure succeeded.

5. Influence of religious art.—The study of the polytheism of this century is essential also to a study of the great religious art which culminated under Pheidias, but which continued forceful and prolific till the age of Alexander. This general effect of the iconic art upon Greek religion has been briefly indicated above; and long before this century the religious bias of the race was combined with idolatry. The philosophers created an image that they could love and cherish, though here and there they might retain the unorthodox fetish, the block of wood or rudely-hewn stone, because of the immemorial magic which it had acquired through ages of shy, half-savage veneration. The achievement of Pheidias and his contemporaries was only the culmination of a process of ideal anthropomorphism that began with Homer and was helped forward by the lyric poetry and music of the post-Homeric age, and by the art of the 6th century. Strictly estimated and studied in all its fullness, in the marvellous products of vase-painting, glyptic, and sculpture which even the shattered fabric of antiquity presents to us, the art of the 5th centuries must be called the most perfect religious art of the world. A more spiritual or more mystic religion could not have produced a work so detached from what we call an art. But it was the best and most satisfying expression of the best that the religious spirit of Hellenism admitted; for this polytheism had been built up by the teachers of the people—poets and artists obeying the race-instinct—not on vague conceptions of infinite godhead ineffable for art and inexpressible in clear speech, but on vivid perceptions of concrete divinities, personified, distinct in form, attributes, and character, robust and very real. The Greek artist, with his miraculous cunning of hand, could deal with these types as he could not have dealt with 'the Word' or with 'the Buddha.' Nor was he merely the exponent of the highest popular imagination, but, unscarcely perhaps and in opposition to a true art-tradition, at times a reformer and in any case a creator. For us his works have this value among others, that even more than the poetic literature, they reveal to us how the people at their best imagined their deities. But they also helped the people to imagine them better and more nobly. Perhaps the supreme hall of Halls that takes rank among the works of high religious inspiration is seen in the Attic vase-paintings produced near to 500 B.C. that portray the Idæus of Dionysus. The strong spirit of that religion which lifted the votary above the conventional, moral, human life, the wild joy of self-abandonment, the ecstasy of communion with the god, are here more startlingly expressed than even in the lyrics of the Bacchoe of Euripides or in the single perfect Bacchic ode of Sophocles' Antigone. It was not till the time of Skopas in the 4th cent. that Greek sculpture could so deal with this orgiastic theme. The glyptic work of the 5th cent. dealing with divine forms is mainly tranquil and intellectual; the physical perfection of the divinities sculptured on the Parthenon impresses us not so much with the sense of physical beauty and strength as with the sense of a higher and nobler vital power, so instinct is the beauty with that quality which the Greeks called σωφροσύνη—a quality partly ethical, partly spiritual, but palpable in material forms which hint at a transcendent element of strength. The expressive power of such an art can show benignity and mildness of mood without sentimentality, beauty without voluptuousness, intellectual thought without morbidness, majesty without stiffness.

The gentle and tranquilizing spirit of the Eleusinian mysteries speaks in the famous Eleusinian relief showing the Mother and the Maid giving his mission to Persephone. The Pheidias Athena Parthenos was a more deeply conceived ideal than the Athens of the poets, for it showed her as the Madonna of the Athenian people, with some touch of maternal gentleness in the face. The Zeus Olympius of Pheidias transcended the portrait of the High God as given by Homer or even by Hesiod; for the chryselephantine statue impressed the later Greeks as the ideal of the benign and friendly deity, the divine patron of a Hellest city and at peace with itself—an image that appeared to add something to the true religious religion,1 embodying, as Dio Chrysostom says, a conception of the god so convincing and complete that, having once seen it, one could not imagine him otherwise.2 Nor had any of the poets presented Hera in forms so winning and gracious as those in which the best art of this age embodied her, as the Argive goddess 'of good works,' in whose face and person brightness appeared by the side of majesty.3 The poetic presentation of Apollo is blurred and incomplete compared with the plastic type of the Parthenon frieze and the Pheidias statue in the Museo delle Terme. The older poetic ideal of Aphrodite was shallow and true; the Parthenon Aphrodite of the Pheidias type, as such as we see presented by the Labore head in the Louvre, here is something of the majesty of the great cosmic goddesses imagined by Hesiod in his Theogony, combined with an emotion of human love in the countenance, and a winning appeal that the verses of the great poet do not clearly convey. And we may suppose that the Okeania Aphrodite of Phidias, like the Tanagra Venus, explains the reason for the theory of Plato and his distinction between the heavenly and the sensual love. The full imagination of the possibility that in love would combine the radiance and the grace of the young cornfield with the awe and mystery of the lower world; the former is masterfully presented by a coin of Lampseus, which shows her rising from among the cornstalks with uplifted, yearning face;4 and the unknown artist of the great Syracusan medallion struck towards the close of the 8th cent., combines this aspect of her, in a type of surpassing loveliness, with a touch of melancholy that hints at the character of the goddess of Death.5 And yet this triumphant anthropomorphizing art must have failed, and, judged by the fragments that survive, did fail, when it tried to reveal in clear outline and full light the half-shrouded forms of the nether world, the chthonian goddesses and the Eumenides whose nature appealed to the sense of religious awe, to what the Greeks called το άγαθος, and did not brook to be wittled away. We have doubt, therefore, if even the Holy Ones, the Semnall of Kalamis and Skopas were types so expressive of the real moral-religious imagination which fashioned these figures of cult as were certain awe-struck verses of Sophocles in the Epyndias Colonae. Nevertheless, this ideal Greek art, by expressing in palpable forms of benign beauty a half-palpable personage of the lower world, did once, in the religious religion and the religious imagination; it banished the unorthodox and the terrible, and helped to purify and tranquillize the Greek mind by investing the chthonian powers with benevolence and grace.

We discern here the influence of the Bacchic and...
that marked the typical character of the greatest age of Hellenas. And all three genially and without querulous protest, though with some freedom of criticism, accept the existing religious order, desiring to ennoble it, not to destroy it. Pindar himself was the establisher of certain new cults, and the first great literary preacher in Greece of Orphic eschatology, and we may, therefore, find the greatest poet in Europe who raised the theme of Paradise to the level of the highest poetry. Such a marvel of song on the mysteries of life and death as the second Olympian ode was a new voice in Hellenas; how far it echoed, and with what influence on the faith of the people, is impossible to measure with accuracy. For the progress of this new eschatology, which is a weighty subject for the history of later Hellenism, we have some important negative evidence in the fact that neither Eschylus nor Sophocles shows an acquaintance with, or knowledge of Orphism or interest in it, or any preoccupying concern with the state of the soul after death; nor in their occasional utterances concerning posthumous judgment do they go beyond the popular traditional view; though the thoughtful refinement of Sophocles suggested to him that there might be forgiveness of sins and reconciliation after death. Nor do we find anywhere in the works of the two dramatists any hint of that pregnant Orphic doctrine to which Pindar gives voice, that humanity is divided into two classes of race, the one to "be saved," the other to "be saved not,"—a doctrine which passed into the higher thought of later Greece.

Leaving aside this special question, we find a certain general resemblance in the ethics and religious emotions and perceptions of the people.

4. Influence of literature; Pindar, Aeschylus, Sophocles. More familiar, and apparently more effective, was the religio-literature of the later period. The mood of the epic and the ode was a religious one; the world was full of religious emotions and inspired with religious emotions. The entire atmosphere was religious, and the scenes of religious emotion were filled with the influence of religion. The influence of Aeschylus, Sophocles, and Euripides was felt in the literature of the period. The influence of Aeschylus, Sophocles, and Euripides was felt in the literature of the period. The influence of Aeschylus, Sophocles, and Euripides was felt in the literature of the period. The influence of Aeschylus, Sophocles, and Euripides was felt in the literature of the period. The influence of Aeschylus, Sophocles, and Euripides was felt in the literature of the period. The influence of Aeschylus, Sophocles, and Euripides was felt in the literature of the period. The influence of Aeschylus, Sophocles, and Euripides was felt in the literature of the period. The influence of Aeschylus, Sophocles, and Euripides was felt in the literature of the period. The influence of Aeschylus, Sophocles, and Euripides was felt in the literature of the period. The influence of Aeschylus, Sophocles, and Euripides was felt in the literature of the period. The influence of Aeschylus, Sophocles, and Euripides was felt in the literature of the period.

These poets also deal with the question of Fate and Destiny. The personal Man was an old, though insignificant, figure of the popular religion and mythology; Homer is aware of him and has to reckon with her. She might become more formidable under the philosophic conception of Ἐλπίδα, which appeared in the philosophy of Herakleitos; and we know that later philosophy and cultivated thought were much perplexed over the problem of the reconciliation of Fate with the idea of a free divine Providence. These poets, taking their cue from Homer, "follow a short cut," interpreting Moira as the voice or agent or "empowerment of the power" of Zeus. The pupil of Phidias, Theokritos of Megara, was working out the same idea when he carved the Fate with Hestia as subordinate adjuncts to the great form of Zeus.
GREEK RELIGION

We may say, then, that both the poetry and the art of this period worked for the deliverance of the polytheism from the burden of fatalism, which tends to lower the value of all theistic religion. As a result, while adhering in certain points to purifying the traditional polytheism, was capable of religious thought that went beyond the theo-patheism and theo-mysticism. The high god Zeus is generally for them a definite personal Being; but once at least Aeschylus transcends this apprehension of him, and defines Zeus pantheistically, a supreme, cosmic force; a fragment of his Hekate speaks of him thus: ‘Zeus is air, earth, heaven; Zeus is the whole of things, whatever is higher still than these.’ Moreover, the other divine forces that shape our lives are presented by him and his fellow-poets not always as the but as moral powers that are only half-personal, not as concrete individual deities but as emanations of these. We may call them ‘personifications of moral ideas,’ and some are no more than what this phrase implies, such as those, for instance, with which Euripides capriciously plays. But some may rather be described as the soul-powers of the High God, like in some ways to the Persians Zoroaster; such are Aeschylus’ Eros, ‘love’; Orphism’s Orpheus, ‘song’; Orphism’s Dionysus, ‘wine’; Orphism’s the maiden daughter of God, who shines in the poor man’s smoke-dimmed cabin, and, in the very heart of Sophocles’ Aias, ‘the throne of God to deal with all the deeds of men.’ While Aeschylus’ genius inclines to the brighter of these emanations, Aeschylus broods rather over the gloomy forces of the shadowy world, which he might at times be constrained to present in palpable concrete form for stage purposes, and yet his own deeper thought could grasp as half-outlined spiritual truths, and in less real bodies instead. The ordinary Hellenes in his religious perceptions laid too much stress on personal individuality, as if this were the only criterion of ideal reality: from his point of view, if Eros was to be a real force of the spiritual world, then Eros must be imagined as a beautiful youth. But Aeschylus’ Athene in striking Sophocles’ fragment is no longer presented as a personal goddess but as a diffused pantheistic force. And the Attic drama may have enlarged the mental outlook of the succeeding generations in this matter; for the author of the speech against Aristogeiton in the 4th cent. must have been sure that his audience would understand him when he said: ‘All mankind have altars dedicated to Justice, Law-abidingness, Pity, the fairest and holiest (being those) in the very soul and nature of each individual.’ This is just how Euripides might speak.

The great 6th cent. poets were all moralists, each in his own way. The history of Greek ethics concerns us only at the several points where it touches religion; and to this history, both generally and on its religious side, the works of Aeschylus and the three dramatists make important contributions. Of special interest is their attitude to Greek mythology, which, in spite of its general brightness and beauty, seriously needed in parts the puritanical reformer, if it was to be harmonized with the higher religious thought. But none of these poets, not even the grave Aeschylus, was willing to undertake such a rôle. Aeschylus that such as the cannibalism of the gods in the myth of Pelops, or blasphemous stories such as the theomachies and the combats of heroes against divinities: ‘Let all war and strife stand far apart from the immortals,’ is a good sentiment, but for the expurgation of Greek mythology and for the enrichment of Greek ethico-religious thought. But neither Aeschylus nor the two older dramatists protest against the three-theistic mythos which accepts at need various legends about the amours of the gods. In fact, the axiom that sexual purity was an essential attribute of all divinity was not yet accepted by the higher thought of Greece.

Pindar’s freedom and sense of irresponsibility in regard to myths has a certain value, in that it shows that the futilities and improprieties of mythology—the ‘unhappy stories of heroes’—were not necessarily a burden on the stronger religious minds of Hellenes, and that they could be gently excised from the polytheism without endangering the popular worship and faith, which in the main were independent of them.

As for the two dramatists, Pindar’s contemporaries, mythology was their public business: and they accepted it glibly because they were not in the first place moral teachers but dramatists; it did not, therefore, occur to them to question the relationships between the gods and hero or demigod. But these might be select, discard, or re-shape; they could take the great legends of the past—legends of Thebes, the story of the Nephelai and of the Abduction of Ajax—all of them irreconcilable in parts with higher morality and religion, and invest them with as much morality as the tradition admitted. This they did with force and subtlety. And generally the moral spirit and imagination of Aeschylus and Sophocles must be counted among the spiritual facts of this period with which the history of Greek ethics and religion must deal. Doubtless the older and robust poet was the stronger moral and religious force: his protests against the superstitions of Nemesis, his profound utterances concerning moral responsibility and the moral continuity that links our lives and actions, his discovery that suffering brings wisdom—these are landmarks in the ethical history of Greece; while with Sophocles the conviction is no less deep of the sternness and divinity of the moral law. They were the last spokesmen of a civic-imperial system with a civic religion and morality that had not yet passed its zenith. Of further, art. AESCHYLUS, SOPHOCLES.

5. Euripides.—The plays of Euripides in this spiritual history of Hellenes was wholly different. Younger contemporary of Sophocles as he was, he seems to belong to a different age. In his work and thought is reflected far more fully than in the older poets of the same century the new mental life which was fostered by the philosophers and the sophists. The influence of the physical speculations of the 6th cent. and of those of Demokritos and Anaxagoras of the 5th, which at some points advanced further in materialism, had had time to penetrate the more gifted minds and to compel the public to a certain attention. The paid ‘sophist,’ the pioneer of modern education and the first champion of the critical spirit, was travelling around. And after 470 B.C. the imperial greatness of Athens had begun to attract the greatest teachers and thinkers of the age. It was of great moment for Euripides that such as Anaxagoras and Protagoras were active in Athens for many years, and that he had enjoyed familiar intercourse with them, as he also enjoyed with Soocrates. It is clear that the poet is inspired by the maxims and spirit; he was also learned in Orphism, antiquarianism, and remote folklore. Being by nature a great poet, he had also something of the weak,
GREEK RELIGION

ness of the 'polymath' or the 'intellectual'; he had not the steadiness of brain or strong conviction enough to evolve a systematic philosophy or clear religious faith; his was, in fact, the stimulating, eager, critical spirit, not the creative. His mental sympathies and interests shift and range from pole to pole. He is a secularist in his view of the world, and has shadowed a secular treatment of ethics based on ideas of πλεον and heredity—though a chorus of his maidens may praise chastity as 'the fairest gift of the gods.' It was, therefore, possible, though most unjust, that Aristophanes should call him an atheist. On the other hand, he is capable of profound religious sentiment and exalted religious utterance, and strikes out flashes of light that might kindle and illuminate a higher religion. Therefore it was possible for Clement of Alexandria to find in some of his words a foreshadowing of Christ. 1 He remains for us an enigma, and probably no final judgment will ever be pronounced upon him, in which we shall all agree. But the student of Greek religion must confront these two questions about him: (a) What was his real sentiment concerning the popular religion? (b) What were his contributions to religious thought, and what was likely to be his influence on the religious temperament of his audience and readers? To make up one's mind on these questions demands a long and careful study of the distinction between Euripides the playwright and Euripides the thinker. It is the confusion of this distinction that leads, for instance, to the strangely erroneous view of the religious significance of his Bacchae. A sympathetic reading of many of the plays must convey the impression that certain cult-figures and legends of the polytheism filled the more or less conscious mind of the poet at times, but seems to compose as if he had a personal hatred of Apollo and Aphrodite in particular, for instance in the Ion and Hippolytus. When he can interpret Aphrodite as a cosmic force, he can dilate on this as beautifully and artfully as Lucretius; if he could have believed that Apollo was merely the sun, as he tells us they 'were well aware, he might have forgiven him. But it is the real personal hatred of Homer and Helen, the personal Apollo, the father of Ion, the seducer of Klytemnestra and Clytemnestra, that rakesle in his mind. When he handles the story of the madness of Helen and brings Madness on the Bacchae, he has a first mouthpiece to convey to the Athenians what he thought of Hera; 2 just as he puts into the mouth of Amphitryon his own morbid criticism of the action of Zeus. 3 Yet with other parts of the polytheism he seems at times in the most glowing sympathy: in the Hippolytus, for instance, where he expresses for the first time in literature the religious rapture of purity; in the Bacchae, where he discovers the necessary phrase for the expression of the Bacchic communion, for the ecstasy of the Menad revel on the mountain, in verses that tingle with the nature-magic that was at the root of this wild cult. Yet no one should be deceived into thinking that he is preaching the cause of Dionysian worship; for the Bacchae closes with that depressing antithesis, where Dionysos plays the sorriest part, and Euripides' own sour dislike of the personal traditional gods plays an unpleasant flavour to the last scene. It is this bitterness of protest and criticism in this poet that strikes a new note in Greece; and Euripides may be regarded as the first in European history to be possessed with the theological temper. It cannot be said that he preached a new religion: he was no votary even of Orphism; for, though, as the Bacchae and the fragment of his Orestes at least, he felt something of its spell, he was not of that cast of mind which could be deceived by its pharisaic ritual and laws of diet, and he certainly cherished no mystic belief concerning the life after death. Nor can he be truly described as a social reformer of the people's faith and practice; for the reformer must have some belief in that which he wishes to reform, and the Euripides firmly believed in any part of the polytheism is hard to maintain; his final attitude is generally a doubt. Nevertheless, his protests might have been of value to the more cultured citizen who in his look to his spirit worship. They are directed mainly and most forcibly against the stories of divine vindictiveness and divine licentiousness. He is evidently touched with the new idea that vengeance is alien to the perfect nature of God; this was still more insistently proclaimed by the Pythagoreans, by Plato, and later philosophers. 4 On the second count his protest is suggested by the notion that was dawning in him that purity in every sense was essential to the divine nature; he is then the herald in literature of a thought which Orphism may have prompted, and which was to play a leading part in later religion and religious speculation, but which was unfamiliar to his contemporaries either in Hellas or anywhere in the Mediterranean except in Israel. His leading principle of criticism in all these matters is expressed in the Iphigenia as Tauris, namely, that the coming of the hero and legend arises from men imputing their own evil nature to God. 5 We owe much to the man who first uttered this warning against a debasing anthropomorphism.

The immoral elements in Greek mythology, which have been constantly reprobated by ancient and modern writers, have often blinded them to the fact that Greek religion, at certain times in its development, was mainly pure and refined. The stories about the gods, often of the type natural to savage folklore, did not constitute ancient religion; and they were the less able to choke the growth of a higher ethical-religious spirit in that they were not enshrined in sacred books that could speak with authority to the people. Yet we have not infrequent proofs in Greek literature, notably in Plato's Euthyphro, that they might exercise at times an immoral influence on men's conduct. Meanwhile the education of men in the 5th and 6th centuries had awakened men's minds to the importance of the moral question in literature. And the protests of Plato are well known in his scheme of education in the Republic; and the same moral point of view prompts him to his puritanical legislation against poets. Such moral movements in the polytheistic societies of Greece are interesting to mark, though their effect is often difficult to estimate. The new puritanical spirit had probably a wholesome influence on the more cultured minds; it had little influence on the mass of the people, nor does the later poetry of the Hellenistic period show much trace of it.

As regards the actual forms of Greek ritual and worship, Euripides has nothing revolutionary to say. He appears to have a strong dislike for prophets, and in this he was in some accord with Zechylus, Sophocles, and the Athenian people. He shows great distrust for Delphi; and its influence was doubly impaired at Athens during the Peloponnesian war. He protests against sacrifices, as a barbaric and non-Hellenic institution; and on one occasion the speaker argues that the gods need nothing from mortals at all: the thought was suggested merely by dramatic exigencies; and Euripides nowhere attempts a crusade.

3 Iph. Thes. 261.
4 Clem. Strom. p. 491 P.
against the value of sacrifice in general. He has
ownly one important thing to say about it, namely,
that the small sacrifice of the pious often outweighs
the large sacrifice of the sacrilegious. This is the
more spiritual view of the divine nature, and is not
infrequently expressed in the later literature; accord-
ingly, Theopompus, and the Hellenistic Judaism, this
higher view of sacrifice was even encouraged by the Delphic
oracle.

There is much, indeed, in the sentiments of
Euripides which might have elevated and cleared
the religious thoughts of his age; but it is doubt-
ful if his ultimate conception of godhead, as it
tended toward—whence it might have come to con-
form with the anthropomorphic polytheism of the people,
or if those most conversant with his tone and
inspired by his spirit could have remained long in
sympathy with orthodoxy. And there is an instinct
in Euripides which enhances his value for the
modern man, but which in the long run was to be
subservient of the old civic religion, namely, the
humanitarian or cosmopolitan instinct—that which
allowed him to sympathise with Trojans, women,
children, and slaves, which inspired him with the
beautiful thought that ‘the whole earth is the
good man’s fatherland,’ which prompted him to
depise the life of civic duty and activity, and to
recommend, as Aristotle does, the secluded and
conspicuous life. The further development of
this cosmopolitan spirit and its effect on the old
civic religion will be noted below.

It has been necessary to dwell so long on Euripides,
not only for the reasons mentioned above, but also
because, owing to the vogue that he won in his
lifetime and that was greatly to increase after his
death, he was more of the great men of letters must be regarded as the popularizer of
the new enlightenment. Cf., further, art. EURIPIDES.

6. Influence of the new enlightenment on the
people's religion. Euripides himself had individu-
ally exercised any immediate religious influence upon
the popular mind, either for good or for harm,
and is not easy to decide with precision; for there were
other exponents than he of the same free and
more advanced thought which began to express itself
early in the 6th century. As a result, we are able
to discern the religious view of human life and
conduct becoming what we should term more
spiritual, more inward. The moral judgment
begins to look to the soul or the inner principle; the
conscience begins. We know of any thing of God as a
spiritual power can read the heart of man, and
judges by that; that sin lies not in the external act alone; inwardness, inward spiritual purity,
is of less avail than purity of soul. Such thoughts
as these, which could serve as the foundations
stones of a new religion, and which helped to shape
the later religious history of Europe, were not
merely an inheritance from the speculations of the 6th
century, and were in the air of the 5th. We cannot
think that they were confined to the philosophic circles
until Euripides gave them publicity; for the
notable oracle quoted and commented on by Herod-
ottus had proclaimed to the people the novel view
that a sinful purpose was the same in the sight of
God as a sinful act; Epicarmus had preached the
higher ideal of purity: ‘If thou art pure in mind,
thou art pure in thy whole body.’ It was perhaps
if the things of the 5th century, that
some rhetorician of the school of Gorgias inter-
polated the poem of Hesiod's Works and Days,
which reveals an exalted view of the High God.

We may believe, then, that this higher religious
ethic had a certain elevating influence on the
popular imagination. The question of immediate
interest is whether we can trace any effects of this
in actual worship. Did the new enlightenment,
for instance, lead to the abolition or reform of
sacrifices or impair forms of sacrifice? 7. Human sacrifice.—This question involves the
consideration of the practice of human sacrifice,
which had certainly been prevalent in pre-historic
and early historic Greece, as in other Mediterranean
communities. We have evidence that in the 5th
and 4th centuries the practice was of rare occurrence
in the Greek world, and was repugnant to
the religious morality of all but the most back-
ward. The Plutonian dialogue of the Menos
contrasts the Greeks with the barbarians in this matter,
yet implies that the Arcadians in the cult of Zeus
Lykaion and the men of Helos in that of Zeus
Laphystias continued the cruel offerings which
diagnosed their Hellenism. Euripides attributes that
the human sacrifice once customary in the rites of
Artemis near Brauron had been, before his day,
transformed into a mere fiction. The Locran sacri-
fice of the maidens to appease the wrath of Apollo
illias fell into desuetude in the 4th cent. B.C., and
at some time earlier than this the Athenians must
have ceased to imitate the Δαναίες in their
Theagenes. The Rhodians ceased their confections,
and at the same time maintained their immemorial
rites, by choosing as a human victim to Krone
a malefactor who had been condemned to death.
According to Porphyry, the practice survived here
and there under the Roman Empire until the time of
Hadrian.

But the better sentiment of Greece had probably
begun to work as early as the time of Homer; for
certain legends concerning the abolition of this
ritual and the substitution of the animal for the
human life sacrifice in the pre-historic period; and
the merciful reform in the ritual was ascribed
to the High God himself in a Leocanian legend
which closely resembles the story of the
sacrifice of Ixion. The humanitarian spirit, then, had asserted itself before the 6th cent.; but doubtless the higher
teaching and thinking of this and the succeeding
age quickened its influence.

8. Phallic ritual.—As regards that element in
Greek ritual which by modern taste is pronounced
impure, there is little trace of any attempt at
改革 in any of the phallic ceremonies. The
element was indeed but slight. The forms of
worship were, on the whole, decorous, often stately
and beautiful; and the Greek care of the external ritualistic purity
was of less avail than purity of soul. Such thoughts
as these, which could serve as the foundations
stones of a new religion, and which helped to shape
the later religious history of Europe, were not
merely an inheritance from the Hellenic or other
Hellenic mysteries, although the Christian
Fathers are eager in their insinuations. The
Hellenic cults of the Oriental Aphrodite were
generally innocent of such of temple-prostiti-
tution which was found in certain Anatolian cults,
and which scandalized the Greek writers: the
Christian writers; the few impure titles attaching

to this goddess may well have arisen in the later period of the decadent polytheism. In the early ages, it is clear, the wholesome and temperate influences of the Helenic spirit had worked upon the forms of the polytheism. Nevertheless, in the ritual of a few deities—Demeter, Hermes, Dionysos, and even Artemis herself—sexual emblems were occasionally in vogue and dangerous. The more or less licentious character is mentioned, though these are very rare; while in the Thesmophoria and other sacrifices of Demeter, what was called aexagalyne, indecent and licentious badinage, was indulged in by the women among themselves, or more rarely with the men also. We note that such ritual is practically confined to vegetation-cults, and in some it is merely vegetation-magic, hardly attaching to the divinity, or affecting his or her moral aspect. The phallic emblem and the procession called the gteleins or phallaria were specially associated with Dionysos and Hermes; and Plutarch, a man of more than average culture and refinement, and strikingly susceptible to the spiritual influences of the more mystic religions, describes it as a harmless adjunct of the ancestral and cheerful Dionysiac ritual of the Boeotian people. And it is in this sense that against this element in Greek ritual there is scarcely a word of protest in all the ethical and philosophic literature of Greece. The exception is only a fragmentary utterance by Herodotus, which had nothing against the phallic procession of Dionysos; but the exact sense of his words is not quite clear. The higher moral thought of Greece on this matter is probably more nearly represented in the utterance of Aristotle in the Politics, where he lays down the same rules for the training of the young:

"No improper emblem as painting or any representation of impropriety is to be allowed by the archon, except in the cults of those divinities to whom the law attaches the ritual of impurity. Thus, in their case the law allows those of more advanced age to perform the divine service in behalf of themselves and their children, but not in the presence of the young." (2)

Even in the last three centuries before Christ, when greater stress was continually being laid upon purity in cult, no protest is heard against these old-world forms, which have maintained themselves in many parts of Europe down to the present day, in spite of the denunciations of Christianity. The seeming paradox is explained when we reflect that the sense of purity changes its content in the different generations; and, secondly, that the Helenic, like all the other Mediterranean religious systems, regarded the physical process as creative power as belonging to the divine character and as part of his cosmic creative force; therefore an emblem that was securely impure might be more allowablecult

g. Survival of other primitive ritual. There is much besides in old Greek ritual that appears to us harmless, but unsmooth and irrational; strange and naive things were done that primitive ideas of magic and animism inspired; and one may be surprised to find that the higher culture of the 5th and succeeding centuries is not known to have suppressed a single one of these. Still in the time of Theophrastos, and indefinitely later, the Athenians were capable of the quaint old-world ritual of the Boukonomia, that strange medley of phallic, magical, and dramatic make-believe; (3) in the time of Democritus (4) they were capable of bringing up to judgment in the law-courts an and, or any other incident that had to do with the death of a man or of the sacred ox, and solemnly condemning it to be thrown into the sea. The driving out of

GREEK RELIGION

at the supposed insult to the Eleusinian Mysteries, at the neglect of the dead after the battle of Arginusai, may be evidence of morbid religiosity, and is surely inconsistent with a general prevalence of asceticism; in these epitases the whole people reveal a passionate attachment to their holy mysteries, to their quaint phallic Hermes-images on which the luck and the life of the State depended, to the duties of the loving tendance of the dead.

Even their animistic beliefs concerning the common phenomena of the physical world had not yet been estiripated or purged by the physical philosophy of Ionia; for, according to Plato, it was still a dangerous paradox, which his Socrates disclaims before the jury, to maintain with Anaxagoras that the sun and the moon are merely material bodies and not in themselves divine. Intellectually, Nikias appears inferior to Homer's Hektor. It was Athens that produced in the 4th cent. the superstitious man of Theophrastus; but it is right to bear in mind that she also produced the man who could so genially and tolerantly expose that character.

11. Influence of comedy.—Those who believe that the faith in the polytheism was falling into rapid decay by 400 B.C. sometimes quote as way of evidence the corrupting influence of Attic comedy in dealing with the divine personalities; the notorious example is the ludicrous figure and part of Dionysos in the four of Aristophanes. Yet the notion of the people who enjoyed the humour of the play were more devoted to Dionysos than to most of the other persons of their pantheon. If the 'excellent feeling' of Aristophanes is a proof of popular unbelief, what shall we say of that Attic term-mitter of the 6th cent. which represents the god half-salve and half-drunk on the back of a mule and supported by an anxious Silenus? The present writer has suggested that 'this is some peasant's dedication, who feared his god little but loved him much, and treated him as his comrade.'

12. Waning of political value of Delphi.—There are certain external events in the history of Greek religion towards the close of the 5th cent. that must be noted in a general sketch of its career. One is the waning of the political influence of the Delphic oracle; its secular mission appeared to have been accomplished. It was the time of Greek colonial expansion had closed; at the first terror of the Persian invasion, the great State anxiously resorted to Delphi for guidance, but the priesthood failed to rise to the Pan-Hellenic occasion and played a double game. During the Peloponnesian war it was obvious that they were 'Lacronizing'; nor were they ever given again an opportunity of heading 'la haute politique de Hellas'; and in the middle of the 4th cent. Demosthenes could speak contemptuously of 'the shadow at Delphi, although the Asklepieion of Kos, according to the 5th and 6th centuries the chief seat of Hellenism in the spheres of religion and morality. It came to serve the purposes of a private confessional, giving advice on questions of conscience; its council was generally sane and often enlightened, and shows the priests as possessed with the progressive spirit of Greek ethical philosophy.'

13. Spread of Asklepios-worship. — Another event of importance is the diffusion of the cult of Asklepios and the growing influence on the Hellenic mind of this one obscure hero or earth-spirited demi-god as a kind of god of medicine. In Sicily in the latter part of the 5th and 4th centuries, Asklepios in Sicily had been introduced with 12. Aristophanes in Sicily had been beforehand with Aristophanes in venturing on burlesque of divine actions, Hephastos and Herakles specially lending themselves to ridiculous situations. Even in the 4th century the same gay irreverence had occasionally appeared, as in the Homeric hymn to Hermes. These things do not necessarily arise from an anti-religious spirit, but they may be taken as indications of a certain vein in the Hellenic character, a lightheartedness and a reckless freedom in dealing with certain occasions, with things divine that is markedly in contrast to the Oriental spirit. Nevertheless, it is not improbable that comedy at Athens and elsewhere did gradually exercise a weakening or a debasing influence on the popular faith. For the other posts of Attic comedy took greater liberties than even Aristophanes: Kratinos, Teldiades, and Plato of the 5th cent. Amphipolis of the 4th, did not shrink from introducing the High God himself on the stage in ridiculous and licentious situations. There probably was some reserve and no gross indecency in the presentation of these plots. And much is conceded to the spirit of the Carnival, especially when a certain sēxopoiētā was sanctified by custom and ritual. Nevertheless, the more earnest-minded of the Athenians may have agreed with Plato's condemnation of such a handling of divine personages; and, though the popular faith may have been robust enough to endure such shocks, one cannot but suspect that the people's religious imagination suffered a debasement in moral tone. A few south-Italian versions of the god on which are scenes that appear to have been inspired by such comedies, are the worst examples of Hellenic vulgarity.

GREEK RELIGION

15. Religion in first half of 4th century B.C.—Yet it is hazardous and probably false to say that the public religion of Greece was decaying visibly throughout the first half of the 4th century. Athens is, as usual, our chief witness. The restored democracy was as it were a new school; it created the spirit, and almost succeeded in establishing the cult of the new goddess of Peace, Eirene, for whose presence among them the weary Athenians might well yearn; it also perfected the ideal of Demeter, the Madre Dolorosa of Greek myth, whose Eleusinian rites with their benignant promise of salvation added power and significance to the later polytheism. The literature of this period still attests the enduring vitality of the popular religion. The Attic oratory of the 4th cent. was more religious in its appeal than any modern has been, as might be expected of a time when there was yet no divorce conceivable between Church and State. It is noticeable, however, that the religious faith of the individual orator, but of the religious temper of the audience, which is attested by many striking passages in the speeches. According to Antiphanes, the punishment of sinners and the avenging of the wronged are specially the concern of the duties of the nether world; and he adds that the soul may be punished for an error of speech. He recognizes the importance of the Attic religion and mythology, and the greatest of his speeches closes with a fervent and pious prayer. It is well to remember ourselves the political or forensic orator is a true witness to the average popular belief than the poet or the philosopher.

16. Plato’s attitude towards the popular religion. —On this background of Greek religious thought as embodied in the surviving writings or records of the philosophic schools of Hellas is far too large a subject even to be adumbrated here; and a general survey of the religion can only notice shortly the leading thinkers whose works there is reason to think had vogue and lasting influence upon the religious world. Among these the chief belongs to Plato; and the full account of Greek religion, both in the period that precedes the downfall of Greek independence and in the periods that follow, must include a critical estimate of his religious speculation. This is no place for an elaborate consideration of the metaphysics of his ideal theory, or the relations of his ideas to a theistic system; only the most general observations may be allowed for the purpose of this sketch. To understand his main attitude towards the popular cults, and his influence upon the later educated world of Greece, we must recognize once and for all that, idealist and formal as he was, he was no revolutionary or iconoclast in matters of religion: he would reform Greek mythology, purging it of stories of divine conflicts, divine vengeance, divine sacrifices; he was fortunate in being born in his sacred books, he feels that this might be done gently and easily without disturbance to the established forms of worship. He does not desire to abandon or idolatry, but he inclines to simplicity in the offerings; in one passage he even maintains that the legislator will not change a single detail of the ritual, if only for the reason that he does not know anything of the inner truth that may lie behind such outward forms. Even in his most advanced physical and metaphysical speculations, he finds a place for the popular pantheon; in the hierarchic scale of things the Olympians are ranged somewhere below the divine transcendental God of the Universe. The Timaeus dialogue presents some interesting theologic dogmas; here in the scale of divine creation, the Olympian pantheon, which seems to be accepted rather for the sake of tradition, is given the third place, after the planets and the sun, which are the second works of the supreme Creator, the first being the cosmic Heaven. These deities of the polytheism, then, are not immortal in their own nature, but are held together for all eternity by the will of the Highest God. And it was to them that he committed the formation of man, and lent for this purpose a portion of His own immortality; the mortality of man is thus accounted for, which would have been inexplicable had man sprung directly from the immortal Supreme Being. It is interesting for our present purpose to note that this ecstatic and transcendental system of the great master and parent of Greek theosophy, would leave the established religion more or less unpimpered; it even accepts its data at certain points, namely, the nativity of its gods, and draws the logical conclusion that gods who were born could not be by essence immortal: therefore Zeus could not be accepted as the Absolute and Supreme Being of the Cosmoe. It also proclaims the idea of an immortal element in man, which, again, is in accord with the contemporary popular faith in the survival of some parts of ourselves. But the work which reflects most vividly the popular religion and betrays the strongest sympathy with it is the Laws, a work of Plato’s old age, in which the conservative spirit of the religious reformer is no less striking than the intellectual decay of the philosopher. He accepts the greater part of the civic political religion, merely purifying the mythology and some of the ideas of the divinity; and it is striking how easily he finds in its materials ready to hand on which he can

build an exalted ethical religious system of rights and duties, especially those which concern the life of the family and the groups of kinship. In fact, the background of the thought in this lengthy treatise is almost always the Greek Polis, though glimpses may here and there break through of a wider vista. Plato expresses a prejudice against all forms of private and orgiastic cult, which were dangerously enticing to women; any doubtful question that might arise concerning rite or cult he would leave to the decision of the oracles of Delphi or other Zeus Ammon near ways.

We feel generally that Plato did not consciously assume the part of an apostle of a new order of religion, but that both in his philosophy and in his religious theory he found a sufficient point d'appui in the old, of which he tried to strengthen the moral potentialities. The later sects which attached themselves to his name or to his school were deeply interested in religious speculation, which degenerates at last into the mystic superstition of Neo-Platonism. Therefore, as the work of Aristotle belongs to the history of European science, so the philosophy of Plato concerns the later history both of pre-Christian and of Christian religious thought. To estimate exactly how his influence worked on the better portion of the centuries before Christ is impossible. We may naturally and with probability surmise that he contributed much to the diffusion of the belief in the spiritual nature and personal God, to the exposition of the crude notions of divine vindictiveness and jealousy, to the interpretation of the external world in terms of mind and spirit; and, as against any materialistic expression, to the acceptance of the belief in the divinity of the human soul, and its affinity with God, and in the importance of its posthumous state. If, at the later periods, the religion of the Hellenes had been less rationalized, and the old polytheism still able to fulfil some degree the religious wants of the individual worshipper. And scholars who have been tempted to anticipate the death of Hellenism in the 4th century B.C., have often ignored, among other evidence, this important historic fact that in the 4th century B.C. it was still vital enough to make foreign conquests, to penetrate and take possession of Carthage, for instance, and that in the 3rd century B.C. it began to secure for itself a new lease of life within the city and the growing Empire of Rome; in fact, the last chapter of Greek religion falls within the Roman Imperial period.

17. Religious art in the 4th century. — Our general survey is now approaching that period of world-change brought about by the rise of Macedon. But, before leaving the scene of the free city-State, we should be better able to estimate the religious works done by the great 4th century B.C. masters of sculpture before the power of Alexander reached its zenith. The perception of the significance of the Sophianic to be expected, plastic types of the Dioscuri and his Thisae, and his work rivalled at least, if it did not surpass, in inspiration of tumultuous life the masterpiece of the older Attic vase-painters noticed above. Praxiteles, the master of the gentler modes of the soul, in the religions sphere consummated the types of Aphrodite and Demeter; the almost perfect embodiment of the latter goddess, the Cnidian Demeter of the British Museum, has affinity with the spirit, if not with the formal style, of this school, and combines something of the tearful expression of the Madre Dolorosa with the blitheness of the corn-goddess. We are conscious, indeed, of a change in the representation of divinity. The works of this later generation have lost the majesty and awe, the σωματον, as the Greeks called it, of the 5th cent. art; nor can the Greek States command any longer the creation of the chryselephantine; it was probably in the earlier half of the 4th cent., of the orgiastic fraternity devoted to Sabazios, with which Ασκληπιον

1 For particulars, see Farnell, Higher Aspects, pp. 67, 68-69, 117, 129. 2 See CUV III. 190-192. 3 BCH xxvi. 299-310. 4 Tb. 199.
in his youth was associated. But it is not till the
Macedonian period that the epicographic record of
these gilds begins; henceforth the inscriptions are
numerous enough to make the religious history
and their organisation and their wide prevalence throughout the
Hellenic world. Their importance for the history of
religion is great on various grounds.

The development of the idea of a
humanitarian religion in that they transcend in
most cases the limits of the old tribal and civic
religion and invite the stranger; so that the mem-
bers, both men and women, associate voluntarily,
no longer on the ground of birth or status, but
drawn together by their personal devotion to a
particularengtment to whom they stand as
intimate and individual relation than the ordinary
citizen could stand to the divinities of his tribe and
city. This sense of divine fellowship might
sometimes have been enhanced by a sacrament
which the members partook of together; we know
that this was the bond of fellowship in the Samo-
thracian mysteries, which were beginning to ap-
pear widely in the early Hellenistic world. A
common meal at least, a love-feast or 'Agape',
formed the chief bond of the theoseoi, and this was
a 'hymn'. On the other hand, we have no
record of the departed brother or sister. There was nothing
to prevent the theoseoi choosing as its patron-deity
some one of the leading divinities of traditional
politeia, as would have been the case if, as Pausanias
supposed them, to stand in any natural
antagonism; for instance, there were local reasons
why Greek merchants whose central meeting-place
was Rhodes should form theocheis under the protec-
tion and in the name of Zeus Xenios, the god who
protects the stranger, or that of Athenes Lintza, the
ancient and powerful divinity of Lintza, or of
Hellas, the pre-historic sun-god whose personality
pervaded the whole island. So far, then, the
religious importance of these societies consists in
their religious fellowship by between the
members, and which later served as a model to
the nascent Christian community.

But in the history of Hellenic religion their
significance was even greater on another ground,
that they wrote a most striking testimony to
that fusion of East and West which it was the
object of Alexander and his mission of his succes-
sors to effect; for many of these religious brother-
hoods, whose members and organization were
Hellenic, were consecrated to foreign deities—
Sabaizos, Adonis, Xonares, and the Syrian god-
desses—so that they played undesignedly the part
of missionaries in the momentous movement some-
times called the theoseis, the blending of Eastern
and Western religious and divine personalities,
of which the significance will be considered below.

3. Menander.—The student who is tracing the
course of the religious life and experience of Hellen
through the Hellenistic period should endeavour
to gather beforehand a vivid impression of the
spirit of the Menanderian comedy. For Menander,
the friend of Epicerus and the devoted admirer of
Euripides, was the favoured heir of the humani-
tarian spirit that had gleamed brightly even in the
Homeric period and had gathered strength and
articulated expression in the century before Alex-
ander opened the gates of the East. Patronized
and courted by Demetrius Phaleres and Ptolemy,
adored by the scholars and reading public of
Alexandria and the Hellenistic world even more
than he had been by his own contemporaries,
Menander was eminently in a position to give a
tone to the religious sentiment of this period; and
the Anthologies of his works prove that he was
actually revered as an ethical-religious teacher.1

Therefore, for the general expository history of
Greek religion he counts for more than any of the
philosophers, for he addressed a far larger public.
Yet the message that he has to deliver has come
to him from the philosophers and from the inspira-
tion of the humanized Attic spirit, of which he
appears the most delicate and final expression.

While writing and thinking pre-eminently as the
enlightened Athenian of the close of the 4th cent.,
he is the mouthpiece of cosmopolitism in ethics and
religion—'No good man is alien to me; the
nature of all is one and the same (οαδει των
διαι των εις υποτικαί των άνθρωπων);2 the Tereitan
formula, 'homo sum, humani nil a me alienum
puto,' is only an extension of this, losing some-
thing of its ethical colouring. Many of the frag-
ments, showing striking approximations to New
Testament teaching, are of vital importance for
the history of Greek ethics. As regards religion,
it may contain protests against superstition and
the extravagance of sacrifice proffered as a
tribute;3 but they exhibit no real or veiled attack
on the popular polytheism of the Areopagite. On
the other hand, they have preserved many memorable
reflexions that bear witness to the development of
a religion more personal, more inward and spiritual,
than had hitherto been possible; a sense
that God is known by personal and spiritual
experience, and not by the spirit of sacrifice or
by the external act of worship. The episcopal
professio divinae soree, 'the light of the mind is
to gaze ever upon God.'4 The sense of close and
mythic communion between man and the omni-
present divine spirit is strikingly attested in the
passage of one of his unknown comedies:

1 See Paus. Associations religioso est in Gree.

3 See a recent paper by Pierre Walke in R.K.G., 1917, 598; the Sentences de Menander; the writer's alma at discovering or
imaginatively the dramatic setting of each fragment, and at
proving the view that Menander was placed as an original
ethical teacher. Accepting his theory, we can still assign high
values to the 'Sentences' for the purpose of illustrating the
history, whether we regard them as original and earnest utter-
ances of Menander or as commonplace which he uses lightly
for dramatic purposes; for, if the latter view is the more
correct, they show at least what was in the air.

7 Tereitan formula, 'homo sum, humani nil a me alienum
puto,' is only an extension of this, losing some-
thing of its ethical colouring. Many of the frag-
ments, showing striking approximations to New
Testament teaching, are of vital importance for
the history of Greek ethics. As regards religion,
it may contain protests against superstition and
the extravagance of sacrifice proffered as a
tribute; but they exhibit no real or veiled attack
on the popular polytheism of the Areopagite. On
the other hand, they have preserved many memorable
reflexions that bear witness to the development of
a religion more personal, more inward and spiritual,
than had hitherto been possible; a sense
that God is known by personal and spiritual
experience, and not by the spirit of sacrifice or
by the external act of worship. The episcopal
professio divinae soree, 'the light of the mind is
to gaze ever upon God.' The sense of close and
mythic communion between man and the omni-
present divine spirit is strikingly attested in the
passage of one of his unknown comedies:

1 See Paus. Associations religioso est in Gree.
of the Peloponnesian war, trailing with them the orgiastic atmosphere of Phrygia; and at some indefinite time before this the impure ritual of certain oriental goddess-cults had invaded the Corinthian worship of Aphrodite. But after the establishment of the kingdom of the Diadochi, the gentile barrier in religion gradually loses its force and significance. It was, in fact, a fact of the times and policy of the part of some of the kings to establish some common cult that might win the devotion of the Hellenic and Oriental peoples alike. Such was the intention of Ptolemy when he founded at Alexandria the cult of the Babylonian god Sarapis, whom the Egyptians were able, owing to a similarity of name, to identify with their Osiris-Apis, and the Hellenes, with their Plouton, owing to the accidental fact that an image of this underworld-god happened to be consecrated to the cult at its first institution. Similarly, when the Syrian city of Bambyles was re-settled as Hierapolis by Selenocos Nikator, the personality of the great goddess Astarte (q. e. c.) was mingled with that of Artemis, Hera, Aphrodite, and other Hellenic goddesses; and the temple of the great Mother of Phrygia and her mendicant priestess; and the fragments in a newly discovered papyrus of a treatise by Kerkiades, the Cynic philosopher, on the use of opium in the 3rd cent. B.C., contain a theory which reduces personal deities to impotent instruments of Fate, and would substitute for Zeus and his colleagues certain divinized abstractions such as Nous and Natura; the latter term, if the reading is sound, seems to denote the spirit of unselfishness or sacrifice—an interesting and potentially valuable idea but at this time still-born.

6. Asklepios-cult and later mysteries.—These sectarians of this later age do not appear to have made a serious attempt to capture the public; and the popular religious movements for the most part ignored them and their teaching. The Hellenistic religions are as convincedly theistic and moralistic as the older were. The chief change lay in this, that a man now might to some extent choose his own divinity or—what was even of more import—be chosen by him or her; he was no longer limited to the cults into which he was born. This freedom had already for some time been offered by the thesitai; and now in the Hellenistic world, especially by the powerful and wide influence of the cult of Asklepios, the idea was developed of a deity who as Healer and Saviour called all mankind to himself; and it was this significant cult-phenomenon that induced Kerkiades in the above-mentioned passage to include Iads, 'the Healer,' among the true divinities whose worship ought to supplant that of the old gods. In the treatise called Asklepios of the pseudo-Apuleius a long address and prayer to this deity are preserved, of which the tone is strikingly Christian.

5. Stoicism, Epicureanism, Cynicism.—This pantheistic speculation inspires some of the dogmas of Stoicism; and for most of the Stoic writers and thinkers the concept of divinity was less that of a personal concrete Being than of a spiritual force or soul-power immanent in things; therefore, while some of them tried to find a place in their metaphysical system for the creations of the polytheism and even a justification for angry and divination, the impression left on our minds by the fragments that have come down to us of the religious specula-

as communion with the divinity through sacrament, the mystical death and rebirth of the individual, the saving efficacy of baptism and purification. These rites could satisfy the craving of the mortal to attain to the conviction of immortality and to the ecstatic consciousness of complete or temporary self-absorption in God. But in the mysteries of Sabazios and Cybele, and possibly in others, this mystical divinity was conveyed to the mystic by the simulation of a holy marriage or sex-communion with the god or goddess; and for this reason the pagan mysteries were generally attacked by the Christian Fathers as obscene; the charge was unjust on the whole, though the psychic effect of the special act of ritual just alluded to was probably detrimental to the moral imagination.

8. Hermetic literature.—The strongest and most interesting reflexion that the ancient records have preserved for us of this fusion of Hellenic culture and Oriental religious sentiment is presented by the Hermetic literature. The origins of this most fantastic product of the human mind are traceable by Plinders Petrie back to the 6th or 5th cent. B.C. But though much of it is pre-Christian, its philosophic diction proves that it cannot be earlier than 300 B.C., and the bulk of it is probably much later.

Accepting this address to the Deity—έχειν δὴ σεν καὶ σε συν Τὸν Θεόν, 'I am Thou and Thou art I'—may be taken as the master-word of these hieratic writings. The unnatural alliance between Greek philosophy and the Oriental mysticism of the Hellenic imagination almost effaced. And the learning and science of the Hellenistic age stood mainly aloof from the religious forces that moved the masses of the people.

9. Daemonicism.—The mystic and theosophical literature of the Hellenistic and Greco-Roman period was marked by a daemonicism, being infected with the polydaemonism of the East and positing the existence of good and evil daemons as a metaphysical dogma. We can trace a corresponding change in the popular Hellenic imagination. In the earlier period, as has been shown, the native Hellenism was, as compared with other races, fairly strong-minded in respect of the terrors of the demon-world; but the later people of the Greek area were certainly tainted in some degree with this unfortunate superstition of the East, and various forms of exorcism, conjuration, and evocation became more prevalent. The modern Greek temperament appears to be possessed with this daemoniac spirit, and many forms have been inherited and developed from this last period of the old civilization.

10. Eschatology.—But another feature that we mark in this mystic religion and these mystic societies of the Hellenistic world indicates a higher aspect of religion, and suggests possibilities of momentous development; most of them, if not all, proclaimed the immortality and happy resurrection, a divine life after death. The Hellenes who had been initiated into the Orphic faith hoped to attain immortal happiness in and through Orpheus, availing of Egyptian ideas and Egyptian spell-formules. The priest of the mysteries of Atthis comforted the congregation of the faithful, sorrowing over the fate of the god, with words that aver the certainty of his resurrection and by implication the hope of their own:

The mysteries of Mithra embodied much the same eschatologic ideas and hopes; but those came to the Greco-Roman world only in the last period before the establishment of Christianity, and had little hold on Hellenic society proper.

11. Hero-worship and apotheosis.—The idea that was common to many of these mystic brotherhoods, that the mortal might achieve divinity, is illustrated by another religious phenomenon which stands out in this last period, namely, the worship of individual men and women either in their lifetime or immediately after death (see art. Dextra, Héroes [Greek and Roman]). To appreciate the full significance of this, one must be familiar with the usages of the earlier Hellenes as also of the Oriental peoples who became subjects of the Diadochi. We have observed that the Greek of the 6th and 5th centuries was willing to confer heroic honours to certain distinguished individuals after death; in this there was nothing inconsistent with the principles of higher polytheism; and in the earlier cases the gods of the Hellenistic world showed a corresponding change in the popular Hellenic imagination. In the earlier period, as has been shown, the native Hellenism was, as compared with other races, fairly strong-minded in respect of the terrors of the demon-world; but the later people of the Greek area were certainly tainted in some degree with this unfortunate superstition of the East, and various forms of exorcism, conjuration, and evocation became more prevalent. The modern Greek temperament appears to be possessed with this daemoniac spirit, and many forms have been inherited and developed from this last period of the old civilization.

The same kind of adulation was lavished by the degenerate Athenians on Alexander and Demetrius Poliorcetes. The most salient examples are to be derived from the records of the Seleucids and the Ptolemies, the kings of these dynasties usually...
GREEK RELIGION

enjoying divine honours after death, and sometimes bearing divine titles such as Xerxes, 'Saviour,' Zeus, 'God,' in their lifetime. Is this merely the gross servility of a decadent age that had lost all real sense of religion? If so, the truth must be accounted for in some degree: Dio Chrysostom exclaims against the quackery and vanity of it; and the sharp-witted Athenians and the educated Greeks generally would be unable to account for their superstitions; they protected themselves before these human gods. It is natural to suppose that the effect upon it, if the real religion was to be found, in a higher account of the Deity, Apollo and Dionysus would tend to collapse when the one was identified with the Selenikai, the other with Attalos. Yet the faith in Dionysus at least was able to survived the strain. And what looks to us mere hypocrisy and blasphemy would appear to many of the Hellenic communities in another light. It seems that the uncultured Greek in the time of Herodotus was capable of believing in all seriousness that Xerxes might be a real incarnation of Zeus upon earth; and such an idea would be familiar, as an old tradition in the popular estimate of kingship, to the native of Syria, and still more so of the Egyptians. When the Rosetta Stone proclaims the Ptolemy as 'the living image of God,' the average Greek might smile in secret, but the native Egyptian would instinctively assent to this assumption of a deity belonging to the high world of the ancient Pharaohs.

This delusion of the mortal, so rife in this later period, may be regarded as a moral and religious evil. Yet it must not be taken too hastily as a proof of the unreality of the prevailing polytheism. And, for better or worse, it is the life of the church belonging to the high world of the Greco-Roman world with the idea of the incarnation of the Man-God.

The Hellenic period cannot be severed by any sharp dividing line from the Greco-Roman; but it belongs rather to the student of Roman religion and the Roman Empire to pursue the history of Hellenic polytheism through the first centuries of our era down to the establishment of Christianity.

The religious phenomena of the period that has just been sketched present, on the one hand, the signs of decay—of the old civic and political religion which fostered the growth of the Greek Polis,—and, on the other hand, the working of new religious forces which prepare the way for Christianity. The gods of Apollo, Zeus, and Athena were among the first to wither; yet a living and personal religious sense was in all probability more diffused through the Greek world under the Empire and the Roman Empire than it had been in the earlier centuries. Contact with the Oriental spirit brought to many a stronger intensity of religious life; religion is no longer preoccupied with the physical and political world; its horizon lies beyond the grave, and its force is 'other-worldliness.' Men flock to the mysteries seeking communion with the divine by sacrifice, and sustaining their faith by mystic dogmas. The religious virtue most emphasized is purity, of which the influence is often anti-social; this was not always understood in a pharisaic sense, but its spiritual significance was proclaimed to the people and penetrated the sphere of temple-religious. An inscription from a temple in Rhodes of the time of the emperor Constantine lists a series of rules concerning righteous entrance into the shrine; 'the first and greatest rule is to be pure and unblemished in hand.'

GREEK ORTHODOX CHURCH

The name. — The term ‘orthodoxy’ (apostolos) is used to indicate the immutable conservation of the true Christian doctrine, as taught by Christ and the Apostles, and set forth in Holy Scripture and Holy Tradition, as against the divergence therefrom of heresies, which is heterodoxy (episkopos). In this sense the word is used as early as the 2nd cent. (e.g. in Clement of Alexandria). The appellation ‘Orthodox’ was applied in ancient times to the whole Church; but after the Western Church separated from the East, it was appropriated by the Eastern Church and was in the name of this faithfulness that it broke off the connexion with the Western Church, which has appropriated to itself the name ‘Catholic.’ Since the chief part in the Eastern Church takes up the Greek nation, very often, even in official documents, especially in the West, the name ‘Greek Church’ was also used for the ‘Orthodox Church;’ but at the present time, when out of the 16 Orthodox Churches only 5 are Greek, and out of the 106 million Orthodox people the Greeks number less than 8 millions, the appellation has become an anachronism. A more correct term is ‘Eastern Church,’ so far as it denotes her geographical position, and brings out the idea that the ‘Orthodox’ Church is not a part of the whole Christian Church; but even this without the addition of ‘Orthodox’ is incorrect, as the term ‘Eastern’ may as justly be applied to the Nestorians, Monophysites, and others.

2. History. — The history of the Orthodox Church falls into four periods, each division being marked by an event which defined its character for the whole period, viz. in the first, the first cent. as the initial development; in the 4th cent. the recognition of Christianity as the State religion (A.D. 313); in the 9th cent. the completion of the Orthodox system of dogma (843); together with the beginning of the separation of the Western from the Orthodox Church, and the adhesion of the Slav peoples to the latter; in the 15th cent. the subjugation of the Greco-Slavic world by the Turks, completed by the capture of Constantinople in 1453.

(1) The early period. — The first days of Christianity were marked by the invitation of the Hellenes to accept it, and the Christian Church of the first two centuries was a Church of the Greeks. Even in Rome the Christian community was Greek, both in comprehension and in language. The missionary activity of the Church was wider and more successful in the regions in which the influence of Hellenism had spread. The Holy Spirit, as the Body and Head of the NT, as well as the first productions of Christian theology, were written in the Greek language. It was the Greek Churches that developed the idea of the Logos, the doctrine of the Person of Christ, of the Holy Trinity, and the like; they were the first to introduce order into the life of the Church, and created a Christian terminology which was accepted everywhere; it was they that introduced the idea of a Church of the whole world. The tendencies of the Roman Church are in this period very slightly noticeable, so that the history of Orthodoxy almost coincides with that of Christianity.

(2) From A.D. 313 to 843. — After Christianity had been recognized as the State religion, the Greek Church elaborated the normal relations between Church and State, being guided by the principle of symphonia and an adaptation of the Church organization to that of the State, according to which the diocesan bishops were subordinate to the bishops of the chief towns, or metropolitans, i.e. to the Metropolitans, and those in the time to the bishops of the capitals of the ‘dioceses’ established by Diocletian, the bishops receiving the titles of Archbishops, Exarchs, and Patriarchs. Such as first were the bishops of Antioch, Cæsarea in Cappadocia, Ephesus, Heraclea (capital of the Thracian ‘diocese’), and Alexandri; in the last case the bishops were all directly under the Patriarch, without the intervention of Metropolitans. Finally, the Patriarchate of Constantinople took a special place among the Churches, becoming the permanent residence of the Emperor from the time of Theodosius I. Constantinople had originally been subordinate to the Metropolitan of Heraclea, but the second Ecumenical Council (canon 3), at Constantinople in 381, gave the bishop of the latter precedence (prozetaîo tois episkopois) next after the Bishop of Rome, as being bishop of ‘New Rome’; and in
GREEK ORTHODOX CHURCH

A.D. 451 he had put under him, by the 28th canon of the Council of Chalcedon, the 'dioceses' (provinces) of Hercules, Ephesos, and Cæsarea, and gained a position second to Rome, but superior to Alexandria, Antioch, and Jerusalem. He had authority
over all Asia Minor, and in Europe over Thrace, from the beginning and ever, in St. 736, the long controversy with Rome, over Illyricum
Oriental, i.e., the countries south of the Danube, toge-
ther with Dalmatia, Epirus, Greece, and Crete.
To him also were assigned, by the 28th canon of
the Council of Chalcedon, 'all other tribes' as well
(άλλα φυλής), and this became a matter of great
importance from the time of the conversion of the
Slavs to Christianity, when by other tribes they
began to mean peoples living outside the limits of
the Empire. About A.D. 500 the Patriarch of
Constantinople received the title of 'Ecumenical'
(ὁ οἰκουμενικός), i.e., the Patriarch standing at the
head of the whole (Eastern) Empire.

With the elaboration of Church organization,
Church life reached a very high development.
The lively intercourse between the Churches
allowed the seven Ecumenical Councils to settle
definitions of a dogmatic and canonical character
in the name of the Universal (Ecumenical) Church;
Theology in its various branches—Dogmatics,
Church-History, Exegesis, Apologetics, polemics,
sermons, etc., supplies admirable examples.
There arose the heresies of the Arians, Macedonians,
Monophysites, Monothelites, with their reactions,
and that of the Iconoclasts, which gave rise to debates in which part
was taken by the people, by monks, and by the civil
power; but the Councils made clear and settled
the doctrine of the Church, and excommuni-
cated those who did not receive it. This resulted
in the formation of the Eastern non-Orthodox
Churches—Nestorian, Monophysite (Coptic, Jacobite,
and other); and the Council's work was for the
world and the Church, and is not to be mocked.

The Councils established the rules of Church
discipline; but side by side with these rules there
now appeared a new source of ecclesiastical law in
the decisions concerning the Church emanating from
the Patriarchate of Constantinople. At the end of the Pseudo-
Theodorianus (A.D. 438), and at the beginning of
Justinian's Code (A.D. 534), and supplemented by
numerous provincial enactments, Church discipline
was thus given a very wide extension, which showned itself, on the one hand, in interference
by the Emperor in Church affairs, in particular as
concerning its property, in the election of bishops,
in the summoning of Councils, and even in the publi-
cation of ecclesiastical edicts during the formule of the
Creeds; and, on the other hand, in the action of the
Church upon the civil laws and administration.
Bishops had the right of supervision even over the
civil administration; the right to sit in judgment,
and to give protection to the poor (peregrina miserales); and sometimes they are found as rulers of the people (ἐπισκοπή), and even
received royal honours.

Church property increased, and Christian phil-
anthropy, under the protection of the State, assumed
great importance. Monasticism, which had already
made its appearance, and gained a position at the
head of scriptural study, spread widely in Egypt, Palestine, Syria, Armenia,
and Asia Minor. At first each monastery was
managed under its own rules; but later in the
Church of Constantinople, in the rule of St. Basil
the Great, and in that of Jerusalem the rule of
St. Sabbas the Consecrated, became dominant.
Church Service also became more elaborate.
There came into use bells, incense, and candles;
they appeared splendid examples of Church poetry;
festivals and feasts were established; ecclesiastical
art elaborated itself into its own (the Byzantine
style), including a surpassing technique (mosaic),
the examples of which, e.g., St. Sophia at Con-
stantinople, remain unapproachable to this day.
Orthodoxy spread beyond the limits of the Empire
to Ethiopia, Iberia (Georgia), Persia, Armenia,
among the Goths, Avars, Alans, Lazi, and other
Caucasian tribes in India, China, and Arabia
among the Saracens. Only in the second half of
the period does the region over which it dominated
begin to be narrowed by the spread of the Mono-
physites and the conquests of the Arab Musulmans.

Within the Empire the battle with the remains
of paganism went on, special zeal being shown by
Theodotus II., Theodosius II., and Justinian.

(3) From A.D. 424 to 457. The reasons for the separa-
tion of the Western Church are very numerous and
very complicated. Already in the 3rd cent. the
Roman Church had begun to acquire a special character on account of its
position in the centre of the whole State and the
influence exercised upon its theology by Roman
Christian thought, and this led to the separation
of the Church into two parts, Eastern and Western, prepared the way
for the differentiation of their Churches. The
weakness of the Western Empire, its fall, the
great migration of peoples, and the fact that the
Romans gave up the idea of a single Latin Empire
were enough for the relation of Church and State in the West to assume a different form, and for the Popes to take upon themselves the rôle of representatives and defenders of the Roman ideals
in civilization and politics. This is the basis of
the misunderstandings which began to arise with
the Eastern Church, especially with that of
Constantinople, and these passed into disputes
which finally ended in complete disruption. Rome
rejected the 28th canon of the Council of Chalcedon,
which conferred upon the Bishop of Constantinople
powers equal to the Pope's. From A.D. 424 to 518 relations between Rome and Constantinople were broken off on account of the Monophysite dis-
pute. Under Pope Gregory the Great a dispute
about the title 'Ecumenical' began. Certain
canons (nos. 1, 2, 3, 6, 12, 13, 30, 55, 67, 83 of the
'Synodicon' Council at Trullo) which condemned
Western practice were not received in the West.
In the Frankish Empire there arose the question of
the Filioque, and the decisions of the 7th Eco-
menical Council as to the honouring of icons were
rejected. The question of the Papal territory
which began in A.D. 787 was ended in A.D. 800 by
the coronation of Charles the Great. Out of the 330
years of the second period (A.D. 313–843) relations
between Rome and Constantinople were inter-
dicted during a total of 298 years. The affairs of
Photius and 1164 Pope Formosus († 855) were
interfered (861), ended in the heads of the two
Churches reciprocally excommunicating each other.
In consequence of the insertion of the Filioque
into the Creed and the personal union of the
Roman peculiarities in ritual—fasting on
Saturday, celibacy of the clergy, and the like—
are in Photius' Epistle (A.D. 856) the eviden-
ces of Rome's defection from Orthodoxy, the
only defender of which was now to be found in the
GREEK ORTHODOX CHURCH

Eastern Church. After the second deposition of Photius in 886, the name of the Pope was again inserted into the Dipthych of the Eastern Church. At the beginning of the 10th century, relations once more became strained over the question of the fourth marriage of the Emperor Leo the Philosopher, which after his death was condemned at the Council of Nicaea of 905, and the final coalition of the church and the state, beginning with the question of the veneration of the cross, against the Pope by Photius, and the dispute which arose on 1064 in the excommunication of the Patriarch of Constantinople by the Papal Legate and the final counsel of the Pope's name from the Dipthychs. Attempts at reunion of the Churches went on until the end of the period; in 1099, at the Council of Bari under Alexius I Komnenos and Pope Paschal II (1099–1100), and in 1116 at the Concilium, under Manuel Comnenus (1118–43), in 1232, 1256, 1274 at Lyons, in 1339 at Avignon, in 1386 at Florence. These were not successful, insomuch as they were undertaken from motives not directly concerned with reunion—on the part of the Pope for the sake of increasing his influence over the Church, on the part of the Orthodox to obtain the political support of the West.

For the Musulman conquest of the Patriarchates of Antioch, Alexandria, and Cilicia, and the Slavs in the 9th and 10th centuries, and the defection of the Western Church in the 9th–11th centuries, the Orthodox Church found compensation in the conversion to Orthodoxy of the populous Slavic nations in the 9th and 10th centuries. These nations formed national Churches, at first remaining dependent upon the Church of Constantinople, but afterwards forming several independent (autocephalous) Orthodox Churches.

So in A.D. 864–65 the Bulgarians and the Serbs at almost the same time submitted to baptism, and in A.D. 868 the Russians. This addition, however, while increasing the number of the members of the Orthodox Church, did not stimulate any great improvement of her internal condition, partly because among the newly converted nationalities education was in a rudimentary condition, but principally because of the pressure of Mongolian nationalities in Russian Christianity. From A.D. 1224 to 1480 was under the yoke of the Tatars. The Church of Constantinople from the 11th century onwards suffered first from the Seljuk Turks, and at the same time from the Crusaders; in the 13th century (A.D. 1204–51) from the Crusaders, consisting of bishops and patriarchs, and having the authority of a final, highest administrative, and judicial court. About the Patriarch there was formed a whole staff of officials ('the nine pontals'). Enormous influence on the life of the ecclesiastical community was exercised by the monasteries, especially those on Mt. Athos, the Stadium at Constantinople, the Monastery of the Holy Cross in Thessaly, etc. They stood up for the exact observance of dogmas and canons and for ecclesiastical independence, supported the science of theology, spread education abroad, and sent out missionaries. The education of the clergy, which had declined at the end of the preceding period, in the middle of the 9th century, recovered and attained a higher level under the Comneni in the 12th century. In the 13th century, at the time of the Latin dominion, Byzantine learning again declined; but in the 14th century, under the Palaeologoi, it still flourished, though during the whole period (as against the last period) it suffered from a want of originality. This movement, moreover, was not disregarded by the newly converted Slavic nationalities.
(4) From 1453 to the present day.—After the taking of Constantinople (29th May 1453) the Orthodox Church within the boundaries of Turkey retained its internal organizations without any substantial change, but the Patriarch of Constantinople, in his capacity of ‘head of a nation’ (Midlet-bashi), received also civil authority over all Orthodox people, especially in this increase of authority, however, neither the Patriarch himself nor his flock was in the very least guaranteed against the violence of the conquerors, who regarded the vassals as without rights and a mere mouth of income. The Patriarchs were forced to pay taxes beyond their resources, both at their election (psikêkes) and year by year (chhrasdas). Vacancies occurred extremely often, and few Patriarchs ended their days on the throne (30 out of 103). Many were elected several times. Still worse was the position of the rest of the clergy and of the lay people, who suffered from the fanaticism of the Turks, and contributed no small number of martyrs for the faith canonicalized by the Church. There were martyrs also among the Patriarchs. The internal life of the Church was uneasy too by reason of the struggles of candidates for the Patriarchate and the interference with ecclesiastical affairs of the Phanariotes, or rich and distinguished laymen living in Phanar (a quarter of Constantinople), who, on account of their knowledge, enjoyed influence with the government. Somestrouble resulted from the institution under Patriarch Manuel (1764–80) of the geroske, an ecclesiastical oligarchy consisting of the six senior bishops and four lay Phanariotes, which was abolished in 1828. It was not until the 19th cent. that the position of the Orthodox Church was improved (Khâti-i-sharif, 2nd [14th] Nov. 1833, and Khâti-i-umrûnûn, 16th Feb. [1st March] 1856) in Constantinople, and in 1862 in all the towns; a Code of canons (in 1909) did not bring the anticipated advantage to the Church, and an attempt was even made to deprive the Patriarchate of its ecclesiastical privileges.

Taking advantage of the sad position of the Orthodox Church, the Popes tried to subject it to their power, and with that intent dispatched several envoys and sent a whole army of missionaries to the East. Success crowned these attempts in one region only, S.W. Russia, thanks to political circumstances. There the Jesuits succeeded in establishing change in the Church, and the Russian Patriarch Gregory VI. refused to accept an invitation to the Vatican Council. To Leo XIII.'s Bull of the Roman Church (20th June 1894, Proclaima gratulatiunis) the Ecumenical Patriarch Anthimus VII. answered on 29th Sept. by an epistle enumerating the errors of the Roman Church. Negotiations as to union with Protestants were also unsuccessful: in 1559 between Melanchthon and the Patriarch Joseph II., in 1576–81 between the Lutherans of Tübingen and Patriarch Jeremias II., and in 1731 the attempt of Zinzendori. Great trouble was caused by the attempt made by Cyril Lucar, who was Patriarch seven times (1612–38), to approximate Orthodoxy and Calvinism. More success has attended the attempts which are still going on to make a rapprochement with the Anglican Church. They were begun in 1717–25 by the party of the Nonjurors, and renewed in 1935 by the adherents of the Oxford movement. So far they have led only to the establishment in 1899 of the representation between the Constantinopolitan and the Anglican Churches, that is, to permission given to laymen of one Church in special cases of extreme necessity to have recourse to the clergy of the other, and to an end being put to protracted negotiations. Negotiations, likewise still in progress, for reunion with the Old Catholic Church, which were begun soon after the establishment of the latter (Conference of Bonn, A.D. 1874), have led to no results.

The weakening of Turkey during the 19th cent. led to the process, still at work, by which the Orthodox nationalities are being freed from her yoke, and they have formed the independent States of Montenegro, Greece, Servia, Rumania, and Bulgaria.

With the diminution of Turkish territory has proceeded the tendency to add new subjects to the Patriarch of Constantinople, as it appeared unsuitable that the new States should continue in ecclesiastical dependence upon a Patriarch who was a Turkish subject. Several States have also been formed by the Orthodox nationalities of Austria-Hungary. Side by side with this the importance of the Greek nationality is increasing. At the end of the 18th cent. in all Orthodox Churches except the Russian and the Montenegro the hierarchy was Greek. At the present time the Churches remaining Greek are the Constantinopolitan, Alexandrian, Hellenic, Cyprian, and Sinaiite. In the Church of Jerusalem the struggle of the Arabic population against the power of the Greek Brotherhood of the Holy Sepulchre has already been crowned with decided success. The unwillingness of the Greeks to give up their ecclesiastical privileges, which raised them above the other nationalities, gave rise to the schisms of Antioch and Jerusalem, now satisfactorily settled, and to the more serious Bulgarian schism.

In the Greek Church a new Collection of Canons has appeared, viz. the Πανάρχιον, compiled in 1793 by the Athos monks Nicodemus and Agapits, and in the Constantinopolitan Encyclopaedia Indipetrae Legii. Both are modifications of the Slavic Kormchais. In the Russian Church the Kormchais ceased to be the source of law still in force, and in 1887, together with the Russian Canon Law, by the Book of Canons, in which a place is given only to the minimum of canonical rules accepted by the whole Orthodox Church: the 85 Apostolical Canons, the Canons of the Seven Ecumenical and eleven Local Councils, and extracts from the canonical works of the thirteen Holy Fathers. There have also been published editions of canonical documents, among which special importance attaches to the so-called Athenian Syntagma (G. A. Ralli's and M. Polien, Συνταγμα των τειων και λεπτων κανων, Athens 1896). In 1894, T. Geisch in the Rheinische Diägesch... ταπαραγματ Κωσταντινουπολιτ, Constantinople, 1888–99).

The present time the Orthodox Church consists of 16 Orthodox Churches of which 5 are Greek: those of Constantinople, Hellas, Cyprus, Alexandria, and Sinai (in all 7,500,000 souls); 7 Slavonic, viz. those of Russia (116 millions in 1911), Bulgaria, Servia, Carlowitz, Bosnia-Herzegovina, Bukovina with Dalmatia, and Montenegro (8,920,000); 2 Rumanian, that of the Kingdom of Rumania and that of Hermannstadt in Austria (about 6 millions); and 2 Arabic, Antioch and Jerusalem (some 380,000). The ancient Church of Georgia (1,300,000 souls) now officially forms part of the Russian Church (q.v.).

Accordingly, the number of all the Orthodox Churches together in 1935 reached 102,000,000. All these Churches are autocephalous, i.e. independent of each other as regards internal administration, but make up one Orthodox Church, as they have one Head or Patriarch, one doctrine and communion in sacraments and services. The communion between them also finds expression in Councils, the decrees of which are obligatory for the Churches that take part in them, or in the interchange of epistles. Both the Councils and the exchange of epistles take place rather seldom, and not regularly, mainly owing to political circumstances.
GREEK ORTHODOX CHURCH

(a) GREEK CHURCHES.—(1) The Constantinople Patriarchate is bounded by the frontiers of Turkey, but even within these limits the Orthodox Bishopric is a province of the Bulgarian Exarchate. Exact statistics do not exist, but the most likely number for the Orthodox of the Patriarchate is 2½ millions in Europe, and 2½ millions in Asia Minor and the Islands. At the head of the Patriarchate stands the Patriarch (since 26th Jan. [10th Feb.] 1913, Germanus V.) with the title of 'His All-Holiness (Πατριάρχης), the Archbishop of Constantinople the New Rome, the Ecumenical Patriarch.' He has precedence over all Orthodox hierarchs throughout the world. The Holy Synod (Σύνοδος) consists of 12 Metropolitans, half of whom retire in rotation every year. The Permanent National Mixed Council (Διοικητική Επιτροπή Μεταξύ Σιωπηλών) consists of 12 members, 4 Metropolitans, and 8 of those who retire at the same periods as the members of the Synod. The sphere of the Synod's activity is that of a spiritual court for the settlement of disputes, and the administration of civil and economic character—schools, hospitals, almshouses, looking after the Church finances, questions of legitimating children, of testamentary dispositions. But the jurisdiction of the Synod and the Council, the Patriarch has a large number of secondary organs of administration; the central ecclesiastical Epitropia, the pedagogic Epitropia, the Epitropia of episcopal property, the financial Epitropia, the Ecclesiastical Court of Justice, the Notary's office, the Ottoman Chancery, and a whole series of officials both spiritual (for example, the Chief Metropolitans, the Chief Archdeacon, and such like) and secular (as the Chief Logothete, etc.). In the Patriarchate are numbered 73 metropolitans in the seas of which 6 are in the semi-independent Bosnia and Herzegovina. The dioceses (ἐπισκοπαί) are ruled by Metropolitans. Some Metropolitans have bishops subordinate to them, e.g., the Metropolitan of Ungria has 7 suffragans, the Metropolitan of Ephesus 6, the Metropolitan of Thessalonica 5, and so on. The dependence of certain Metropolitan sees in Bosnia and Herzegovina and of the Metropolitans of Ungria and Slavonia is purely nominal. The organ of the Patriarchate is the journal Εκκλησιαστική Αδύναμη. The higher clergy recognized by the Patriarch are the bishops of Chalki, in the Sea of Marmora not far from the Bosporus (since 1844), the inferior clergy in the Seminaries at Cesarea in Cappadocia, on the Isle of Patmos (since 1718), and on Mt. Athos (since 1890). The authority of the Patriarchate also extends to secular schools.

(2) The Church of Hellas was proclaimed independent of that of Constantinople at a Council of 6 bishops at Nauplia, 15th [29th] June 1833, but in Constantinople it was recognized as autocephalous only in a decision of the Synod on 11th [23rd] July 1850. Now the Church of Hellas is governed by a Synod modelled on the Russian Synod, and consisting of the President, the Metropolitans of Athens, and 4 diocesan bishops, who change every year. In purely spiritual matters the Synod is independent; in affairs of a mixed character it has to obtain the approval of the civil power. Its decrees are sanctioned and enforced by the king's Commissioner. There are 32 dioceses in all, including 4,225 parishes and 1,622,000 souls. Together with the Diapora, who have since 1808 been reckoned as under the authority of the Athenian Synod, they amount to 2,400,000. In 1908 there were in Greece one Metropolitan (at present Tholoulis), 6 archbishops, 25 bishops, 167 men's monasteries with 1748 monks, and 10 convents with 325 nuns. The yearly income of the monasteries amounted to 2,121,165 drachmas, the revenue of the province to 60 million drachmas. Higher theological training is received by the clergy in the theological faculty of the University of Athens, secondary instruction in seminaries—the Rhinac, one at Arta, and one at Tripolis. The chief clerical journal is the Ιερός Σύνδεσμος, published by the league of that name. On 15th [28th] Jan. 1910 a 'law' was published with regard to Parish Churches and their property, the qualifications of parish priests and their stipends, and on 1st [14th] Feb. 1911 a supplementary act, as a central Church treasury and the administration of the monasteries.

(3) The Cyprian Church was recognized as autocephalous as early as the Council of Ephesus in A.D. 421. In recent times it has occasionally been subject to the influence of other Patriarchates, but formerly its autocephaly had always been recognized. At its head stands the Archbishop (at present Cyril), who bears the title of 'the Most Blessed the Archbishop of Justiniana Nova and all Cyprus,' and lives at the Archbishop's Palace. The bishops are the bishops (Metropolitans) of Paphos, Citium, and Cyrenia. The Archbishop and the Bishops make up the Synod which administers the Church of Cyprus. In the elections the lower clergy and the people have their part. In April 1911 the Orthodox in the island amounted to 182,737; and there were 607 churches and 79 monasteries. At Larissa there has been a seminary since 1910, and a journal is published, Εκκλησιαστική Εφημερίς.

(4) The Patriarchate of Alexandria, founded, according to tradition, by St. Luke, included in the 4th cent. Egypt, the Thebaid, Libya, and the Pentapolis, and had more than 100 dioceses. In the 5th cent. Monophysitism spread in this region. In A.D. 638 it fell under the power of the Arabs. In the 18th cent. the patriarchs lived in Constantinople. Now it has an extremely small population. The Greeks put the number at 150,000, but, as a matter of fact, it does not reach 100,000. It is governed by the Patriarch (at present Photius), who bears the title of the 'Most Blessed Patriarch of Alexandria and all Egypt and Ethiopia,' and lives in Cairo. In the Patriarchate there are (1st Jan. 1913) 7 dioceses, 5 monasteries, 31 parishes, and 56 churches. The Bishops with the Patriarch form the Synod. In Alexandria two clerical journals are published, the weekly Ηεραυρά and the monthly Εκκλησιαστική Φύσης. In 1908 a diocese was founded in Abyssinia (Χριστιανή).

(5) The Church of Sinai consists of no more than the monastery on Mt. Sinai, built in A.D. 527 by Justinian. The monastery received autocephaly by a decision of the Council of Constantinople in 1756, which ended a controversy between Alexandria and Jerusalem as to which had authority over the monastery, by declaring it independent. The monastery is governed by the Hegumos Archbishop, who bears the title of 'Archbishop of Mount Sinai and Raitha' (a village on the Red Sea) and 'all honourable,' and is consecrated by the Patriarch of Jerusalem (at present Porphyrios). The number of brothers is not more than a few dozen (now 50). At Cairo the monastery possesses a branch establishment (μετοχία) in which the Archbishop mostly resides; the latter, however, as the monastery is governed by the 'Dikasios.' The monastery is famous for its library, in which among other things was found the renowned Codex Sinaiticus.
GREEK ORTHODOX CHURCH

(6) Slavonic churches.—(5) Russian Church.—See separate article.

(7) The Bulgarian Church, originated under King Boris in A.D. 865, was at first subject to the Patriarch of Constantinople, but very soon submitted to authority over it were made by Rome. Under Czar Simeon it became independent and the Archbishopric was transferred to a Patriarch, and this was recognized even by Constantinople in A.D. 946 under Czar Peter. Under Pope John (A.D. 1197-1204) a union with Rome was agreed upon, but it came to an end in 1222. The throne of the Patriarchs was successively at Dorostolium (Silsilstya), Serdica (Sophia), Velika Moglena, Prespa, and finally at Ohrida. In 1326, under the Patriarchate was founded at Tarnova, in the 14th century, Bulgaria was conquered by the Turks, and from then on the Patriarchate of Tarnova was subordinate to Constantinople and ranked as a Metropolitan see. But the Archibishopric of Ohrid preserved its independence until 18th [27th] January 1787, when it was united to the Patriarchate of Constantinople. When there was an awakening of the national self-consciousness of the Bulgarians in the first half of the 19th century, there was a struggle to be ecclesiastically independent of the Greeks, and this found its consummation in the declaration of March 10th (22nd) 1870, that the Bulgarian Church was autocephalous. This was later confirmed by the Sultan, and was not recognized by the Patriarchate in September 1872 a Council was held in Constantinople which pronounced the Bulgarians ecclesiastically, that they had based their scheme of ecclesiastical organization upon the principle of nationality (ethnophilanthism). But the decisions of this Council were not recognized by the Slavonic churches. This did not affect the position of the Bulgarian Church remains undefined. It consists of two parts, one in Bulgaria, was established in 1889 and now independent; the other in Turkey, consisting of 5,000 Serbs are under the Exarchate (at present Joseph), who resides in Constantinople and has a deputy in Bulgaria. At Sophia there is a Synod and since 1919 there has been one at Constantinople, each consisting of 4 Metropolitan sees. At Constantinople there is also (since 1910) a Mixed Council, consisting of the 4 Metropolitan sees and 8 laymen. In Bulgaria there are 11 bishoprics (with 3,334,700 souls), in Turkey 9 with bishops. In 1909 there were in Bulgaria 214 village churches, 2066 village churches, 768 Town churches, 9 metropolitan sees, 1 bishop, 8 archimandrites, 22 economi, 1917 priests, 11 deacons, 8 archidiacons, 49 hegumeni, 13 hegumenesses, 62 hieromonachi, 66 monks, and 247 nuns. At Sophia there is a Clerical Seminary (about 150 students), and at Bachkov a school for priests. At Sophia is published the journal Svetoslav ('Counselor'). The Turkish part of the Exarchate consists of 22 sees, but there is bishop only in half of them, the rest being governed by the Bosnian Congresses, consisting of 4 clerics and 5-7 laymen. In the population amounts to 1,057,092 souls (1906). There are 1233 churches, and 51 monasteries. At Shishel near Constantinople there is a Clerical Seminary and at Vuktor (Sokolje), a Priests' School. The authority of the Exarchate extends to the secular Bulgarian schools in Turkey. The organ of the Synod of Ohrid is the journal Tovarnoto Platnost ('Ecclesiastical Messenger'), of the Exarchate, Vesti ('News'). The Bulgarian Church is governed according to the 'Regulation of the Exarchate' elaborated in 1883 and adapted to the kingdom in 1885. By the law of 1808 the clergy in Bulgaria receive their stipends from the State.

of Constantineople A.D. 1219, and under King Stephen Dushan (1331-56), a Patriarch was appointed with his throne at Ipek. The Patriarchate of Ipek extended to a great part of Bosnia, and included Montenegro, Dalmatia, Bosnia, and Herzegovina. In 1375 its autonomy was recognized by Constantinople, but between 1386 and 1429 the whole Patriarchate fell under Turkish domination and was united to the Bulgarian Patriarchate of Ohrida. The Patriarchate of Ipek was re-established in 1557. In 1880, under the leadership of the Patriarch Armenius, some 200,000 souls migrated to Hungary where they formed the Church of Karlowitz. On 16th [22nd] 1706 the Patriarchate of Ipek was once more abolished and its dioceses were over and 1830 ruled by Greeks, bishops named from Constantinople. In 1832 the Servian Church, or rather a part of it, gained some independence, and in October 1879 full autocephaly. By the Tómos evnoçitis of 1879 the Church of the kingdom of Servia is governed by a Metropolitan (at present Demetrius) and 4 bishops in the towns of Zic, Timok, Niš, and Sabac, who form 3 sees of Bishops. At present the organization of the Church is regulated by the law of 27th April (7th May) 1886. There are 12 metropolitan sees, numbered 2,735,147 souls, 5 dioceses, 651 churches, 71 chapels, 54 monasteries (men's), 887 parishes, and 1145 clergy. The clergy are educated in the Seminary of St. Sava, and there are several religious journals are published at Belgrade—Glavni Pravoslavni Orki ('The Herald of the Orthodox Church'), the organ of the Male College; Vatnik Srpske Crkve ('The Messenger of the Servian Church'), and Pastirske Boč ('Pastoral Speech'), the organ of the secular clergy. In accordance with the law of 31st Dec. 1901 (12th Jan. 1902), the clergy are supported by payments made according to a tariff for services rendered.

(9) The Karlowitz Servian Church was formed of the 200,000 Servian inhabitants under the Patriarchate of Ipek under the leadership of the Patriarch Armenius III. Crnagorčić, in the time of the Austrian Emperor Leopold I. The immigrants were granted rights of ecclesiastical and civil autonomy, confirmed in 1791 by the Reichstag. Their dependence upon the Patriarchate of Ipek came to an end with the abolition of the latter in 1796. In 1845 the Metropolitan of the Karlowitz Church received the title of Patriarch from Francis Joseph. In 1894 the Church of Hercegovina was separated, and 1878 the Bukovina-Dalmatian Church. Now the Karlovitz archbishopric contains over a million members, 7 dioceses, and about 500 parishes. In the Church is an Exarchate. The bishopric stands the Metropolitan-Patriarch with the title of 'Holiness' (at present Lucian Bogdanović), and at the head of the bishops in the 8 sees: Karlodak, Pakracy, Buda, Temesvar, Vrsec, and Bača. Questions of dogma are decided by a Synod consisting of all the diocesan clergy and the presidency of the Patriarch. The Patriarch is elected by a congress of Church and people held every three years, and exercising the right to decide all matters concerning the Church's autonomy.

By the Regulaciones of Ipek, 27th July 1911, and an edict of Francis Joseph published in June 1912, the rights of the congress have been restricted, while the power of the Hierarch has been increased. The clergy are educated in the seminary at Karlovitz, established as long ago as 1792. The Archbishop publishes a monthly journal, Bogatanstvo Glavni ('The Herald of Theology'). By the Law of 1869 the clergy were assigned a stipend, glebe, and a tariff of fees for occasional offices.

(10) The Church of Bosnia and Herzegovina has been de facto ecclesiastical since 26th March 1880, when an agreement was made between Austria and
the Patriarchate of Constantinople, though nominally it is dependent on the Patriarchate. Down to A.D. 1768 it was under the Patriarch of Ipek, and since then under that of Constantinople. It is divided into four dioceses—Zara, Mostar, Doljnia-Tuzla, and Banjaluka—governed by Metropolitanians. In 1910 it numbered 855,418 members. At Relief there is a Theological College at which candidates for the clergy are trained. Since the beginning of 1914 there has been a publishing institute at Sarajevo an organ of a league of secular clergy, the Željezna Oružja (Steel Bullets); formerly the Archbishop published Istočnik ('The Source'). The ecclesiastical organization is regulated according to a Code for Churches and Schools, published on 1st September, 1905, by the American Government, according to which a stipend is assigned to the clergy.

(11) The Bukovina-Dalmatian Church consists of two parts, Zara and Bocca di Cattaro, the link between which is almost nominal—the Metropolitan see of the Bukovina and 2 dioceses in Dalmatia. The Metropolitan see is governed by the Archbishop of Csernowitz, who is Metropolitan of Bukovina and Dalmatia (at present Vladimir Repta), with his throne at the town of Csernowitz; and the dioceses of Dalmatia and Bocca di Cattaro are controlled by the bishops. Founded in A.D. 1402, the diocese of Bukovina was at first part of the Moldavian Archbishopric of Kariowitz; from 1738 to 1738 it was part of the Archbishopric of Kariowitz; and in 1733 it became autocephalous; and at the same time the see of Zara and Bocca di Cattaro was subordinated to it. The former was founded by Napoleon 1. in 1806, the second in 1809. In the Archbishopric of Bukovina there are 2333 priests; in the diocese of Dalmatia (1910), 89,951 members, 77 priests, 54 parishes, and 3 monasteries; and in that of Bocca di Cattaro, 21,775 souls, 64 priests, 45 parishes, and 5 monasteries. Besides these there are in Lower Austria 6856, in Bohemia and Moravia 7311, in Triste and Styria 2649 members—altogether an Orthodox diaspora of 17,119. In the Archbishopric of Bukovina the clergy are educated at the Theological faculty of the University of Csernowitz; in Dalmatia, in the diocese of Zara, by 1888 by the Austrian Government, a Rumanian-Russian Candela is published. At Zara, down to 1912, there was published the Glaziul Pravoslavei Dalmatinei (The Herald of the Orthodox Dalmatian Church). In Bukovina the clergy receive their stipend from the Fund for the Religious, founded in 1792; in Dalmatia, from the treasury, according to the law of 4th Feb. 1797.

(12) The Montenegro (Corna Gora) Church became autocephalous in 1661, when the Patriarchate of Ipek, of which it had been a part, was abolished. Down to 1862 it was governed by Metropolitanians who were at the same time the Princes of Montenegro. But in 1862 this theocracy came to an end, and Prince Danilo kept for himself the civil power only, and handed over the spiritual to a separate Metropolitan. At the present time the Montenegro Church numbers some 230,000 members, and consists of two dioceses—Cetinje, governed by the Metropolitan (at present Metropolitan), and Zvoling-Rushe (since 1906, governed by the Present Bishop). There are usually consecrated in Russia. In 1909 a law was passed defining the stipend which the parochial clergy are to receive from the State. On 30th December 1914 there was issued a 'Constitution for the Holy Synod,' consisting of the Metropolitan, the Bishop, 2 Archimandrites, 3 Proto-presbyters, and a Secretary. On 1st (14th) Jan. 1904 was promulgated a 'Constitution for Spiritual Consistories.'

(c) RUMANIAN CHURCH.—(13) The Rumanian Church has enjoyed de facto independence since 1864, but this was recognized by the Patriarch of Constantinople only in 1885. In 1889 it numbered 5,451,787 members, 3566 parishes with 8000 clergy, and 41 monasteries. It includes 8 dioceses, 2 Metropolitan sees, viz. the Orthodox Bucharest and the Moldova-Suwan (Jassy), and 6 bishoprics, viz. Arjash, Buzau, Londer Danube (Galatz) (Romania, Rimnik-Vid, and Hus), of the Metropolitan and the bishops with sees have a suffragan bishop. The Church is governed by a Synod consisting of the bishops and a Highest Church Council (since 1900), in which secular clergy and laitymen take part. The election of a Metropolitan and certain ecclesiastical affairs are in the competence of Parliament, but in these proceedings only Orthodox members take part. The country clergy are educated in (secondary) Seminaries with an eight year course, the town clergy at the Theological faculty of the University of Bucharest. At Bucharest is published a religious paper, the Biserica (i.e. Baslica—Church) Ortodoxa Romana. By the law of 21st Jan. 1902 the clergy receive their stipends from the Church fund (asesa bisericii).

(14) The Hermannstadt (Sibiu) Rumanian Church in Hungary was severed from the Archibishopric of Kariowitz in 1834; from 1738 to 1783 it was part of the Archbishopric of Kariowitz, and in 1733 it became autocephalous; and at the same time the see of Sibiu and Hermannstadt was subordinated to it. The former was founded by Napoleon 1. in 1806, the second in 1809. In the Archbishopric of Bukovina there are 2333 priests; in the diocese of Dalmatia (1910), 89,951 members, 77 priests, 54 parishes, and 3 monasteries; and in that of Bocca di Cattaro, 21,775 souls, 64 priests, 45 parishes, and 5 monasteries. Besides these there are in Lower Austria 6856, in Bohemia and Moravia 7311, in Triste and Styria 2649 members—altogether an Orthodox diaspora of 17,119. In the Archbishopric of Bukovina the clergy are educated at the Theological faculty of the University of Csernowitz; in Dalmatia, in the diocese of Zara, by 1888 by the Austrian Government, a Rumanian-Russian Candela is published. At Zara, down to 1912, there was published the Glaziul Pravoslavei Dalmatinei (The Herald of the Orthodox Dalmatian Church). In Bukovina the clergy receive their stipend from the Fund for the Religious, founded in 1792; in Dalmatia, from the treasury, according to the law of 4th Feb. 1797.

(15) The Church of Antioch numbered in the 4th cent. as many as 220 sees. In 431, Cyprus was separated from it, and in 481 the Church of Jerusalem. In 638 it fell under the power of the Arabs; in 728 it was taken back again by the Greeks, and in 1263 by the Turks. It now numbers some 316,000 members, mostly Arabic-speaking, living in Syria, Cilicia, Mesopotamia, and the provinces of Arabia Minor. It is governed by a Patriarch (at present Gregory IV.), who bears the title 'Most Blessed Patriarch of the Great City of God, Antioch, and of all the East,' and resides (since 1929) in Damascus. The Patriarchate is divided into 14 sees, governed by Metropolitanians. A great and beneficent work connected with it is the Russian Imperial Palestine Society, which establishes schools for the Arabs. The Patriarchate publishes in Arabic a journal called Graeco. There is a seminary at Damascus. The Hierarchy was for a long time Greek, but the last two Patriarchs (1885) have been chosen from among the Arabs, for which reason the other Patriarchs refused for some time to recognize them.

(16) The Church of Jerusalem was originally a bishopric subject to the Metropolitans of Csesarea Philippi. The Council of Chalcedon in 451 accepted the bishop of Jerusalem as a fifth Patriarchate, subordinating to it all the bishops of Palestine to the number of 50. From the 4th to the 6th cent. monasticism was very general in this region. In A.D. 614 it was wasted by the Persians, in 623 recovered by the Greeks, in 636 conquered by the Arabs, in 707 by the Seljuks, in 1096 by the Crusaders, in 1187 by the
GREEK ORTHODOX CHURCH

Muhammadans, and finally, in 1517, by the Ottoman Turks. It now numbers no more than some 30,000 members, mostly Arabic-speaking, but is governed by Greek monks, about 20 in number, who, since 1687 formed the Brotherhood of the Holy Sepulchre (Αγιου Θανατου Λαμπροτριον). The Patriarch and all the bishops are elected exclusively from the members of the brotherhood. The former bears the title, Most Blessed Patriarch of Jerusalem and all Palestine. To the Patriarch are subject 6 Metropolitans and 11 Archbishops, of whom only a few live in their sees, the majority residing in Jerusalem. The Patriarchate is governed by a Synod, presided over by the Patriarch; the members (16) are certain members of the Brotherhood. On 29th Dec. 1911 (2nd Jan. 1912), beside the Synod, there was established, on the demand of the Arabs, a Mixed Council (Μείγμα Ζώμαρος) of 6 clergy (members of the Brotherhood) and 6 laymen (Arabs), and this slightly restricts the power of the Brotherhood in matters of marriage, Church property, and schools. In the Patriarchal journal is published called Νεα Ζως. In the Monastery of the Cross is a seminary, temporarily closed. Relations with the Patriarchate of Alexandria have been renewed through personal questions between the Patriarchs.

4. The dogmatic system of Orthodoxy.—The fundamental dogmas are not identical with the dogmatic teaching of the Orthodox Church and that of other confessions consist in the particular view it takes of dogma. Orthodoxy does not allow of the possibility of dogmatic development. The complete fullness of dogmatic doctrine was once for all taught by Christ and the Apostles, and is an object of faith. Modification and development can affect only the external forms of the dogmas. So-called dogmatic is the more authoritative according as it expresses better the faith of the whole Church at all times, i.e., according as it answers to the formula of Vincent of Lerins: quasi semper, quasi ubique, quasi ad omnium. For this reason the highest authority in the Orthodox Church is the Seven Ecumenical Councils, because they had representatives of the Church from all parts (ubique), and because they did not establish any new dogmas, but only formalized which already (semper) had been confessed by the Church ('following after the Divine Fathers'). Guided by this principle, the Orthodox Church regards as invasions of man's mind the doctrine of the Roman Catholic Church as to the perpetual procession of the Holy Ghost from the Son as well (Φιλογενεσις) (instead of the momentary sending of the Holy Ghost by the Son), the Immaculate Conception of the Theotokos, the Infallibility of the Pope and his power over the whole Church, and the doctrine of purgation. The Orthodox Church is distinguished from Protestantism by its recognition of Holy Tradition as a source of teaching as to faith; by its doctrine of Seven Sacraments, not as signs of grace, but as the grace itself; and in particular by its doctrine of the Transubstantiation of the bread and wine in the Sacrament of the Eucharist into the very body and very blood of Christ; and by its doctrine of the Resurrection of the dead not by faith alone, but also by good works. It also rejects the Reformers' doctrine of the working of salvation by grace, and of unconditional predestination, and it teaches that grace works together with man's freedom (συνεργισιμος), and that predestination has its foundation in the Divine foreknowledge. While admitting the common priesthood of believers, the Orthodox Church admits at the same time a special priesthood in a hierarchy of three orders (Bishop, Priest, and Deacon), and that this receives its full powers not from other members of the Church, but from her Founder Himself, and hands it on in succession by episcopal laying on of hands. Reckoning the Church on earth as only a part of the whole Church, Orthodoxy recognizes the indispensability of lively communion between the Church on earth and the other part of the Church—the Church in heaven. This is the doctrine of the 7th Ecumenical Council, not to the word and the painting but to the persons represented in them. In its moral teaching, Orthodoxy, in contradistinction to Protestantism, considers asceticism to be indispensable, not as an independent end in itself, but as a means for fallen men to reach moral perfection.

Both Holy Scripture and Holy Tradition are admitted as sources of doctrine as to faith. Any question of the comparative authority of one or the other source is impossible in Orthodoxy, inasmuch as each is merely a different mode of expressing one and the same doctrine of the Church. All its fullness is already included in Holy Scripture, and finds its foundation therein. Holy Scripture includes both canonical and uncanonical Books. Among the latter are the so-called Nicomo-Constantinopolitan Creed (Συμβολος της Ιερας Συμβολος); the Epistle of the orthodox Theoptriarch of the Eastern Orthodox Church touching the Orthodox Faith, as it was sent in 1723 to Russia and Great Britain.

A fuller statement of Orthodox teaching is given in the so-called Symbolic Books. This expression has been borrowed from the Protestant; but, strictly speaking, the term 'Symbol' in the Orthodox Church, as no single one of them has been approved by the highest ecclesiastical authority—an Ecumenical Council—and the name merely attaches to certain more or less authoritative statements of faith, the number of which cannot be exactly defined. Generally the term is applied to the following:

1 Pravoslavna Epirodiama ('The Orthodox Confession') of the Metropolitan of Kiev, Peter Moglias, composed in 1685, and approved by all the Patriarchs and by the Russian Holy Synod.

2 The Confession of Dositheus of Jerusalem, approved in 1672 by the Council of Jerusalem. It is also known by the title of The Epistle of the Patriarchs of the Eastern Catholic Church touching the Orthodox Faith, as it was sent in 1723 to Russia and Great Britain.

3 Pravoslavna Sviatoslavtstvo ('A Longer Orthodox Catechism') of the Orthodox Catholic Church of Moscow, Philaret; approved in 1839 by the Russian Synod and afterwards also by the Patriarchs.

Among works on Dogma, the best known in the Russian Church are the Dogmatic Theologies of the Metropolitan Macarius, Archbishop Philaret, Bishop Sylvester, and the Protobishops Malinovsky; in the Greek Church, Ίησος Καιναχιστής, Στηνοαγμα Διακοπητη της ανθρωπης αποκομια εξηγησις of Z. Rhomos, Athens, 1893, and the work of Androuzou, do. 1907.

Editions (fairly well known) of the Confessions of Moglias and Dositheus in Gr. and Latin, by A. E. Rhomel, Korektononton (Athens, 1893); Κοροκτονοντον, Athens, 1890, and earlier; E. N. Mesolos, Κοροκτονοντον, Athens, 1890; in Greek, J. Tchoukoulof, Κοροκτονοντον, Leipzig, 1894. There is a German translation of the first in Hoffmann, Historia Catechismorum, Ratisbon, 1783; of the second, in Revue Internationale de Théologie, 1. (1895) 220-295; an English tr. of the Catechism of Dositheus in 1

1 Sometimes the title of a 'Symbolic Book' is applied to the works of Jerome II., Patriarch of Constantinople (to the Theophilius of Tilsit), and the Confession of Metropolitan Epiphanius, afterwards Patriarch of Alexandria.
GREGORIAN CHURCH

As a basis for a summary of the dogmatic teaching of Orthodoxy we must inevitably take the Nicene-Constantinopolitan Creed (Symbol) as it is worded in the authorized statement of the faith of the Orthodox Church. The first Article of the Creed speaks of the Creation of all things visible and invisible by God the Father. In connexion with this the Orthodox Theologians develop the doctrine of the Holy Trinity, traces of which they find in the OT, the doctrine of angels and their seven orders, of the veiled question of demons, of the double bodily and spiritual composition of man's nature as a microcosm, and of Providence, under which predestination (προόρωμα) is explained as foreknowledge (προγνωσία), through which the freedom and the fall of man become intelligible. In opposition to the Pelagians it is recognized that in Adam there sinned also all his descendants, and they are therefore liable to the same punishments, but possess a special potentiality for good as having preserved the σωτήριον thought has gone astray.

The second Article speaks of the Person of Jesus Christ. In developing this and the eighth article on the Holy Ghost there is given a detailed refutation of the Nestorianism, by each of which is introduced teaching irreconcilable with Holy Scripture, the immutability of the Creed is violated, and a doctrine of two θεός in the Deity formulated. The teaching of the Creed as to the Godhead and manhood in Jesus Christ is supplemented by the definitions of the 3rd to the 6th Council as to the unconfounded, immutable, inseparable, indissoluble union in Him of two natures in one Person. χριστός is by some (e.g. V. V. Bologov) understood as the unity of self-consciousness but not of consciousness, by others as a union on one side. In connexion with the teaching as to the Incarnation the doctrine of the Perpetual Virginity of the Theotokos before, at the time of, and after the birth of Christ is set forth.

The salvation of mankind through the Incarnation, Passion, Death, Resurrection, and Ascension of Christ (Articles 3-8) is understood as a deliverance from sin, the curse, and death. This salvation is completed by Christ's threefold service as King, High Priest, and Prophet. The Descent into Hell was the manifestation of Christ's kingly power, and its purpose was to liberate those who under the Old Dispensation believed in His coming. The 9th and 10th Articles speak of the Prophetic and High Priestly service of Christ. His Prophetic service consisted in His giving the doctrine of ἑκάστη ἀλήθεια and the means for its attainment. This doctrine, passing from the Apostles to the Bishops, is preserved by means of oral and written διδασκαλία in the Church. The Church is called 'Apostolic' because she is faithful to this Apostolic tradition; she is called 'One' because she has one Head, Christ, and in her works one Holy Ghost; she is 'Holy' because her members are made holy by true doctrine, and by the Sacraments; she is 'Catholic' because she ought to be united by the whole world. An attempt to give a more exact definition of the Church as 'the Body of Christ' has not been successful. In opposition to the Protestant it is explained that the Church is at one and the same time both visible on earth (or militant) and invisible in heaven (or triumphant). The existence of several autonomous Churches contradicts 'sacral unity of the Church, inasmuch as they are united by unity of confession of faith and communion in prayers and Sacraments. Her task, the salvation of souls, is exercised by the Church and those that bear office in her, through preaching the doctrine of Christ and the Apostles, and celebrating the Sacraments established by Christ for the sanctification of men.

The 10th Article of the Creed mentions only one Sacrament—Baptism; but all statements of faith enumerate seven—βάπτισμα, χρίσμα, σύμβασις, μεταμορφώσεις, λειτουργία, γεύμα, and also the seven Sacraments was not established till the 13th cent., apparently under Western influence (Council of Lyons, A.D. 1274). St. John Damascene mentions only the first three Sacraments, Dionysius the Areopagite six, and among them the taking of monastic vows and τὰ ἑκάστη ἱεραμομαχία τελειώματα. The taking of monastic vows at the monk Job in A.D. 1270, and by some modern Russian theologians (Leontiev—as a form of penance; Archbishop Antonius of Volynia).

The Sacraments are looked upon as spiritual means by which, under visible signs, there is granted an invisible grace of God, i.e. a saving force of God. The Roman Catholic doctrine of their acting opera operato is rejected. The unworthiness of the celebrant does not interfere with their efficacy; but on the side of the recipient, faith in the administration, in accordance with the ordinances of the Church, are indispensable. Baptism begins with the rite of the renunciation of Satan and his works, by the one to be baptized. Baptism is a new birth which annihilates original sin and all sins previously committed, and makes the baptized a member of the Church; but the consequences of sin remain in a tendency to sin and disease. At Baptism there must be sponsors. The ordinary practice is the baptism of infants as soon as possible. Re-baptism is not allowed, if only because of the words of the Creed 'one Baptism.' Baptism by immersion is based on the baptism of the Roman Catholic Church. The ordinary practice is the baptism of infants as soon as possible. Re-baptism is not allowed, if only because of the words of the Creed 'one Baptism.' Baptism by immersion is based on the baptism of the Romans.

The ordination of bishops and priests is the Sacrament of Holy Orders. The ordination of a bishop is the consecration of a bishop, and the ordination of a priest is the ordination of a priest. The ordinary practice is the ordination of bishops and priests as soon as possible. Re-baptism is not allowed, if only because of the words of the Creed 'one Baptism.' Baptism by immersion is based on the baptism of the Romans.

unto condemnation. The term 'transubstantiation' (μεταβολήσωσις) is borrowed from the West, but in the Orthodox Church it does not imply the raising into a new being of substance by the conversion of accidents, but implies only that the bread and wine upon consecration are transmuted (μεταβολήσωσις) in the Body and Blood, not τρέφω nor είνηραται, but ἐδόθη καὶ γεμαίρεται, i.e., into the very Body and very Blood of Christ. In contradistinction to the Roman Church, Communion is administered in both kinds and with leavened bread. The consecration of the Holy Gifts takes place not by the repetition of the words of Christ, 'Take, eat...,' but by the 'laving of the creatures of the Holy Ghost (πνεύματος, πνευμαλωσία). The Eucharist is not only a sacrifice of praise and thanksgiving, but also an atonement (λατρεία) on behalf of living and dead, identical in essence with the sacrifice of Golgotha. In contradistinction to the Roman Church, the participation of the faithful in the Eucharist is regarded as indispensable, and 'private masses' are not permitted at a celebration of the Eucharist. At any rate, those engaged in the service must communicate, and non-communicants receive particles of the τροφή (ταλάντιον) from which were taken pieces for the sacrament (εὐλαβεία). The Eucharist can be celebrated at the same altar only once in the day, and the celebrant can celebrate only once in the day. The consecrated elements remain for ever; they are kept in pyxides and ciboria, and are used for the celebration of the Liturgy of the Pre-Sanctified and the communion of the sick. The Liturgy (i.e. the Eucharist) can be celebrated only by a priest or a bishop, and only upon an εὐλαβεία. Penitence (μεταμέτρεσις) is usually taught from the age of seven years, and precedes communion. In penitence there are distinguished the moments of contrition (μεταμέτρεσις), and remission of sins (ξένος). But the Roman doctrine of satisfaction for sins on the part of the repentant is definitely rejected. Sometimes a penance (εὐκορία) is laid upon the repentant; this is meant as a spiritual exercise or self-denial necessary for a victory over evil habits, e.g. fasting on other than the appointed days. It is recommended that confession be made to one 'spiritual Father,' who acts not as a judge, as in the Roman Church, but as a spiritual physician. Denial is given to the doctor, but time, after the lapse of a certain time, but also temporary punishment, from which doctrine proceeded the theory of the thesanurum mari- tium and the practice of indulgences.

Besides the Sacrament of Confession there is the so-called 'confession to elders,' i.e. to elders among the monks (hieromonachs) for pious living.

The Sacrament of Ordination is administered by the laying on of hands (χειροτονία) by a bishop. Ordination with the three degrees—bishop, presbyter, deacon—was instituted not by the Church but by her Founder, Christ. A second conferment of ordination to the same degree is not allowed even in the case of converts, as long as the orders of the non-orthodox Church are recognized as valid. Accordingly, Roman Catholic clerics receive the rank that belongs to them. The practice in regard to Anglicans has not been settled, and the question in America of the unfrocked Anglican priest Irvine, on 8th Nov. 1905, by the Russian Bishop Tycho, has no decisive bearing upon the point. Ordination is allowed only in the case of the unmarried, or the one married. Marriage after ordination is not allowed. Since the Council in Trullo (A.D. 692), bishops have been excluded from among the unmarried, and mostly from those who have taken monastic vows. The rite of admission (χειροτονία or εὐχλασία) to the minor orders or offices of the Church is not considered a Sacrament. Only two lower orders now exist, the Reader (or Singer) and the Subdeacon. However, there are also—exorcist, doorkeeper, and women servants of the Church, widows, and deaconesses. Bishops, according to the light they hold, or their distribution in the services of the Church, bear the titles of Patriarchs, Exarchs, Metropolitans, Archbishops; presbyters of archpriests, protopresbyters, protodeacons; deacons of archdeacon and protodesceni. These are not different orders, but only honorary titles. Monks are said to belong to the clergy only when they have received ordination, in which case they bear the title of hieromonachs (prosubdea) and hierodeacae. Those who have embraced the monastic life are divided into novices (μαρτυροψελφέροι) who have not yet taken vows, monks of the lesser schema (μικρόχειρωμένοι, μικρομοιχός) who have taken vows and received the tonsure, and monks of the great schema (μεγάλχειρωμένοι) who have taken special strict vows. Monasteries are not classed in orders, but all follow the rule of St. Basil the Great, somewhat modified in modern times. Their general vows are obedience, poverty, and penitence. The last is variously interpreted: in some monasteries with common life (κοινωνία) monks may not possess any individual property, in others (κοινωνία) they may. The heads of monasteries bear the title of hegumenos, those of convents κοινωσόμενοι. The larger men's monasteries are ruled by Archimandrites.

Marriage is declared to be a Sacrament on the authority of Eph 5.25. It is preceded by betrothal (μαρτυροψελφέροι, μαρτυροψελφέροι), formerly entered into long before marriage (even up to 10 years), but now usually, both in the Greek and in the Russian Church, celebrated just before the Sacrament. The chief moment of the Sacrament is held to be the crowning. In contradistinction to the Roman Church, in which the parties themselves are considered to be the celebrants of the Sacrament, and its essence is held to be rather the consecration of the copula, the Orthodox Church considers the clergy to be the celebrant of the Sacrament, and its essence the conferring of a grace. Wedlock is allowed only between Christians, and at least one party must be Orthodox. Marriage between blood relations is forbidden to the seventh degree inclusive, but is allowed to the collateral line. In the case of relations by marriage, wedlock is not allowed in the first four degrees. In particular, a man is not permitted to marry his brother's wife or his sister's husband's sister. An impediment is also found in spiritual relationship, i.e. relationship arising through standing sponsor at baptism. The Sacrament of Church mar-riages only between a godfather and the mother of his godchild, but at one time this impediment extended to the seventh degree (e.g. in the Patriarch Nicholas III. Grammati; 1062-1107). From this general norm there are variations both towards condensation and towards greater strictness. A second marriage is allowed, but, if both sides have been married before, it is celebrated with less pomp; a third marriage is allowed only by condensation (εἰρητική); a fourth is absolutely forbidden, and in some Churches exceptions have been allowed (as nowadays in Bulgaria and Bosnia). Divorce on the authority of Mt 5.31 is allowed in case of adultery, with the immediate right of re-marriage. In the Russian Church in recent times divorce has been allowed on other grounds, and second marriages are not allowed to the very party after the expiration of a period of penance.

The use of holy oil (chrima) is mentioned in Mt.
GREEN, THOMAS HILL

16th April 1836: it is a sacrament in which the body of a sick man is anointed with oil with an invocation of the grace of God which heals the diseases of the body and the weaknesses of the soul. It is performed by a priest (Russian - отец) of 7 priests; hence in the Russian Church it is called 'Soborovanie.' In contradistinction to the Russian Church, in anointing with oil that it is the last anointing of a dying man (extrema unctio extimantium), the Orthodox Church teaches that it should be performed only upon the sick for their recovery and not for the dying, though the Western practice is fairly widespread. Sometimes anointing with oil is performed upon the healthy, e.g., at the Trinity Laura of St. Sergius on Maundy Thursday.

The 7th, 11th, and 12th Artt. set forth ecclesiastical. The Orthodox Church recognizes a double judgment, one particular and final on the soul of each human being at his death, the other general and final—the last judgment (the dreadful judgment) which will follow after the universe has ceased to exist with their bodies, and will also be for those then living. Until the last judgment those who have been condemned by the particular judgment may receive pardon through the intercession of Christ and the saints.

The existence of Purgatory as a place midway between heaven and hell is not recognized.

See also Church, vol. iii. p. 622, and Confessions, vol. iii. p. 837.

Neale, History of the Orthodox Church in Austria-Hungary, London, 1905; V. Kolo-

GREEN, THOMAS HILL. I. Life. —An adequate account of T. H. Green's life is given in the monograph prefixed to the Works (posthumous) of T. H. Green, by J. W. C. Mils, from which the following details are selected (cf. also DNB, s. v.).

Green was born 7th April 1836. His father, Valentine Green, was rector of Birkin in the West Riding of Yorkshire. His relatives on both sides were clerical—a fact of some interest in estimating the influence which formed his intellectual development. His family was distantly connected with Cromwell—a circumstance which seems to have had no effect on attracting his mind to the political theories of Cromwell's time. At the age of fourteen (1850), Green went to Rugby; in 1855 he
entered Balliol College, and in 1859 gave the first proof of his ability by obtaining first-class honours in the school of Literae Humanae Artis. His mind appeared to have developed slowly; he was more inclined to meditation than to accumulation of facts, and therefore never exhibited the qualities of the prize-winning scholar. In 1862 his interest was first identified by his Professor, Mr. J. M.十四条, who also attempted to cultivate his interest in Carlyle, Wordsworth, Kegan Paul, and P. D. Maurice, and he lectured in Oxford, at first on History and afterwards on Philosophy, slowly making up his mind to enter upon teaching as a profession. The influence of Jowett was the one dominant factor of this period. During 1864-66, Green was engaged in the work of a Royal Commission on Education, and his reports did much to further the development of education for children of the middle classes; his interest in this type of secondary education was a phase of his democratic tendency, and lasted through life.

In 1867 he finally settled to the work of College Tutor, showing capacity for the details of his post beyond expectation. He was elected a Fellow of All Souls in 1865. In 1867 he married Charlotte Symonds, daughter of Dr. Symonds of Clifton, and sister of John Addington Symonds. In 1872 he began a temperance campaign, engaged in social work, opened a coffee-room in Oxford (1875), and was a member of the Town Council in 1876. In these activities he showed the qualities of a reformer, and might have advanced to a wider sphere of activity as member of Parliament if his health had allowed him to stand the strain. From 1873 he was actively interested in the discussions over the reform of the Church in England. As early as 1871, Green was writing largely as a way of forcing himself to work systematically. He wrote articles for the North British Review on that subject. In 1874, his views were enunciated in his introduction to Hume's Treatise of Human Nature. This was his major work in the period 1875-77. When, having been elected Wykeham Professor of Moral Philosophy, he gave the lectures which form the Principles of Ethics, this work never reached its final form. In 1878, however, he lectured at Oxford, and others who stood between Kant and Hegel, but the work of translating Locke was cut in the middle when, after a short illness, Green died on 26th March 1882.

2. Philosophical views.—(a) General position.

In the history of English speculative thought Green deservedly holds a high position. He forms one part of a well-defined antithesis, in reference to which both his ideals and his achievements must be estimated. The close of the 18th cent. was a period of transition for British philosophy. On the one hand, there remained the method and principles which sprang from Plato and were established, for Englishmen, by Locke. These had been developed, after Locke, by Berkeley and Hume, and may be called, for convenience, 'Associationism' or 'English Empiricism.' After Hume there was further progress of a somewhat decurrent kind, leading to a revival of the spirit of Empiricism in the figures of Mill, Hume, and others. In Utilitarianism as begun by Hume, defended by James Mill, and most brilliantly expounded by J. S. Mill, there is a continuation of the empirical thought with increased emphasis on ethical and political doctrines. In the work of Bentham, speculative questions were relegated to the background. Similarly, in the case of James Mill and J. S. Mill, the real significance of their thought is to be looked for in practical as opposed to speculative questions. This must be emphasized, because Green approaches the work of Hume and Mill from this side, and is most concerned with the ethical implications of Empiricism. The roots of Green's own position are to be found in Kant, so that, in J. S. Mill and Green, British and German lines of development came into direct conflict. The position was further complicated by a new development on the British side. While Kant's successors rapidly moved away from his basis, and Hegel finally emerged as the outcome of a revolutionary development, the empirical position was further reinforced by the ethical work of Herbert Spencer, which ultimately incorporated Darwinism in its expansion of Empiricism. Green, therefore, found himself face to face with a growing opposition, and was compelled (M.E.) to G. H. Lewes, and Spencer. This whole movement is conveniently covered by the term 'Naturalism,' and it is not clear that Green challenges in Naturalism a long line of thought which was by no means a stagnant perpetuation of doctrine, but a living and aggressive development. In order to understand Green, it is necessary to grasp the character of this Naturalism. J. S. Mill accurately describes the nature of the first reaction against the 18th century. Speaking of the 'German-Cole- rigidian doctrine,' he says:

It is ontological, because that was experimental: conserva tive, because that was innovative: religious, because so much of that was inculcated: concrete and historical, because that was matter-of-fact and precise. (Dissertation 1869, 421.)

This description of the first reaction applies to the later period also. Coleridge began the movement with a sentimental opposition to Locke's school; J. F. Exner had the opposition to Locke's philosophy at St. Andrews, 1845-46) was vaguely Hegelian; J. H. Stirling began in 1856 to translate and expound the systems of Kant and Hegel; after him William Wallace at Oxford, and Edward Caird at Glasgow (1866-68) and Oxford, continued the work of expounding German philosophy in Britain. Thus before and during Green's time there was an established line of Idealism with which he could associate himself in his opposition to Naturalism, and in all this movement there is close evidence of his association with it. Green's general position may be described as spiritualistic, religious, or Idealistic in comparison with the Naturalism, Agnosticism, or Utilitarianism of the opposing side. As has been said above, Green was associated himself with the Idealistic movement. The vagneness of that expression is justified by the facts; for Green took Kant as his basis, but developed his own doctrine cautiously, and expressed considerable doubt as to the value of Hegel's position (Works, iii. 143). Consequently it is inaccurate to call Green an 'idealistic Naturalist'; just what it is accurate to call Green is a difficult question; while the influence of Hegel is very potent, there is much in Green which should be regarded as directly developed out of earlier theories. It is partly on this basis that the opposition between J. S. Mill and Green appears now to have been often exaggerated: for Mill included under Utilitarianism a strong element of Kantian morality, and Green tended to limit himself to a combination of Platonicism and Kantian rationalism. In both cases the influence of earlier British writers (e.g. Butler, Price) is a factor which tends to diminish the difference in their conclusions. When Utilitarianism took still another form at the hands of Henry Sidgwick, the controversy turned on points that were only of secondary importance. Utilitarianism made room for immediate moral judgments as originally found in Butler, thus admitting a rationalistic theory of conscience; while in Green the idea of absolute ends or absolute values, when closely inspected, becomes a formal concept of the end with no material content except what Utilitarianism was, by then, prepared to supply.

The first consideration has been given to the ethical part of Green's work because that is the focus of his interests; and in dealing with that aspect it has become clear that Green was an opponent of Naturalism and of Utilitarianism in all the various forms which each assumed. The deepest ethical problem for Kant and naturally those of God, freedom, and immortality; Green is true to the Kantian standpoint in seeking a metaphysical basis for his ethical theory. To achieve this it was necessary to go back to the point from which Kant had started, namely Hume. The introductions to Hume's Treatise of Human Nature (Works, i. 274) is a complete statement of Green's objections to English Empiricism. As these are at the same time aspects of his positive teaching, they may be summarized here.
GREEN, THOMAS HILL 437

(l.) Locke's theory of knowledge is declared to be grounded in a false conception of consciousness: the 'ideas' is described by Locke as something given to, rather than produced by, the mind: hence the false idea is something given to the mind, and the true idea is something produced by the mind. The result of this false start was in Hume, whose work exhibited relentlessly the same principles as those, in the matter of the truth of ideas, the original error. The initial error was the assumption of ideas as objects of the mind when it thinks; this Green takes to be a false analysis of experience, involving the profound conclusion that an experience may be experience of an idea as of something given to the mind from without. On such a basis it is obvious that the self must be ultimately a complex aggregate of ideas, a product of experiences often repeated and (by association) knit together, a precipitate of time rather than a living reality. It must be admitted that Green's elaborate criticism is not always fair or relevant: there is much wearisome disputation about terminology where Locke was clearly making no effort to use technical terms; there is frequent distortion of the significance of passages due to concentration on detail in place of breadth of treatment; there is a striking lack of appreciation for the work which Locke actually achieved. Locke's achievement is that of objects independent of the mind. The famous Essay. On the other hand, Green has a cause to plead, and his main points are strong. The central assumption of his principles, consistently followed, led or might lead to that view of man which makes him a thinking machine, a merely animal organism, a creature without personality. The origin of these false views was to be found, Green thought, in the associationism of Locke and his followers. In denouncing this, Green was eminently in the right; but it has proved difficult to work out how a series of sensations could know itself as a series produced no answer: the doctrine, like its original supporters, was dead. With this point gained, the whole position is reversed: as the series does not sum itself, there must be a permanent self which does sum the series; this self must be active, not passive, and therefore the sensations, feelings, desires must all be phases of its activity rather than data over which it receives more or less passively. Again, if we look to the objective system, we find there are only things in the order of empirical sense of substances, but also relations; relations cannot be antecedents of the act of thinking, because they are things of 'impressions'; they are essentially the 'work of the mind.' Locke (from Green's point of view) was wrong in attaching so little importance to the work of the mind, for it now becomes obvious that not only relations but all that Locke would have called 'objects' are 'work of the mind'; they are not things, hopelessly external to our neuro-cerebral organism, but complexes of relations, nuclei in a network of experience. Thus, through a criticism of Empiricism, Green expounds a form of critical idealism based on Kant.

(ii.) The complement of this speculative theory is the practical theory: after treating the 'understanding,' it is necessary to discuss the principles of morals. The connection is obvious: if the analysis of the understanding leaves us with no 'self' capable of originating action, there can be no responsibility and no morality. Green was aware that Hume could not be answered by a dogmatic reassertion of Intuitionism. Hume's position was extremely subtle: if his doctrine involves real experience in the Leibnizian sense, it is the less provided for a working substitute in that product of habit and association which the average man might be satisfied to call his 'self'; if his position seemed to cut man off from all communication with God and deny all affinity between human nature and the Divine nature, it yet left the average layman a sphere of aspirations and scope for social labours. There could be no doubt that, if the only escape from Hume was by retreat to Cowper and the case was hopeless, it was necessary to escape at all. The answer to that seemed to be written in the history of Delium, in every instance of invidious or pious character, in the fact that the average man is never content to think of himself as a creature of circumstances (cf. Works, iii., xxii.), but either rises above that estimate of himself or sinks below it to moral degradation. Green saw that morality belongs only to persons as self-determining agents; his task was to prove the possibility of morality by removing the objections to the view that men are self-determining agents; and he achieved this in an argument that deserves more attention than it has received. The point is in strict conformity with the previous demonstration that an idea cannot come from without into the mind, but must be itself a product of the mind, an expression of mental or spiritual activity. From this it follows that we must reverse the use of such terms as 'pleasant,' 'tempting,' and the like. These can no longer be taken to indicate permanent states of objects independent of the mind. At the root of objects of pleasure is 'pleasant' only when a person regards it in that way; an opportunity is 'tempting' only when a self-determining agent perceives it as such (Pragmatics, 98). Through the pleasure of pleasures and pains as things that act on the self, mind was to regard themselves as victims of circumstances or propensities. Hume finally declared reason to be the slave of the passions; no other conclusion was possible while reason and the passions were external one to another; Green's answer is based on his proof that reason is the master of the passions. The new position had far-reaching consequences: if pleasures and pains can in this way be taken up into the life of the self, if the environment is no longer a sum of irresistible attractions and repulsions, Green can triumphantly vindicate the moral life as a life of self-determination and self-realization.

These two phases of the opposition to Hume so far exhibit Green's main position that it is unnecessary to examine with the same care his attacks on G. H. Lewes and Herbert Spencer. Between Green and those writers who laid emphasis on the physical substratum of the mind, the natural history of morals, and the mental and human nature, there was hardly sufficient sympathy to make the antagonism interesting. With J. S. Mill and Sidgwick the case is different. Green naturally found in Mill's system the most significant exposition of Hedonism. J. S. Mill appeared to him simply as the heir of those doctrines which Bentham originated and James Mill advanced; the allowances which should be made on account of Mill's own condemnation of Benthamism are made by Green in word only; there is no real surrender of the belief that Utilitarianism is wrong, and that Mill's doctrine is the old Utilitarianism in new armour. In this Green was decidedly at fault; if he had ever realized the extent to which Mill was under the influence of Butler and Kant, he would not have been the precursor of a whole generation of short-sighted attacks on Mill. As will be shown later, Green's conception of relations is religious; and on questions of religion Mill and Green were antagonistic by birth, breeding, and nature. Green divided with Mill the allegiance of the public, largely because of the apparent solidarity between Green's point of view and that of the advanced thinker in religious matters. Mill, on the other hand, appealed more directly to those who set social progress before the philosophy of
religion, including also those who were so far secular as to be anti-clerical, and so far opposed to orthodox beliefs as to welcome the 'irreligion of the future'. Here, again, the exegesis of differences was unfortunate: Mill's views on religion were not directed against such refined theology as that of Green, and Green on questions of social progress were far enough to satisfy any utilitarian. But of all philosophers since Socrates it has been true that by their followers ye shall know them. Green and Mill were not really in the same plane. Mill belonged to the world of affairs, and his ethical writings are the theoretical background of social and political prophecy. Green is primarily a philosopher: his sphere is the rarified air of dialectics, smokeless if not cloudless. It is only necessary to read Green's criticism of Mill's Logic (ii. 165) to realize the difference: in the analysis of thought-processes, Green may win an easy victory; but the investigator in the laboratory or the field, handling things, finds in Mill the more instructive guide; and even where modern science and method rebels against Mill, it does not reject him in order to accept Green. As compared with Mill, Sidgwick was more akin to him in his academic modes of thought; he could and did meet Green on his own ground; he attacked his metaphysics, criticized his demonstration of freedom, freely and merci-

lently analyzed in which Green expressed his aspirations and too often obscured his meaning. But this, again, was not of ultimate significance; the only really valuable criticism made by Sidgwick on Green was the publication of his own version of Utilitarianism.

(c) Speculative groundwork.—In the exposition of his thoughts, Green was hampered by his familiarity with German modes of expression. In place of the lucid English of Hume, Green employs a technical language which baffles the untrained reader. His philosophy is always clouded by a want of clearness in the thoughts; but, as this is not the place to discuss details, an attempt will be made to state his principal ideas in ordinary terms; and those ideas were ad
ed, for Green clear and distinct. It must be granted that some ideas are more easily expressed than others; also, the expression of convictions which are akin to religious experiences is notoriously difficult, easily ridiculed, and hardly ever intelligible to those who have no memory of similar experiences. Green's whole philosophy is founded on the profound conviction of the deep significance of personality. He saw in contemporary English philosophy an implicit reduction of personality to illusion, an analysis which ultimately explains it away. In Kant he saw the basis of a different philosophy, which could be employed to refute English Empiri-

cism and open the way for a different expression of moral values. Having shown that Locke and his followers were at fault in their psychological method and their idea of the objective world, Green proceeds to argue that experience properly treated (i.e. in Kant's way) proves that there is a 'spiritual principle' in Nature. The world is for commonmen a series of objects, a form of perception, and 'objects' are discriminated experiences, having differences which reflect the ultimate differences of 'things', i.e. of those stimuli to which we refer our distinct experiences. The word 'Nature' is thus interpreted to mean a complex of experiences which indicate a ground of experience beyond thought. The system of thought is objectively real, because it is real for all rational beings, but not objective in the sense of being set over against the thinker as alien to thought. Thus, the old distinction of subjective and objective, opposed as inner and outer, is removed; the thinker and that which is thought are not divided from one another; they are not divisions of the universe, but distinctions arising out of experience, in which they have first been given as a unity. Since 'Nature in this sense is always continuous (not an aggregate of empirical 'things'), distinctions are made enough to satisfy any utilitarian. But as these laws are not arbitrary dictates so much as the revelation of rationality in the universe, it is argued that experience, thus analyzed, leads to the conclusion that there is a spiritual principle in all things—the thinker as his capacity of thinking, and in the objective reality of the conditions of thought. From this can be deduced (1) the ultimate unity of subject and object as collateral manifestations of one principle (which is called the higher unity, taking precedence over the unification of separate experiences in one personality); and (2) the freedom of the individual conscious activity, because that 'Nature' which in Empiricism tends to be presented as an entity in which consciousness is not shown to be one of its manifestations. This position bristles with difficulties, but its main point is not without a certain appeal. Empiricism certainly inclined to the belief that man is a material organism, that thought is a function of the nerves, and that circumstances control action. Against this Green would say that it is spiritual, that the physical body is not the cause of thought but its instrument, and that circumstances are no more than occasions for the exercise of freedom in choice. These metaphysical discus-

sions thus prepare the way for the ethical doctrine.

(c) Ethical and religious views.—Green's proof of freedom, the basis of his ethical work, amounts to a demonstration that the physical aspect of man cannot be cited as the true cause of his actions. To make morality possible it is not necessary to bodily reflect at time of a want of clearness in the thoughts; but, as this is not the place to discuss details, an attempt will be made to state his principal ideas in ordinary terms; and those ideas were ad-
ed, for Green clear and distinct. It must be granted that some ideas are more easily expressed than others; also, the expression of convictions which are akin to religious experiences is notoriously difficult, easily ridiculed, and hardly ever intelligible to those who have no memory of similar experiences. Green's whole philosophy is founded on the profound conviction of the deep significance of personality. He saw in contemporary English philosophy an implicit reduction of personality to illusion, an analysis which ultimately explains it away. In Kant he saw the basis of a different philosophy, which could be employed to refute English Empiri-

cism and open the way for a different expression of moral values. Having shown that Locke and his followers were at fault in their psychological method and their idea of the objective world, Green proceeds to argue that experience properly treated (i.e. in Kant's way) proves that there is a 'spiritual principle' in Nature. The world is for commonmen a series of objects, a form of perception, and 'objects' are discriminated experiences, having differences which reflect the ultimate differences of 'things', i.e. of those stimuli to which we refer our distinct experiences. The word 'Nature' is thus interpreted to mean a complex of experiences which indicate a ground of experience beyond thought. The system of thought is objectively real, because it is real for all rational beings, but not objective in the sense of being set over against the thinker as alien to thought. Thus, the old distinction of subjective and objective, opposed as inner and outer, is removed; the thinker and that which is thought are not divided from one another; they are not divisions of the universe, but distinctions arising out of experience, in which they have first been given as a unity. Since 'Nature in this sense is always continuous (not an aggregate of empirical 'things'), distinctions are made enough to satisfy any utilitarian. But as these laws are not arbitrary dictates so much as the revelation of rationality in the universe, it is argued that experience, thus analyzed, leads to the conclusion that there is a spiritual principle in all things—the thinker as his capacity of thinking, and in the objective reality of the conditions of thought. From this can be deduced (1) the ultimate unity of subject and object as collateral manifestations of one principle (which is called the higher unity, taking precedence over the unification of separate experiences in one personality); and (2) the freedom of the individual conscious activity, because that 'Nature' which in Empiricism tends to be presented as an entity in which consciousness is not shown to be one of its manifestations. This position bristles with difficulties, but its main point is not without a certain appeal. Empiricism certainly inclined to the belief that man is a material organism, that thought is a function of the nerves, and that circumstances control action. Against this Green would say that it is spiritual, that the physical body is not the cause of thought but its instrument, and that circumstances are no more than occasions for the exercise of freedom in choice. These metaphysical discus-

sions thus prepare the way for the ethical doctrine.
when realized, is not other than a condition or state of itself. The moral development of a rational being is, therefore, to be regarded as the conscious realization of the capacities of the self to a ceaseless recognition of incompleteness accompanying the striving after greater completeness. Green's process of addressing his pupils at the day before the Sunday on which Communism was administered was one of the occasions on which he felt most acutely that his mode of thought was not that of the man who is religious without being philosophical. The truth was that Green desired to get away from outward forms and phrases and concentrate on spiritual significance. His faith was deep but not conventional, and required for its understanding a sympathy not often accorded by the average churchgoer or even the average clergyman. In St. Paul's writings, Green found a meeting point for the Christian tradition and his own idealism. The deepest life of man is the inner self-consciousness; the life of thought is a perpetual revelation of the self which indicates infinite possibilities; man has, therefore, in himself a witness to God, for God is thinkable only as the realization of all that man has in him to become. As God is thus, objectively, the sum of perfection, so is man subjectively rebutted in that perfection. Faith is not a belief in facts resting on historical evidence; it is rather the immediate consciousness of the will, an experience rather than an acceptance of proofs. The position is stated in essence in the Prolegomena (§ 187):

'He is a being in whom we exist, with whom we are in principle one; with whom the human spirit is identical, in the sense that He is all which the human spirit is capable of becoming.'

As at a period when religious men were inclined to rise up in arms against all re-interpretation of dogmas, whether due to philosophy or to science, Green's views were of a kind not to be rashly disseminated. This he knew; but he was not in any sense troubled by doubts; he rested securely in the personal conviction of truth, and feared not for religion, but for those who by narrowing of interpretation were imperilling the adequacy of religion for life.

(d) Political philosophy. — It is possible to write on Logic, Ethics, or Metaphysics without being truly philosophic, but it is not possible to be truly philosophic without coming to terms with the daily life of common people. The moral philosophy as most severely tested at the point where the individual and the common good come into consideration, for he has then to choose the way in which he will formulate their relation and maintain their agreement or their incompatibility. This fact was realized by Green. He saw the significance of political philosophy for his own outlook, and at the same time he had a natural tendency towards an active participation in schemes which might be thought wholly uncongenial to an academic tutor. In Green's political philosophy can be found the most concrete expression of his thought. His academic work in teaching Aristotle stimulated his appreciation of civic life and ideals; his religious emotions, always mildly anti-clerical, found an outlet in the theological and practical fostering of common life; his Anglo-German idealism was a further incentive to study the life of societies these being so clearly capable of interpretation as the realization of identity in difference, unity in plurality. Looked at from this angle, society or the life of communities appears as that higher universal with which the individual has most immediate contact. Whether the individual recognizes it or not, every set has significance for the whole community; the life of the individual is nothing apart from the community; and, conversely, the

GROTIUS.—In this article attention will be directed mainly to the contributions made by Grotius to the development of religious and ethical thought. It will be unnecessary, therefore, to do more than indicate in outline the chief events of his life.

1. Life.—Hugo Grotius was born on 10th April 1583, and was from early years brought under the influence of those more liberal ideas in the theory of which his own views were to become a powerful champion. His tutor was Uttenhoven, subsequently a friend of Arminius and a leader of the party of the Remonstrants. At the University of Leyden, to which he went at the age of twelve, he entered the faculties of law and medicine, and very soon exhibited an extraordinary proficiency in scholarship. So much attention did his precocious talents attract, that, when no more than a youth, he was offered the chair of law and jurisprudence at the university. He was, however, not published during his lifetime. It was edited by his sons and issued in 1647. His professional advancement was rapid. He was appointed to the office of Advocate General of the Flats of the Provinces of Holland and Zealand, and in 1618 became pensioner of Rotterdam, then acquiring a seat in the States of Holland. In the same year he proceeded on a mission to England, connected with the dispute concerning the English church. Here he became much impressed by his appearance and intelligence (Casaubon, App. 2). He returned to the Low Countries in 1621, and was for a time the centre of a community of scholars bringing together in spite of the disparity of their ages. Both were true Christian scholars, earnestly devoted to the unity and differences in the church were composed, and hopeful of the results which would follow from an unbiased and well-informed appeal to antiquity and to the light of Scripture. Grotius on his return to Holland found the flood of religious rancour in full stream. The controversy about the consubstantiation of faith and other points of Calvinistic doctrine, which had begun between the two university professors, Gomar and Arminius, had, it is said, even spread to the military. In questions of ecclesiastical, confessional or of social legislation, he found his theory adequate; it was a reason for extending his knowledge among all classes, as it was a reason for supporting the abolition of slavery even at the cost of war. In brief, his own genius converted his idealism into the working faith of a social reformer; in practice he was heart and soul with the progressive tactics of the utilitarians, and in this part of his life's work nothing separated him from the better class of utilitarians except the significant assertion in which he persisted, that the ultimate end of society is not comfort but character.

2. As Christian apostle.—Of all the writings of Grotius, probably the most widely read has been the unpretentious little book entitled Religious Christianity, which deals with English Rationalism and its relation to the philosophy of religion.
in vernacular verse, in order that it might be committed to memory by Dutch sailors and traders, and by them employed, as occasion served, for the propagation of the faith. Subsequently he expanded and translated it into a small Latin treatise in six books (1627). In the first book he lays down the fundamental principles of natural religion—the being and attributes of God, and the immortality of the soul. Of the nature of the atonement he was devoted to an examination of the claims of Jesus Christ to be the teacher of the true religion; the third deals with the authority of the Bible; the remaining three books are concerned with destructive criticism of Paganism, Judaism, and Muhammadanism.

It may fairly be said that this small volume initiated a new kind of Christian Apology. Not that it introduced any new arguments. The author explicitly professes to base his work on that of earlier apologists, among whom he names, in particular, Raymond of Sabunde, Luis Vives, and Philip de Moray. In fact, the principles which underlie Grotius' treatment of his subject do not differ essentially from those of the classical scholastic Apology, the Summa contra Gentiles of Thomas Aquinas. There is the same confident appeal to the natural reason and natural conscience of man, the same ingenuity in placing of the impossibility of any radical opposition between reason and faith. But the difference in the method of presentation is obvious. Theology has issued from the study and the own of the nature of the truth of the Christian religion as made to rest on three supports—the height of the ideal which it sets before men for attainment, the excellence of its rules of duty towards God and man, the pre-eminence of its Founder as testified by the miracles which He was enabled to work.

The Bible, Grotius naturally defends positions from which modern criticism would dissent; but it is interesting to notice how soberly he instilled the natural and the testimony of Biblical authors, their opportunities for accurate observation, and their unmistakable good faith. At the time he was criticized for omitting to mention such fundamental doctrines of Christianity as the Trinity and the Atonement. But the criticism is beside the point. It was not his purpose to write a treatise, however elementary, on Christian Doctrines. Rather he set himself the practical task of proving to inquirers the reasonableness of submission to the teaching of Jesus Christ. What the teaching actually was they might learn from recognized sources, especially from Holy Scripture. Thus we have in the de Veritate an excellent example of the Christian Apology written by a layman for the use of the laity. It is brief, pointed, practical, effective. That it answered its purpose may be inferred from the number of editions that were called for, and from the fact that it was already translated into several European languages.

3. As dogmatic theologian.—During the lifetime of Grotius, Holland was a hotbed of theological controversy. In these discussions he took a share, influenced not by any partisan spirit, but by the desire to make a good use of his wide and intimate acquaintance with Christian writers of all ages, and to furnish such a statement of the truth as might help to reconcile discordant opinions. His methods may best be illustrated by his treatment of the two burning questions—the theory of the Atonement and that of satisfaction. (a) Grotius' views on the Atonement are to be found in the Defensio Fidei Catholicae de Satisfac- tione Christi, a treatise directed against the opinions of Socinus. Here he is strongly dissatisfied with the explanation given by Socinus of the connexion between Christ's death and our forgiveness. It is not enough to say that Christ preached forgiveness and gave His life to be a pledge of the truth of His preaching; that by His death He gained the right to distribute pardon; that He gave us a supreme example of patience; and that by the Cross He instils into us that faith which is the necessary condition of forgiveness. Above and beyond this, Christ's sufferings must be recognized as vicarious punishment, notwithstanding His innocence. For Grotius boldly maintains it to be not of the essence of punishment that it should fall upon the shoulders of the guilty party: 'Affirmo non esse simpliciter iniquum sit contra naturam poenas ut quis puniatur ob peccata aliena.' It cannot, therefore, be said a priori that Christ's punishment on this account was an injustice. The view that sin can be regarded as merely constituting a debt, and its punishment remedied without other consideration than the willingness of the creditor, is severely criticized. In opposition to this 'debt and credit' conception of the relation between sin and its punishment, he views the view of legal transaction, God filling the rôle of Rector or Governor, and man that of culprit. The Governor's function is explained to be the administration of laws, which have been devised for, and are enforced in the interest of, the common good of the governed. Yet this enforcement is not a matter of mechanical rigidity. Room is left for the exercise of discretion, and the theory is advanced that the punishment of the offender is subject to dispensation. Having made these preliminary explanations, Grotius proceeds to state his theory of the Divine forgiveness in terms of the law-court. A solutio involves the removal of an obligation. In some cases the solutio immediately cancels the obligation, as when a debt is fully paid or a penalty fully borne. Let it be remembered that the person who provides the solutio need not necessarily be the debtor or criminal, but may be some one else acting in his name. In these cases there is no remission because no part of the debt has been left unpaid, no part of the penalty omitted. But in other cases, where the settlement is not thus complete, there can be no discharge of obligation unless the governor officially intervenes and decides that some offered compensation shall be accounted sufficient for the purpose. In relation to the law, this act of the Governor is dispensation; in relation to the offender, remission. The compensation is, properly speaking, a satisfaction, an amounting to a solutio strictly so called. Thus Grotius dissents from Anselm's theory of the Atonement, according to which the price paid by Christ was the equivalent of the debt due from man, the infinite price of the death corresponding to the infinite amount of sin. Grotius holds that Christ, by submitting Himself to suffering and death, offered a true satisfactio, which, by the act of God, the Governor, was accepted as a sufficient reason for granting to guilty man a remission from the obligation to pay the penalty for his sins. When a debt is remitted without any solutio, the transaction is called accep- tatio. If the dischage follows upon the substitution of some new obligation in place of the old, the term is used is accetatio. With the help of these
technical terms Groton condenses his theory into the following sentence: "Non est acceptabile; non est soluto rei iuris debita; non est novum; sed est remissis ecclesiasticis satisfactionibus." There is no unconditional absolution; there is no payment of the exact debt; there is no substitution of a new obligation; but there is a remission in consequence of a precedent satisfaction."

Two further points remain for consideration. Why did the Almighty adopt this method of requiring satisfaction before forgiveness; and why was Christ the person to provide it? To the first question Groton replies that there was, indeed, no absolute necessity for the choice of this particular mode of Atonement, but that God selected it in order that He might thereby manifest at the same time the greatest number of His attributes, viz., His clemency, His severity or hatred of sin, and His concern for upholding the law. To the second question he answers that Christ was pre-eminently suited to provide the requisite satisfaction, because of His incomparable dignity, and because of His close connexion with ourselves as head of the body of which we are the members. His death ensured our forgiveness, while at the same time it was a conspicuous demonstration of the Divine justice. This theory of the Atonement has not escaped severest criticism. H. M. Oudemans writes of it as follows:

"Of all the strange notions that at various times have darkened the realm of theology it would be hard perhaps to find any more strange than this, which eliminates from the greatest facts of history any reference to God, while it dares to interpose between man and God the fiction of an indelirious vengeance (Catholicae Doctrinae de Atonamento, London, 1881, p. 595)."

But in passing judgment upon Groton it would be unfair to forget that his theory was framed to meet a particular difficulty. Socinians had forcibly urged the incompatibility of free forgiveness with the demand for satisfaction. Let men choose, he had said in effect, between the view that God is ready to forgive sins freely and the view that He requires the satisfaction of the Atonement. Groton set himself to show how contradiction does not exist, and that it is possible to combine belief in the freedom of Divine forgiveness with belief in the necessity of the Atonement. To this particular end his argument was well adapted. It disposed once for all of the unsound dilemma which Socinians had set up. At the same time it was impossible to close one's eyes to the very serious defects of this so-called 'Governmental Theory' of the Atonement. The attempt to express the sacred and tender relation between God and the erring soul in terms of human law could not be otherwise than unsuccessful. That the analogy between sin and crime enabled Groton to bring out his thesis clearly is true. He showed convincingly the weakness of the conception of sin as mere debt. But the hard and rigid ideas of sovereignty and administration are wholly inadequate for the purpose which they are made to serve. The royalty of God is allowed to obscure His fatherhood. Moreover, the theory of Anselm, with all its shortcomings, had at least suggested a reason why the sufferer should be God Incarnate, viz., in order that there might be an equivalence between injury and compensation. This reason disappears in Groton's statement of the case, and there is nothing to put in its stead. Groton throughout appears strangely unconscious that he is speaking of a mysterious truth in merely analogical terms and principles. Realization of the rigid theory of verbal inspiration which had practically rendered impossible any rational treatment of the Sacred Text, he recognized and allowed for the presence of the human element in the work of the Canonical authors. In an age when it required some courage to make the avowal, he declared himself unable to hold that all the doctrine contained in the Hebrew Canon had been dis-
GROWTH (Biological) 443
tated by the Holy Ghost. What need was there that the Histories should have been so produced? It was enough that the writer's memory should be strengthened and his accuracy in consulting authorities ensured (v. 12). The words of Scripture were to be interpreted according to the recognized rules of grammar and philology, on lines independent of dogmatic conclusion. It is credit to Grotius had laid to heart the lessons which he had learned from Scaliger. In applying his principles he displayed a rare soundness of judgment, an uncommonly attractive the admiration of that pioneer of Biblical criticism, Richard Simon. Fully accepting the reality of prediction in Jewish prophecy, he held that the passages in question generally referred to the fortunes of the Jewish people, and only in a secondary and allegorical sense found fulfillment in Jesus Christ. With regard to the use in the NT of quotations from the prophets, he maintained that for the most part they were introduced for the purpose of enforcing a faith already existing, and that, in controversy with the Jews, the Apostles had preferred to base the proof of their Master's Messianic dignity on His miracles and His resurrection (cf. note to Mt 1:1). That credit was still only feeling its way forward without fixed principles to guide it. In this department of study, as in so many others, Grotius showed a tendency to improve his views as he accumulated knowledge of his suggestions with regard to various readings is printed as one of the Appendices attached to Walton's London Polyglot (vol. vi. App. xvi). The higher criticism was even further removed from the horizon of that age. Yet it is interesting to notice how Grotius had come to the conclusion that Eusebius was a person of outstanding ability and profound learning, and how he attempted to detect Christian interpolations in Sirach and the Book of Wisdom. Examples of his independence in matters of exegesis, and of his freedom from the shackles of mere tradition, will be found in his comments on the following passages: 1 Thess. 2:15; 1 Cor. 12:11 (cf. W. W. Farrar, Hist. of Interpretation, London, 1886, p. 389 n.).

5. As moralist.—In referring to the events of Grotius' life, we have already noticed the favour with which his writing was received. From the point of view of the jurist, the publication of this book may be said to mark the initiation of the science of international law. For although Francis a Victoria, Balthasar Ayalza, and Albericus Gentilis had already written on the subject, no previous work had commanded any large measure of assent. A general agreement as to first principles was still lacking. The treatise of Grotius provided what was wanted. Within thirty or forty years of its publication it was generally accepted as authoritative by the professors of Continental Universities. The students of ethics, however, will take more interest in the moral principles upon which Grotius builds up his structure of jurisprudence. Writing at a time when no such thing as a concert of Europe was imagined, he was precluded by the nature of his subject from appealing to any positive enactments. He was, therefore, compelled to find a sanction for his proposed rules of war in that which is antecedent to all institutions. With a fine discernment he made his appeal to Nature, teaching that the essence of rights is to be found not in any bare calculation of expediency, but in the moral constitution of man. Moreover, it is of the essence of his system to consider men not in isolation but as a member of a community. Human nature, even apart from any specific want, constrains men to form a society which, in order to satisfy their instinct, must be peaceable and reasonably constitute. Utility, indeed, affords the occasion for the introduction of civil law, but is not in itself a criterion. Grotius emphasizes that previous writers had mingled together in confusion all the laws of nature and the law of nations, and the law of particular States. In making his appeal to the law of Nature, he maintains its validity even upon the impossible supposition that there is no God, or that He takes no account of human affairs (Art. 11). He holds that its pronouncements can be deduced from notions that are self-evident and impossible of denial except by those who deny the existence of their own reason (Art. 80). Thus, although Grotius was not specifically concerned with questions of right and wrong in relation to the conscience of the individual, he clearly insisted on the possibility of moral sanctions independent of religion and revelation. In so doing he prepared the way for the modern development of ethics as a separate science.

6. General estimate of Grotius' character and influence.—Grotius possessed a strong industry, a highly trained and penetrating intellect, and a vast erudition, together with an absolute sincerity of purpose and unquestionable honesty. These qualities attracted, as they most thoroughly deserved, the profound respect and admiration of his contemporaries. But he was never a great leader. The elements of force were lacking. In religion he was earnest, thoughtful, and devout. But he hardly gives us the impression of being irresistibly compelled to deliver his testimony by the power of conviction. His was not the mystic's direct and overwhelming vision of Truth. His was the faith that had its roots in his experience, and in a well-considered deference to authority. Though he wrote much on disputed religious topics, it was not his natural bent. In answer to a letter from de Thou strongly denouncing him for any part in theological controversy, he replied that he had himself obliged to do so by the love of his country, his wish to serve his Church, and the request of those to whom he owed obedience (Ep. 85). It is an accurate statement of the considerations by which, against his inclination, he was impelled into controversy. He was emphatically a lover of peace. Above all things he desired to promote the cause of Christian reunion. In pursuit of this great end he was willing to concede much to Roman Catholicism; and, when writing on this subject, he so expressed himself as to lead many to suppose that he would eventually join that communion. That he was not only disfavour and apprehension the dogmatic instability and fissiparous tendencies of Protestantism is undoubtedly true; but no direct evidence is forthcoming to show that he ever intended to make his submission to Rome. It is, therefore, idle to speculate on what he might have done, had his days been prolonged. When it came, his death was the close of a conscientious and laborious life, in which, according to his plan, he does not cease to be of service to succeeding generations.

GROVE.—See TREES AND PLANTS.

GROWTH (Biological).—A distinctively vital process, characteristic of all living creatures. It is closely associated with development (q. v.) and with
reproduction, which is often a more or less discontinuous growth. For practical purposes it is usually enough to say that growth is increase in the size or volume of an organism, and usually implies increase in mass or weight. But this definition is too wide, since there is plainly considerable difference between an increase of size due to a deposit of fat and the slow, continuous growth of a lean fish like a haddock; or between an enlargement due to the accumulation of water in the system and the fine growth of an embryo's brain. When a dried turnip is surrounded with water, or when a frog leaving its winter-quarters in the mud passes into the pond, we see increase in size, but no one would call this growth. The fact is that more than one word is required to cover the phenomena which may be in a general way referred to as growth. Organic growth is essentially a regulated increase in the amount of the protoplasm and intimately associated substances. It is more than mere accretion, it is an active process of self-increase. Unlike a crystal's growth, it comes about at the expense of materials different from the growing substance—often very different, as in the case of plants which feed on air, water, and salts. Unlike the expansion of an excluded gaseous substance, in relation to the organism, or organ, or cell that is growing.

Conditions of growth.—(a) Nutrition.—It is a fundamental condition of growth that income should be greater than expenditure. Growth primarily depends on the assimilation of food—on there being a surplus in the continual process of self-renewal. It is not inconsistent with this to say that an organism may grow larger for a time without taking in any food, for what happens in such a case is that the increase of the cell substances goes more into dilute and bulkier form. The shoots of a potato sprouting in a dark cellar show true growth, though the organism as a whole is actually losing water in transpiration, and, as its respiration shows, breaking down carbon compounds. Nor is it inconsistent with our previous statement to recognize the fact that, during the period of most rapid growth in tadpoles, the inhibition of water is more important than the assimilation. But during this period the weight of dry substance in the tadpole does not increase at all.

(b) External agencies.—Growth, like development, has its optimum environment, but it differs greatly for different kinds of organisms, and it is difficult to make general statements in regard to the agencies that favour or hinder growing. As light is essential for the assimilatory process (photo-synthesis) of ordinary green plants, we may say that light is a condition of their growth; but as a matter of fact light is directly retardative. The strongly refractive, so-called chemical rays, which have little or no effect on assimilation, have an inhibiting effect on growth. Other things being equal, plants grow more rapidly during the night than during the day. The growth of plants is also dependent on humidity, the amount of oxygen, electrical conditions, temperature, etc. The optimum temperature usually lies between 25° and 37° C, and there is a complete cessation of growth in plants at a temperature less than 0° or higher than 40°–50° C. For animals the general statement is that very low or very high, or a temperature slows growth; it does so in part by retarding the process of cell-division, and this, in part, by retarding the formation of nuclear compounds in the cells. For a developing chick the temperature above which death occurs is 43° C; the minimum at which growth stops is about 28°, the normal limits are between 35° and 39° C.

(c) Internal stimuli.—Growth is a regulated phenomenon, occurring in a certain sequence and within certain limits. The regulation has reference to the specific constitution of the organism (its structural organization on the one hand, its characteristic metabolism on the other), and that means that it has reference to the past history or evolution of the organism. This is one of the criteria of organic growth; it differentiates it from the mere multiplication of chemical substances, or from the continued action of a ferment. As a result, in growth of crystals there is also some degree of regulation in relation to the already existing architecture.

One of the ways in which the regulation of growth is brought about within the organism is by means of internal secretions or hormones. The internal secretions of the thyroid gland of the pituitary body have a specific regulatory effect on the growth of the brain, the subcutaneous tissue, and the bones. The internal secretions of the reproductive organs have a definite effect on the growth of parts of the body, both of important organs like mammary glands and of trivial decorative structures, like some of the secondary sexual characters. In response to the stimulus of the salivary secretion of the larval gall-insect, we have very striking examples of specific secretions including specific kinds of growth. It is said that, in the growth of the roots of some plants, specific chemical substances are formed which inhibit further growth. In short, fact is accumulating which shows that particular parts of an organism have their growth regulated by specific internal secretions. It has been proved that some, if not all, human giants are the result of exalted secretion of growth hormone, and it is possible that some kinds of dwarfs are due to a deficiency of this stimulus. The correlation of the growth of different parts of the body must be recognized as a fact even though there is no available physiological interpretation, e.g. in terms of the formation of specific secretions. There is great inequality in the rate of growth of different parts. In cases of underfeeding there is great diversity in the way in which the growth of different parts is affected. More familiar and perhaps simpler are cases where an organ, such as the heart, responds by increased growth to increased demands upon it.

In his elaborate discussion of growth, Herbert Spencer sought to show that it varies (other things equal) (1) directly as nutrition, (2) directly as the surplus of nutrition over expenditure, (3) directly as the rate at which this surplus increases or decreases, (4) directly (in organisms of large expenditure) as the initial bulk, and (5) directly as the degree of organization. This kind of analysis is valuable, but what is most needed at present is an extensive series of measurements of growth under diverse conditions.

Periods and rates of growth.—In a segmenting ovum we see development but no growth. Soon, however, development and growth proceed hand in hand, both very rapidly. Later on, when development is proceeding slowly—all of the chief steps having been taken—growth may go on very vigorously. Thus in the prenatal life of man great strides in development are taken in the first three months, and then growth proceeds. Thereafter, when the developmental steps are less striking, the growth is for a time very rapid. From the third to the fourth month the increase in growth is 600 per cent. After this it drops quickly and is barely 25 per cent, in the last month of pregnancy. In some organisms the growing period is very sharply punctuated; thus in insects with complete metamorphosis all the growing is done in
the larval period. In other cases growth may go on as long as the organism lives and feeds. Thus we may distinguish the definite or determinate growth of birds and mammals from the indefinite or indeterminate growth of reptiles and fishes. In other words, some organisms have a definite limit of growth—the physiological optimum—while others have not.

It is partly, no doubt, because of dependence on nutrition and on external agencies that growth is so often 'punctuated,' in some detail, rather than continuous. Even in the case of a fish familiar with the rings of growth seen in the cross-section of a tree and with the lines of growth on the outside of shells. Similarly the coming and going of the seasons is for many fishes accurately registered by the concentric zones of growth seen on the scales and even in some of the bones. But besides the periodicities of growth which can be reasonably correlated with external periodicities, such as those of the seasons, there are others of a more recondite nature, such as the phases of quick growth and slow growth that alternate in the development of some animals, as Fischel has shown, for instance, in the embryo of the duck.

Active growth in multicellular organisms implies the growth of the individual cells and ensuing cell-division. The cells may grow by taking in water, and by accumulating products of metabolism, but even more by the renewal of the living matter. Spencer, Leskam, and Alexander James have thrown light on the limit of growth in cells and the division which usually occurs when that limit is reached. When a spherical cell has quadrupled its original volume, it has by no means quadrupled its surface, the one increasing as the cube, the other as the square, of the others. It is in the surface of the cell that is fed, aerated, and purified, functional difficulties set in when the growth of surface begins to lag behind the growth of the cell-substance. The maximum safe size is the limit of growth, and it is then that the cell so often divides, halving its volume and gaining new surface. As a general rule, if a cell reaches the stage of exceeding the functional requirements of the organism, it is no longer as capable of further growth. The rate at which growth-promoting processes are performed in a cell, the ratio of the amount of nuclear material in the cell to the amount of cytoplasmic material involved in the growth-promoting processes, the rate of growth, and the degree of differentiation are factors in determining the size at which growth is arrested.

In man, according to Robertson's researches, there are three maxima of rate of growth. The first is before birth, but its precise occurrence is uncertain. As we have mentioned, the increment from the 3rd to the 4th month is large and then falls slowly to the 6th month, when it is smallest. It then falls with great rapidity between the 4th and 6th months, and thereafter more slowly till birth. The second maximum is in early infancy or childhood. Minot puts it in the first year, when the increase of weight is about 200 per cent. Robertson puts it in the fifth year. The third maximum is near the time of puberty—about the age of 13 for girls, of 15 for boys. It has been suggested by Robertson that the first period is predominantly characterized by the synthesis of nuclear compounds, that the third is one of cytoplasmic increase, while the second is intermediate and represents the resultant occurrence of both synthesis processes. It is important to notice that the growth of women is very different from that of men. It is not only 7 per cent less, but it is on a different scheme, with the parts in different proportions.

The law that the rate of growth varies inversely with the degree of differentiation has been noted in a few cases in regard to individual parts. 'Thus human stature exhibits the same loss of growth-power as is shown by the weight of the whole body, with this difference, however, that the rate is not so high in early stages, the descent in later stages less abrupt' (Jenkinson, op. cit. p. 68).

When we say that growth is a regulated increase in the amount of living matter, we refer to such facts as its periodicity, its varied rate in different species, and its general correlation. Kellott has emphasized the same idea by calling attention to the diversity in the rate of growth of different parts of the body. In the smooth dogfish (Mustelus canis) the organs, or perhaps tissues, seem to grow as more or less separate units. 'Each organ grows in its own characteristic way—each has an individual form of growth curve' (Kellott, op. cit. infra, p. 596). The rates of growth of the brain, heart, pancreas, spleen, and so on, are different from the rate of increase in total weight. In animals of indeterminate growth, like fishes, the brain, heart, digestive glands, and fins do not keep pace with the general increase of trunk musculature and connective tissue; and a loss of physiological equilibrium results. The determinate and more perfect growth of birds and mammals, for instance, is an obvious improvement on the more primitive unlimited growth.

When we consider growth in its entirety as a regulated self-increase of the whole organism and of its parts, we see how far it lies beyond the present limits of physico-chemical interpretation. The analogical phenomena of chemical polymerization and of the increase of crystals in a solution are interesting, but they do not at present bring us nearer understanding of the growth of organic tissues.

J. ARTHUR THOMSON.

GROWTH (Moral and Religious).—I. DEFINITION AND SCOPE.—This article has for its scope the sum-total of the moral and religious change through which a child passes in the attainment of moral and religious maturity, these changes being considered as natural processes. Two distinctions are to be made at the outset. (1) 'Growth' here used is a more specific term than 'increase.' In addition to the effects of mere increase in knowledge and power, we have to consider changes in children's interests, points of view, and feelings and attitudes. (2) There are two factors in the changes from moral infancy to moral maturity—the congenital or constitutional factor, and the individual's own experiences. The former may be illustrated by the mental phenomena of puberty. Here a

1 The art. Adolescence and Childhood contain data and analyses that are presupposed in the present discussion.
change occurs that does not depend for its general character upon the individual's experience. On the other hand, many features of the individual's moral personality are a reflection of his previous experiences. Stout and others propose that the term 'development' should be used for congenitally determined character and 'growth' for the others. The present article will adopt this nomenclature.

Development and growth do not, however, denote two independent series, but one series of changes each of which has the two discriminable factors. Thus, a hungry baby is bound to make some kind of demonstration, but what kind depends upon the experiences that have previously been associated with feeding. Just so, the ripening sexual instinct is bound to manifest itself morally, but the conduct of each pubescent boy or girl depends partly upon habits of thought, speech, and conduct already acquired.

Development is the manifestation of instincts and impulses, of which the food-instinct and the sex-instinct are in a peculiar sense basal, but which include many other learned tendencies, such as curiosity, play, mere gregariousness, emulation, and sympathy. Such tendencies are always co-efficient in character, but of themselves they do not defend parents in what's.

Man's original equipment dates far back and adapts him, directly, only for such a life as might be led by a family group of wild men among brute forces of land, water, storm and sun, fruits and berries, animals and other family groups of wild men. But he must be a new man, in which his original nature is often at a loss, and against which it often rebels (Thoreau, 91).

Each item that is ascribed to development (as distinguished from growth) is a generic tendency rather than a specific attainment. What is specific is the particular direction given to the tendency by the individual's own experience in a particular environment, and this is what we mean by growth. While the general direction of both racial and individual progress is in some sense pre-determined by original nature, the character of each individual depends also upon accumulation of the effects of particular reactions to particular stimuli. Because this cumulative process is itself spontaneous and constitutional, we are justified in calling growth a natural process. Further, we are justified in designating as natural any common method whereby the species as a whole, or a race or men, expresses a fundamental tendency of human nature. Thus, the monogamous family is a natural, though not the exclusive, instrument of the reproductive instinct. In a parallel way, society at large is natural; and, consequently, the cumulative effect of society upon the individual is natural also. An unnatural reaction is one that either defeats an instinct or fundamental tendency, or (though it satisfies an individual) is incapable of social approval and adoption.

II. CHARACTERISTICS OF THE DIFFERENT STAGES OF GROWTH.—Efforts have been made in recent years to construct out of congenital factors a picture of the normal progress of the child's personality. The suggestion of such a possibility appears to come from the fact that the human embryo assumes a succession of definite forms that correspond in part to an ascending series of embryonic forms of inferior species. Here, to some extent, the individual body recapitulates the physical evolution of the species. May not the mental life of the immature individual similarly recapitulate the mental history of the race? This hypothesis was adopted in such a rigorous fashion as to give an impression that the three essential stages of the life history of character is that a child should run through a series of congenitally fixed periods in each of which one's social attitudes are pre-determined (see Literature on the development and growth of the child).

1. First Year.—The pre-individual stage.—The infant reacts to things and to persons in much the same way that a child would react to the same things and persons. This stage is characterized by the child's inability to differentiate between self and other. The infant is unable to distinguish between the self and the external world, and responds to stimuli in the same way as if they were coming from within the body.}

same way. There is little realization either of one's individual selfhood or of other persons as objects that have thoughts and feelings. Nevertheless, a basis for genuinely social habits can be laid now, since the present association with parents is a familiar experience of persons. Such association with persons is the surest quickener of intelligence, and the surest building of spiritual and moral interpretation of one's world.

2. Ages 1 and 2.—The period of preliminary socialization by imitation.—Even yet the child does not steadily distinguish himself from others. But his ability to walk and to talk, and his increasing control of hands and arms, make possible greatly increased interaction with other persons, and increased participation in the common consciousness of the family.

He acquires many antipathies and likes that he feels, but cannot explain, in later life. . . . If the parents around him show fear of worms, insects, snakes, darkness, lightning, etc., he shares their feelings and may in later life be unable to overcome his timidity and repugnance, although he knows that there is absolutely no basis in reason or fact for such feelings (Kirkpatrick, 87).

In the same way attitudes towards persons, and even towards one's own pleasures and pains, can be elicited and formed into habits even at this early age. This is especially evident in the threemen and in the twomen.

3. Ages 3, 4, and 5.—The period of preliminary individualization.—The child now discovers himself as an individual and experiments with his own selfhood as contrasted with both things and other persons. A boy in his fourth year requested of his mother something that was entirely beyond her power. When she attempted to explain, he cried out, 'You can, too! You're a bad mamma! I haven't any mamma any more!' Here is no longer the complete absorption in woes that is characteristic of the preceding years, but a self-conscious woe and an effort to find one's place among persons. Towards the end of this period there is likely to appear cheer contrariness, or apparently unmotivated refusal to conform to social expectation. Such refusal is often, no doubt, a genuine experiment which brings the pleasure of self-assertion in new fields. This individualization offers new opportunities for moral and religious growth. Individualization is a necessary foundation of character. Therefore the process should be encouraged, not hindered. This preliminary self-assertion expresses no moral fault, and it should not be treated as a violation of a moral code or of social standards.

On the other hand, conformity without experiment should not be prized. This implies that the best moral results are to be expected of a child who is not encouraged to find out for himself that certain kinds of conduct bring mutual pleasure, and other kinds mutual pain. That is, his experimentation, while free, should be within a social group, so that success shall mean a shared pleasure, and his earliest self-consciousness be a social self-consciousness. If, now, the family is a religious one, with habitual outward expression of its faith in speech and in family devotions, in church attendance, in religiously motivated conduct, the child, even at this age, can begin the conscious assimilation of religion. Christian family life is naturally and normally the introduction of the child to the duties and privileges of the family of God (see CHILDHOOD, § 4).

4. Ages 6 to 11 inclusive.—A period of socialization by means of regulation and competition.—(1) The child now begins school life, with its new social environment. (2) In the home also rules are now imposed with increased assumption of the child's responsibility. (3) Association with other children in games and plays extends greatly, and the necessity of playing according to rules increases throughout the six years. This necessity is due partly to the possession of growing strength, initiative, resourcefulness, which would be destructive if the child's exuberance were left unchecked. It is due also to the increasing remoteness of the ends sought. Finally, it is a consequence, in part, of the development of instinctive tendencies which Thorndike calls 'mastery and submission', 'approving and scornful behaviour', and 'emulation or rivalry.' Games during these years work out these tendencies on a larger and larger scale. But another factor also enters. Competition changes its character as the years go by. At first each individual plays for his own advantage or honour, as in the game of 'tag.' Then come games in which each child plays on a 'side.' But still the individual seeks individual success, with little or no team work, as in the game of 'gum.' But towards the end of the period there is an approximation to true team games, that is, games in which functions are specialized and the player seeks the success of the team rather than personal glory. But the approximation is ordinarily only a distant one. Individualistic and social impulses still struggle against each other in a most interesting manner, as can be seen in the boys of twelve to play football. Clearly we are witnessing the approach of the bloom-time of one of the socializing instincts. (4) Towards the end of this period there is another manifestation of the same thing in the combination of leadership and chumming. Girls form 'sets' and boys form 'gangs,' with a spontaneity and impulsiveness that points toward an instinctive origin (see CHILDHOOD, § 3). (5) In this period children usually experience important contacts with society in a larger sense, as in the Church, in social customs, in the ordinances of a city, or the laws of the State. The grown-up world is likely to appear to children in their impetuousness as chiefly a hindrance to freedom, as negative regulation. Probably this cannot be altogether prevented. Yet it is important that children should discover that the regulations of society are not arbitrary, and that freedom comes through obedience to the conditions of socialized existence. Here the family organization is likely to be the determining factor. Arbitrariness, or what seems like it, on the part of parents may easily intensify the already strong tendencies to individualistic self-assertion on the part of children; and this experience, if it is cumulative throughout the whole period, may permanently stunt the personality on its social side. In the family, and in the Church, a child should be conscious not so much of regulation as of fellowship. In this way he will have a means of interpreting the values of his own little competitive organizations, and he will have reinforcement for the developing social instinct. (6) Yet the special mark of this period cannot be any profound socialization of motives. The growth of character takes the form, rather, of a heightened sense of laws, of rights, of penalties, of the necessity of co-operation, and of the force of social opinion. That is, the will is being socialized on the plane of 'the law' as distinguished from 'grace.' (7) But it is a mischievous exaggeration to say, as is often done, that this period is naturally one of unrelieved egotism. The narrowness of the child's experience, the lack of foresight, the seeking of proximate rather than remote ends, the impulsiveness—these do, indeed, render impossible the broad sociality that adults demand of themselves. But against all this we must set not only the fact that children spontaneity, apart from all instruction, organize themselves so.
GROWTH (Moral and Religious)

traces of the parental instinct. This should not be confused with the sexual instinct, which ripens later. The parental instinct is manifested toward his own babies and smaller children, domestic pets, dolls, toys, and parents. Girls display it in certain directions more than boys, but it is actively present in both; and it should be developed as a softening and socializing force. Second, children respond to parental affection with real devotion. Adoration amounting in many cases to worship, family loyalty, and pride, a genuine glow of affection—these are the rewards which parents may reap who really share their life with their children.

(8) The religious significance of this period can easily be gathered from what has already been said. If the social environment of a child is a religious one, he naturally conforms to it under the same conditions that favour conformity in other respects. The fundamental condition is that he should realize himself as a part of an actual religious fellowship, as his father's family, a Sunday-school class, or the Church. Religion will then be to him an extension, through imagination, of social experience on the level of his present life. Laws of conduct, with the consequences of right and wrong acts; admiration and condemnation; the inclusion of God in one's family life, and loyalty to Jesus as one's Saviour—these will sufficiently indicate the nature of the religious impulses that arise at this age. Neither intellectual nor moral depth is to be looked for as yet.

Ages 12 to 14 inclusive. Early adolescence.

—No single phrase can adequately characterize the method of socialization that now sets in. For, on the one hand, there appears a tendency to take a self-assertive or at least independent attitude towards social authority (as in the family), and, on the other hand, to deepen one's social attachments ('gangs' and 'sets,' personal friendships, loyalty to 'the team,' parent-church activities. The whole expresses the approach of puberty, or the attainment of it. Here the peripheral facts are the ripening of an instinct. For the sake of simplicity, the age characteristics of boys are taken as our starting-point. Beginning with this period, deduction should be made, therefore, for the earlier development of girls; and the deduction should increase as the years go on—from about one year at the beginning of adolescence to about three or four years at its close. Both the apparently contradictory marks of the period above named have a positive moral significance. The new attitude towards social authority is not a mere revolt, as the complementary fact of the deepening of social attachments shows. Rather, the profound socialization that is being prepared for—requiring, as it will, the steady devotion of personal conviction and seasoned loyalty—preemptes the detachment of the individual consciousness from chance groupings and from control by mere rules passively submitted to. Thus, increasing individualization and increasing socialization are merely complementary phases of a single process. Rather, they may be; but the possibility also arises for a deeper selfishness than any that childhood knows. Self-assertion often becomes revolt, open or clandestine, against the social order. There is a sudden acclamation of juvenile crime at precisely these years. Yet even in this very revolt involves the socializing process that is going on, in the fact that his criminal acts are usually done in 'gangs,' or at least prompted and supported by gang enterprises and sentiment. The moral opportunity of parents and teachers is clearly indicated. It is to release the youth progressively from childhood's restraints, and, by extending, free devotion to worthy socially-organized activities. There is now a rather general recognition that the youth's interest in heroic men and women furnishes an important clue to some of the best material for moral impression. The youth organization can be morally utilized by promoting clubs for outdoor sports and other appropriate activities. These things are now widely utilized also in religious work and training. The Young Men's Christian Associations in particular have seized upon the organizing impulse, and used it effectively. There is now hencé a literature of religious and moral work with boys, and most of it makes some sort of boys' organization a central consideration. Further, on the part of Sunday schools, along with the greater use of literature, for there is wide experimentation in methods of social-religious group life. Confirmation or Church membership now makes a vital appeal to the grouping impulse in many youths.

6. Ages 15 to 17 inclusive. Middle adolescence.

—For the general moral significance of the attainment of reproductive capacity, see ADOLESCENCE. The main difference between this period and the one just described are fittingly indexed by the fact that, whereas in early adolescence the sexes have a sort of regulation for each other, in middle adolescence sex attraction becomes clear and conscious. Here, again, we find a period of moral growth fundamentally determined by instinctive development. The moral possibilities expand the moral dangers radiate from the same centre. The misuse of sexual power is unquestionably the chief moral failing of humanity. But around the larger centres of life preparations for family life gather some of the greatest moral forces. If we put together the two facts of increased capacity for sentiment, and the necessity of reproductive preparation, the reason that the conditions become so much more diverse. For example, we must now deal with the moral growth of persons the large majority of whom are engaged in industries, either within or without the home. Some of the effects of shop and factory labour upon adolescents we can already discern. From the monotony and fatigue of their daily work, for instance, they react towards flashy, exciting, and often perilous pleasures. On the other hand, religious conversion occurs more frequently during these years than at any other period of life. Indeed, the ages of sixteen and seventeen mark the climax in the age curve for conversions in so many different and widely scattered groups that we cannot doubt that we are dealing here with a natural law. But misunderstanding of the significance of such facts is easy. What is proved is that, in populations subjected to certain emotional incitements, the largest response comes from young persons of sixteen and seventeen. This by no means proves that capacity for religion suddenly awakes at this age. It proves only that responsiveness to certain kinds of appeal is at a maximum. A complementary indication of a natural law may be seen in the fact that religious Confirmation almost the world over has tended to seek its centre of gravity in point of age in the earlier period, not far from the age of fourteen. At fourteen the religious response is social in his majority, and not spiritual. What we must recognize as the peculiarly important fact about middle adolescence is that the new capacity for sentiment carries with it a certain plasticity that is of exceeding importance for education. This plasticity does not exist before; and, once gone, it is likely never to return. As has been indicated, the ages with itself is a certain non-

2 See Jane Addams, The Spirit of Youth on Our City Streets, New York, 1908.
GROWTH (Moral and Religious) 469

structive tendencies. The moral interests of the race, therefore, demand that these years should be devoted to education—possibly in connexion with industries, but certainly with opportunity for freedom, play, idealization, or the development of the changing social relationships and functions of the young. The youth is now fully his own master, the maiden (in her different way) her own mistress, and upon each now comes the full authority and responsibility of a citizen. Marriage is to be contracted; an occupation is to be entered upon; legal majority with all its responsibilities is attained; at last one is a full member of society and of the State. The general effect is to check the emotional ferment of the preceding period, and to give greater place to rational reflection and deliberate decisions. Bearing in mind that mental and moral growth is checked for multitudes at various stages, especially of adolescence, and that many youths squander their powers by frivolous living, we may say that the normal line of moral and religious growth at this period has as its main characteristics independent reflection and the solidifying of the bearers of responsibility. A frequent result of the deepening realization of responsibility for one's own thinking is doubt concerning religious and social questions, whether in religion or in politics. Indeed, dissent from the socially accepted is a frequent phenomenon of adolescence at all its stages. But the quality of the dissent is likely to change from arbitrary impulses at the beginning to emotional unrest (as doubt of one's status before God), and, finally, to the steadier questioning of a mind that is interested passionately. One's acquisitions go on increasing, and subdivision and differentiation occur within one's thinking and one's purposes, but the fundamental motivation of the whole is generally determined before the end of adolescence.

III. GENERAL PRINCIPLES. It remains now to indicate certain general principles that apply to this whole series of growth periods.

1. A normal mental life processes as complex as those with which we are here dealing has inevitable limitations. Growth periods and transitions have, for instance, no such sharpness as any numerical division must have. Such divisions, too, can indicate only a central tendency from which there is much variation. Further, the qualitative description can never adequately represent the temperamental and other variant shades that a given mental tendency may take. Nevertheless, the fact that, to use common parlance, 'no two children are alike' is misused and becomes misleading whenever it seems to justify the abandonment of definite methods and expectations.

2. A single central principle of moral and religious growth can be discerned. Thenceforward these periods, namely, the reciprocal individuation and socialization of consciousness by participation in the social order. Intercourse with persons is the primary condition of the development of self-consciousness. The individual's acquisition of language is, for example, a crucial point for his whole development. Further, the social inhibitions and the social pleasures to which the individual is gradually introduced both awaken and socialize self-consciousness. Hence the incompa-

3. This principle gives us likewise a clue to arrests and perversions in moral and religious growth. An arrest consists in the persistence of the personality social consciousness and mode of functioning beyond the chronological period to which it naturally belongs. One's growth in the disproportionate growth of any natural factor in any period. Now and then congenital conditions or unfavourable physical environment give a certain insidious and pernicious influence to this basis a monstrous moral growth supervenes. But in other cases some unfortunate social emphasis or social neglect turns the forces of growth into side channels. The permanency of the generally one whose natural and even useful egoistic impulses have been socially over-indulged in early life until a habit has been fixed. Thus it is, too, too, that society itself produces not only such relatively mild perversions as egoistical self-consciousness on the one hand, and social callousness on the other, but also much of the criminality and the vice that affect us. Undoubtedly degeneracy of certain stocks is at the root of such crime and vice; there is often relative incapacity for response in one direction, and disproportionate strength of impulse in another. It would unquestionably contribute enormously to the moral health of society if these stocks should cease to breed. But it remains true, on the one hand, that the outcome of growth, even for one with unfortunate heredity, depends in great measure upon the social habits and pleasures that he meets during his plastic years; and, on the other hand, that a great proportion of vice and crime is simply perverted growth on the part of fairly well endowed individuals. Such perverted growth must be charged to the inadequate provisions that society has made for a normal moral life on the part of the young. Sexual vice, for example, though it is the utterance of an instinct, is enormously promoted by the refusal of adult society to face the facts of sex, and to incorporate into our dealings with the young a socially constructive sex-consciousness. Most of the heart-rending wrongs of society, in fact, thrive by virtue of specific social experiences of the young. The natural correlate of our analysis of growth and its laws, therefore, would be that society should regulate all its intercourse with the young on the principles of education.

1 See the 8th Year-Book of the National Society for the Scientific Study of Education, Chicago, 1898.
and religious growth, together with a few studies of practical missionary work promoting such growth. The reader should consider the literature appended to art. Child Life as a part of the process.

I. GENERAL WORKS ON THE GROWTH OF MORAL CHARACTER:

II. WORKS CONCERNING THE FAMILY AND RELIGIOUS LIFE:

III. GENERAL WORKS ON METHODS FOR PROMOTING MORAL AND RELIGIOUS LIFE:

GUIANA.—1. Name, geography, and physical characteristics.—The origin and history of the place-name 'Guiana' or 'Guyana' are obscure, despite the very full and pregnant note by G. E. Church prefixed to the article under this name in EBr, 1874, vol. xii. p. 674. The name is almost certainly compound of the two local Red men's root-words ess or es and oca, which respectively indicate 'water' (or rather 'river'), and 'the place of.'

There seems little doubt that the name Guiana was unintentionally coined by some of the earlier explorers of the 'Wild Coast' of the north-east of the southern continent of America. In sailing past the long series of river mouths and deltas which occupy the coast between the Amazon and the Orinoco, they very probably inquired of the few natives of the locality with whom they came into contact as to the name of the new land, and, being answered that it was a 'place of many rivers,' misunderstood or misheard this to mean that Guiana or something that sounded like it was the proper and accepted name of the country which they saw from their ships.

Naturally enough, the extent of this imaginary land of Guiana was undefined in the minds of these earlier explorers. Probably it was too at first merely an alternative for what they had before spoken of as the 'Wild Coast.' Then it was thought of as extending quite indefinitely back from the coast, even perhaps as far as the then unknown Amazon. When this was ascertained, it was all at a very distant place, though some—and those the more dominant tribes—were further advanced than others. As it happened that the chief and most enduring European influence brought to bear on the Red men of Guiana was that of the Dutch—the English, though a long way behind, perhaps second in this respect—and as it is close together, also that behind these sources there was some sort of water communication between the two great
rivers Orinoco and Amazon, and that the whole of the land watered by the rivers of Guiana was thus a great island, the so-called 'Island of Guiana,' a huge delta-island, as it were, of the single great river-system which the Amazon and the Orinoco was then supposed to form.

About the mouths of the rivers of the Guiana coast representatives of various European nations—Dutch, English, and French—at an early period established a few widely scattered settlements, and thus acquired some sort of claim to possession. Meanwhile other colonial nations—Portuguese as regards the whole of the southern part of the continent and the Spaniards as to the northern part—professed to have acquired between them, by gift from the Pope, exclusive rights over the whole continent, before that country of Guiana, which even then was more or less de facto possession of the Dutch and others. For several centuries Dutch, English, and French struggled, each against the others, for possession of Guiana, and were often much to their indignation—regarded and dealt with as interlopers by the Spaniards and Portuguese. Only within quite recent years has the last of the Guiana boundary disputes between Dutch, English, and French and the Brazilians and Venezuelans—the two last-named respectively representing the old Portuguese and Spanish claims—been settled.

Nowadays Guiana—the old island area of Guiana between the Orinoco and the Amazon—is divided, from north to south, into Venezuelan Guiana (i.e. that part of Venezuela which lies south of the Orinoco), British, Dutch, and French Guiana, and Brazilian Guiana (i.e. that part of Brazil which lies north of the Amazon).

The island of Guiana, of course, never existed, in the strict geographical sense of the term; but, as it has proved, the term did cover something real, in that it applied to an area distinct in physical features, and, perhaps consequently, in the kind and condition of the natives who occupied the land first and still longer there. Towards the back of the so-called 'island' there is a group of mountains, mostly flat-topped and hardly anywhere exceeding 1000 ft. in height, between which and the main rivers of Guiana, some of these flowing towards the west to join the upper waters of the Orinoco and the Amazon, while others—the longer and more important ones—run eastward into the sea on the Guiana coast. Except for the mountain watershed, to which reference has just been made, and a few minor and isolated elevations, the whole of Guiana is comparatively low and of recent origin; indeed, a very large proportion of it consists of actually recent alluvial deposit from the many rivers. The long slope from the coast to the main watershed is for the most part densely covered with trees; and the slope from the watershed downward towards the main alluvia of the Orinoco and the Amazon is chiefly open country, locally called savannah, with few trees except in the gullies.

2. Ethnography.—At the time when Europeans first entered and penetrated the region in question, it was inhabited by red-skinned natives obviously belonging to a considerable number of tribes, more or less distinct from and hostile to each other, and all at a very early stage of culture. Though some—and those the more dominant tribes—were more advanced than others. As it happened that the chief and most enduring European influence brought to bear on the Red men of Guiana was that of the Dutch—English, though a long way behind, perhaps second in this respect—and as it is close together, also that behind these sources there was some sort of water communication between the two great
litter change in the condition of the so-called 'Red
Indians,' from the first entry of Europeans till
comparatively recent times. It is true that the
early European settlers introduced into Guiana
large numbers of African negroes for manual
work on the tropical plantations; and that, though
these plantations were very seldom far from the
coast, the negroes, especially, from the nature of the
work, were more brutalized of them—did from
time to time, and often in large numbers, escape
into the forests of the interior and make their
homes not far from those of the Red men. But,
as it was also part of the established Dutch policy
to use their red-skinned allies against the escaped
black slaves, there was hardly any intermingling
between these American and African colored folk;
and it was only much later—quite recently, indeed,
when the gold which had long been sought there
had at last been discovered, and the White colonists
themselves had thereby been attracted in large
numbers into the interior—that any very consider-
able change occurred in the habits and condition of
the Guiana Red men. What the latter were
up to a very few years ago they almost certainly
were when the Dutch established their first colony,
In 1621, on the Ressequito River.
From time to time many different names have been
more or less vaguely applied to the various
groups, or so-called tribes, of Guiana Red men; and
it is difficult to assign them in any
and scientific way. But in the main they
belong to four not very widely separated branches
of the American race. In the swampy forests
nearest to the sea, are the Warraus, the least ad-
vanced of all the local tribes, and probably repre-
senting the earliest of the known inhabitants of
the country. In the forest, a little way inland
from this, are the Areewaks, who must have come into Guiana, from
the north, at a later date than the Warraus, but
sufficiently long before the arrival of White men
to have established themselves firmly and almost
as aborigines. Inland from the Areawak country
the greater part of Guiana is, and has been through-
out historic times, occupied by several branches of
the great Carib stock, all the members of which
may conveniently be distinguished as 'true Caribs.'
Still further from the sea, i.e., entirely in the snows,
exists the last of these stock, whose
or were, the so-called Waparos, who may or may
not have been originally of Carib stock. The true
Caribs and the Waparis, almost certainly reached
Guiana after the Areawaks, and not very long
before the discovery of the country by White men.
Indeed, some of these true Carib tribes entered
Guiana from the south, by the waterways con-
necting the Amazon with the Guiana river-system,
when comparatively following the settlement of
the Dutch on the coast.

3. Stage of culture—All these Red men were in
a very primitive stage of that culture which was
developed—sometimes, as in Mexico, to a very
high degree—in America. And though, as might
be expected from their history as briefly indicated
above, the Warraus are at a somewhat lower stage
than the other Red men of Guiana, the difference
is not very considerable.
The Red men of Guiana, so far as their habits
have not been altered by European influences, are
in the stage at which they live by hunting and
fishing, in much the same way as that of a primitive
stage too simple to merit the name of agriculture.
Four-footed game and birds are plentiful every-
where. Fish are extraordinarily abundant in the
rivers, large and small, as also in the sea. Fresh-
water turtles are so numerous in the rivers that
their flesh and eggs provide the Red man with a
considerable addition to his animal food; and near
the sea, crabs and shell-fish are at least equally
plentiful. Nor is there any lack of wild fruits
and other vegetable food. As to cultivation, the
cassava plant is the chief object; and the roots of
this made into 'bread'—much of which is further
manufactured into the slightly fermented and
highly nutritive drink called paosoro—supply a
very large part of the food of all the tribes except
perhaps the Warraus, who have a poorer régime
than the others, and are said to exist on swamps
where cultivation is difficult if not im-
possible, use the fruit and pith and sap of a palm
(Mauritia flexuosa [Linn.] growing wild round
their homes in place of cassava.
None of these Red men had occasion—and, in propor-
tion as they are out of contact with Europeans,
still have little occasion—for much in the way of
clothing. A small apron is quite sufficient except
at festivities or in courting; and on such occasions
a greater or less amount of ornamental clothing is
easily added by working up the feathers, seeds,
shells, and beads which Nature has abundantly
provided.
As for shelter, on the open savannas, where the
wind is often cold, fairly large and substantial
houses, with thickly thatched roofs and thick mud
walls, are built; throughout the greater part of
the forest region much less substantial houses of
leaves and posts suffice; and in their low-lying,
palm-tangled swamps the Warraus construct for
themselves yet simpler shelters, and, indeed, do not;
but, owing to the nature of the ground, they have
to place these houses on somewhat substantial
platforms of felled palm-trunks. In none of these
cases is the house in any way much elaborated;
and nor is much labour involved in getting the material
together.
Fire was always easily made by rubbing two
sticks together, in a swift and easily learned way
(cf. art. FIRE), and fuel lies everywhere around.
Most of the tribes are good potters, after a simple
fashion. Bow and arrows, blow-pipes—the latter
used only on the savannas—and fishing-gear they
are singularly expert at constructing. The only
other prime necessity of their simple and easy lives
is the hammock, or hanging bed, the invention
of which is one of the great triumphs of ingenuity which
they have achieved. The material of which the
hammock is made is either the cotton which grows
almost wild about their houses or the strong strings
like fibre which they know how to extract from
palms and similar plants.
In short, these Red men, when first discovered
by Europeans, had attained to nothing more than
that stage of culture in which each individual, or
at any rate each family group, knows how, from
the material ready to hand, to supply easily all the
immediate needs of life, but is unable, owing to
ignorance of the necessary arts, to produce treasure
of wealth for the use and enjoyment of succeeding
generations.

—It is more difficult to describe what would appear
to be the mental attitude of this people, at this
stage of culture, towards their fellows and towards
the world in general. The individual Red man of
Guiana knows only himself, and knows neither of
any beginning nor of any end to that self. He
sees children born into the world, and—if and when
he thinks on that subject—he probably assumes
that he himself was once 'born,' but not that he
came into existence as a kind of passive
being. He assumes that at the crisis of birth he—i.e., the
'being' whom he recognizes in himself—merely
passed into a new body. Similarly, when he sleeps
he dreams perhaps that he is a jaguar or a tree
or some other man or thing than himself; and when
he is awake, if he remembers his dream at all, he
assumes that he (his being) was really at the
moment that jaguar, tree, or man, and that he has now passed back into the body which he happened to occupy at the moment when he went to sleep. Once more, he sees the men die, and proclaims that he himself will one day die; but he does not for a moment suppose that this will be the end of him, but rather that it will be merely the passing of his mind into another body—much as if during his dreams he has already been in other bodies.

Another thing which it is necessary to understand is that a typical Guiana Red man is—and, so far as he retains the innate habit of thought of his race, could not but be—the purest of egoists. He claims no rights, and instinctively claims for himself certain rights, for instance the right to get for himself all that he is strong and clever enough to get. At the same time he can hardly fail to recognize the existence of innumerable other beings, which are more or less ‘good’ or ‘bad’ to him, but are all more or less elusive as to bodily form. These beings with which he comes in contact may be in what we should call human bodies, which may be those of Red men of tribes other than his own, or, again, not of his own family or not of his own household, but may be in bodies which we should call those of brute beasts; or they may be embodied in trees, or stones, or any other outward shape. Moreover, all these beings may be, as the Red man thinks, in existence in kind if they are not at times together the necessities of life is to guard himself against the attacks of the kemaisa. Against the open attack of the kemaisa he can to a certain extent guard himself, but against the insidious attacks which the kemaisa is able to make—in virtue of that being’s unlimited power of changing its form—the Red man naturally feels himself insufficiently equipped; and he therefore appeals for help against the kemaisa to the professional wise man of his tribe, the pesis, or medicine-man.

It may at first sight appear that this conception of the relations of good and evil is not very different from that which among more civilized folk takes the form of a great contest between good and evil, between God and the devil. But there is this difference, however, that to the Red man there does not appear to be any God to fight for him; it is a question of fighting only for his own welfare, without the help of anyone else, and the other side is as good or bad as he may. The question may be asked as to what is the nature of the material with which the kemaisa, when he does not use an arrow or other material weapon, works harm, and, again, as to the material with which the pesis counters it. In both cases the material is called by the Red man bessm; it is thought of as an essence extracted from some substance, and it may be used, now by the kemaisa and now by the pesis, much as, under the conditions of western culture, poison might be administered by an enemy, or medicine by a doctor.

The kemaisa and the pesis are both more clever, i.e. more artful, than their patient, and both possess one faculty which is of great importance to them; they know how to extract the real being of the red-skinned patient from the body in which it happens to be enveloped. For instance, the kemaisa, if he gets possession even of a fragment of the body of the patient on whom he intends to inflict ill—say even a few hairs or a nail-cutting—may be able to get possession of the whole being which was within the body from which the fragment was cut; or, again, that a knowledge of what we should be inclined to call intimation, can, for convenience of treatment, draw out the spirit (the real being) of his patient, just as one of our own medicine men may take possession of the body of his patient stripped of its ordinary clothes.

5. Morals.—The innate ideas of the Guiana Red man most nearly approaching to what, if he had ever for himself attained to any higher stage of
culture, would have been his religion have been briefly indicated above, and it now remains to note what, under the restraints of this very primitive type of life, is his line of conduct towards all outside himself. As a matter of fact, his morality, like his religion, is purely egotistic. Whatever he does he does for himself. His self is the centre of all; he is ultimately a polygamist—and no part of himself; and, so far as he takes trouble for them (and he habitually does much in this way), more because they are good—i.e., useful—to him. On the other hand, his children—one of the chief uses of his wives is to bear children to him—are (the boys at least) part of himself, and are cherished, lovingly. This difference in his personal relation towards his wives and his children is clearly indicated in his practice of the remarkable custom of cow-cotec, in accordance with which, as soon as the child is born, the mother, as a matter of course, at once resumes her ordinary daily tasks; but the father not only refrains from hunting and all similar hard tasks, but lies in his hammock, and is even nursed. The explanation of this strange custom seems to be that a part of the father's being is supposed to have been separated from him, having died in childbed; and is the recently separated father and child who require nursing—much as, in the process of plant propagation by cuttings, the first necessity is to provide for the healing of the wounded surface and on offshoot. Moreover, it is the egoism of the Red man which regulates the more or less kindly bearing—in proportion to the omen. The use of these is useful—towards his relations other than his descendants, and towards Red men of groups other than that to which he belongs. Again, it is his egoism, carried to extremes, which regulates his greater or less hostility towards strangers—whatever the colour of their skin—so long as he suspects them of possible evil intention towards himself.

It makes it quite plain that, in attributing to the Guiana Red men an extreme form of egoism as the leading motive of life, he has no intention of disparaging them. It is only that the Guiana Indian is a survivor from a very primitive stage in the development of mankind, from a stage before the first glimpse of religion, and the idea of the universe in the light so different from that in which the Guiana Red men—and a good many other equally primitive folk—exist.

The most practical lesson to be derived from all this seems to be that the difficulty of suddenly imposing our very much and differently elaborated system of thought, religion, and morality, on such folk as the Red men of Guiana is enormous, that the task should not be undertaken except after as full an understanding as possible of the conditions, and that it can be accomplished only, if at all, by civilized teachers who have agreed among themselves as to what exactly to teach.

GUILH.—See Gill.

GUILLIM.—See Sis.

GUBU (Africa).—See Negroes and West Africa.

GUJAR (Skr. Gjajara, the country now known as N. Gujarat and Rajputana which took its title from a tribe of the same name).—The Cymrae were adopted into Hindustan in the train of the Huna [V. A. Smith, J.R.S., Jan.-Apr. 1900; D. R. Bhandarkar, J.A.S., 1900, p. 167 ff.].—A tribe of cultivators, herdsmen, and cattle thieves, which at the census of 1901 numbered 2,103,023, found in the largest numbers in the Panjab, Rajputana, United Provinces, and Kashmir.

The theory of Cunningham (Districts of India, i. 64), that they are connected with the Yush-chi tribe of Central Asia, afterwards known as the Tokhari, is rejected by Halsey (J.C.R., 1901, l. 319 f.), on the ground that the latter are almost certainly of the brachycephalic type, while the Gujar is dolichocephalic. He therefore includes them in what he calls the 'Indo-Aryan race.' It is, however, certain that during the first five centuries A.D. hosts of the Scythian and Hun invaders of N. India became absorbed in the indigenous population, and were adopted into Hindustan (Smith, Early Hist. of India, 1906, p. 375 ff.).

In their purest form they seem to be found in Kashmir, where Drow (Journals of the Kasha Territoires, 1875, p. 194 f.), though he does not regard them as 'high Aryan,' found some with eyes lighter in colour than are common among other tribes of the country. In the Panjab they have much in the physique and customs of the Gujars which renders it probable that they are connected with Central Asian tribes.

In religion, the Gujjars of the Panjab have been largely converted to Islam, and not far from half their total number now follow that faith. In the United Provinces and Rajputana they are still largely Hindu. In the United Provinces they are usually worshipers of Siva and of the Sakti, or Mother-goddesses, and in particular of Sital Bhavani, who controls smallpox. They also worship the local village-gods, such as Chataram, and two tribal deities, Pyareji and Bada Sahib Ram. The latter are deified heroes of the tribe. Pyareji, whose shrine is in the Saharanpur District, flourished early in the 17th cent. A.D. He was one of the marvellous children of the folk-tales, and, when he grew up, the tribe was severely afflicted by the god of certain Brahman whom they had slain by treachery. Pyareji, who had by that time acquired saintly powers, exorcized the evil spirit, and the reputation which he thus acquired earned him Divine honours. The management of his shrine still remains in the hands of his descendants, who have now joined the Vaishnavite sect. Bada Sahib Ram was another worthy of the same class, who is worshipped at a shrine on the banks of the Jumna in the Ambala District. The Pyareji and Gurus are specially devoted to the cult of the saint Sarwar, whose shrine is at Sakhi Sarwar (q.v.). (Macalayan, Panjab Census Report, 1891, l. 136.)

The Muslim branch of the tribe, in spite of their conversion, continue to follow many of the animistic practices of their Hindu forefathers, such as the ceremony of waving lights over a bride to scare evil spirits. They consult Brahman astrologers to fix lucky times for domestic rites; and they worship not so much Allah as a host of deified heroes and saints, such as Gauri, the saints of Bahruch in Oudh, Madar Sahib, and other shrines of the faith. In some parts of the Panjab, members of the tribe claim the hereditary power of wonder-working and curing diseases. The head of one sept in the Jullian District pretends to cure
a skin disease which causes baldness, by pulling out a single hair from the head of the patient. He practices only on one Sunday in the month, and must accept no fee, because that condition was imposed by the fastir who conferred the power upon his ancestor many generations ago (Rosen, 1, 162). A branch of the tribe in the Hasara District shows that his correctness to Islam is recent and incomplete, by the retention of Hindu rules of eating, keeping strictly for personal use the vessels employed in cooking, puncturing purification before prayer, and praying with the hands downwards instead of upwards, as is the usual custom with Muhammadans (P.N.Q. ii. 45). The Gتچیار in the Bhavnagar State of Rajputana have a curious custom of making a cow of cow-dung, covering it with cotton, and then going through a rite of symbolical slaughter of the image. This seems to imply some form of totemic communion, or a commemoration of the actual killing of the sacred animal. The latter explanation is accepted by the neighbouring tribes, who consider that the Gتچیار are degraded by the rite (Rajputana Gazetter, i. 1899) 162. In W. India many of the tribes have joined the Jain community, while others for the Vaisnavas and Gt آی.1.

The system explains the evolution of primitive matter (prātās) or prātās) and the infinite variety of the universe by the hypothesis that primitive matter, in spite of its unity and indivisibility, is composed of three different substances, termed gusana (quality). Each of these signifies 'quality.' In addition to its earlier meaning 'constituent,' the later signification was formally adopted for the technical Sākhya term, and primitive matter was said to be composed of the three qualities. This rendering, however, is incorrect. The three gusanas in the Sākhya philosophy are nothing but the constituents of primitive matter (or of the material universe, developed from primitive matter), as proved by the express declarations of the Sākhya texts and by the connexion of the three gusana. The view that they were derived from Jacob's does not practically differ from this, when he contends (GGA, 1890, p. 203 f.) that, although the three gusana are regarded by the experts as the Sākhya authorities as constituents of primitive matter, the term originally denoted 'quality,' since the Sākhya system, as he maintains, goes back to a period at which to the Indian consciousness the categories of quality and substance were not clearly distinguished.

The three gusanas bear the names of sativa, rajā, and tamas. To assign to these, however, their etymological meanings of 'goodness,' 'passion,' and 'darkness' would be misleading; and, indeed, the terms do not admit of exact translation. The founder of the Sākhya philosophy regarded as most important for men those qualities in objects which excite either pleasure or pain or indifference (asaktya, inapātitya). Pleasantness was associated with the ideas of brightness and lightness, pain with those of incitation and movement (activity), apathy with those of heaviness and restraints. The world contains a number of things that were composed of three elements, each of which is manifested especially in one of the three above-mentioned dispositions. The author of the Sākhya system further explains the position of material products and the variety of impressions by the unequal and varying combination of the three constituents, which everywhere contend with one another, and give more or less complete expression to their own essential nature, according to the measure of success attained by one or two, in suppressing both the others or the third at some particular place. Thus allowed to develop freely, sativa is manifested in the object as light and buoyancy, in the subject as virtue, benevolence, happiness, cheerfulness, etc.; rajā in the realm of objects as force and movement, in the subject as every kind of suffering, anxiety, passion, wickedness, etc., but also as ambition, effort, and activity; tamas in the realm of objects as heaviness, rigidity, and darkness, in the subject as cowardice, fear, stupidity, sloth, etc. According to this theory, sativa predominates in the world of the gods, rajās in that of men, tamas in that of animals, plants, and minerals.

The most remarkable feature of this whole theory is clearly that it traces the characteristic of matter back to physical causes. The relation of the three gusanas to human belief and sentiment, modes of life and action, is described in the 17th and 18th chapters of the Bhagavad Gītā. It is a remarkable doctrine also that pleasure, pain, and apathy not only exist as subjective and individual experiences, but have their objectively real corollaries in the external world.

Every process in the material universe depends, according to the doctrine of the Sākhya, upon the action of one or more of the gusanas. The use of the infinite variety of the modifications to which they are subjected, every phenomenon, every development, and every change is explained by the qualities of these three elements. If, however, sativa and rajās and tamas have a place in all products, it is a necessary inference, from the principle that the product is simply the material cause in a determinate form, that they must have already existed in that cause, i.e. in primitive matter. As sativa, rajās, and tamas in the form of the product (priyās) fashion the universe as it exists, so in the form of the causes (kāraṇa-rāpa) they fashion the primitive matter before evolution begins. Is it possible, however, for the infinite indivisible primitive matter to be fashioned by three finite elements? Can it consist altogether of parts? The answer given to the second question is in the affirmative, just as a single stream of water is composed of many streams. And in reply to the first the explanation is offered that the three gusanas are finite only in the sense that they are present in their entirety everywhere, but that, on the other hand, there is no point in the universe where at least a minimum of these three elements is not to be found. As long as primitive matter remains quiescent, the three gusanas, according to the doctrine of the Sākhya, continue in a state of equilibrium. While this condition lasts, during which the constituents remain unrelated to one another, all the forces and qualities which display themselves in the developed universe are latent and inactive as germs in primitive matter. It must not, however, be inferred that during this period the three gusanas are completely at rest; that would be contrary to the nature of these elements, which are the product of evolution. It is rather that in primitive matter, before evolution begins, an isolated movement takes place within each separate gusana in such a way that each of the gusanas becomes for a time equivalent to itself, i.e., sativa becomes only sativa, etc.

When the state of equilibrium of the three gusanas

GUNTHERIANISM is 465

is disturbed, and they begin to contend with one another, the universe is evolved in the way described in the philosophy of the three guphas, i.e., the close of the inert and undifferentiated matter, and the mechanical influence exerted by the souls on the primitive matter which stands to them in a relation of perpetual dependence. Those actions of living beings which in the previous age of the universe have not yet received their remuneration, reward or punishment in a new age. Forthwith merit and demerit, which had slumbered during the period of the dissolution of the universe, awake to life, and proceed to call into existence a new creation. When the process of evolution of primitive matter begins, and the state of equilibrium of the three guphas is again established. This alternation of the rise and dissolution of the universe is repeated in the same cycle that began or ended.

It is obvious that this whole theory of the three guphas as taught by the Sankhya is a pure hypothesis, which shares the fate of very many other hypotheses of philosophical conceptions in India, as controlled by the theory of the three guphas.

GUNTHERIANISM.—Guntnerianism is the name given to a rather vague defined body of teaching, mainly philosophical in scope, but with important bearings upon certain theological dogmas, which originated in the writings of Anthon Günther (born 17th Nov. 1785 at Lindenau in Bohemia; died at Vienna, 24th Feb. 1883).

1. Life of Günther.—He was the son of devout Roman Catholic parents, and from his youth to the study of Kant, Pufendorf, Schelling, etc., seems he was a while to have been mentally hastened by religious convictions. When, however, in 1801 he moved to Vienna with the household of Prince Reissenheim, in which he acted as tutor, he fell under the influence of Clement Mary Hofbauer, afterwards canonized, with the result that his faith in Christianity revived, and he set himself to write a new theology. Two years after his ordination (1829) he entered the Jesuit novitiate, but found that he had no vocation, and then for the remainder of his days (1824-60) he settled down quietly at Vienna as Priest and Preacher, giving some part of his time to pastoral work, but occupied mainly with philosophical and theological speculations. For more than twenty years he acted as official censor to a Government, and was a member of the theological revision. He refused tempting offers of a professorship at Munich, Bonn, Breslau, and Tübingen, probably in the hope of ultimately securing a similar distincion at Vienna itself; but, before the opportunity appeared, he deserted the Church, and devoted himself to scholarly researches, and the study of the philosophy of God, as a whole, and the doctrine of the Trinity. While in Vienna, he included there, in 1861, his Theory of Philosophy, which he placed on the Index of Bome, though this recognition was given to his personal integrity and good intentions. Günther submitted to the condemnation, and his work is still in print.

2. System.—It was the purpose of Günther to build up a philosophical system in opposition to the prevalent Hegelian pantheism, which he considered the philosophy of the schoolmen was inadequate to meet. In his writings a certain fundamental dualism (which attains its climax in the antithesis between God and the created universe, and all his revelations). Nor can the student of his works, casual and unsystematic though they be, resist the suspicion that the development of his ideas has been guided by an exaggerated desire to discover analogies and symmetrical features in every field of thought, and that the anticipations of being able to provide some sort of natural explanation of the great Christian dogmas of faith has moulded, consciously or unconsciously, the whole of his psychological theory. It was a conspicuous element, if not a fundamental unit, of Günther's teaching that there is no real distinction between the truths demonstrable by human reason and the mysteries of faith. The latter are not to be regarded as beyond the range of human intelligence unaided by revelation. On the contrary, he maintained that pure reason is capable of demonstrating the 'why,' though not the 'how,' of such revealed dogmas as the Trinity and the Incarnation. Revelation held to be only hypothetically necessary; that is to say, in so far as man's intelligence had been improved by original sin. From this position it resulted that reason is the supreme arbiter, and ought not to be regarded as the handmaid of faith—a view, as the Papal condemnation points out, which laid open to the objection that knowledge and faith are not distinct things, and, further, that the dogmas of faith may change as knowledge is perfected. These theological conceptions rested on Günther's ground from the modern scientific point of view. It is nevertheless an interesting essay in explanation, which to the Indian mind has appeared possessed of such convincing force that the idea has become the absolutely common property of all philosophical Sanskrit literature. Even at the present day the treatise on 'the primitive principles' in India is controlled by the theory of the three guphas.

Similarly, in his psychological analysis of man's constitution and mental processes, Günther finds an aid to the comprehension of the mystery of the Incarnation. In man, there are three elements—body, psychic principle (Geist), and spirit (Geist). The psychic principle is the product of
GURKHA, GORKHA.

The dominant tribe in Nepal, which takes its name from the District of Gorkha in the N.E. portion of the valley of the river Gandak, between the rivers Trишalṅгά and Svet Gajāk, the chief town being Gorkha, 56 miles W. of Kālmānpūr (q.v.), the present capital of the country. The name Gorkha is popularly interpreted to mean 'cow-protector' (Skr. gokṣapa); by others it is connected with that of the national saint, Gorkhāmath (q.v.), a mysterious figure of whom the recorded history is little more than legend (Wright, Hist. of Nepal, Camb. 1877, p. 140; E. H. Wilson, Essays, i. 213); but it is more probably a local name which has acquired its present form and interpretation under Brāhmān influence. The present dynasty claims Rājpūt origin, tracing its descent to the son of Rāja Samāri of Chitābor in Rājpūtāna in the 12th cent. A.D. But the recorded genealogies begin with Maharāja Deva Sūkh (a.d. 1506, a date confirmed by the MsS collection in the Durbar Library, p. 206, JAS 89 XIII. 17). A member of this dynasty, Prithvi Nārāyaṇ, in 1769 expelled the ruling house and has been constituted hereditary king on the 10th of the light half of the month Jej (May–June), at which the weapons of war are worshipped and animal-sacrifices are offered, is the most popular because it is comemorial of the animistic beliefs which form the real basis of their religion. Though nominally Hindu, the bonds of caste sit lightly upon them. The fowl are not killed for food, the pulse and rice, which must be cooked by each man for himself, and with due regard to the laws of ceremonial purity. Anything else all Gurkha...
will eat in common; and the only prohibited meats are beef, the flesh of the nilgai, or blue bull (Boselaphus tragocamelus), and that of female goats, which none eat but the cowherds. Game and fish are also allowed, and Gurung use buffalo meat in their own country—a practice which they deny when serving with the more Hinduized Damaras and Khamars (Vit. 1. 20. 13). Caste restrictions make the Gurkhās specially valuable on field service, and tends towards greater cohesiveness, particularly in Highland regiments, than is possible in the case of Indian sepoys, who are more scrupulous in matters of food and drink.

The Gurkhā religious tradition is thus a mixed character. The present ruling dynasty, like all new converts, follows the tenets of Hinduism with more anxious care than many of their co-religionists in the Indian plains. They have a great reverence for Brahmans, and the slaughter of the sacred cow is rigorously prohibited. The result is a very decided observance of orthodox Hinduism. Thus, though as present in the Indian plains there is little actual worship of Indra, the Vedic god of the firmament, except in a vague way for the purpose of securing timely falls of rain, in Nepal there is a regular feast in his honour, the Indrajatra. But it is significant that this is combined with a folk festival, the Bhadra, in honor of Devi Kumari, the female goddess—one of the many forms of her cult which has probably been derived from the indigenous Animism. The usual festival of Indra, however, may have been, in a great measure, derived from Buddhism. Indra or Sakra being a favorite object of worship among the later Buddhists (Oldfield, ii. 312 f. ; Wright, p. 385; "A Visit to a Buddhist Temple between him and Lond., 1896, p. 205"). Siva is worshipped under the forms of Sambhamātā, the "Lord, giver of prosperity," and Pasupatiṇātha, "lord of cattle," the latter cult probably absorbing some of the earlier forms of worship. Siva as the Sivaratri feast, the "night of Siva," is very popular, the principal object of worship being the four-faced linga which stands in the temple of Mahādevā at Pasupati. To this prayers and offerings are made; fees are given to the presiding Brahman, who pours water on the linga, wash it, and cover it with flowers. When this is over, the officiating priest, after repeating sacred verses, reads out of the holy books the many names and epithets of Siva, while the worshippers fling leaves of the banana or cypress (both sacred) over the top of the linga (Oldfield, ii. 321). Equally popular is the worship of his consort in one or other of her many forms. The chronicle, writing of the king Sivadeva-varma of the ancient Śrīnarātha dynasty, says that, recognizing that Bāhiś Devi was the principal deity of Nepal, he ordered that after the worship of Siva as Pasupatiṇātha a cloth should be tied by one end to his temple and the other to the palace, the object being to bring him into mystic contact with the goddess (Wright, p. 120). In her form of Devi Bhrārī she is the guardian deity of a considerable district; and in another shape she is honored at the Duryod-pajā or Dasabhā festival, with annual sacrifices. Here, however, as is the case in Bengal, a clay image of the goddess is not made; but on the first day of the festival the Brahmans bow lowly on the spot where they worship, and the sacred vahana is shown. On the tenth day of the feast they pull it up and present small bunches of it to their followers, in return for presents which they receive from them—"as a charity for the gods." Oldfield has collected many instances (Wright, p. 38; Fraser, "Domestic, Attic, Oriental", London, 1867, p. 184 f.).

The topics above and partly constitute the compe-
building was originally dedicated to his worship, the name _Padmanabhā_ being not of Jain origin, but derived from the Vedic _padh_ in the sense of 'lord of the lotus.' This temple is now in ruins, the cruciform porch alone remaining, though in a dilapidated condition. The second great temple is the loftiest building on the hill. It forms an important object in the view from every side of the fortress. Its original name is now lost, and it is known as _Teti Mandir_, the 'ol'imat's temple,' from the person at whose expense it is said to have been built. The design of the temple resembles that of several of the S. Indian shrines. It seems to have been originally dedicated to Vīṣṇu; but over a later doorway is a figure of Ganeśa, which shows that the followers of Siva subsequently adapted it to their worship. They also introduced the _jāta_ and the image of the bull Nandi. The earliest inscriptions referring to the worship of Vīṣṇu belong to the 9th and 10th centuries A.D.; and the temple seems to have been adapted to Śaivite worship as early as the middle of the 15th century. There is also a true Jain temple, discovered by Cunningham, and one of the Mother-goddess, Maā Dēvī, besides other less important shrines. The rock-sculptures are unique in N. India for their number as well as for their gigantic size. They fall into several groups. That known as Ursālālā contains twenty-two principal figures, all of which are entirely naked. Inscriptions fix their date at 1440–53, under the Tomara Rāja. One figure is that of Adināthā or Reahbādā, the first Jain pontif. The largest figure, not only of this group, but of all the Gwalior rock-sculptures, is a standing colossal, 57 ft. in height, near which is seated, another colossal, 30 ft. in height, of Nomināthā, the twenty-second Jain hierarch. In the B.W. group the most remarkable figure is that of a sleeping female, 8 ft. in length, lying on a rock with her head to the south and her face to the west. Both thighs are straight, but the left leg is bent backward beneath the right. Next this is a seated group of a male and female with a child, whom Cunningham identifies with Siddhārtha and his wife Tīrīsala, the reputed father and mother of Vardhamāna or Mahāvīra, the last of the twenty-four Jain pontifs (Bihler, _Indices Sect. of the Jainas_, Eng. tr., Lond. 1903, p. 29). The remarkable fact about these sculptures is that they were executed during a single generation of 33 years (A.D. 1441–1474).

**GWLOR STATE.—See CENTRAL INDIA.**

**GYPSIES.**—A race of people inhabiting various countries of Europe, but distinguished from the surrounding populations by their special language, customs, and physical characteristics.

1. Name.—The name 'Gypsy,' or 'Gipsey,' is used only by English-speaking people, and is a corruption of 'Egyptian,' by which name the race in the West Indies is still known in English literature. In the sense of 'lord of the lotus,' the name _Pānābī_ was originally applied to the descendants of the Egyptians, in the sense of the ancient Egyptians, and in Spain as 'Gitanos' (from 'Egiptianos'). It was used in a Latin form in Hungary in 1490, as may be seen from the will of a Hungarian noble, László Hermann, now preserved in the archives of Prince Battyány. The passage deserves quotation. In allocating four of his 'smaller horses,' the testator directs as follows, the language employed being Latin: 'The third, which I bought from the Egyptians of Osogany (i.e., Egypt near Cynophions), I leave to my younger black. This horse is a grey one, and used to be a carriage horse.'

Here an alternative name, very wide-spread in Europe, is introduced. It takes the following shapes: _Zingari_ or _Zingano_ (Corsica), _Tchinkhanet_ (Turkey), _Zingariol_ (Syria), _Cingani_ (Hungary), _Zgane_ (Russia), _Cingani_ (Poland), _Zingares_ (Portugal), _Ziganes_ (France), _Zigamam_ (Germany), _Zingari_ (Italy), and _Zingardi_ (Spain). The etymology of this name has given rise to much discussion, but without definite result. Many other names, more local in character, have been given to the Gypsies. In Spain they have been known as 'Greeks,' as 'Bohemians,' as 'Hungarians,' as 'Plemings,' and as 'New Castilians.' In India they have been variously designated 'Bohemians,' 'Saracens,' 'Cecarrotas,' and 'Belcayanas.' In the Netherlands they were not only 'Zingars,' but also 'Greeks' and 'Heidens' (i.e., Heathens). They have been frequently styled 'Tarata,' notably in Scandinavia, where they are also called 'Fante-folk.' There are English instances of 'Bohemian Tartars' and 'High-German' applied to people who were probably Gypsies; while Scotland has references to Gypsies or Saracens, otherwise 'Moors or Saracens,' as present in that country in the 15th century. In Poland they have been called 'Salsales' and 'Philistines,' as well as 'Cyprians.' Early writers have variously designated them 'Nubians,' 'Ethiopians,' 'Asyrians,' 'Uxil,' and 'Cilices.' Many of these names seem to denote the name of the country or province whence the Gypsies had come, bestowed upon them by the people of the country in which they had arrived.

2. Physical characteristics, distribution, etc.—The physical characteristics of Gypsies of pure stock, or nearly so, are well marked. Their complexion is generally dark, ranging from olive to deep brown, or even black. A. Welsbach, who examined 22 Gypsy soldiers from a Hungarian regiment, found the colour of their skin to be as follows: brown, 18; inclined to brown, 9; light brown, 8; greyish brown, 9; and grey, 9. It will be seen, therefore, that the prevailing colour of skin, hair, and eyes was dark. Engene Pittard, of Geneva, records similar results from an examination of 1270 Gypsies, of whom 804 were men, 200 women, 94 per cent of the men, and 88 per cent of the women had black or brown hair.

The proportion of black-haired men was very remarkable, observes Pittard. 'In many cases the colour of their hair was

Gypsies

20. dark as a mulatto, and with a profusion of long, flexible hair, black as jet, hanging down to his eyes, and distending about his cheeks and neck.

3. Although the typical Gypsy is of swarthy complexion, black-haired, and dark-eyed, it must be noted that certain members of that caste have not all of these characteristics. This is not a singular case, as may be shown from other references, and the fact requires to be kept in view.

1. The Gypsies are of middling height, bulk, and weight. Their distinctly monochromatous head is small, and moderately constricted towards its base. Lebert states that the series of 1270 Gypsies examined by him having yielded 71.19 per cent. of dolichocephalic forms. Miyashita, a Japanese craniologist and also a keen student of the Gypsies, made a special investigation of this subject in his monograph "Über den Bau der Zigeunerköpfe," published in 1878. He adds that the Gypsies of the Balkan Peninsula have straight noses, inclined to aquiline. With regard to the stature of the Gypsies examined by him, he places that of the men at about 1 m. 649 (5 ft. 5 in.), and of the women at 1 m. 532, or a little over 5 feet.

4. Although there is a common belief that Gypsies are homeless wanderers, they are for the most part a sedentary people, only occasionally showing nomadic tendencies. In the official "Report on the Gypsy Problem," drawn up by Arthur Theobald in 1860, and published at Halsingborg in 1861, the following definite statements are made with regard to the Hungarian division of the race:

"The number of Gypsies in Hungary is estimated to be some 250,000 of whom about nine-tenths are settled, 73 per cent. belonging to the uncertain class who have sojourned for some considerable time in one place, and about 5000 are out-and-out wanderers. The smallest Gypsy population is to be found in Transylvania; there are in the county as large as 2000 Gypsies, and the language of the majority is Magyar. The usage for compulsory school-attendance, which has been attended by some of the most educated of the race, is in force for the latter, as a rule, better off. About 50 per cent. of the Gypsies consider themselves under the denomination of the race.

5. There are more numerous in S.E. Europe than elsewhere, and they have existed in that region for an unknown period of time. They are specially congregated in the territories bordering upon the western shore of the Black Sea. According to one writer, there are 600,000 Gypsies in the district of the Lower Danube and the Balkan Peninsula, the Gypsy population of Macedonia being remarkable for its density. For particulars as to the Macedonian group, this writer refers us to Vasil Knezievi ć's "Maliakas," a work written in Bulgarian (Sophia, 1900), which contains much information about the Gypsies there entire nation to literature. The population of the Gypsies is large, and the greater number of the many Gypsy villages are given, and there is a valuable account of their trade, characteristics, etc., in the "Gypsy Journal," which has evidently been prepared carefully.

6. In the original Swedish, which was made by the Gypsy Lore Society of Sweden, and by another member of that Society, with subsequent revision by Arthur Theobald. This work appears in the "JULS" (JULS), vol. v., 1811-12 (vol. v.)

7. My Schools and Schoolmasters, ch. xvi.
Owing to the fact that a certain proportion of the Gypsy population is migratory, and also because there are many people of mixed blood who may be regarded as Gypsies, but not by another, it is impossible to obtain wholly accurate statistics in connection with the race. Indeed, the figures vary to an astonishing degree. The official statement in 1874, which gives that the number of Gypsies in the countries belonging to the Crown of Hungary amounted to 28,2741; whereas the return of 1860, galloped above, raises the figure to 290,000. On the other hand, the Almanach de Gotha for 1888 states that there were only 79,893 Gypsies in Hungary on 31 Dec. 1887. The same authority gives the following figures: Rumania, 200,000 Gypsies in 1878; Servia, '29,020 as servent de la langue bohémienne', in 1884; Bulgaria, 57,000 in 1881; and Eastern Rumelia, 27,190 on 24 Jan. 1886. These statistics, notably in the case of Rumania, are remarkably at variance with those furnished by the Holingfors report of 1890, wherein it is stated that the number of Gypsies in Rumania amounts to 'nearly 300,000', while Servia possesses 46,212, and Bulgaria 52,182.2 It will be noticed, however, that the Almanach de Gotha, in stating to regard Hungary, the latter figures show an increase which might be explained by the assumption that the race has been more prolific during the last generation, possibly owing to an improvement in its surroundings. There is, however, a sufficient discrepancy between the reports to warrant the conclusion that these statistics can be accepted only as approximate.

The Gypsy populations of several other European countries are thus allocated in the Holingfors report of 1890: Russia, 50,000; Finland, 1871; Poland, 15,000; Lithuania, 10,000; Galicia, 16,000; Spain, 50,000; and the British Isles, 20,000. A Statistical Account of the Gypsies in the German Empire, published by Noise in 1884, shows that there were then 241 families, consisting of 1064 individuals, living permanently in Prussia. Although permanent residents, they were not sedentary all the year round, but moved about, attending the principal fairs in their occupation of horse-dealers, musicians, and puppet-show men. In most of the other German States there are no resident Gypsies, according to von Sova, although Gypsies from other States or countries occasionally pass through. Wurtzemberg, however, possessed about 87 resident Gypsies in 1888; while there were 53 in Alsace-Lorraine, 24 in Baden, and 17 in Brunswick.

Von Sova's statistics appear to minimize the number of Gypsies in Germany, if one may judge from his statement that, 'as far as is known, there are no Gypsy colonies in Bavaria.' He adds that 'the police authorities have the strictest orders not to permit Gypsy bands to enter Bavaria, or, if found, to send them away.' This certainly does not accord with Richard Andree's report of Die Signen in Bayern,3 based upon the official Zigeunerverbrem, Munich, 1905, wherein the number of Gypsies in Bavaria is estimated at 3350. It must, therefore, be assumed that von Sova's figures, as regards the German Empire, cannot be relied upon.

'The Gypsy race is found in every country of Europe, all over Asia, in Turkey, Persia, Turkistan, Afghanistan, Baluchistan, India, in Egypt, the neighbouring African and in the South. It is scattered throughout North and south of America. It is found in Japan, China, and in the South Seas. The same Gypsy race and the language is the same Romani sko (Gypsy tongue), in different stages of decay, and modified by various environments.'

2 Id. (I.S.), vol. iv, pp. 121-122, on edit.
3 Th. D., vol. i, pp. 29-33 and 134 et.
4 Contributed to 'Rustit. antiquae. Gnosticae', 24 Nov. 1895.

The accuracy of these statements cannot be questioned, although the writer1 omits India and Australasia from his list. It is scarcely necessary to explain that the Gypsies found by one enumerator, but not by another, it is impossible to obtain wholly accurate statistics in connexion with the race. Indeed, the figures vary to an astonishing degree. The official statement in 1874, which gives that the number of Gypsies in the countries belonging to the Crown of Hungary amounted to 28,274, whereas the return of 1860, galloped above, raises the figure to 290,000. On the other hand, the Almanach de Gotha for 1888 states that there were only 79,893 Gypsies in Hungary on 31 Dec. 1887. The same authority gives the following figures: Rumania, 200,000 Gypsies in 1878; Servia, '29,020 as servent de la langue bohémienne', in 1884; Bulgaria, 57,000 in 1881; and Eastern Rumelia, 27,190 on 24 Jan. 1886. These statistics, notably in the case of Rumania, are remarkably at variance with those furnished by the Holingfors report of 1890, wherein it is stated that the number of Gypsies in Rumania amounts to 'nearly 300,000', while Servia possesses 46,212, and Bulgaria 52,182.2 It will be noticed, however, that the Almanach de Gotha, in stating to regard Hungary, the latter figures show an increase which might be explained by the assumption that the race has been more prolific during the last generation, possibly owing to an improvement in its surroundings. There is, however, a sufficient discrepancy between the reports to warrant the conclusion that these statistics can be accepted only as approximate.

The Gypsy populations of several other European countries are thus allocated in the Holingfors report of 1890: Russia, 50,000; Finland, 1871; Poland, 15,000; Lithuania, 10,000; Galicia, 16,000; Spain, 50,000; and the British Isles, 20,000. A Statistical Account of the Gypsies in the German Empire, published by Noise in 1884, shows that there were then 241 families, consisting of 1064 individuals, living permanently in Prussia. Although permanent residents, they were not sedentary all the year round, but moved about, attending the principal fairs in their occupation of horse-dealers, musicians, and puppet-show men. In most of the other German States there are no resident Gypsies, according to von Sova, although Gypsies from other States or countries occasionally pass through. Wurtzemberg, however, possessed about 87 resident Gypsies in 1888; while there were 53 in Alsace-Lorraine, 24 in Baden, and 17 in Brunswick.

Von Sova's statistics appear to minimize the number of Gypsies in Germany, if one may judge from his statement that, 'as far as is known, there are no Gypsy colonies in Bavaria.' He adds that 'the police authorities have the strictest orders not to permit Gypsy bands to enter Bavaria, or, if found, to send them away.' This certainly does not accord with Richard Andree's report of Die Signen in Bayern,3 based upon the official Zigeunerverbrem, Munich, 1905, wherein the number of Gypsies in Bavaria is estimated at 3350. It must, therefore, be assumed that von Sova's figures, as regards the German Empire, cannot be relied upon.

GYPSIES

481

passage that remains obscure; but it seems clear from it that in the Middle Ages, when they appear prominently as travelling actors, showmen, mountebanks, jugglers, hypnotists, quacks, false coiners, pilferers, robbers, and mercenary soldiers. As itinerant actors and showmen they were apparently very numerous. P. Lacroix, in relation to such people in the 18th cent., observes: \(^1\) 'Many of them were Bohemians or Zingari [i.e. Gypsies]. They travelled in companies, sometimes on foot, sometimes on horseback, and sometimes in some sort of conveyance containing the accessories of their craft and a travelling theatre.' Richard Augustine Hay, a Scotch priest of the 18th cent., tells how a company of Gypsies used to be the guests of the Earl of Roelin every year, occupying two towers in Roelin Castle (Midlothian, Scotland) during May and June, when they acted several plays. As these towers became known as 'Robin Hood' and 'Little John,' it may be assumed that they were named after the most popular plays.\(^2\)

Perhaps the most important of all the occupations professed or followed by medieval Gypsies is that which has yet to be named. They figured conspicuously in the character and attire of religious pilgrims, and were everywhere accepted as such—a fact which will receive fuller consideration below. The performance of historic dances, for which Gypsies were noted, can hardly be ascribed to them, their displays as actors. In the Accounts of the Lord High Treasurer of Scotland there is an entry of the year 1550, which shows that the sum of forty shillings was then paid 'to the Egyptians that danced before the King [James V.] in Holyrood house.' There is no indication as to the nature of the dance on that occasion. But from Spanish and Provençal sources we learn that in the 15th century certain miracle-plays relating to the life of Christ, Gypsy dances are of frequent occurrence. For example, the last act of Lope de Vega's Nacimiento de Cristo ends with the appearance of the Three Kings preceded by dances of Gypsies and Negroes, and with the worship and offerings brought by all to the new-born Saviour.\(^3\)

One of the most popular plays sung by Spanish children on the Day of the Holy Kings (Epiphany or Twelfth Day) opens with the verse:

The Gypsy women, who are always
The joy of the town gate,
Seeing the Kings arrive,
Wish to give them a dance.
Get ready the castanets, Gypsies;
The Three Kings have come in at the gate,
To see the young boy;
Ooh, ooh, ooh.

In a certain Provençal play the Three Kings themselves are understood to be Gypsies, and they successively foretell the future of the infant Christ by the art of palmistry, in approved Gypsy fashion. They introduce themselves thus:

'We are three Bohemians
Who tell good fortune.
We are three Bohemians
Who rob wherever we may be;
Child, lovely and so sweet,
Place, place here, the cross;
And each (of us) will tell thee
Everything that happens to thee:
Begin, Janan, however;
Give him the hand to see.'

GYPSIES

They art, from what I see, Equal to God.
And then his Son all wonderful:
There's not a shilling in the land:
Love has made thee a child.
For all the human race:
A Virgin is thy mother,
Thou art born without any father;
This world was made by God.
Love has made thee a child,' etc.

After completing their forecast of the Child's destiny, they proceed to examine the hands of the Virgin and Joseph, the latter of whom is thus addressed:

And then, good old man,
What art at the corner of the manger,
And what art at the manger?
Will thou not see that we thy hand?
Say, thou fearst perhaps
That we should steal that thee
Which is tied up there?
We would rather steal the child:
Place (something) here upon, fair sir,
We have scarcely drunk (to-day)."

The Gypsy prodigities which emerge in this last stanza are still more unreservedly indicated in an Andalusián carol:

In the gate of Bethlehem
The little Gypsies entered,
And the new-born child
Have robbed of his swaddling clothes.
He has given to the Gypsies,
Faces of olive,
They have not left the child
One little rag!

How the Blessed Virgin with her Child Jesus and Saint Joseph fled into Egypt, and how they found food and lodging, is the title of an Italian tract of medieval origin, wherein a Gypsy woman encounters the Holy Family during their flight, and offers them hospitality:

I have here a little stable,
Good for the young she-ass
I will now place therein astray and hay:
Behold a shelter for ye all!"

After bidding Saint Joseph to be seated, she goes on to foretell the future of the Virgin and Child—"for we dear Gypsies can all divine the future."

These references are not the only ones which associate Gypsies with Jesus of Nazareth. One very persistent tradition is that the nails used at the Crucifixion were made by Gypsies, and that the race became assured in consequence. On the other hand, the Gypsies of Alsace and Lithuania assert that this was not so, and that a woman of their people endeavoured to steal the nails from the Jews, in order to prevent the Crucifixion. She succeeded in stealing one, with the result that only three nails remained available, two of which were used for the hands, and the remaining nail was driven through the feet, which were crossed one above the other. The Gypsy comments as follows upon this tradition:

This Gypsy counter-legend offers a possible explanation of the historic unexplained transition from four nails to three in crucifixes during the twelfth and thirteenth centuries. Dr. H. Morris discusses the change in his Introduction to Legenda of the Holy Road (London: T. Nuttall, 1871). There it appears that, while St. Gregory Nazianzen, Nizan, and the author of the Amen Epistola speak of three nails only, St. Gypian, Augustine, and Gregory of Tours, Pope Innocent III., Haliade, Theodoric, and Ambrose speak of four; and that the earliest known crucifix with three nails only is a copper one, of probably Byzantine workmanship, dating from the end of the twelfth century. Now, in the Byzantine Gypsies possessed at that date a metallurgical monopoly, this crucifix must, of course, have been fashioned by Gypsy hands, when the three nails would be an easily intelligible protest against the commonality that those nails were forged by the founder of the Gypsy race."

they were obtaining the benefits accorded to Christian pilgrims as early as the 6th cent., and that they are referred to in this character by Charlemagne, in an edict of the year 789. They undoubtedly appear as pilgrims at a much later period.

We know, for example, that in the year 1417 the noble Transylvanian family of Horvath presented forty sheep 'to the poor pilgrims out of Egypt, who were about to travel to the Holy Land'; that in 1418 the Saxon Count of Hermannstadt, in Transylvania, granted 'to the people from the Holy Land food and fodder for their horses; work eight deniers'; that in the same year the municipality of Frankfurt-on-the-Main gave bread and meat to 'the wandering people from Little Egypt'; and that in 1419, Andrew, a duke of Little Egypt, with a hundred and twenty followers, received money, wine, and bread from the town of Mâcon, in Burgundy. Further, a certain 'Lord Eusebio from Egypt and his two hundred and twenty comrades' were voted a sum of money, corn, and poultry by the municipality of Kronstadt, Tranzilvia, in the year 1416. Then, again, in 1426, on St. Andrew's Eve, the town of Arnheim, in Gelderland, paid six guilders 'to the count of Little Egypt, with his company, to the honour of God'; and, at the same time, gave 'to the same count and to the Hebran women, to the honour of God, a half mazer (a corn measure) of white bread, a barrel of beer, and a hundred harvestings.'

In all these cases, which are only a few selected out of many of the same kind, it is manifest that the pilgrims who received these various gifts belonged to the caste known as 'Egyptians' or Gypsies. That Gypsies actually professed to be pilgrims is seen from the statement made by Pencier in his Commentarius (1572), wherein he asserts that they wore the pilgrim dress. Aventinus, who wrote in the early part of the 16th cent., complained indignantly that their pilgrimage was but a pretence; that they placed a Liberty possessed by no other class. 'Robbing and stealing are prohibited to others, under pain of hanging or beheading; whereas these people have licence for them.' Aventinus was not using the language of exaggeration, for robbery and theft were among the many characteristics of the medieval Gypsies. Nevertheless, they sustained at the same time the role of genuine pilgrims; and as such they were supported by the citizens and country-folk among whom they travelled.

In order to understand the situation properly, it must be realized that the Gypsies enjoyed Papal protection. This is seen from a letter granted in 1408 by Charles, Count of Egmont, under the seal, to a certain 'Count Martin Gouyn, born of Little Egypt,' in which it is stated that the Pope, Alexander VI., had ordained Count Martin and his family and company, 'to go on pilgrimage to Rome, to St. James of Galicia, Compostella, and to other holy places.' To enable this count of Little Egypt and his followers to fulfill the Pilgrim injunctions, Count Charles of Egmont strictly ordered his representatives throughout his principality to succour and protect the Gypsies. The Count of Egmont and all orthodox people were bound by their religion to obey the wishes of the Pope in this respect. Obedience, moreover, brought them a spiritual reward. The citizens of Amiens were granted Papal indulgences and pardons because they gave alms to an earl of Little Egypt and his company of about forty persons who visited their town in September 1427. The same kind of reward is indicated also in an ordinance of the magistrates of Tournai in Hainault, who appealed to the devout members of the community to give alms to 'the great Earl of Little Egypt or his people,' who were expected to sojourn for four or five days in Tournai in the last week of March 1429.

At this period, if not at earlier dates, the leaders of these Gypsy bands were men of mark, who received their appointments from the Crown, or other supreme power, in the various European countries. They have borne many designations—"theven," "Giants," etc., and have been the subjects of scholarly study since that time. Furthermore, as an art, by Leo Wiener, in JUJS (G.B.), vol. iii. no. 4, April 1879, pp. 543-547.

The passage is quoted in JUJS (G.B.), vol. iii. p. 7.
GYPSIES

king, regent, governor, master, judge, duke, earl, count, baron, and captain. It is to be noted that these rulers were not of Gypsy blood, but belonged to the local nobility, and in which their particular section of the race was settled. The evidence obtained from Poland and Lithuania is clear and undeniable. Under certain conditions, Gypsies were recognized as having a distinctive and a reward. Their revenues were mainly derived from the authorised poll-tax that their subjects were bound to pay to them, although they had apparently other sources of profit. One thing clear is that, when they travelled from home, both the rulers and the ruled abstained upon the gifts which they looked for—and not in vain—from the people among whom they sojourned. This was because they bore the character of pilgrims, to whom it was a pious duty to give alms.

The medieval Gypsies constituted therefore a system, and not merely a race—an organisation which had its ramifications all over Europe, and which held a position that all the secular and religious authorities recognized. To analyze the component parts of that organisation, and to endeavour to solve the problem of the origin, outside the scope of this article. A close investigation of the causes and effects of the Crusades (p.5) forms the first step in such a study. No very great weight can be attached to the single ascription of a French Gypsy soldier in 1329, that he came into France under the French Kings at the time of the Crusades, notably under St. Louis (1229). Indeed, that assertion conflicts with the belief already referred to, that Gypsies figured as Christian pilgrims as early as the reign of Charlemagne. And it is evident that many of the Gypsies of the 18th century, availed themselves of the privileges of pilgrims and Crusaders, and particularly of those possessed by the Templars and Hospitallers. A concrete example of this is seen in the case of 'Lord Emmanu from Egypt and his two hundred and twenty comrades,' who were so hospitably received at Kronstadt, Transylvania, in 1416. Emmanu, or Emmaus, is in Judea, not in Egypt; and Emmanu was formerly a Commandery of the Hospitallers. The Lord Emmanu of the year 1386 was a certain Bartholomew, who, with his comrades, enjoyed precisely the same privileges as those accorded to the Lord Emmanu of 1416. That is to say, he and his company were entitled to travel about Europe, 'living on the countries through which they passed, all on the strength of their being pilgrims, or the defenders of pilgrims. As recently as 1229, the Grand Master appealed successfully to the Pope and the Emperor against the attempt made by the Duke of Savoy to exact money from the Grand Master and his company for their food and lodging when passing through Savoy. Thus, the position occupied by the people popularly called 'Egyptians' was identical with that of the Hospitallers. This identity can be seen in other respects, such as exemption from military duty to the country in which they lived, and freedom from its taxation. Perhaps the most notable link is the use of the sign of the Cross as a mark of union.

Even if the Gypsies had been quiet and peaceable people, their assumed right to exact food and money from others would have rendered them a burden to the general population of Europe. But, as they travelled in large companies, their men being armed to the teeth, and as their demands were enforced by acts of violence, when necessary, the situation became increasingly intolerable to the middle and lower classes. Consequently, in all the countries of Europe, edicts were for the suppression or the expulsion of the Egyptians. On the other hand, the leaders of those Egyptians were men of noble birth, legally appointed by the State to their position of regent, baron, or count, and that position gave them a good income and many privileges. It was therefore to their advantage that the laws against Egyptians

tians' should be nullified as far as possible. The result of these opposing interests was that, for several centuries, the European countries oscillated between the enactment of laws framed for the purpose of ending the Gypsy system, and the very perpetuation of that system by the continued filling-up of vacancies in the Gypsy baronies.

For an illustration of this conflicting state of things, in 1639 an edict was issued in the king's name forbidding any Gypsies to enter the country, and ordering those within it to leave without delay. Nevertheless, it appears that in 1645 there were no fewer than 500 Gypsy men in France capable of bearing arms. Further, in 1600, and again in 1602, the Gypsies received notice to quit France—with two months' grace in the former instance and one month's in the latter. In spite of all this, it was found necessary in 1628 to issue a royal declaration: 'Contra les Bohémians, leurs femmes et enfants, et ceux qui leur donnent retraites.' This last clause refers, of course, to the French nobility and court-judiciary, who are accused of giving shelter to the Gypsies in their castles and mansions, in defiance of Acts of Parliament expressly forbidding them to do so. They are now ordered once more to desist, under pain of losing their fees and offices, with threats of severer punishment if they continue to disobey.1

Eventually, but only after the lapse of centuries, the Gypsy system was completely suppressed. In the course of the struggle, thousands of Gypsies were executed, banished, or imprisoned; and their surviving representatives are, with few exceptions, inoffensive members of the community in which they live. The problem of the Gypsy system and the Gypsy race still awaits a completely satisfactory solution; but a careful study of the system cannot fail to throw light upon the origin of the race.

It may be added that the country known as 'Little Egypt' was probably the Holy Land, in the first instance, and, in later times, the territories retained by the Crusaders in Greece and the islands of the Levant.

5. Religion.—The question of the religion of the Gypsies is somewhat involved. Their over-lords during the Middle Ages were undoubtedly Christian. The Genoese family of the Albabali, their successors of the house of Goth, and, at a later date, Antonios Eparchos, the correspondent of Melaznthon, all of whom were in turn Barons of the Gypsy corps, could not have been anything else than Christian. The same can be said of the noble Hungarian family represented in 1423 by Count József, who held the office of eyalets of the Turks. Similar examples are Lord Balatci de Kiskend and Caspar Nagy, who belonged to the court of Queen Isabella of Hungary, by whom they were created eyalets of the Turks of Transylvania in 1627. All of these were non-Gypsies upon whom the office of eyalets was conferred. No room for doubt exists in the case of several of the nobles of the Gypsies who died in the 16th century. The monument of one of them was placed in a little monastery beside Schloss Fürstenau, a castle of the Count of Erbach, in the Odenwald. The epitaph was to this effect: '1443 years after the birth of Christ our Saviour, on St. Sebastian's evening, died the high-born lord, Lord Pannell, duke in Little Egypt, and Lord of Hierchborn in the same country.' Lord Pannell's arms were emblazoned on his tomb—a golden eagle crowned, with a nag-born for crest, above a crowned helmet. The Swedish chronicle recounts further how, in the year 1688, at Pfortzten, 'there died the well-born Lord John, Free Count out of Little Egypt, to whose soul God be gracious and merciful.' Both of these confessions testify clearly to noble birth and Christian faith. The case of Count Martin Gnoegy, 'born of Little Egypt,' who was commanded by Pope Alexander VI. to go on pilgrimage for those persons, see Joly (O.S.), vol. III., 1875-89, p. 228, and O. (N.S.), vol. v., 1912-13, pp. 312-313.

The Gypsies and the Annals Sacerdi of M. Crucis, Frankfort, 1600, II. 384, 510. age, about the year 1498, is perhaps not quite so definite. Nevertheless, it is inconceivable that a Pope would enjoin upon any but a Christian the duty of pilgrimage to various holy places in Europe. The religion of the Gypsy rulers, therefore, may be regarded as certainly Christian. That of the Gypsies themselves, in some instances, falls within the same catechism. Among them has been born the famous Symon Simeon, an Irish friar, who visited Candia in Crete in 1522, and who there saw 'a race outside the city, following the Greeks' rite.' He describes it in terms that clearly indicate Gypsies. Consequently, it is evident that those Cretan Gypsies belonged to the Eastern or Greek Church. The same friar also refers to numerous Danubian captives in Alexandria and Cairo, apparently Gypsies, who had been converted to Muhammadanism by their captors. What was their previous religion? The Danubian territories formed then a part of Christendom, and, if there is no evidence that those Danubian captives were previously Christians, there is, on the other hand, no evidence that they were not. The presumption is that they were Christians in name, if not in fact. The whole history of the Gypsies points to this conclusion. It was because they were accepted as Christian pilgrims that they received alms, to the honour of God, and free quarters in all the countries of Europe. They wore the pilgrim dress, and the cross was their chief symbol. When they had to retreat before superior numbers, they sought and obtained refuge in religious houses. No fewer than three hundred Gypsies found shelter in the Convent at Plainpalais, Geneva, in 1532, when they had to give way before the attacks of the populace and the town officials. Moreover, when twenty of their number were taken prisoner on the heights, they were speedily pardoned and released, propert Desm. Martin del Rio tells of a similar incident in Spain, apparently in the town of Santiago, on Corpus Christi Day, 1894, when the Gypsies were repulsed by force of arms; nevertheless, all of a sudden, and I know not how, everything was hushed up. Neither the Augustin friars nor the Knights of St. James would have so championed the Gypsies had they been strange and unknown pagans. Nor would either of these fraternities have exerted themselves to protect a crowd of the ordinary citizens of Geneva or Santiago against the consequences of their turbulent behaviour towards the city officials.

There is no better testimony to the Christianity, nominal or real, of the Gypsies than that afforded by the Church of Les Saintes Marines de la Mer, in the Ile de la Camargue, Bouches-du-Rhône. In this church the festival of the Holy Mary is annually celebrated on 25th May. On that occasion, the crypt of the church is reserved exclusively for the Gypsies, because here is the shrine of Saint Sara of Egypt, whom they regard as their patron saint.

The Gypsies, to the number of several hundreds, began to arrive as early as the 20th of May, and throughout the night of 24th-25th May they keep watch over the shrine of Saint Sara. On the 25th they take their departure. This custom, which is in full force at the present day, has continued for at least four or five centuries; for M. Lhéric, once at Les Saintes (1897) that the votive offerings of the Gypsies, still preserved in the crypt, date back to about the first year of that date, therefore, the Gypsies were worshipped in the crypt as Christians.

Many other statements might be adduced which show the Gypsies, past and present, in the light of orthodox Christians, punctilious in observing the rites and ceremonies associated with Christianity. On the other hand, evidence of anathema is not difficult to obtain. The crypt of Les Saintes
-tree-worship—among German Gypsies, might be held to indicate an absolutely pagan cult. The air, the birch, and the mulberry-tree are specified as the respective symbols of the Old Prussian, the New Prussian, and the Hanoverian Gypsies. Once more, however, it has to be noted that tree-worship was formerly practised in all the old countries of Europe, traces of it being still discernible among the peasants down to our own times. Indeed, not only among the peasantry and in past ages; as witness the old churches with holy and misletoe in the Christmas season, which is the ancient Yule.

Considerations such as these seem almost to point to the conclusion that the chief difference in religious matters between ordinary Europeans and the Gypsies of Europe is that the latter have come to give in a greater measure than the former the pagan practices once common to all Europeans.

In a communication made to the Orientalische Gesellschaft (Berlin) in 1888, Solf represents the 19th century Gypsies of Germany as combining a religious code of their own with Christian profession and practice.

1. "captain," presides over each tribe. He is elected for seven years. His powers are both regal and ecclesiastical. He marries, divorces, excommunicates, and reconciles those who have forfeited honour and privileges. Nearly all the marriages are celebrated on Whit Monday. Great care is taken to avoid marriages between the degrees prohibited by the German law, although they are otherwise allowable by Gypsy custom and tradition. Adultery is exceedingly rare, and is punished with severity. The children are baptised, and handsomely presents are always expected from the god-parents. If a child is born while they are lodging near a village, they usually take it to the parish church for baptism. They wear no crossing at a death. Solf describes the Gypsy as "full of piety."

The term Heidens, or "Heathen," so often applied to Gypsies in Western Europe during the last centuries, would seem to denote that they were not regarded as Christians. When, in 1429, the town of Arnhem, in Guelderland, gave six guilders to the count of Little Egypt, with his horsemen, to the honour of God, and, on the same day, a quantity of food and drink to the same count and to the Heathen women, to the honour of God, a difference in religion between the count and the Heathen women appears to be implied. Nevertheless, the name Heidens, or "Heathen," was used, on at least two occasions, as a racial or caste designation solely, when the people so designated were Christians by religion. One of these instances occurs in Justinger's Berner Chronik. Bataillard, who cites the passage, points out that, Justinger was recorder of the town of Bern, and that his chronicle runs from 1411 to 1421. In 1419 he makes the following entry:

1. Regarding the baptised Heathen. In this year there came to Basel, Zürich, Bern, and Solothurn more than two hundred baptised heathen (Heidens); they were black, miserable, with women and children; and they camped before the town (Bern) in the fields, until a prohibition was issued, because they had become intolerable to the inhabitants on account of their doings; for they stole all they could. They had dukes and earls among them, who wore good silver belts (Silber Gürteln), and who rode on horseback; the others were poor and wretched. They wandered from one country to another; and they had a safe-conduct from the King of the Romans.

Here, it will be seen, the term "Heathen" is applied to people who were admittedly Christian by religion. The other similar instances are that afforded by the Staats-Archiv of Basel, in which it is recorded that on 13th June 1423 a payment of one guilder was made to two heathens (Zweien Asytten) who had become Christians. There is practically no doubt that in all these instances—among German Gypsies, and in that of 1423, and at Arnhem—Gypsies were regarded as Gentiles.
HABIT

In its most general acception, habit denotes a persistent readiness in certain phenomena to recur, which has been acquired by repeated recurrence. Here readiness is to be understood as including the presence or facility, but also a tendency or impulse. Habitual readiness is thus distinguished, on the one hand, from a readiness that is transient, or, on the other hand, from a persistent readiness that is inborn. The former is merely the general tendency of all living things to act under any stimulus. The latter is what is termed distinctively as instinct (q.v.). The distinction between habit and instinct, however, is no longer thought to be so absolute as it was in former times generally supposed. Empiricism, indeed, has led to the abandonment of the former distinction. The older empiricists, of whom J. S. Mill may be taken as the last representative, generally held that most, if not all, instincts are habits formed by each individual, but at a period so early in life as to have left in memory no traces of their formation. But this older form of the empirical theory has completely given way before the ideas of evolutionism. At the present day, while many, if not all, instincts are in their ultimate analysis reduced to habits, they are still admitted to be inborn in the individual, and the process of their evolution is extended over an indefinite period in the life of preceding generations. Empiricism includes in its theory not only instinctive impulses to action, but also the ineradicable necessities of thought. The necessity of thinking that 2+3=4, or that two straight lines cannot enclose a space, is regarded merely as a habit which has become so firmly fixed that it can no longer be resisted. A much more questionable use of the term habit is one which extends it to facts in the inorganic world. For instance, W. James speaks of ‘the habits of an elementary particle of matter,’ and describes ‘the laws of Nature as immutable habits which the different species of elementary matter follow’ (Principles of Psychology, vol. i. p. 104; cf. Radstock’s Habit and its Importance in Education, p. 220). These theories carry us into the general problems of philosophy, and it is the ethical significance of habit with which we have specially to do. For our purposes there is no gain, but rather a loss of simplicity, in extending the idea of habit as is done by the theories in question. For, even if the unalterable necessities of thought and the unalterable properties of matter can be with any propriety described as habits, yet, in so far as they are unalterable within the range of all scientific experience, they lack the essential character of habits; they cannot even be identified with instincts, for these are by no means incapable of modification. The very essence of a habit is that it is an effect of alterations going on in living things; it is an aspect of life, consequently, as Aristotle pointed out long ago, habit cannot be engendered in inorganic things. ‘For instance, the stone, which by nature moves downwards, cannot acquire the habit of moving upwards, not even if one tried to give it the habit by throwing it up ten thousand times; nor could fire form a habit of moving downwards; nor could anything else with a nature of one sort be made to act on another from habit’ (Eth. Nic. ii. 1. 2). Analogies, indeed, are sometimes drawn from acquired facilities in the inorganic world. Folded, paper returns readily to its folds. A lock or an engine works more easily after being used for a while. The fittest analogy of all is probably to be found in the improvement of a violin that has been played by a master. In all these cases the acquired facility is associated not with elementary particles, but with complex combinations of matter; the material of the violin is even an organic compound. But the analogy of such facilities with habit is superficial at the best. It has no connexion with any process of organic growth. As an organic process, however, habit is found in the vegetable world. Thus the modifications which may be developed in a plant by artificial culture or by natural adaptation to a new environment are of the nature of a real habit. More nearly akin to the habits of human life are the numerous aptitudes which animals can be trained to form. In man also the most spiritual habits have their basis in his organic life. The nutrition of the organs called into play must be affected by the uniformity of their action during the formation of a habit. Layers of untint effect will run into peculiar positions determined by the habitual movement of the organs they supply, and thus the growing organs will, under a new environment, be adapted to the actions repeatedly performed. The fact is that often after prolonged effort we continue to feel the beat of the blood in the arteries in the throbbing movement of which the effort called forth, long after the effort itself has ceased. This effect is experienced not only in the sensations of active effort, but also in...
HABIT

487

the so-called passive sensations. A din thrills in the ears of many persons after a long railway journey, and this is one of the most unmistakable operations in vision. It thus appears that, though the elementary properties of inorganic, and perhaps also of organic, material are indispensable, the organic beings a natural adaptability to the alterations of organic structure involved in the formation of a habit.

This is the physiological interpretation of the fact that habitual actions are done with a certain unconsciousness; that is to say, though we may remain conscious of the series of habitual actions as a whole, we fail to note consciously the separate actions in the series. When we begin to form a habit, the actions required are in general performed slowly, deliberately, and with an amount of effort that is often painful. Gradually with repetition the slow and deliberate effort disappears, and the actions are performed with an easy rapidity that carries them beyond the ken of consciousness.

For, to attain distinct consciousness, one mental activity must endure for a certain length of time before being supplanted by another. Consequently, if one activity is in experience uniformly followed by another, it comes after a while to suggest that other so instantaneously that it fails to be noticed in consciousness, and the activity suggested alone seems to have passed all through the intellectual life, and is especially familiar in the perception of the external world. The fact perceived is always suggested by some sensation, and in principle it is instantaneous that the sensation escapes attention, and the fact perceived appears like an object of immediate intuition. The same result is of great service in practical life also. For fear, joy, and the like, which are often paralyzing in a person, may be associated with some such exertion. They will then serve merely to suggest and stimulate the activity with which they are associated, just as the feeling of being in the presence of the person will itself suggest the object. An intense excitement finds its worth mainly in the fact that its intensity makes it readily suggestible. It haunts us so that we cannot escape from it, and thus it determines the current of our life; that is to say, it gives life a new habit. But without this continued recurrence of an intense impression its original intensity would not prevent it from being gradually, in some cases even rapidly, effaced. It is a familiar rule, therefore, of all life that habitual attainments must be kept in continued practice, else they are apt to be supplanted by a return of the untrained awkwardness with which they began. Even instincts, as will presently appear, die away if they are not kept in life by practice; and any peculiar variety of plants tends to lose the distinctive habitus developed by culture, and to revert to its wild type if it is left uncultivated. This fact becomes of importance on the training of the moral and religious life. The young convert in the glow of his fresh enthusiasm is apt to imagine that the habits of the new life are already acquired, and that he has only been born anew, and that there is a long process of growth before him still, ere he can reach the stature of spirituality. It is not therefore surprising that statistics seem to point to a startling proportion of relapses after

Even the higher nerve-centres in the brain exhibit the same result at times. Complicated mental operations come to be so habitual that they too fall below the verge of consciousness. From the physiological point of view this sort of activity is described as unconscious cerebration (see Carpenter's Mental Physiology, ch. xii.).

In its psychological as distinguished from its physiological aspect, habit is connected with the mental process of suggestion and association. A habit is an acquired readiness in the suggestion of phenomena that have been frequently associated. Now, among other facts connected with this process, it is a familiar law that phenomena are most readily suggested in proportion to their original intensity and to the frequency with which they have been repeated. These two conditions of ready suggestibility are the influences mainly called into play in the formation of habits. Sometimes a new habit seems to spring into full development all at once, under the impulse of a particularly intense impression. A violent shock in conscious experiences may suddenly produce such organic changes as in ordinary circumstances are the result of very gradual and extended adaptation. This may be that, however, sudden and violent shocks appear at times, their suddenness is more apparent than real. Possibly it has been prepared by subconscious processes that have been going on for some time before and only made manifest over the threshold of consciousness (E. D. Starbuck, The Psychology of Religion, London, 1899, pp. 108–113; W. James, Varieties of Religious Experience, New York, 1902, p. 286 ff.).

Habit, in any case the fact that changes of similar violence are seen in other regions of mind shows that sudden conversions are not out of harmony with the laws of mental life (Starbuck, op. cit. ch. xi.). But, however valuable a sudden and violent shock may be as an initial impulse to the formation of a new habit, its value apart from this is apt to be dangerous and destructive. An intense excitement finds its worth mainly in the fact that its intensity makes it readily suggestible. It haunts us so that we cannot escape from it, and thus it determines the current of our life; that is to say, it gives life a new habit. But without this continued recurrence of an intense impression its original intensity would not prevent it from being gradually, in some cases even rapidly, effaced. It is a familiar rule, therefore, of all life that habitual attainments must be kept in continued practice, else they are apt to be supplanted by a return of the untrained awkwardness with which they began. Even instincts, as will presently appear, die away if they are not kept in life by practice; and any peculiar variety of plants tends to lose the distinctive habitus developed by culture, and to revert to its wild type if it is left uncultivated. This fact becomes of importance on the training of the moral and religious life. The young convert in the glow of his fresh enthusiasm is apt to imagine that the habits of the new life are already acquired, and that he has only been born anew, and that there is a long process of growth before him still, ere he can reach the stature of spirituality. It is not therefore surprising that statistics seem to point to a startling proportion of relapses after

An interesting illustration of this phenomenon is given by Max Miller in his Autobiography (p. 210 f.). The printer is
spiritual changes produced by the violent excitement of revivalism, when compared with the proportionate decrease of cases of insanity during that period, a fact which is due to the ordinary unexciting religious culture of home and church and Sunday school (Starbuck, op. cit. p. 170). For this reason, all religious habits must be trained by the same organic process by which all life is evolved; and it is an interesting fact that the Great Teacher draws his favourite parables and metaphors for illustrating the development of the kingdom of God from the processes of organic growth in Nature. It is the organised structure developed by a process of growth that distinguishes habitual goodness from a goodness that is due to any transitory impulse. 'One swallow does not make a spring,' as Aristotle puts it, in illustrating the necessity of trained habit to genuine virtue (Eth. Nic. i. 7. 15); and Hosea (6. 20) had long before denounced the futility of a goodness that is transient as a morning cloud or early dew. On the other side, also, of the moral life:

"The sun that practice burns into the blood, And not the one dark hour which brings renown, Shall brand us after, as those fold we use" (Tennyson, Merlin and Vivien).

While habit is thus not to be confused with any fleeting impulse, it is also, as we have seen, distinguished from those impulses that are inherent. But we have seen, further, that this distinction is not so sharp as was at one time supposed. Possibly instinct may itself be but a habit earlier formed, and thus embedded in the primitive structure of our living things. But, whatever its origin, we now see that the processes which constitute life in, by a prolonged uniformity of action, produce a new organism or system giving a habitual readiness of the same kind as the instinctive. For this reason habit is commonly spoken of, in a phrase which has long been proverbial, as a second nature. It is, moreover, a familiar experience in common life, confirmed by scientific observation, that the second nature, thus created by a man's own habitual action, may overshadow the instincts of his original nature. For instincts are by no means beyond reach of the changes going on in life. On the contrary, not only do they require the stimulus of a proper environment to be called into activity in the first instance, but, even if roused in this way, they may afterwards be completely supplanted by counteractive habits. Numerous illustrations of this will be found in Spalding's celebrated article on 'Instinct' in Macmillan's Magazine for February 1873, and in the chapters (xi. to xvi. inclusive) on 'Instinct' in G. J. Romanes' Mental Evolution in Animals, London, 1883; see also C. Lloyd Morgan's Animal Life and Intelligence, do. 1890-91, ch. xi. on 'Habit and Instinct.' It thus appears, if the value of an instinct, like that of any intense impression, were to be found in the original start which it gives to the process of forming a habit.

But, if the mere animal can thus modify its native instincts in adaptation to the changing exigencies of life, it would be preposterous to deny man a similar adaptability. The truth is that man's superiority to the mere animal is to be found mainly in his superior adaptability. This is not indeed to be interpreted as meaning, what is too commonly assumed, that Nature guides the lower animals by the instincts with which she endows them, while she leaves man to the direction of his own intelligence. Both statements are wide of the truth. For, on the one hand, many of those modifications of instinct which have been referred to above are intelligent adaptations by an animal to a new situation. On the other hand, it is a mistake to suppose that habit in man is distinguished from the lower animals by the comparative poverty of his instincts. So far from this being the case, his
rather to break off habits that have become in- 
vested. The second or habitual nature, as we 
have seen, is to a large extent the nature of men 
and then it becomes for the edu- 
cator a more intractable factor than congenital 
habits. Furthermore, it imposes a limit on 
the plasticity of human nature as rigid as any 
that are fixed by original constitution. This is 
the ground of the familiar educational rule, to 
begin all training on a right method from the first, 
in order to avoid the formation of habits which 
must be unlearned before further progress can be 
made. The observation of old habits is also one 
of the causes which make the acquisition of new 
habits increasingly difficult with advancing years. 
For, as the years go on, every man is gradually 
forming an aggregate of habits which constitute his 
distinctive character. That character becomes 
every day more intricately woven into the inner- 
most tissues of physical and psychological life, and 
the drift of this process points to the conclusion that 
the character thus formed may become at last 
practically unalterable. Whether the moral doom 
of men does actually in the end become fixed 
immutably for evil as well as for good is a problem 
which would carry discussion beyond the limits of 
our theme. But in the phenomena of habit there 
is revealed a moral government of life, which is 
characterized by the most rigorous justice. The 
growth of habit furnishes an unfalling reward for 
every virtuous act, and brings to every vicious act 
its corresponding penalty. In the making of every 
appropriate figure, every act we perform is likened 
to seed sown in a fit soil, destined to produce a 
fruit of its own kind. Whosoever, therefore, a 
man aways that precludes that, certainly, 
shall he reap in the habits that he creates. Thus 
virtue is literally its own reward, vice its own 
punishment.

The best studies on habit are those in the great 
works on Psychology. Most of these treat the special kinds of 
habit separately, though the separate treatments can usually 
be found in an index. Fortunately, however, one of the 
greatest of these works on the science, W. James's Principles of 
Psychology (London, 1890), devotes a chapter (the fourth) to 
the general nature of Habit. The chapter on Habit (the 
eighth) in W. B. Carpenter's Mental Physiology (London, 1873) 
also deserves mention as being still of value. On the educational 
aspect of the subject there is a little monograph by Paul 
Radeostock, Die Geschicht und ihre Wirklichkeit fur die 
BRITISCHEN (Eng. title, Habit and its Importance on Education, 
Boston, 1890). For young children and their teachers there 
is another monograph by Walter L. Sheddick, Learning in the 
School (New York, 1898). The historical development of the 
subject is admirably traced in the tenth chapter of A 
History of Psychology by Paul Ince; and in Psychology, an 
article in the Encyclopædia britannica.

HAIDA.—1. Geographical and ethnological— 
The Haida, or, as they term themselves, Xidak 
(i.e. people'), are an American Indian people 
whose territory includes the Queen Charlotte 
Islands and the adjacent waters of the Prince of 
Wales Island, Alaska. Between 180 and 200 years ago 
the so-called Kaagani left the N.W. end of the Queen 
Charlotte Islands, and, landing on Prince of Wales 
Island, appeared north of the southern 
end of which they took possession. The 
Haids are not now a numerous people; of the main 
body, according to Swanton, in 1907 there remained 
several thousand, and the numbers of 
the eastern branch were a 300, making less than 1000 in all. In 1836-41 their 
numbers were estimated at more than 8000; and 
in 1888 at 2600, which must have been quite an 
exaggeration, in the light of the figures reported 
since then. Linguistically, the Haids form an 
independent family, termed, in Powell's classification 
(V. E. W. B., I, 347), Skidegate, a corruption by the Whites 
of a name of a chief of the north shore, Sp'edaga. 
Authorities like Boas and Swanton, however, 
consider possible an ultimate relationship of the Haids 
with Tingit (phonetic and lexical coincidences, 
grammatical peculiarities), and more remotely 
with Athapaskan; but this is still doubtful, 
although certain elements of social organization 
also point in the direction of closer affinity between 
Haids and Tingit (Kolahshan). Physically, the 
Haids belong to that group of Indians of the 
North Pacific Coast which includes also the Tingit 
and the Tsimshian, as has been shown by the 
anthropometric researches of Boas and other 
investigators.

2. Contact with Whites.—Swanton considers it 
not impossible that the Queen Charlotte Islands 
may have been visited by Spaniards during the 
17th cent. (H.A.I., 1897-98), but 'the first certain 
account of their discovery is that by Ensign Juan 
Perez, in the corvette Santiago, in 1774.' Bodega 
and Maurelis came the next year; in 1786, La 
Perouse, and, in 1787, Capt. Dixon, who 
was there more than a month around them, and the islands 
are named from his vessel, the Queen Charlotte.' 
From that time on, visits of vessels of 
England and New England resorted to the coast, 
principally to trade for furs, in which business the 
early voyagers reapied golden harvests.' The 
result of this intercourse is thus indicated by 
Swanton (p. 521):

'The advent of whites was, as usual, disastrous to the natives. 
They were soon stripped of their valuable furs, and, through 
smallpox and general immorality, they have been reduced in the 
last 60 years to one-tenth of their original number. A 
station of the Hudson's Bay Company was long established at 
Haida, but is now no longer remunerative. At Skidegate there 
are works for the extraction of Douglas fir, with which they 
are employed to the people during most of the year; but in summer 
all the Indians from this place and Masset go to the mainland 
to work in salmon canneries.' These canneries also furnish the 
Salishan with work in summer.

Most of the Haids are Christians, at least nominally; mission-stations exist at Skidegate 
(Methodist), Masset (Anglican), and Howkan (Presbyterian). Of the general attitude of the 
Haids, Swanton says (loc. cit.):

'The Haids, Tingit, and Tsimshian seem to show greater 
adequacy to civilization and Christianity than the Indians 
than many of the tribes farther south. They are generally 
regarded as superior to them by the white settlers, and they 
certainly showed themselves such in war and in dept of the arts. 

In the 'Story of the shaman, Gánokok's-father,' 
recorded by Swanton ('Haids Texta,' in Bull. 39 
F.E., 1906, pp. 311-315), some items of White 
influence are referred to, and it seems that the 'new 
religion' of Bini, the Carrier Indian (Athapaskan), 
reached the Haids of Skidegate.

3. Tribal and social organization.—The Haids 
belong to those American Indian peoples who had 
a set social system, with caste divisions. The 
whole Haids people, according to Swanton (H.A.I. 
1, 522), is divided into two 'sides' or clans— 
Raven (Boya) and Eagle (Got)—each of which is 
subdivided and redistributed into numerous smaller 
local groups. Each clan is divided from one woman.' Besides the principal and more 
important towns of the Haids, 'there was for 
merly an immense number of small towns hardly 
distinguishable from camps, places that had been 
occupied as towns at some former time, and mythic 
or semi-mythical towns' (ib. 523). Society consisted of 
chiefs and nobles, and common people and 
slaves; and the lines of descent were determined 
by the various classes. The slaves (see below) per-
formed menial labour, and the difference between the common people and the nobility was accentuated by a dample, 'if people to a low family passed close in front of chiefs' houses in their canoes, they might be injured or enslaved.' High-born children did not cry like those of slaves or of common people's children, 'it was said that in the sky there was a sun of Tāxēt in the sky. Battle-songs were sung by women in the absence of their husbands at war, and there were songs used by all families, 'making peace.' It was believed that unfaithfulness on the part of a wife while her husband was away hunting or at war would cause him ill-luck or even death. This incident appears frequently in the myths and legends. A supernatural being named Tia 'presided over slaughter, and made his presence known at a time when it was about to take place' (Swanton, Bull. 33 BE, p. 374). When peace was made, one man from each side was generally taken up and borne around upon the shoulders of his opponents. He was called the "deer" (id. p. 380).

7. Totemism and heraldry.—As noted above, the Haida people are divided into two clans, 'Raven' and 'Bear,' both of which there are many minor groups and subdivisions. Each clan has a female progenitor (Djīlāgāns, the reputed ancestress of the Eagle clan, figures in a number of legends, and is connected with a famous scandal). Marriage between members of the same clan is forbidden. The fact that men and women are of different clans seems to be the Haida idea of sex or spiritual world. Most of the supernatural beings, however, seem to be assigned to the Raven people. Children followed the mother, and the mark of descent was to be of noble descent, sometimes married their captors and became free.' Swanton says further (HAI 205):

'Four prominent Haida clans and one clan among the "dwyers" of the North Pacific Coast with whom the institution of slavery attained considerable proportions; here a slave-class existed, the members of which were either war-captives or individuals purchased or obtained in other ways as slaves from neighbouring tribes. The strong caste-system probably made it difficult for male slaves as a rule to rise to positions of importance, although Swanton states that the greatest Skidegate chief of the time was a slave in his youth (cf. Bull. 29 BE, p. 306 f.). With female slaves the case was somewhat different for, these, especially if they were noble descent, sometimes married their captors and became free.' Swanton says further (HAI 205):

'The most prominent Haida clans and one clan among the "dwyers" of the North Pacific Coast with whom the institution of slavery attained considerable proportions; here a slave-class existed, the members of which were either war-captives or individuals purchased or obtained in other ways as slaves from neighbouring tribes. The strong caste-system probably made it difficult for male slaves as a rule to rise to positions of importance, although Swanton states that the greatest Skidegate chief of the time was a slave in his youth (cf. Bull. 29 BE, p. 306 f.). With female slaves the case was somewhat different for, these, especially if they were noble descent, sometimes married their captors and became free.' Swanton says further (HAI 205):

8. Secret societies.—According to Swanton, the Haids have secret societies 'only during the last 100 or 160 years.' These are of the spirit-initiation type. 'The entire performance consisted in the supposed possession of the novice by some one of a number of spirits, who carried the youth away and made him act the spirit himself was supposed to act. Some of these ways of acting were very ribald, and others were in accordance with native conceptions. They were largely the property of certain chiefs, who would allow only their own families to use them' (Swanton, HAI 205).

9. Peace and war.—A considerable proportion of the Haida stories relate to war with their neighbours. These stories were accompanied by its own shaman. Taunting songs were sung in the language of the
HAIDA

471

so constructed that it can be made to show up
either white or black. Of the hoop and pole game,
sort of a dancing, songs are sung to the Haida. It
is usually played with a disk or ring of hemlock
twigs and a long stick. Under this head Culin
also classifies the dance of gau ets' dij or a "woman's
dance," called Lea, which was commonly sung to by Swanton
(‘Ethnol. of Haida,’ p. 80) as follows:

This was a boy's game. Late in the spring, when a tall,
slim plant called Lea, the plant which was eaten, was at its
best, the boys would collect a great quantity of the stalks.
These two would each drive a couple of sticks into the ground
about 5 yards apart. After that each would take about 50 sticks
of the salmon-berry bush, and, using them as spears, alternately
try to drive one of them between the adversary's pole, or stick
into the ground beyond, so that it would rest on its top.
Each boy would then bid a certain number of Lea stalks, and
after they had used up all of their spears, he who scored the
most hits was the one who had been put up by his adversary. If
he were one point ahead, he got nothing more; but if he were
the best of two points ahead, he was as much as one; and if he
were three points ahead, as much as two, and so on.

Concerning the game of setigadiddaka, or
"knocking something over by shooting," which was
played by older people (sometimes by the whole
town turned out, and the resulting contests ex-
tended over a long period of time), Swanton informs
us that, "for some religious reason, the contest
playing with arrows as soon as winter began." Of
the "stick-game," Swanton, who describes it in
some detail in his account of Haida games, says
(‘Ethnol. of Haida,’ p. 185):

"The great gambling game of the Haida was the same as
that used on neighboring parts of the mainland. It was played
with a disk or hoop and a stick. The number of the sticks varied
in the sets that I have seen, one having as many as 50 sticks
of the set. The set was made of bone, but the most of yew or some similar kind of wood. Those were finely
polished, and, in many cases, finely carved or painted, but
usually were simply divided into sets of from two to four
by various individuals. One of the big sets included 20
sticks, was left blank, or nearly so, and was called djit, balt.
The djit was the piece hidden and guessed. The gambling-sticks had
several names, most of them bearing names of animals." The
more elaborate ones were ornamented with representations of the
animals they bear. A set of 60 sticks, collected by C. F. Newcombe
and now in the University of Pennsylvania,
was illustrated by the following:
shadow, 1; red fish, 2; black bear, 3; plane (of slate, weticed),
2; sea otter, 3; dance head-dress, 3; buffalo, 2; black bear,
deer, 2; seal, 2; guillème, 2; large house, 2; halibut, 2;
Humpback salmon, 5; dog salmon, 6; oonupedia, 2; chief who
has (i.e. rob noses), 2; supernatural beings of high rank
(90)."

A monotonous chanting accompanies the game,
here as elsewhere. Of the ethics of gambling
among the Haida, Swanton observes, "but it is
not so true to say that cheating was fair in Haida
games as it was in part of the game."
In a "ring and pin" game, described by Swanton
(‘Ethnol. of Haida,’ p. 60), when the V-shaped piece fell to the ground instead of being caught on
the stick, after the stick, the one
who threw must yield to the next player;
but, before doing so, he was at liberty to pull his opponent's hair violently or punch his knuckles as
many times as he had made a catch. Concerning
the game of jackstraws, which, he thinks, "would
seem a natural and logical development from the
game of stick-counting," Culin (p. 729) says:
"The only intimations the writer has had of it
in America are among the Eskimo and the Haida."

9. Songs.—The Haida have many brief songs
of various sorts, both in connection with feasts and
other public ceremonies and for other purposes.
Magic songs and "power songs," used by shamans
and others for the purposes of acquiring or in-
creasing influence and the incantations of
diverse kinds for luck in fishing or success in hunt-
ing, war, etc., are common. There are also war-
songs, love-songs, songs for calming and for raising
storms, "dancing-hat" songs, satirical and taunting
songs, songs belonging to the animals and other
creatures in stories, house-songs, canoe-songs,
songs of mourning, women's songs, cradle-
songs, and peace-songs. A large number of all

sorts are recorded in the various works of
Swanton (in 'Haida Songs,' texts and translations of 88
cradle, 11 mourning, and 6 miscellaneous songs
from the several Haida dialects are given). Totem-
pole raising and 'potlatches' were accompanied
by much dancing and singing. The joyful songs,
called Lea, were sung immediately after
'jdaj djat jagads,' or 'women's songs,' were used
when totem poles and house timbers were erected
in a potlatch (Bull. 89 BE, p. 147).

10. Feasts and festivals.—Like other tribes of
the North Pacific coast, the Haida had a number of
important feasts and festivals, some of which
were of foreign origin. The institution of the'
'potlatch,' a great feast in which the giver dis-
pensed with large amounts of property (commonly
blankets) in presents to all invited, being after-
wards 'potlatched' in return, was so esteemed
that in one of the cradle-songs, cited by Swanton
('Haida Songs,' p. 8), a child is told that he is a boy
and not a girl, in order that he may give great
potlatches—for that was he born. Swanton says
(HAI ii. 293):

"During the festival in which the gifts were made, houses
and carved poles were raised, chiefs' children were initiated
into the secret societies, their ears, noses, and lips were pierced
for ornaments, and suits of copper plates, which figured promi-
nently in the social and economic life of this people, were
the by-products of this event, took place. Among the Haida,
children were then tattooed. All was accompanied with dancing,
singing, and feasting."

People save money for years in order to hold a
great potlatch, and, distributing their wealth in this
manner, become really rich and attain high rank
as chiefs, etc. It is said, as Swanton reports
('Haida Songs,' p. 51): 'Once when there was a
great famine in Sitka Inlet, the chief of Drum
Town had enough property to hold a potlatch
and save every one from starvation.' In a cradle-song
the future potlatches of a child are likened to the
deluge in the time of the Raven. Another
families are warned to be ready for invitations
to the potlatch when the child is to be tattooed, etc.
At potlatches and feasts the chiefs were placed in
accordance with their wealth, the richer sitting
nearer the inside house-pole, in the back part of
the house."

Among the peoples of the North Pacific Coast
the salmon-ceremonials were of great importance.
11. Shamans, medicine-men, etc.—The shamans
of the Haida deserve special mention from a
religious point of view. According to Swanton
(HAI ii. 292):

"Among the Haida and Tlingit, shamans practiced practically
all religious functions, including, as usual, that of physician,
and occasionally a shaman united the civil with the religious
power by being a town or house shaman."

Shamans obtained their positions hereditarily, or
by natural fitness. The former was more common,
the shaman getting his position from his father,
and 'inheriting his spiritual helpers, just as he
might his material wealth.' He had a guardian
spirit in either case, and 'the first intimation
of his new power was given by the man falling sense-
less and remaining in that condition for a certain
period.' This was the sign of the presence of a
secret-society spirit or a guardian spirit.

12. Witchcraft.—Among the Haida, as with
other peoples of the North Pacific Coast, belief
in the power to influence or control the thought
and actions of others by supernatural means, occult
practices, and the like, prevailed. According to
Swanton (HAI ii. 996):

"Among the Haida witchcraft was supposed to be due to mice
which had got inside of a person's body, and if these could
be expelled he might be restored to his right mind. There
were said to be as many as ten of these mice sometimes, one
of which (the last to leave) was a white one. A means of detect-
ing witchcraft employed by the Haida shamans was to
write the name of all persons in the village in the presence of a
live mouse, and determine the guilty party by watching its
motions."
HAIDA

One of the Haida families of the Eagle clan was called 'witch-people.'

13. Calendar.—Of the Haida month-names two refer to mammals, three to birds, two to fish, three to plants, and three to the seasons and the weather. In the month 'Swanton,' in his account of the Haida calendar (Anz. Acad. 1903), says that they formerly intercalated between the two portions into which they divided the year what they called a 'between moon,' which may sometimes have been omitted to correct the calendar. The two periods of the year are 'summer' (April to September) and 'winter' (October to March), consisted of six months each.

14. Art.—The art of the Haida is, in some respects, the most interesting and remarkable north of the border of Mexico, and Central American influence. Indeed, as W. H. Holmes observes, the carving of the Haida, Tingit, Kwakuitel, and other tribes, in wood, bone, ivory, and slate are remarkable for their artistic qualities, and perfection of execution, displaying more than a mere suggestion of the aesthetic qualities of the prehistoric work of the tribes of Mexico and Central America. It says further: 'A carving in black slate by a member of the Haida tribe, representing the "bear mother," is not surpassed in spirit and expression by any known work north of Mexico. However, in the totem wood-stones, masks, rattles, dishes, boxes, and tobacco pipes which excite our admiration, it was executed with a great deal of imagination, and a time when the influence of the art of the white man had no doubt come to be somewhat decidedly felt,' (R.A.F. 640).

As materials whereupon to exercise their artistic sense the Haida had particularly the fine-grained black slate of the Queen Charlotte Islands, soft whale bone carvied, but growing harder with time, and taking a good polish; also the cedar-wood of this region, which enabled the tribes of the North Pacific Coast to attain a perfection not elsewhere reached by the aborigines north of Mexico. Haida carving and sculpture express themselves in special relations with religion, mythology, and history.

In wood-work we have the curiously carved and painted totem-poles (models of these for White consumption are now made in slate as well as in wood), and boxes for containing bones of the dead (graves). The images of animals and figures of persons, representations of human beings, animals, and mythological figures in horn, bone, bone, ivory, cups, ladles, spoons, and other utensils, implements, and ornaments were made, often in the form of or adorned with representations of human beings, animals, mythological beings, in whole or in part.

One of the Haida carved spoons described by Ridgway (Emsl. vi. 1890) 14), one has the neck of a woman clasping a frog or a toad to her breast and kissing it; another a woman and a bird; a third, a bear and a monkey clasping each other. A fine old pipe has a woman and a raven in such a union.

The Haida were also skilful in metal work: copper was used for ornaments and utensils (knives, rattle, daggers, the 'coppers' used as symbols of wealth); of silver (introduced by the Whites) they made bracelets, etc., with symmetrical figures engraved upon them. Other rather artistic developments appear in the chiefs' robes of frayed bark, and in the ceremonial head-dresses. Noteworthy also is the Haida basketry hat. Rock-painting does not occur in the Haida country; according to Newcombe, of two rock-carvings noted one is probably Tingit.

15. Painting and tattooing.—Besides the use made of painting on masks, totem-poles, and other wooden objects, and tattooing, the arms, hands, feet, face, hands, front, etc., the Haida practised painting and tattooing of face and body. A. C. Fletcher says:

"Among the Pacific Indians women were tattooed on the face and body, a custom that recently reached its most recent development among the Haida of Queen Charlotte Islands. The designs were of conventionalized "totemic" figures, and seem to have indicated personal or tribal distinction rather than any religious cult." (R.A.F. 760). Red and blue colours were employed.

16. Life and soul lore.—The souls of animals, according to the Haida, "have the human form, and act very much as men do on earth." According to Swanton (Pall. 29 B. E. p. 189), "every animal and every human being is supposed to be governed by a "thread of life"—i.e. a thread used also for thread made of mountain-sheep wool."

In one of the tales a woman lets out the "thread of life" of her husband, who goes hunting, knowing its action when he is coming back; in another tale a man is told to wear a new hat, when he is coming home: roosts on it, the "thread of life" occurs, she stretched her arms to the thread of life of him only who wore the new hat, and she saved him, because his wife left something for her.

Restoration to life is a common thing in Haida tales, but Swanton (Pall. 29 B. E. p. 348) met with but a single instance of restoration to youth, i.e. where Slaughter-lover 'spit medicine upon the old people they had killed, and they also became young.' Fire was the means of communication between this world and the world of spirits, the messenger being 'Old-woman-under-the-fire.'

Water is also occasionally mentioned as serving for such purposes (49. p. 14). Food for the slain in the land of souls was transmitted through fire.

Concerning 'Woman-under-the-fire,' Swanton remarks (ib. p. 209):

"Woman-under-the-fire repeated to the supernatural beings everything that was said near it. But, if charcoal were instantly robbed upon the lips of a person who had anything to say without the want of the supernatural beings to hear, Woman-under-the-fire knew that it was not intended.'

The souls of those dying at battle or by violence went to Täx-t's house in the sky. Concerning the souls of gamblers, we read in the tale of Sound-gambling-sticks (ib. p. 57):

"He was also said to live in a place within sight of the Land of Souls, and, when a gambler died, he came over to gambol with him, making dog salmon against some successful, there would be many deities; if the gambler won, there would be a great run of dog salmons."

The re-incarnation of salmon in human beings (particularly twins) is a common belief among several peoples of the North Pacific coast, with whom the Salmon Festival are of special significance.

17. Re-incarnation.—The belief in re-incarnation of the dead filled a very important role among the Haida, with whom the child was thought to be the returning father, mother, or other dead relative. The myths, legends, and songs treat often of this topic. In the cradle-songs the babies are reminded of what they used to do when formerly on earth; old tain-marks and other evidences of their identity with those passed away are pointed out; their childish actions are rebuked as being unbecoming, since, e.g., they are reborn chiefs, and 'too great to cry, etc.' In a cradle-song given by Swanton (Haida Songs, p. 5) a child is sung to as follows:

You need not think that the smoke of your house in the middle of Skedans will be as great as when you were a woman [in your previous life upon earth]. You need not think that they will make such a conical nebula about them. Other rather artistic developments appear in the chiefs' robes of frayed bark, and in the ceremonial head-dresses. Noteworthy also is the Haida basketry hat. Rock-painting does not occur in the Haida country; according to Newcombe, of two rock-carvings noted one is probably Tingit.
Many of the favorite stories of the Haidas tell of the re-incarnation of the Raven or Shining-Heavens, their highest deity—particularly the myth 'How Shining-Heavens caused himself to be born.'

18. Influence of sea-environment upon mythology and religion. The influence of their island home and environment upon the mythological and religious ideas of the Haidas has been very great, although not a few of the mythical figures, moti's, and incidents may have been borrowed rather recently from the Tsimshian, Tlingit, and others. Water-monsters and supernatural beings of the sea of various sorts figure largely in folklore, myth, and legend. The most prominent group of these supernatural beings are the Killer-whales. The killer-whale (Orcia sp.) appears in many stories of the type of 'The Man who married a Killer-whale Woman,' cited by Swanton ('Bull. 29 BE', p. 286 f.). The killer-whale is prominent in Haida art, being often represented conventionally by his fin instead of by his whole body. In tales borrowed from Tsimshian and elsewhere, the role of the killer-whale is disproportionately emphasized, as, e.g., in the story of Gunamafistl (ib. 386-340).

Supernatural beings.—The Haidas world teems with supernatural beings of land and sea, mountain and forest, river and lake, cliff and cave, air and sky. While the somnolent human beings is generally by way of fire, personified as 'Old-woman-under-the-fire' (see above), the messenger of the supernaturals. These supernatural beings are unable to hear the odor of urine, the blood of a menstruating woman, or anything associated with these (ib. 168). They are believed to land their canoes first, and to do the work of the human beings, for example, sew up the break in the canoe. Supernatural beings 'hunt during the night, and get home before ravens come calling;' if they are detained in any way so that they hear the raven, they will not call (ib. 168). When a supernatural being was born, he grew up quickly, and soon cried for a bow, but would only be satisfied and one of copper. Supernatural beings are made fire by rubbing hard white stones together. Those who have become animals can be recognized, when being skinning and cut open, by the ring of copper about their necks. Simply looking at the skin is said to be enough to make supernatural beings laugh (ib. 288). Supernatural beings do not want anything dirty, like human beings, for they have clean hands. Thus, a man often feels a real shake under him for this cause (ib. 297).

Among the most noted supernatural beings, or figures with names of such are the following: Killer-whale, Supernatural-woman-to-whom-is-thunder, the Waquo, Cave-supernatural-being (fishman of eating), Master-Carpenter or Master-canoe-builder (a favorite deity of the canoe-building Haidas), Mouse-woman, Supernatural-sparring, Dag-o-gega (being who tries the strength of heroes), Sacred-one-standing-and-moving-supernatural-being who-was-said, the one-in-the-silence, the greatest supernatural being in the ocean, Master-hopper (a one-legged supernatural being, or a being with one leg shorter than the other), Supernatural-being-at-whose-voice-the-ravens-sit-on-the-sea, Raven, Dijilqons, and Shining-Heavens.

The terms 'Master', 'Greatest of', 'Mother of', 'Owner of' are often applied to supernatural beings, e.g., 'Mother-of-halibut', 'Greatest of gulls', 'Owner of dog-salmon.' These supernatural beings seem often to have the power of assuming the form of a thing, and yet to be distinct from it. Thus, e.g., "Old-woman, 'Cill woman,' or 'Reef-woman,' may be a clif or a reef, and also live under it.

2a. Deities, demi-gods, and heroes. From the standpoint of the Haida mythology and folklore the following may be singled out as especially noteworthy: Shining-Heavens, Raven, Lagna, Dijilqons. Of these Lagna is a Tlingit spirit; Dijilqons is the ancestor of the Eagle clan; the other two are demi-gods, or demi-gods, of the Haidas. Shu, or Shining-Heavens, is 'the highest deity anciently recognized by them.' The story of his incarnation, 'How Shining-Heavens caused himself to be born,' is one of the greatest stories told by the Haidas (Swanton, Bull. 29 BE, pp. 29-31).

One of the first incidents in this tale might be considered with the finding of a moss by a young girl, who, digging on the beach, uncovers a cockle-shell, from which comes the cry of a baby. She looks into it and discovers a little child, which she takes home. The wonder-child soon grows up; it is Shining-Heavens, who above his supernatural power is the approved way. In one myth the Raven finds a cockle-shell full of children dressed over by the waves. By some this birth in a cockle-shell is interpreted to mean birth from a cockle. The birth of the wonder-child, the re-incarnation of some famous personage, or the incarnation of some supernatural being, is the typical hero-story of the Haidas.

Besides the tale of Shining-Heavens, we have the story of 'He-who-got-supernatural-power-from-his-little-finger,' 'He-who-was-born-from-his-mother's-side,' and others. Abandoned or put-away children often figure in hero-tales, e.g., 'The-old-abandoned-for-eating-the-flipper-of-the-hair-seal.' That the existence of a Raven clan among the Haidas, Tlingit, and Tsimshian has had something to do with the importance of Raven stories in their mythology is pointed out by Swanton (Bull. 29 BE, p. 146, and Ethnol. of Haida, p. 104), who gives (Bull. 29 BE, pp. 110-149) the tale of 'Raven Traveling.' The story of 'Raven Traveling' is the creation legend of the Haidas; but, as Swanton remarks, it rather explains how things were altered from one state or condition into that in which we now find them (ib. 149). Raven, indeed, is transformer rather than creator, although he is represented as having originated not a few things, and is the principal figure at the creation, for 'topographic features in various other national vocabularies ... the tastes, passions, habits, and customs of animals and human beings are mainly explained by referring to something that Raven did in ancient times. His story-name is Nakftlala, or 'He-who-voice-is-obeyed.' He has a buffalo-side, like some other American Indian gods and demi-gods, but some Haidas also express the opinion that 'Nakftlala was a great chief who put on the skin of a raven [the usual magic device] only when he wanted to act like a buffalo.' The travelling companion of Raven is Eagle or (among the Tsimshian) Butterfly. Other interesting deities are Taat (whose name is confused with that of a small bluish salmon), to whose house men in the darkness were said to be killed (ib. 169). A curious feature of Haida mythology, as Swanton notes, is the fact that all the 'river-spirites' seem to be women, only a single instance to the contrary having been met with. Among these water-creatures, who appear frequently in the tales and legends, are the following: Creek-woman (in various localities); Supernatural-woman-who-plays-up and-down with her-own-property (i.e., with the fish); Flood-tide-woman; and Tidal-woman. One of the winds, North-east, was named after Fair-wather-woman, who figures in several stories. Other female characters in Haida mythology and folklore are the Half-rock (stone from hips down) woman, or Woman-rooted-to-the-ground; Old-woman-under-the-fire (messenger from the supernatural beings); Porpoise-woman; Ice-woman; Property-woman; Mouse-woman; Panther-woman (this character has a Tlingit name); Woman-sitting-and-smelling. But the most famous female figure in Haida lore is Dijilqons. Dijilqons is the ancestor of the Eagle clan, and figures in a
HAIR AND NAILS

scandal with Swimming russet backed thrush another supernatural being.

21. Animals in legends.—In the legends of the Haida a large proportion of the birds, beasts, and fishes of their environment figure more or less prominently: whale, porpoise, seal, sea-lion, salmon, cod, halibut, devil-fish, eel, salmon, sculpin, berring; geese, snow goose, white, black, and gray, eagle, raven, crow, coromander, wood-pecker, owl, wren, hawk, puffed, loon, dipped (water-oos), goose, robin, Daurian, blue, black, blue, gray, land ood, creaster, tanager, grizzly, blackbird, sparrow; beaver, porcupine, marten (older brother of black bear), land-otter, dog, black bear, grizzly bear (a bugaba for children), mouse, mink, grouch, ground hog, wassel, etc. Some of the mainland animals, such as the wolf, also appear. The animals in the story have names different from their common everyday ones. The Haida name for black bear is Kus' u.; but in stories he is called Kus' u. winghtita. The Thunder-bird and the Sleep-bird are peculiar culls, as are the long-nosed animals the land-otter has a role sui generis. According to Swanton ('Ethnol. of Haida', p. 28 i., Bull. 59 BE, p. 225).

22. A man who saved himself from drowning was supposed to be deprived of his senses by land-otters and become transfigured into one of its kind. This being would land-otter fur 'all over his body, and as soon as he is covered with fish spines, it travelled all over the Haida country with the same effect.

If a land-otter looked at any one while drinking water, that person was seized with fits, soon died, and seemed to live amongst the land-otters (Bull. 59 BE, p. 270). The idea that loss of the senses or craziness is caused by the land-otter is common to several of the Indian peoples of the Pacific Northwest. Emerging the land-otter, we learn also (ibid.) that 'if a land-otter forgot to take along the mat used to cover the knees of a canoe-man while padding, he was sure to be killed by human beings.

HAIR AND NAILS.—In custom, ritual, and superstition, the same ideas underlie the majority of beliefs and ceremonies relating to human hair and nails; and the whole class of observations may be conveniently divided into a single section. Sometimes, indeed, customs may be due to the close connection of the hair with the head; and analogous to the case of the nails will naturally be wanting. For example, certain practices relating to the hair of the head appear to have originated from the wide-spread belief that the head (q.v.) itself is particularly sacred (see Frazer, *G.P.*, pt. ii., 'Tabor'), p. 202 f.); some plants are designated as being sacred to the head, and it is important not to disturb this spirit more than is necessary, or, as among the Greeks, the hair is itself regarded as the seat of *Myth. and Religion* (Gruppe, Munich, 1896, p. 167, 720) — a belief which is also found, in a modified form, among the Omaha (Fischer and La Flesche, *Field *BE, 1911), p. 124. Hence the Burmese shrink from frequent washing of the head; and, when the hair of their kings was cut, the operation was attended with much solemnity. Possibly the above, some superstitions concerning hair-washing or hair-cutting arise from a special fear of offending or injuring the spirit of the head. Samsen's strength was lost as soon as the hair of his head was cut off (Jg 16:14). But, in the main, these superstitions are the outcome of a primitive belief which affects the nails as much as the hair. The savage thinks that any portion of his body, though severed, still retains some sort of connexion with himself. Thus, injury to the hair or nails is liable to cause danger to the person who suffers from it, and the clippings of the hair belong to the principle of 'sympathetic magic' is well-known in folklore; and, if a man can work magic on an enemy by obtaining a portion of his clothing, it is even more readily comprehensible that he can do mischief by means of a part of his enemy's actual body. The simplest precaution is that of avoiding hair-cutting altogether. This course is sometimes taken to protect those whose lives are specially valuable, as in the case of the Frankish kings (G. P., pt. ii. p. 179). Cutting off the hair or nails is avoided on only certain occasions or at certain periods, when it would be more dangerous than usual. Young children are frequently thought to be too exposed to danger; hence, we often find that neither nails nor hair may be cut in infancy or during the early years of childhood.

This superstition is still (recently) common in England; e.g., a baby's nails must not be cut until it is a year old, otherwise it will be 'light-fingered', or ill-luck will result (see *County Folklore* L. (1890) 12 (Suffolk), v. (1898) 230 (Lincolnshire), etc.). Usually the danger is avoided by biting the nails (one of the superstitions which indicate a fear of iron). This practice is widespread in Europe and is also known in *County Folklore*, iv. (1904) 58; *Melanesia*, iv. 486, for examples from various parts. So, among the negroes of Jamaica, to cut the nails of infants with scissors will make them thieves (JL xvi. (1905) 68).

In the case of adults, the hair (or sometimes the nails) must not be cut during times of special danger. According to Diodorus (i. 18), Egyptian travellers did not cut their hair until the end of their journey. The inhabitants of Taif in Arabia shaved their heads at the sanctuary of their town, on returning home. Robertson Smith, who quotes this example (Rel. Sem., 381), suggests that the bond between the worshipper and his god has been loosened by absence during the journey, and the offering of hair has the effect of binding it again. This explanation is very possible in certain cases; but more probably the custom of leaving the neck uncut during a journey arises from the fear that a stranger may work magic by means of the locks. It is also possible that the idea of purification may underlie the practice, so that a spirit lives in defilement or infection among strangers, and he removes the uncleanness by cutting his hair on returning home. Van Gemmen (*Villes de paysage*, p. 285) lays stress on the pilgrimage or journey as
HAIR AND NAILS

intermediate between two stages (séparation et agrégation), each of which has its appropriate ritual.

In Greek myth, Achilles kept his hair uncult because his father Peleus had vowed it to the river Spercheus, if his son should come home from war in a foreign land (II. xxi. 144). This, however, does not prove that the early Greeks were among those who abstained from hair-cutting when on a dangerous expedition; Achilles had left home as a boy, and (as will be seen below) it was a practice for Greek youths to offer their hair to the local river on reaching manhood. But the passage is a good example of the common custom whereby the hair is left uncut during the period of a vow. A Nazirite was commanded to let his hair grow while under a vow; afterwards he shaved 'the head of his separation' at the door of the tabernacle, and burned the hair in the sacrificial fire (Nu 6:5; see also Ac 18:22-24). Here, and in many other cases, the hair-cutting seems to be a rite of purification for the person who, during the continuance of the vow, has been unclean.

Besides the period of a vow, there are other occasions on which the cutting of hair is avoided. According to a common English superstitious rule, it was better for women never born on the Sabbath to have their hair cut or combed.

(Footnote [For European parallels, see Mithraeum, ii. 457.] Here Christianity has no doubt adopted a pagan superstition, which is mentioned as early as Heliodorus (Works and Days, v. 79, 90, xii. 26). The reason given is that the hair is γυμνός (see also Würtem. L. ch. 4, ed. von Stade, i. 507, i.e. must not be cut as at a religious festival). The same warning is given in the Symbols of Pythagoras, where hair-cutting must be postponed for the person who, during the continuance of the vow, has been unclean.

The practice is due to a different cause. Those who believe in a resurrection of the body have a natural anxiety that no part of their personal uncleanliness may be left on the day of resurrection. In Leirin, while some peasants burn their hair and nails for fear of the fairies, others keep their hair cuttings, which may be required on the Day of Judgment to scale against the weight of sins (PL vii. 1898). This explanation has probably superseded an original fear lest the hair should attract evil spirits. Indeed, in Cavan this reason is avowed; it is unlucky to burn hair, which will be required on the Last Day in order that the body may appear as God created it (F9. xix. 219). The Magi is not confined to Christian races; Frazer (GBP, pt. ii. p. 578) quotes similar beliefs from the Incas of Peru, the Turks, and others.

In leech-craft, the use of hair and nails is widespread; only a few typical examples can here be given. Pliny (HN xxvii. 25) mentions, as a remedy for fever, that the Magi placed the hairings from a patient's fingers and toes at the door of another man, before sunrise. Some of the Magi, more innocently (as Pliny adds), order the parings to be thrown on an ant's nest to prevent the ants from attacking the patient's hand; or the child may carry off the nails to be caught and worn as an amulet. These prescriptions are generally explained, with Pliny himself, as cases of the transference of evil to another person, animal, or plant; and many cases of folk-medicine seem to be based on this principle. In the Hebrides, epilepsy is cured by burying a black cock with clippings of hair and nails from the patient. In Mesopotamia, a child may be cured of the same malady by burying some of his clothing with a lock of his hair. As the linen moils, the child recovers (F9. xii. 316). Here, and often, the object is to rid of the disease by mere transplantation. But, as Hartland notes (ib. 144.), many of the cases generally explained by transplantation are different. In a common type of leech-craft, the hair or nails of a sick person are stuffed into the hole of a tree, or hung up in its branches. Where this custom may often be to secure a healing union with a healthy tree; for in a similar rite, in which a sick child is passed through a tree, the good health or preservation of the tree is an important feature. It may be possible, therefore, that the idea of a healing union is the motive of some other practices in which the parings are transferred to an animal or man; and Hartland thinks that the idea of the hair or nails of a sick person has often obscured or supplanted an older
HAIR AND NAILS

belief in the virtue of union with a healthy object, whether human being, animal, or plant.

Apart from caring for sickness, the hair is very commonly found as a medium of connexion or union. This idea is probably at the root of the well-known custom of dedicating a lock of hair to a god. At a later stage of thought, the hair is no doubt considered as a mere symbol; but in earlier times the worshipper, by offering a part of himself, is put in actual communion with his god. In Greece, as we have already seen in the case of Achilles, youths and maidens offered their hair to deities on reaching maturity. Frequently the deity was the life-giving river of the country; Orestes presents a lock for nurture (ἕφασθαι) to the Inachus. (Eschyl. Ophel. 5.) (For other examples, see Pausana, i. 57. 3, viii. 30. 3, and 41. 3, with Frazer's note, giving parallels from other nations.) Both in Arabia and in Syria it seems to have been customary to sacrifice hair as an initiation into the state of adolescence (Ed. Sem. 327 f.) cf. Lucian, de Dea Syr. 55. The custom was regular at Rome, the hair being dedicated to some patron deity; e.g., Nero dedicated his first beard to Jupiter (see references in Mayor on Juvenal, iii. 186). Offerings of hair were also made on other occasions in Greece—as by girls before marriage (Diod. i. 46. 41). In these cases, the offering may have been 'propitiatory,' as it was made to virgin-deities, and seems designed to avert their wrath at the marriage of their worshippers. But the general idea is the same: the worshipper is put in communion with the deity. Pausania (ii. 11. 6) mentions a statue of Ægina, the goddess of health, which was in the possession of women's hair and garments, in no doubt dedicated before or after childbirth. Similarly, the cutting of hair is the means whereby the living are put in direct communion with the dead. Often the mourner's hair is plaited on the tomb, or in the grave, or on the corpse itself. Here the desire to maintain connexion with the dead is, no doubt, the original motive, though frequently forgotten. The custom is classical: in (Eschyl. Ophel. 6), Orestes offers hair at the tomb of his father, as well as a lock to the river-god (see Soph. Pho. 299, At. 1174; Eur. Iph. 580; Lycurgus, Epit. 60; Bion, i. 61; for parallels from other peoples, see Hartland, LP ii. 229 ff.). In many instances the hair is not brought into close contact with the dead, and appears to be cut simply as a token of mourning (as in Homer, Od. iv. 183; Eur. And. 101, Or. 458; and often in other races). But here it is probable that the original purpose has been forgotten, and the cutting of hair has degenerated into a mere expression of grief. Hence the Persians cut not only their own hair, but also that of their horses, after the death of a famous general (Herod. ix. 24). By a natural extension, death himself was said to cut off a lock from the head of a doomed person (Eur. Ajax. 74 f.; Verg. Aen. iv. 698 f.). In many of these cases it has been thought that the offering of hair is a substitution for the whole person, who is thus spared the necessity of being actually sacrificed to the dead (see Tylor, PC, 1891, i. 401). Accordingly a slightly different view, the hair is a pledge of the ultimate union of the mourner with the dead in the nether world. Both these explanations may hold in certain instances; but the general idea (as stated above) seems to be rather a wish to preserve connexion between the living and the dead (see LP ii. 325 f.).

The broad idea that union can be effected by means of the hair or nails may be illustrated by other practices, some of which are very well-known, savage lay great stress on the influence of diet, believing that to consume part of a man or animal will transmit their distinctive qualities. Thus, in Japan, the characteristic of another person was acquired by biting his hairs in sucking his drinking, the hair was very commonly found as a medium of connexion or union. This idea is probably at the root of the well-known custom of dedicating a lock of hair to a god. At a later stage of thought, the hair is no doubt considered as a mere symbol; but in earlier times the worshipper, by offering a part of himself, is put in actual communion with his god. In Greece, as we have already seen in the case of Achilles, youths and maidens offered their hair to deities on reaching maturity. Frequently the deity was the life-giving river of the country; Orestes presents a lock for nurture (ἕφασθαι) to the Inachus. (Eschyl. Ophel. 5.) (For other examples, see Pausana, i. 57. 3, viii. 30. 3, and 41. 3, with Frazer's note, giving parallels from other nations.) Both in Arabia and in Syria it seems to have been customary to sacrifice hair as an initiation into the state of adolescence (Ed. Sem. 327 f.; cf. Lucian, de Dea Syr. 55). The custom was regular at Rome, the hair being dedicated to some patron deity; e.g., Nero dedicated his first beard to Jupiter (see references in Mayor on Juvenal, iii. 186). Both these explanations may hold in certain instances; but the general idea (as stated above) seems to be rather a wish to preserve connexion between the living and the dead (see LP ii. 325 f.).
HALEBID

HALEBID (Kanarese hale-bid, 'old ruin').—A village in the Hassan District of Mysore; lat. 13° 13′ N.; long. 76° E.; the site of the great ancient city Doraasamudra, Dvārakasamudra, or Dvārakatimuras, the capital of the Dravidian Bahuva dynasty. It was founded in the early part of the 11th cent. A.D., and largely rebuilt by Rāja Vira Somesvara in the 13th. He is said to have been attacked by leprous, and was warned to erect temples in honor of Śiva as a means of curing his disease. This probably accounts for the splendid religious buildings which survive to the present day. The city was captured by the Muhammadan general Kāfūr, and plundered in 1310. Sixteen years later it was finally destroyed by another army of Musulmān invaders. One Siva temple is said to be dedicated to Śiva in his form Kāntābheva (Kāntābheva, the name of an Așura, and Kāntābheva a title of Durgā, the spouse of the god); but Rice shows that its proper name is Kērārāvarna, 'Lord of Kēdar' (so Kērārānītha), and that it was erected by Vira Ballīla and his queen Abhinavī Kērālā Devī, about 1219. Of this temple Ferguson says:

"If it were possible to illustrate this little temple in anything like completeness, there is probably no building which would convey a better idea of what its architects are capable of accomplishing. It is, however, imitated and mutilated by its neighbour, the great temple at Huliāb (known as Rājasvārana, 'Śiva, Lord of the Rāja dynasty'), which, had it been completed, is one of the buildings on which the advocate of Hindu architecture would desire to take his stand" (Ind. and Inst. Rev., ed. 1915, p. 445.)

This, the older of the two ornamental temples, was probably commenced by Vinaśāyitīya (A.D. 1047–1100). It is unfinished; but whether this was always the case, or whether it was completed and afterwards lost its towers, is uncertain (Rice, Mysore, p. 514). Ferguson has given an elaborate
and enthusiastic description of this magnificent building. Rice, however, corrects his proposal, assuming that the final ornament of the towers, resembling a lantern, was really a sacrificial vase (ezelalst), bound round with a cloth and fixed to the top, from which oil was filled with holy water and used at the consecration of a temple. Fergusson remarks:

"The mode in which the eastern face is broken up by the larger mass, as to give height and place a mass of towers and domes over the summit, is a better way of accomplishing what the Gothic architects accomplished in their transept and projections. This, however, is surpassed by the western front, where the variety of outline, and the arrangement and subdivision of the various faces in which it is disposed, must be regarded as a masterpiece of design in its class."

Rice, p. 615 ff., gives a full account of this splendid temple.

W. CROOKER.

HALEVII.—1. Life. —Jehudah ben Samuel Ha-Levi (Arab. Aby-l-Haazr Yehudah ibn Alfi), Jewish philosopher and poet, was born in Toledo about 1068 (the year in which that city, the meeting-place of East and West, fell before Alphonso VI), and died in Palestine about 1143. Ha-Levi was sent at an early age to the Rabbinical seminary of the famous Isaac Alfas at Lucena. In addition to the usual studies of theological study, he devoted himself to mathematics, the natural sciences, philosophy, and, since he was to be a poet, his Horatian. Arabic he learnt to write as skillfully as he did Hebrew. A born singer, he gave himself to poetry when he was a young man. On the completion of his musical studies, he began to promote, first in his native city, and later at Cordova. But, though successful, he does not appear to have been more than a leisure poet for his vocation. His chief interest was literature, religious literature more especially; and he sought to sympathise with his oppressed people and his love for Palestine, the cradle of their lost greatness and their future home, found expression in his Horatian poetry, but his ruling passion. Meanwhile theological study, the instruction of young men in Rabbinism, and literary pursuits relieved the monotony and disappointments of his professional life. He wrote various works, both secular and religious, mainly in Hebrew, and his great philosophical work, Kabbalat al-Kazari, usually known as the Kazari, in Arabic. His religious poems have enriched the library of the synagogue; his Kazzari is a classic. It was soon after the completion of the latter work—he was then about fifty-five—that he found opportunity for realising the great dream of his life. To see Jerusalem with his own eyes, and to worship at its fallen shrines, was his chief desire.

That I may fly away, and there, as rest from all my wanderings,

The ruise of my heart among thy ruins lie,

Thus he addressed his popular elegies (since included in the liturgy for the Fast on the Ninth of Ab); and now that yearning was to be satisfied. Travelling through Spain, where his journey was a triumph—such enthusiasm was he hailed by his many admirers—he took ship for Egypt, where a long and a tempestuous voyage caused him extreme discomfort; but it also fired his muse. The scene before his eyes conjured up the old, the desired haven, and the utterance of that thought in verse, stilled for him the tumult of the waves:

'As the sea rages, but my spirit is glad;

It draws nigh to the Temple of its God.'

The hospitality of his many friends kept him in Egypt longer than he wished; but as length he seems to have reached Palestine. He certainly got as far as Tyre and Damascus, and he may perhaps have seen Jerusalem, though only for a short time. It was at Damascus that he penned the elegy already cited. The closing passages of his life are unknown; but legend has filled up the gap. It is said that, while he was reciting his poem on Zion in the Holy City, an Arab horsemann rode over him and trampled him to death.

2. Philosophy. —Ha-Levi's great philosophical work is, as has been stated, the Kazzari. Written about 1140, it was rendered into Hebrew some thirty years afterwards by that famous rabbi Judah ibn Tibbon. A little later (about 1200) a second Hebrew version was undertaken by Isaac Corda. Of this, only a portion, the preface and a short fragment, have been preserved. History tells of one Balian, king of the Kazars, a tribe in the Crimea, who became a convert to Judaism in the 5th century. He is said to have met some of the descendants of the Kazars at Toledo, utilised this incident to give point and vividness to his book. His aim, as is indicated by its sub-title, "The Book of Argument and Doctrine of the Despised Faith," was designed to vindicate Judaism against the assaults of its various detractors—the Karaites within the gates, and the Moslems and infidels without. What had asked him what shape such a vindication ought to take, and his great book was his reply. The story of Balian provides the work with its starting-point and framework. The king, dissatisfied with paganism, invites a philosopher to expound his system. The God of philosophy, however, proves to be a constant being, indestructible and inaccessible to men. The king turns, therefore, first to a Christian, and then to a Muhammadan, but with equally unsatisfactory results. The truth of the religion in each case is devoid of convincing historical guarantees. On the other hand, both have appealed to Judaism as the fount and the witness of their creed. The king accordingly sends for a Rabbi, and the rest of the work gives the imaginary conversation which ensues. The arguments of the Rabbi, which are, of course, those of the author, convince the king, who thereupon declares his adherence to the Jewish faith.

In order to understand the genesis and significance of the Kazzari it is necessary to have a clear view of the state of religious thought in the 12th century. It was overthrown among the Jews in Halevi's time. Coloured by Greek philosophy, by the teachings, more particularly, of Plato and Aristotle, Arabic philosophy in its turn influenced Jewish thinkers living under Muslim rule in Africa and Spain. That influence had a twofold result. It gave rise, on the one hand, to unorthodoxy and to a demoralisation of the religious and philosophical ideas of the time; on the other hand, it furnished, on the other hand, the impulse to a synthesis intended to reconcile Jewish philosophy with the teachings of the great philosophes of the Christian world, and it furnished, on the other hand, the impulse to a synthesis intended to reconcile Jewish philosophy with the teachings of the great philosophes of the Christian world. This synthesis was led by the famous Sa'adya (8th-10th cent.). Sa'adya's great work, Emunoth Vedothoth ('Credoes and Beliefs'), was designed to defeat the sceptic with his own weapons. A too materialistic philosophy had been its undoing; a philosophy grounded on faith in the Unseen should be his salvation (see SA'ADYA). To Sa'adya succeeded Bahya ben Joseph ibn Bakudah (11th cent.), who, in his book Haleba-botot ('Duties of the Heart'), provided a philosophical antidote to the Aristotelian doctrine with which Ibn Sina (Avicenna) had familiarised his Muslim followers and their Jewish admirers. Theological turmoil in Islam was matched by a like ferment in Jewry. In the opinion of many among both communions, however, the attempt to reconcile religion with metaphysics was a failure. It fostered scepticism instead of curing it. Philosophy was the enemy, and war to the knife was the only means of averting its sinister effects. Thus orthodoxy asserted itself once more— in Islam in the person of al-Ghazali (11th cent.; see ENNOCH [Muslim]), in Jewry in the person of Halevi, whom al-Ghazali influenced, and whose deep distrust of 'Greek wisdom,' whose blossom is beautiful, but bears no fruit, disheartens even his poetry. Both writers aimed at displacing philosophy by unordi- natorial belief, and the Jewish Rabbi was probably moved to write his Kazzari by the polemical works of the Muslim theologians of the time. The common purpose animated them, the Rabbi set himself the additional aim of defending his religion from Islam itself, with its attacks upon Jewish Biblical exegesis.

In spite of this, Halevi's repudiation of philosophy is far from thoroughgoing; it may even be
HALEVII

479

criticized as inconsistent. In regard to the fundamental principles of theology, such as the Divine Existence and the close relations of a personal God with the universe, he will have nothing to do with modern philosophy. The perspicacity of those principles is established for him by one kind of testimony, and one only—that furnished by the historic facts of the Bible. Holy Scripture is the imperfect witness upon which rests the truth of Judaism itself. But, when dealing with less vital matters—the genesis of the world, for example, the Divine attributes, human free will, and, the like—he has no scruples in resorting to philosophy, and even to metaphysics. Nor can it be said that he succeeded in his main polemical purpose. If Saad had failed to discourage philosophical scepticism by encouraging philosophical belief, Halevi equally failed to discourage it by banning it altogether. The next great name after his in the chronology of Jewish thought is Maimonides (end of 13th cent.), with his Mora'ah Neubah ('Guide of the Perplexed'), the most systematic attempt at interpreting Judaism in terms of the Aristotelian teaching which Saad had produced. Nor was conveyed in this epoch-making treatise, in which Saad failed to communicate his theses to the modern generation, the truth that both the philosophical and the anti-philosophical positions are at once useful and dangerous. Philosophy has its psychic roots, and the evidences to which it arrives, and hence is in accord with the individual. If the mystic finds his proofs of God in his own spiritual experience—makes them, as T. H. Green expresses it—the ordinary believer either looks to nature and history for corroboration of his creed or declines to corroborate it at all. On the other hand, there are persons desirous of believing, but so constituted as to require conviction as a condition precedent to religious faith. If philosophy may unsettle and alienate the ordinary believer, it may satisfy and win the most excelling disciple. Halevi practically recognised this truth when, setting out with the avowed purpose of excluding rationalism from the sphere of his inquiry, he restored to it in order to justify certain elements of his Judaism. Apart from his initial postulates, the Kuzari is thorough-going, and, therefore, a philosophical exposition of the Jewish religion. And it is in such a form that it retains its interest for us. It gives us a picture of the religion which appealed to the average Jew of the Middle Ages, of the religion, moreover, which still commands the allegiance of his successor to-day. That the book attained instant popularity, that it influenced so considerably a Jewish philosopher as Ibn Daud, who wrote his Sefer Kuzari in 1198, and that it has passed through a dozen editions, is not surprising. More remarkable is it that it should have been translated into many European languages, including English.

The following is a summary of the salient teachings of the work:

The aim of religion is the good life. Revealed religion is, therefore, superior to the natural religion of the philosopher, which defines the good life in diverse ways. The belief in God, in His existence and in His revelation, constitutes the essence of the Jewish creed. This belief is rooted in historical facts, e.g. in the Sinaitic revelation, which took place in the presence of a whole nation. Nothing in Scripture can ever be irreconcilable with reason. Thus the Biblical apophthegms of God, such as merciful, just, loving, justifying the Bible as a whole, and the like, do not imply any opposition to reason. The very existence of the universe points of view from which it is approached by the human mind. Like manner the Divine attributes merely correspond to the various relations of God to His creatures.

The Kuzari is essentially an essay on the idea of the election and mission of Israel rests upon an historical basis. The Bible is the absolute, successively prophetic and sapiences, completed by the Israelite people, who were chosen as the depositaries of the Divine truth. That truth reached its full expression in the Bible, with its three great classes of precepts—ethico-social, ritual, and spiritual; and its communication to Israel elevated that people into a kingdom of priests, charged with the performance of the prophetic task.

The adaptation of the Biblical precepts to the needs of the succeeding ages is the characteristic function of the Talmud, which defines the boundaries of permitted and forbidden actions in accordance with tradition. The theory of an Oral Law supplementing and substantiating the Written Law is essential to a due interpretation and fulfilment of the Biblical ordinances. Hence, unlike Karaitism, Judaism, which rejects tradition, Rabbinism gives satisfaction of spirit to its adherents by the assurance, that, in obeying the laws of their religion, they are performing the clearly ascertained will of God.

Moreover, Judaism, the religion of joy, imposes limits on asceticism: 'Thy self-satiation on a fast-day is not more acceptable to God than thy devout rejecting on a festival. The powers of soul and body are to be equally developed. The good man, as Judaism conceives of him, will not shun the world and its activities; nor will he long for death in order the more speedily to enter into eternal life. Man, moreover, is free (this in opposition to the Epicurean and fatalistic school of Neo-Platonists). God knows the consequences of human actions, but this is not sufficient to forswearing them.

Between the Divine foreknowledge and human action lie intermediate causes. The human will is one of them; it can direct the law of causes and effect as it desires. Nevertheless, the Divine omnipotence is not limited, inasmuch as these intermediate causes depend upon God, and are to be referred back to Him. As to the prophetic gift, it is a direct emanation from the Godhead; it is the numerous messiahs. There is no prophecy outside the Holy Land (probably a questionable reference to Mahommedanism). It is forbidden to those who are not of the Jewish race. In virtue of it's obedience to the Law and of its ancestry, Israel has a special aptitude for prophecy, while the heathen exiles in exile by obedience to the temporal precepts. That exile is no proof of its rejection by God: as the Jews were not driven from the land; it is 'the heart of the nations,' feeling every pain and disaster of the great body of mankind. But the dry bones will live. The Jews have always been in exile throughout the ages, have been dispersed among nations, have dispersed on earth for ever, preparing the way for the Messiah, who will make them one.

3. Poetical works. Halevi the poet is at least as great as Halevi the religious thinker. He has been called 'the most inspired writer of Hebrew after the Psalms.' The allusion is to his poems, which, unlike his great prose work, were written mainly in the sacred language, but in the Arab style, with its fettering artifices and conventions. Though essentially a religious poet, Halevi, in common with his predecessors of the Judæo-Spanish school, did not disdain to sing of secular themes. Indeed, the new Hebrew poetry which that school created was secular; but it was religious. Halevi—so facile is his gift—turns to poetry when others would use prose. If he has to write a letter or send a greeting to a friend or a great man—the Ibn Ezra, Samuel ha-Levi ben Migash, and many others—he sends it in verse. He invokes his muse on the smallest provocation. He has left epithalamia, elegies, satires, epigrams, riddles, and love-songs. His songs of youth and of old age, of feasting, and of the splendour of land, sky, and sea. He rallies a lad who has begun to grow a beard; he chronicles the discovery of his own first grey hair:

• I found my first white hair to-day,
And placed it out, scarce knowing what I'd done.

• An easy task, it is said, to vanquish one;
But how when all the rest are grey?

With the title, 'To a Friend who finds my Poetry as grievous as I do,' he indites the following lines:

• Ye'man with thee, explained my friend,
The day my money went;

• So well in Truth, What's my sin? I cried.

'Why poverty,' he asked me.

But the didactic note prevails. He warns the world that mundane things, 'a protecting shadow to-day,' 'may be a snare to-morrow'; the eagle prides itself on lifting the shaft that slays its mate. He has some lines entitled 'The Counsel of the Sage,' which contain the following advice:

• Keep a joyous face for thy friends, for they will be chasing you.

Win the hearts of the learned, and capture the wisdom of the wise. So will thy desire be fulfilled, and thy wealth multiply.' About to take
medicine, he writes some prayerful verses, in which he affirms his trust not in the potion, but in the healing power of God. Here is a characteristic stanza of the "Shemnu of God":

"I taste unto the true life's fount. Spurning the life that vain and base, My one desire to look upon my King? No other being has my reverence. Once in a while I see Him in a dream; Then would I sleep for eye; Could I but see His face within my heart I'd never wish to look abroad."

Another poem is entitled "The Shame of the Jew is Jesus, Christ". Its central thought is thus expressed: "Men revile me—they know not that shame, borne for Thy sake, is truest glory."

Halevi's chief strength, however, lay in his gift of hymn-writing. He was the poet of the Synagogue and par excellence. No liturgical writer has found so wide acceptance among the Jews, or lifted their devotional poetry to so high a level. He has left hymns—some 300 in number—for the whole of the Jewish year, and the Synagogue has made abundant use of them. They are a common bond uniting the sects of "the Kabbalists among them—with their many differences of thought and ritual. Simple, as a rule, in ideas and expression, they tower above the effusions of the more ancient liturgical poets. Halevi, with his love for dark sayings and difficult phraseology, Hallevi's religious poetry moves, moreover, on a far loftier plane. Its leading feature is a keen consciousness of God, the desire for communion with Him, an aesthetic sense, and a religious trust in His restitute. The joyousness issuing from this temper is modified, however, by the sad thought of Israel's lovelessness. The eminence of Edom and Ismael (Christianism and Islam) is a constantly recurrent themse, as though the iron of persecution had entered into the writer's own soul. One passage gives the Divine judgment upon the oppressor. This sombre tone persists even in some of the poems written for Feast-days. But their final note is one of hope and faith. Purified by tribulation, Israel will be redeemed at last, and the old national life restored. Sometimes the poem is the voice of the soul of collective Israel, "the King's son," sometimes the voice of the individual soul. Now the poet mourns his own sins, especially the sins of his youth; now he calls to youth to remember that life is fleeting, and that old age, with its disillusionments and regrets, and the day of death, "when there is neither love nor hate," will come at last. "Haste," he exclaims, "after thy King, with the souls that flow unto the goodness of the Lord!"

Apart, perhaps, from a quicker feeling for the beauty, as distinct from the solemnity, of the physical world, Halevi's poetry makes no appreciable addition to the content of Jewish thought. The Bible and the Rabbinical literature not only colour, but fashion, his theology and his outlook on life. His chief characteristics are intense spiritual feeling and lofty imagery. Traces of theosophy meet us here and there. This angel is very real to the poet; they hold up the throne of God, but God does not figure. He is the Omniscient, who fills, but transcends, Nature. "Thou containedst the universe; but the universe does not contain Thee." But God is immemorial as well as transcendent. "He came down at Sinai, and He dwelt in the bush." It is life, in very deed, among the Cherubim. Lo, the highest heavens contain Him not. He lives in His glory, even as He dwells among the angels. Yes, His assembled worshippers are very near to Him, invisible to the eye of flesh. He is manifest to the soul. His grace, too, is infinite; it triumphs over His strict justice, and ensures forgiveness for truly repentant sinners who "essay to give His robe." "These graces, as drink-offerings in His sight." The one supreme joy is communion with God. His grace, he says, is amply revealed. "Away from Thee, my life is death; near to Thee, my death is life. . . . Let me seek Thy grace, and let me die."

"My heart is one with my Beloved; my soul lives again. A poor prisoner, yet am I glorious. My heart holds my Beloved; what need to seek Him, then? Is He in the heavens or in the deep? My soul enthroneth Him; why, then, brother or friend? Or what can King or Prince do for me?"

Still more daring is his flight. Influenced by the Midrashic interpretation of Canticles, he thus apostrophizes God:

"Beloved, hast Thou forgotten how Thou didst lie between my breasts? Why, then, hast Thou sold me into lascivious slavery? Once Thou hast my love, and Thou gav'st Thy love to me; How, then, couldst Thou give my honour to another? Have I Redeemer but Thee? Or hast Thou a prisoner of hope but me?"

"Give me, I pray, Thy strength, for to Thee I give my love."

He retains, too, some of the Talmudic superstitions. The name of the Shecht (cornt) is written with the Greek letter chi, for example, on the New Year Festival will confound Satan, and give him impeded play to the Divine mercy and men's contrition. His spirit chides under his people's subjection to active persecution, they have to endure attempts to weaken them from religion. "They would turn me aside after false prophets"—so Israel made to complain; "they revile me when I seek to serve my God." But "Lo, Thy fame is in my ears; the Red Sea and Sinai witness to Thy greatness. How, then, shall I speak of Thee in these lines in which we may discern a poetic echo of the great theses of the "Kuzari"—the testimony of history to the eternal truth of Judaism.

Halevi's eminent position is attested by the frequency with which he has been translated. Heine, moreover, generally frugal in his praise, gives the Israeli singer of his race unstinted homage: he is

"A very wondrous mighty Fiery pillar of all song That preceded Israel's mournful Caxay; . . . was men, Through the desert of sad exile."

"When this spirit was created By Its Maker self-contented, Its face was set toward the east, And that kias's beautiful Echo Thrills through all the poet's numbers, Which are hailed by this grace."

Of the many attempts to summarize Halevi's significance in the sphere of religious literature, Graetz's appreciation is perhaps the happiest: "He was the transfigured image of self-conscious Israel seeking to express himself in thought and in Art."

MORRIS JOSEPH

HALLAJ.—In the history of Muhammadan pantheism there is no event more celebrated and remarkable in its consequences than the execution at Baghdad, on the 24th of Dhu'l-Qa'da, A.D. 309 (29th March, A.H. 121) of Abu Tâhâ ibn Mansur al-Hallaj.—often incorrectly called Mânsûr Hallaj,—on the charge of pretending to be an incarnation of the Divine. His claim was expressed in the most forcible and uncompromising terms that can be imagined: And I—haqq, I am the Real." The significance of this formula will be explained after some account has been given of its author's life and character. Hitherto it has not
been possible even to sketch the outlines of his career with any certainty, but the researches of Louis Massignon, which will shortly be published (see below), throw some light on the subject. 1

1. Life.—Hallaj, whose grandfather is said to have been a Zoroastrian, was born c. A.D. 868 at Bālāt, near Fars, in southern Persia, and passed his childhood and youth in the chief city of Trāj. At the age of sixteen he went to reside at Tus, where he became a disciple of 'Amr ibn Uthmān al-Makki, and married the daughter of another Shī‘a, Muyūf ibn Aqīl. On leaving Bālāt, he proceeded (in 877) to Baghdad and completed his training in Shī‘ism under Junayd, the greatest mystic of the time. Little is known concerning his movements and the events of his life during the next twenty years. About 896 he made the pilgrimage to Mecca, where he remained for a year in seclusion. The fact that soon afterwards his Shī‘a teachers broke off relations with him was probably due to their dislike of the extreme pantheism to which he had by this time devoted himself, according to his opponent, Shihhī al-Majī, 1 who said that they did not publish him because of any attack on religion and doctrine, but only on account of a breach of discipline. After two years in retirement at Tus, he travelled for a long while (c. 899-902) in Khurāsān and Fars, preaching and composing his first works on mysticism; at this date he received the title of Hallaj (the Carrier of the Word of Truth) which he was generally known. Having made the pilgrimage to Mecca a second time, he settled for a year at Baghdad, whence he travelled by sea to India and returned to the farthest boundaries of Turkestan, preaching and writing as before. He then returned as a pilgrim to Mecca, where he stayed two years, and on his return arrived at Bālāt, where he delivered a public discourse which raised an outcry against him and led to his being arrested; but he managed to escape from prison, and concealed himself at Sīa in Khurāsān (903). Three years later he was again arrested and brought to trial at Baghdad before I‘āq, visier of the Khalif Muqtadir. On this occasion he was charged with being a Carmatian (q.e.), and, although he had evidence to justify the allegation, he was detained in custody at Bālāt. His captivity, which lasted for eleven years, was not of a rigorous nature; he was moved from one prison to another, and was allowed to receive visitors and continue his preaching—a privilege which he used to such purpose that he gained many influential sympathizers. Finally, in 922, a second trial took place. It was conducted by the visiers I‘āq and Hāmid, and dealt with the principal charges against Hallaj: (a) his secret correspondence with the Carmatians; (b) the extravagant notions of his disciples, who believed him to be Divān; (c) his own belief in the question of essential union with the Godhead (‘ism al-jawwā‘). Hāmid wished to confine the inquiry to these points, but the qādis insisted on adding a fourth, viz. the doctrine (which was, indeed, held by Hallaj) that the pilgrimage to Mecca is not one of those religious obligations which are absolutely binding, but belongs to the class that admits of abrogation. On this skilfully chosen combination of theological, legal, and political grounds, the prisoner was condemned to death. During his execution, which was carried out in a barbarous manner, Hallaj displayed the utmost fortitude. His mutilated body was burned and the ashes thrown into the Tigris, while his head was sent to Khurāsān to be shown to his followers in that country. Many, however, both there and elsewhere, would believe that he was dead, and continued to expect his return. They maintained, quoting the statement in the Qur'an (vv. 186) concerning Christ, that Hallaj had been transported alive to heaven, and that the actual victim was one of his enemies, or, according to other versions, a horse or a mule.

Similar legends are told of ‘All (al-Farīr) and Abu al-Khayr (shahbāt) and several Shī‘a hereafter mentioned. As Massignon has pointed out, they express the popular feeling that a God-ordained saint suffers the indignity of being murdered, crucified, or disembowelled.

2. Teaching.—Although the later Muhammadan tradition attributes the condemnation of Hallaj to his outrageous impiety, it is certain that political motives played a large part in the affair. He is described, in the oldest historical books that mention him, as an agent attached to the Shī‘ite or Carmatian propaganda, 2 a reckless and unprincipled agitator who spread the doctrine of a new prophet, and by gross impositions on the people, engaged them to perform miracles which were only the tricks of a clever conjurer. Now, there seems to be no evidence that Hallaj was a Carmatian, but his own writings make it clear that he pretended to be that. The doctrine of incarnation (būdū‘ī) was held in common by some heretical Shī‘a sects and by various branches of the sufi school, and Hallaj and the others might plausibly be represented as a Carmatian, since he is said to have called himself ‘the Radiant Light,’ and to have been visited by an angel whom he received as a messenger of Allah, saying, ‘We bear witness that thou art He who puts on a different form in every age, and in the present age hast assumed the form of Ḥusain ibn Mānsūr; and we implore thy blessing and thy mercy, 0 knower of secrets!’ (al-Farīr bāsiha al-Farīr, 264, 19). Moreover, in the first quarter of the 10th cent. the Carmatians almost succeeded in establishing a reign of terror; and Massignon suggests, with reason, that Hāmid, who had incurred much odium by his measures for controlling the importation of arms, may have sought to run up his popularity and credit by pretending that Hallaj was one of their most dangerous missionaries, and making it appear that his conviction was a political triumph. Otherwise, it is at least doubtful whether the audacious dialectic with which he pursued his theological speculations, or the pantheism which he openly professed, would have cost him his life. Islam has always been tolerant to the excesses of mystical enthusiasm, and the plea of ecstasy has seldom been urgent in vain.

According to the theory of Shī‘a philosophy, al-baqī‘, the ‘Real,’ i.e. God regarded as pure being, is opposed to the phenomenal world, which exists only as a reflection of pure being upon the darkness of matter or ‘not-being.’ Even the more orthodox mystics hold that union with God is attainable. They say that in ‘passing away’ (fand) from his phenomenal self man necessarily becomes one with God, insomuch as the Divine element in his nature is then free to rejoin its source. The theory, stated in this way, is not Hallajian, but Hallaj presents the same ideas in a symbolic form peculiar to himself. 3 While the Shī‘a are generally careful

1 The present writer is indebted to M. Massignon for the greater part of the following biographical notices as well as for other information, and acknowledges the courtesy with which they have been communicated.

2 According to some authorities, the epithet refers to his power of restoring to life the bodies of the dead, a power which was regarded as of the highest importance, and the office of the ‘baqī‘ was bestowed on him because he once raised a large quantity of cotton in a miraculously short time.

3 The definite statement that he was one of the missionaries of All-Rid, the eighth Imam of the Shī‘a (rowned, Literary History of Persia, p. 439), seems not to be justified by the original text (Poirier, 150, last line), which says that he carried on a special propaganda in favour (right) of the ‘Aima and was a great preacher of the faith. It is, however, evident that Hallaj did not regard the deified man as being devoid of personality and indistinguishable from the
to disavow the heretical notion that the Divine substance or spirit can enter into man, this doctrine of human transsubstantiation (hulāl) was nevertheless adopted by some of them; and, since it was taken by Fāris, one of the chief disciples of Hallaj, we may conclude that it is implied in the famous formula, Ḍaḍa-ʿl-baqq, 'I am the Real.' The latter, published at Bombay in 1887 and again in 1904, is a particularly gross forgery.

**RAYMOND A. NICHOLSON.**

**HALLUCINATION.—I. Definition.**—A hallucination is generally defined as a false perception. It is generally that it is not the only species of false perception, and a clearer characterization is therefore necessary. Psychologists draw a distinction between states of consciousness in which there is contained or involved a reference to an object in the so-called external series here and now, and a state of consciousness which, though in content otherwise generally similar to the other, does not carry this objective reference. The first is termed a percept or a perception; the second is termed an image or representation. These psychological experiences form two series known as the presentational and ideational series respectively. This nomenclature indicates the dominant characteristics of each type of experience, though, of course, there are representational elements in the ideational series and ideational elements based on perceptual experiences. Normally there is no confusion between the two. A hallucination is said to occur when a member of the second series is ascribed to the first by the one who takes the conscious subject for a percept. The one, be it noted, is, qua psychical event, as real an experience as the other. The 'fallacy' lies in the function which the conscious state in this case is made to perform or in the significance which is attached to it. It is made to report falsely about external reality. In this it partakes of the character of illusion (q.v.), and yet it may be distinguished from that kind of experience. Whether the distinction is merely one of degree is a question on which there is no agreement among psychologists. Esquirol gave currency to the following distinction. In hallucination an experience which is, as a matter of fact, a perverted form of cerebral activity, is centrally initiated, is judged to have an objective correlarv or to be peripherally initiated, whereas in illusion the peripherally initiated and peripheral initiation—it is not, strictly speaking, a 'fallacy of the senses'—but the representational factors are wrongly apprehended or interpreted. Hallucination, in short, takes place when we perceive an object which by the accepted tests of external reality must be finally judged to be nonexistent; illusion takes place when we perceive the wrong object. This may be taken as a working hypothesis of differentiation, though further investigation has led to the conviction that the line of demarcation is not so bold and well-defined as it is thus made to appear. There are a number of borderland cases which present difficulty, and which are sometimes to be found in the literature of the subject under the head of 'hallucination' sometimes under the head of 'illusion.' It certainly seems well-established that in numerous (some would say in all) cases classed as hallucination there is a sensory or representational factor. In these cases, however, the sense element is so vague and unpecific that it would not normally form the
HALUCINATION 463

2. Varieties.—It is said, not quite accurately, that we may have hallucination of more than one sense. What is meant is that the content of the hallucination may be of one or other of several of the modes of consciousness normally regarded as modes of sensation. In this sense the statement is correct. Thus we may see before us the figure of an absent friend or acquaintance or some grotesque and monstrous figure; the visual factor is predominant here, and it may be said at this point that "visual" hallucinations, like most largely in the records of the subject, whether they relate to the experiences of persons in a normal or abnormal condition. But we may also find hallucinations in which the auditory (the subject hears voices or definite sounds), touch, temperature, olfactory, kinesthetic, and other modes are respectively predominant. This is well marked in the experiences of persons in the hypnotic state. Tell such a person that he has taken a snuff and he sneezes; tell him he is standing on ice and he feels cold at once; he trembles, his teeth chatter, he wraps himself in his coat.1 If one sense only is involved, the hallucination is said to be simple; if several are involved, the hallucination is said to be compound.

There is a well-known experience particularly marked in the case of the person in the hypnotic state, or under the influence of post-hypnotic suggestion, known as negative hallucination. This is the case where the subject fails to perceive an object. He may only fail to see a person in the room, or he may be totally unaware of his presence, according to the character and scope of the given suggestion. The epithet 'negative,' though applicable enough from the point of view of the subject, is misleading as applied to the hallucinatory state itself. The hallucination is as positive as any other. The whole objective situation is apprehended by the subject as other than it is; or, if we limit the reference to that part of space in which the unperceived object or person is at any moment, then that part of space is falsely perceived; the background is continuous; there is not a gap in it; e.g., the back of the chair on which is seated the person whose absence is suggested will be seen, although, of course, it is not there.

Dreams (q.v.) are generally regarded as the most familiar type of hallucinatory experience. We speak of dreaming to be the subject of objects and of series of external events which are sometimes so vivid as to cause a distinct feeling of relief or disappointment when we wake and find that these events do not fit into the normal external series. So careful an observer as McDougall,2 however, finds a marked distinction between the features of a dream experience and the features of a hallucinatory experience. This is a direct challenge to more careful introspection. The present writer's observations go to confirm the view that when dreams are pure hallucinations, it is a direct challenge to more careful introspection. The present writer's observations go to confirm the view that dreams are pure hallucinations.

This kind of hallucination seems to be that in the dream state the hallucination is more complete than usual. The impressiveness of the object is as marked and the emotional co-efficient at least as intensive as in experiences which are unquestioningly recognized as hallucinations. It is to be remarked that among these are the hallucinations of the half-wake state or in the passage between sleep and wake. The line between these hypnagogic hallucinations and dreams is extremely difficult to draw.

The hallmark of a so-called waking hallucination are to be found in what are termed waking hallucinations.

This form occurs in the experience of persons who may otherwise be regarded as in a normal waking state. There are many such cases reported by historians:1 the anthropologist furnishes instances from his observations of primitive peoples;2 current report furnishes a sufficient number of cases of comparatively recent cases. We are fortunate here, however, in not having to depend merely on such evidence. In 1889 the English Society for Psychological Research issued a questionnaire containing the following query: 'Have you ever, when believing yourself to be completely awake, had a vivid impression of seeing or hearing or being by a living being or inanimate object, or of hearing a voice; which impression, so far as you could discover, was not due to any external physical cause?' To this 17,000 replies were received, of which over 2000 stated that under the conditions indicated figures had been seen, or, less frequently, voices had been heard. Similar inquiries have been made in America by W. James, in France by L. Martillier, and in Germany by the Munich section of the Gesellschaft für psychologische Forschung, with a similar result. An attempt has been made by Parish, in an analysis of the evidence, to show that, while the subjects of these hallucinations no doubt believed, in all good faith, that they were fully awake at the time of the experience, they were really in the transition state between sleeping and waking. The evidence, however, bears this construction, although there are enough instances of a kind to make a prima facie case for it. The question of whether these inquiries has not been to establish the existence of waking hallucinations, but to obtain evidence on the vexed question of the possibility of directly intimate distant events by this means to a person who would have been unaware of these events through the ordinary and understood modes of communication. This is the case in coincidental hallucinations. The hypothesis has been advanced that there is a causal relation between such apparitions and the distant events to which they refer. The problem is one which lies beyond the scope of the present article. It is treated at length in Phantasmagoria of the Living (E. Gurney, F. W. H. Myers, and F. Podmore, London, 1886). The available evidence shows a number of cases of coincidental hallucination markedly in excess of the number to be expected on the theory of probabilities; and this, so far, is favourable to the view that these occurrences are not merely fortuitous, but is not sufficient in extent or quality to warrant a definite conclusion.

In addition to the above so-called 'waking hallucinations,' which are regarded as taking place when the subject is in his normal condition, there are hallucinations which occur either (a) in a state which at the time of the occurrence cannot be called normal, or (b) in a state which is permanently abnormal, as in the case of mental disease. As an instance of the first type may be mentioned the familiar hallucinatory experiences, already referred to, connected with those moments of our mental life when we are passing from the waking to the sleeping state, or from the sleeping to the waking state. At these moments there is a sudden eruption of an apparently irrelevant image or procession of images which have a vividness and impressiveness much superior to those of the image in the normal waking experience, and which are readily mistaken for perceptual. Some of the experiences referred to as waking hallucinations, as well as many normal cases of apparent visual hallucinations, belong to this type. In extreme general fatigue or in fatigue of a particular sense organ, hallucinations readily occur. The consciousness of one's situation passes into the hallucinatory state; prolonged.

2 Cf. Lang, Making of Religion, p. 113 et.

2 Hallucinations in EMF, xil. 569.
fasting is a preparation for the state of hallucina-
tion. After protracted visual strain, 'visual'
hallucinations often occur.

En trance induces hallucination. The most
famous example is the hallucination accompan-
ying alcoholic poisoning in the state known as
delirium tremens. Intoxication by chloroform,
nitrous oxide, halothane, urethane, strophanthin,
etc., also induce hallucinations. Hallucinations
thus conditioned are mostly of an unpleasant
and even terrifying character, though in certain
cases, e.g. hashish intoxication, there is a pleasant
phase.

In other cases, conditions of a psychological
character are predominant, as, e.g., in hypnotic
trance and ecstasy. The results obtained by 'crystal-gazing'
(q.v.) may also be included here. The general
preliminary condition of these experiences is an
intense concentration of the attention upon one
point. Indeed, we may note the effect of concen-
tration of attention upon hallucination before it
reaches the stage indicated in any of the above-
named experiences. A person eagerly listening
for a knock or a footsteps may have the hallucination of
the sound he is awaiting. A 'ghost' may be seen
by one who is aware he is in a haunted room, and
who is consequently in a state of strained expecta-
tion. In the census of the Society for Psychical
Research there are thirteen cases of hallucination
which took the form of the appearance of a person
whose arrival was looked for. 'Collective hallucina-
tions,' i.e. hallucinations of a particular kind
experienced by more than one person at the same
time and place, are, no doubt, explained by this
factor. The hallucination first experienced by one
member of the group may spread to the others by
suggestion operating through the special direction
and concentration of attention induced by the
experience.

In hypnosis the process is carried further. The
subject is in a highly suggestive state, and hallu-
cination is easily produced either while he is actually
in the hypnotic trance or subsequently, when the
waking state supervenes, under the influence of
suggestion made during the trance, i.e. of 'post-
hypnotic' suggestion. The records of hypnotism
(q.v.) teem with instances of both types.

In the extreme forms of ecstasy (q.v.) the distinc-
tion between the self and the not-self disappears,
and with it the consciousness of the not-self,
which on the psychical side is represented by
percepts and images. There is one total, all-
embracing, oneness of the moment. There is, obviously
no room here for hallucination. But in the ecstatic
experience, which may find its consummation in
such a condition, there are moments in which
hallucination, in the strict sense of the term, may
be noted. The best-known cases of ecstasy are
those of religious ecstasy, where the object of
contemplation and desire is a religious one,
though this state is not exclusively connected with
objects of this type. Examples of hallucinatory
religious ecstasy are to be found in the sacred
books of many religions, in the records of lives of
saints and mystics, and in the accounts of primitive
peoples.

Gazing steadily at a shining surface—a metal
mirror, a silver utensil, a cloud of smoke, a crystal
induces hallucination. The 'sceer,' or seer,
perceives pictures of distant objects and events.
This has been known to mankind in various parts
of the world. For the patient, the imagery of the
practice as a method of divination is indicated by
the fact that Aeschylus attributes its discovery
to Thracian divination. The term 'crystal vision'
and 'crystal ball' to 'crystal vision' are the
practices of inducing auditory hallucinations
by holding a shell to the ear or by striking gently
the rim of a bell. This is also used as a method
of divination. The voices heard are ocular.

Hallucinations accompany somatic disorder or
bodily disease. The delirium of fever is a familiar
instance, and hallucination is associated with the
state of collapse preceding death. The halluci-
nations accompanying acute alcoholic poisoning,
already referred to, might also be brought into this
category. An interesting type of this class is the
'visceral' hallucination. Perceiving and hear-
nering states that patients suffering from visceral
diseases are liable to hallucinations of a peculiar
kind, either visual, auditory, or olfactory. The
visual hallucination is much more characteristic,
takes the form of a vague, shroud, white, black,
or grey human figure often incomplete. The
auditory hallucinations are of sounds, such as
tapping, scratching, and rumbling.

Coming between this type and the type connected
with mental disease are the hallucinations of the
nervous diseases, such as hysteria (q.v.) and epilepsy.
They are markedly present in the state known as
'the great hysteria,' at least in the third and
fourth of the four phases indicated by Charcot.4
In the aura preceding the epileptic attack and
in the post-epileptic condition, hallucinations are
frequent. They are very often of a distressing
character.

In many forms of mental disease or insanity (q.v.),
hallucination is a notable feature, more particularly
in those cases where the mind falls into a state of
invisibility or disappearance. 'Collective hallucina-
tions' and 'visualization of the intellect.' Hallucination, according to
Mendel, is often associated with amnesia, but
seldom with acute dementia. Parnassus, it is well
known, is strongly associated with certain voices
which are neither heard nor seen. Some of the
insulting voices and figures are seen by the victim
of this painful malady. The hallucinations of
insanity may be divided into those which are
episodic or independent, and those which are
relatively permanent. The first, as the term indicates,
are not in any known relation to the
general morbid condition; the second are obviously
related to, and are symptomatic of, this morbid
state. Of the two the latter are regarded by
psychiatrists as less serious, since they may be
covered up through the disease, and may diminish or
disappear with the amelioration of the general
state of the patient.

3. Causes.—The central question for the theory
of hallucination is this: What are the special
subjective conditions under which a state of con-
sciousness arises which bears the character of a
sense-perception, with all its normal features,
and is it absent? The answers to this question take
the shape of a general psycho-physiological formula.
All such answers are conditioned by assumptions
regarding the identity or non-identity of the iden-
tational and sensory centres in the brain; and the
theory of hallucination will not be in a wholly
satisfactory state until the strife of hypotheses on
this point is ended.

A prominent and obvious type of theory is that
which is termed 'excitement.' In the principal
form of this view, which has been supported by Fales,
Tamburini, Ferrier, Hoffmann, Griesinger, Krah-
Ebing, and many others, the hallucinatory state
begins in the ideational centres. In an abnormal
state of excitability of an ideational centre the
excitement overflows into a sensory centre. The
excitation of the sensory centre is 'economically'
projected, and a hallucination results. This
theory, according to the excitability of the ideational
and sensory centres are regarded as distinct and separate. Apart from this, which
is called in question, there are various objections
to the view as an explanatory hypothesis. It is
pointed out that it overbooks the fact that an image,1

HAMADRYADS (Teutonic).—The various stages of religious development among the Teutonic peoples are exhibited in their rites and myths connected with trees. The ancient belief in a power residing in trees—a power that might be transferred to other creatures and to the earth itself—may still be traced in a wide variety of popular customs. Thus, in early summer—on May-day or at Pentecost—the May-bough is carried from the forest to the village by the young people, in the hope that it will endow them with fresh vital energy; at the end of harvest, the harvest-tree is erected upon the last wagggon-load of corn, in order that the spirit of the tree may pass into next year’s crop; in spring, cattle, fields, young girls, and newly-wedded couples—the latter also on their marriage-day—are stroked with fresh twigs of sprouting trees, or with boughs of the so-called ‘rood of life.’ From the belief in the power dwelling in trees sprang also the worship of the moon—a huge tree-trunk standing in the open sky—among the Saxons (Mannhardt, Baumkultur, p. 308 f.), the worship of the evergreen trees that stood before the temple of the gods in Old Upsala (Adam of Bremen, Hist. Haedab. iv. 26, soc. 134), the Norse myth of Yggdrasil, the world-ashe, and the Eddie myth which tells us that Ask and Svinir, the sah and the ey (Yule, 11-15), were the first men.

Then at an early period imagination proceeded to associate trees, and to people forests with demoniac beings. These assume the form of a female, but sometimes a male, form. Popular fancy ran riot among them, enveloping them in myths of the most varied kinds, and even to-day they are met with in their primeval form among all the Teutonic peoples. In O.H.G. they appear as skroto, in A.S. as wildwulf, in M.H.G. as hohnscho, aholens, or evilhail. In the popular belief of the present day they are known as wood- or moos-maidens, forest-nymphas, wildfolk, Fangtern (Tyrol), blessed maidens, Norerg (Granbunden), Edgborg, Skogspadies (Dan. ‘fairy- maidens’, ‘wood - nymphas’), Skogard, Skogafurs (Swed. ‘forest - woman’), and by many other names; when they assume a male form, they are known

1 For the beliefs of other peoples on the same subject, see

THEM AND PLANTS.
as 'wild men,' 'wood-mannikins,' or Skogsmen (Swed. 'forest-men'). They live in the woods—either underground or in trees, especially hollow ones—and are often encountered there by human beings. In outward appearance they usually resemble old women; their bodies are hairy, and covered with moss. The male has, in common with their field-spirits, the characteristic feature of long pendulous breasts. Their faces are hagish and wrinkled; and sometimes their backs are concave, like the hollowed-out trunk of a tree. Here and there, however, and especially in the Tyrol, they are found as graceful figures with beautiful flowing hair. At times, their form ups and falls rather to that of the giant; they are abnormally large and strong; they have bristly hair, and are armed with tree-trunks. Occasionally they are endowed with the prose nature, and may avail themselves thereof to appear as animals.

Their attitude towards human beings is sometimes friendly, sometimes hostile. Their appearance presages a fruitful year. They put the hunter on the track of his quarry, and accordingly he seeks to win their favour. But they often fascinate the traveller with their thrilling songs and their laughter, urging him from the right way, and leading him astray. They occasionally unite in marriage with human beings, or engage to serve them, and in such cases bring good luck to the house so long as they stay in it. As denizens of the forest they possess a knowledge of medicinal plants, and make use of them to give health and strength to their favourite. This in the Bölden's saga, the food from which Balder drew his great strength was guarded by virginises silvestres (Saxo Gram. iii. 77). They make special appeal to human beings for succour when they are pursued by the Wild Hunter. At such times violent whirlwinds arise, shaking the trees and pressing the branches far down. If the hunter's cry is not heard, he falls into the hands of the Wild Hunter, he lays her crosswise upon his head. If she is delivered from his power by a human being, she rewards the latter with the golden honey of the mead-dryads. The latter, like the dwarfs, sometimes substitute their own offspring for human children.

It is very doubtful whether these tree- and forest-spirits were also objects of worship, i.e. whether the milk that was poured out, and the berries that were left upon the trees, were intended for them. It is much more likely that these gifts were offered to the souls of the departed, which were supposed to survive in trees. In point of fact, trees were regarded by all the Teutons as the abodes, not only of demonic spirits, but also of souls, and as such were treated with the utmost reverence—a practice constantly inveighed against in the penitential discourses and ordinances, as well as in the legal codes, of the early Christian period. We find it said in numerous legends that the souls of the departed pass into trees, or continue to live in the trees that grow upon graves. The extent to which a materialistic conception prevailed here is shown by the widely diffused belief that the soul lived in the bark, and was not injured. Such ideas explain the severe penalties inflicted upon those who committed offences against trees. The act of killing the bark was specially forbidden, as the souls were supposed to dwell just beneath it. One found guilty of the offence, according to the Vorsiferme (i.e. abstract of special names forming part of ancient German law), had his body cut open, and his intestines wound about the tree in such a way as to cover the injured part. (J. Grimm, Deutsche Rechts geschicht (Leipzig, 1869, ii. 90). The spirits who lived under the bark could both impart disease and take it away. Hence sick persons were drawn through a hollow trunk, or else the malady was driven into the tree—i.e., a bird (owl or hawk) known to some of the invalid's hair or pieces of his clothing inserted into it, the cavity being then closed up again. Departed souls frequently take the form of a bird or hawk (a bird was sometimes known to be within which they have their abode. It was also believed that the soul of the family-ancestor had passed into the tree growing in or before the homestead, and this tree accordingly became associated with the tutelary spirit of the family, i.e. the domestic spirit. According to Norwegian belief, the fylges (fowl) approximates to the protective spirit of the individual, and to propitiate the tutelary spirits, and ward off evil from man and beast.

The origin of the tutelary spirit—the fact that it was at first particularly connected with theidea of a trestle (wood-grain or wood), this has gradually been forgotten, and its place taken by another soul-like being, the guardian spirit of the house, the Norwegian tomgrable (cf. 'Robin Goodfellow'), the German Haubold (cf. the brownie), whose tree was either in the trunk of the tree or in the root beneath, and who guards the dwelling-house against injury by fire. If a tree which thus harbours a domestic spirit is hewn down, prosperity departs the house, and the person who did the deed is taken ill. Some of the old tales represent the tutelary or domestic spirit as being regarded by others, it remains in the fallen trunk, comes into the house along with the latter, and continues to reside in the rafters made from it; and, if the required offerings (food, drink, etc.) are given to it, it continues to guard the house as before. To this class of tree-spirits—tutelary demons evolved from soul-like entities—belongs also the Klaußtermann (see DEMONS AND SPIRITS [Tent.], vol. iv. p. 633 f.) of the Baltic and North Sea coasts. He is a tree-spirit who has been brought into the house, and who continues to reside, helping the sailors in their work, and protecting the vessel. But, should the ship be destined to go down, he deserts it. He, too, receives gifts of food and drink.

E. MOOG.

HAMILTON.—See PHILOSOPHY (Scottish).

HAMITÉS AND EAST AFRICA.—The classification of the eastern Hamitic peoples is a matter of much uncertainty. There is a large body of tribes concerning whom, except on some trifling points, there is complete agreement between the various sciences and the scientific outside. Outside there is a want of harmony between anthropology and philology, and between the various philological schools. The common stock may be said to consist of two main groups: the Hamites (including Gallalites, 'Afar-Salamp), with these anthropology connects other peoples or import-
ant groups of peoples, as the Nuba, the Funj, the Massal, and the Wahuma, of whom some at least speak a purely non-Hamitic. One school of philology, of which the most illustrious representative is Renich, limits the true eastern Hamites to the peoples of the two great groups just named, but considers with them two other peoples dwelling between the one group and the other, viz. the Baria and the Kunana, who, although they do not speak a purely Hamitic tongue, employ languages—called by this school proto-Cushite—which seem to approach the Hamitic type, and represent, as it were, a link of connexion between the Hamitic and Nilotic tongues. Another school, of which the most recent and active champion is Meinloth, places the Baria and the Kunana among the peoples speaking the so-called Sudanic, and consequently non-Hamitic languages; on the other hand, this school includes among the Hamites the Bari dwelling on the White Nile, and the Massal of British East Africa and of German East Africa. It is easy to understand why here, as elsewhere, even for historical reasons, anthropology and philology are not in agreement. Further, while we recognize the importance of the doubts raised concerning the character of the Kunana tongue and the import of the analogies of the Massal language with the Hamitic tongues, this is not the place to discuss the differences between the philological schools. The following notes refer especially to those peoples whose language is generally admitted, with brief references to the two proto-Cushite peoples.

1. The Beja represent one of the greatest ethnic groups along the middle course of the Nile. According to some anthropologists, they were among the principal elements which went to form the ancient Egyptian people. Many of their tribes and parts of tribes are doubtless concealed under the unidentified names of the conquests of the Pharaohs to the south of Egypt. Their primitive seats appear to have been the desert regions of eastern Nuba. Towards the beginning of the common era they seem to have undergone a powerful movement of expansion or of migration, determined, it may be, by the influx of the Nuba and of other populations of the south-west into the regions of the kingdom of Meroë, of whose inhabitants they must have formed a conspicuous part. This movement drove towards the Egyptian frontier some fractions of tribes, such as the Biemuyes, who were the subjects of fantastic stories and of terror on account of their ferocious incursions; on the other hand, other tribes moved towards Abyssinia. The kings of Aksum were often occupied by the incursions of the Beja or by expeditions against the Beja, so much so that among their other titles they assumed that of "kings of the Beja." In course of time the Beja seem to have founded a proper land, at least for a time, in the regions of northern Abyssinia. It is certain that among the peoples of the Abyssinian highlands we find some speaking the Tigréa tongue and observing the customs of the other Abyssinians, and who boast a Beja origin, as the Tedder in Akake-Guray, and the Degg Itate of Serat. There was much rivalry between the Beja element and the Miskia in the valley of the Barks, in Eritrean Sahel, and on the mountains traversed by the river Anseba in the last part of its course; sometimes the one, sometimes the other, ethnic factor prevailed. Thus there were formed mixed populations, although fractions of races are to be met with who are purely Beja and purely Nuba, as far as the foot of the mountains of Abyssinia proper, such as the ad-Sala dwelling near the outfall of the river Barks from the mountains of Liban on the plain below.

Meanwhile in the northern regions the Arabs, who had succeeded the Byzantines in their rule over Egypt, must often have come into contact with the restless nomads of the south and their forays. Numerous military expeditions were the consequence, and also numerous treaties, the most ancient of which does not seem to have been very favourable to the Arabs, whose governor, the Aghlab Allah ibn Hiyah as-Sa'idi undertook to furnish the Beja with three hundred young camels, provided they would respect the borders of Egypt and the lives and goods of the Musalmans. As a matter of fact, it was possible to guarantee the safety of Egypt only when several Arab tribes went and established themselves in Nuba, thus paralyzing the warlike inclinations of the Beja elements, or when these tribes began to pass over to Islamism. In the 9th and 10th centuries the Beja formed a sort of independent principality, whose ruler, resident in el-Hajr in the southern part of their territory, acted in the name of all the tribes of his race dwelling between Egypt and Abyssinia. From Arab sources we learn the names of one of these, who already in the year 216 A.H. (A.D. 831) seems purely Islamite—Qutun 'Abd al-Aziz.

In the days of the historian 'Abd-Allah ibn Ahmad ben Salaim ibn-Uswan, who in the 10th cent. wrote a history of Nuba, this union of tribes had ceased, and the tribes once again appear in separate groups. Among these the ruler of the Belaw, whose seat was at Suakin, deserves mention. The Belawi principality lasted until the end of the 17th cent., when a family of Dajifil, favoured by the Funj, seized the command of the country. Nevertheless the Belaw have continued to constitute a kind of aristocracy down to the present day.

A long time before the historian 'Abd-Allah ibn Ahmad ibn-Uswan, a great internal revolution had taken place among the Beja. The place of the Sanafit tribe in the hegemony of the race has been taken by the Hadjare tribe, to whom ancient Arab writers assign as their territory the Beja country from the Egyptian border as far as Askalay, Aishab, and beyond. It is worthy of note that even today the Abyssinians call both the language and the tribe of the Beja Hadjare.

Even in ancient times the Beja must have crossed the Nile, settling nuclei of populations on the left of the river. Among the most important of those derived from them are the Beni Kathil or Kawaisha, who, however, in their various inter-crossings have ended by adopting the language and customs of the Sudanic Arabs, although they do not consider themselves to be Arabs. Their principal groups are on the Habab and the Dinder, but some are also found on the Athara, on the Blue Nile, and at el-Ashesh on the White Nile. Important portions passed into Kordofan, where for a long time they remained mingled with the Kababish. In fact, the Atawia sections of the Kababish, the Wayla sections of the Hamar, and the Tuwaimat sections of the Aulaik Bika Jawama's still belong to them; a Kawaisha colony has even settled at Werna in the mountains of southern Kordofan.

The principal divisions of the Beja now are: (1) the Abahab, between the Nile and the Red Sea to the south of Wad Hamasa up to the tropic; (2) the Nubia, to the south of Wad Hamasa, last towards the territory of Suakin; (3) the Hadamawa, between Suakin and Rasasa; (4) the Habasa, in the territory of Rasasa; (5) the Beni Amur, who consist of number of the Beja mixed with others of Abyssinian origin, in the valley of the Barks.

The Beja have a language of their own, which was formerly studied by Munzinger, and afterwards more perfectly by Almquist and Renich.
The Beja were always essentially nomads and a pastoral people. Among them devoted themselves to agriculture; many were camel-drivers. They never had any high degree of civilization, although the Kita' ah-Fashar ascribes a special alphabet to the Beja. The Beja adopted the religion of the Ethiopians or of the distant Berbers. In regard to religion, according to Arab authors, paganism seems to have been dominant for a long time among the tribes further removed from Egypt. Mas'ud says that in his day they still venerated an idol. The Beja were friendly to the Egyptians and in the time of the southern kingdom, when that nation was at its height of glory, the Beja were bound to the Egyptians by ties of friendship and marriage. In the 18th century, the Beja were still venerated by the Egyptians, who held them in high esteem.

2. The Agaos. The Agaos, whose famous mountainous and desertous districts are, as a matter of fact, described by Ethiopian geographers, are, the so-called Solomonic dynasty, because it claims as its founder Menilek, the son of the queen of Sheba and king Solomon; and the present kings of Abyssinia are the descendants of this family. The change of dynasty gave rise to a new movement of the Agaos peoples towards the north, and the Aksumites were not able to check it. The Agaos are the chief representatives of this fresh migration, and in course of time they adopted the Tigrinya language. The Solomonic dynasty extended its conquests over the Agaos on the west and south-west, who up till then had remained independent: at the beginning of the 18th century, Damot was conquered; about a century after, Wagari was firmly established in the country. The Agaos were definitively taken possession of, and in the 17th century, Agamo was annexed. Semi is a formidable mountain region, offered a fierce resistance to the Agao element, but the Agao element was driven out of the country.

Little is known of the ancient Agao religion. Their chief god was the sky (Debhan or Dar). Under him were many gods—some malignant, like the sar, and some beneficent. The latter dwelt in springs, trees, and mountains, and were there venerated.

To-day, Agao paganism is not longer proscribed, and the Agaos are either Christians, Jews, or Khamantas. Of the Agao Christians, it is not necessary to speak; but it seems certain that many usage of the Christians of Abyssinia, and even the style of their subterranean churches,
HAMITITES AND EAST AFRICA

have been inherited from the ancient pre-Christian religion. The Jews of Abyssinia are Agoss by race, and are only the remnants. The church is very uncertain. At first it was held that they were connected with colonies of Jews of southern Arabia, whom the kings of Aksum were supposed to have forcibly introduced into Africa to enslave the conquered ethiopians of Yemen (6th cent. A.D.), and to have settled in exile on the mountains of Semien. Now the hypothesis seems to be preferred that Judaism came into Abyssinia by land from Egypt. The Falashas do not know Hebrew, and they have not the Targum; they have adopted the Bible of the Coptic Church, and use their alphabet, their literary language, and almost all their books. But, although without originality, they have shown an indomitable attachment to their religion. Cf. ABYSSINIA, AGASS.

3. The peoples conventionally called Sidama represent a great mixture of differing ethnic elements; and this explains the immense variety of classification met with among travelers, according to the prevalence of this or that physical characteristic. It may be, however, that a better knowledge of the anthropological elements and of the languages of these populations will bring about a modification of the classification which is at present accepted by scientists.

The Sidamas, and a called Sidama seems originally to have embraced the southern part of Abyssinia, properly so called (at least the western province of Gisho), and to have extended southwards to within 200 miles of the great equatorial lakes; to the east it extended towards the Webb; on the west it occupied the high valleys of the rivers Sobat and Dassanech and the other affluents of the White Nile; to the north-west it crossed the Blue Nile (which separated it for a considerable part of its course from Gojam and Chara), and to the east the Dassanech, or the Semite, with whom, for the most part, we know nothing. The Abyssinians—Semites or 'semiitized'—early established themselves in the regions to the north, and absorbed the local tribes; the Gurgul, who speak very corrupt Semitic dialects, seem to be descendants of a north Abyssinian military colony, which had been placed in the territories of the kingdom, and which in the course of centuries had become amalgamated with the peoples of the country. These new Semitic tribes were so savaged to extend their territory still further south by conquests and raids; but the forming of Sidama States, whose chief sought a defence in Islamism, kept them back, or at least hindered the populations of the valley of the river Omo from being absorbed. Towards the middle of the 16th cent. the Galla tribes, dwelling to the east of the so-called Sidama, began their migrations and invasions, which were, for Ethiopia, more violent, and had more lasting consequences, than the barbarian invasions of Europe in the eastern part, all the north and north-west of the Sidama territory, became Galla territory; to the Sidama little more remained than the valley of the Omo.

Today, as far as is known, ethnologically speaking, into four principal groups: (1) Kaffa; (2) the ancient kingdom of Garto on the south and southeast; (3) the mountains of May-Gudo; (4) Zenjero; (5) Kollor, Deero, or among the Shitro, negroid tribes to the south-west of the Kaffa. But the long isolation of these regions from Abyssinia has prevented great alterations in the adopted religion. Some results have been achieved by Catholic missions during the last fifty years. The recent Abyssinian conquest is destined to revive the condition of the Coptic Church there, unless Islamism gains the upper hand. Islamism had appeared among the Sidama of the Kaffa in the 14th cent., but for centuries it made no progress; it has, however, been making rapid advance during the last fifty years. The old paganism is losing ground. Two types of paganism appear to be recognized, the first is not at present possible to say if the second represents a derivation from the first. The first type is met with among the Kaffa and the Ometi (Genta, Gisho, Kollor, Sale, Uba, Goza, Malleo). The supreme deity is Hezcko, called also Desco or Deotah. Hezcko is invisible, but is incarnate in his priests and in the king of the Kaffa; those who are incarnate in Hecoco become Hecoco themselves. Among the Kaffa, the priests belong to the aristocratic class of the Gojong, whence also is derived the royal family. There are two high priests among the Kaffa, and over all one high priest residing formerly in Addio near the village of Golco, now in Coba. This high priest consecrates the newly elected king, and receives the annual tribute also from the Ometi, or inhabitants of the valley of the Omo, who are not politically dependent on the Kaffa. Worship is paid in a temple in a wood. The priests, falling in the kios of Church, announces to the faithful the will of the god. The priest is naturally also the sorcerer who cures sicknesses, delivers from the evil eye, etc. Under Hezcko there are totelary genii of different places, who live in springs, rivers, crossroads, and great trees. The priests may not eat the flesh of the ox. All the women are prohited, because unclean, the flesh of the horse, ass, mule, wild boar, hippopotamus, and monkey; men abstain from eating cabbages, and women from eating liquor. Their beliefs are, that the other world seem to have been largely influenced by Christianity; but at the same time it is still possible to discern in their various rites and ceremonies the remains of primitive beliefs.---that death is succeeded by a life like the present. Thus, when a king died, his servants brought him his customary food every day, and it is still said (but this is not certain) that at the time of his burial a slave was killed, in order that he might continue to serve his sovereign. Among the Zenjero, religion had a specially ferocious and brutal character. The supreme god seems to be the sun; further, the Zenjero alone among all the peoples of Ethiopia have (or had) an idol of iron readily formed, which, they say, fall from heaven. They venerate numerous genii in the mountains, rivers, and rocks. The king was supposed to be an incarnation of the supreme solar divinity, and was the chief of the priests and sorcerers of his realm. It was his duty to deal the first blow to the human victims who, at the beginning of ten out of the twelve months of the year, were immolated on the summit of Mount Bor-Budda; these victims were chosen from twenty-two families of the country. Other human sacrifices were offered.

Out of every ten strangers who crossed the frontiers of the kingdom, one had to be sacrificed to the divinity. Naturally, the Abyssinian conquest, which took place in the year 1897, put an end to these practices. According to Boroffi, the chief divisions of the Sidama, based on their languages and on their political status, and the Abyssian conquest, are the following: (1) Kaffa; (2) the ancient kingdom of Garto on the south and southeast; (3) the mountains of May-Gudo; (4) Zenjero; (5) Kollor, Deero, or
HANIMETE AND EAST AFRICA

Northwards, where they gave rise to the Saho tribes.

It is possible to-day to recognize five Saho groups: (1) the Minifere, who dwell between the Benin and Assail river, and seem to have been placed to guard the country against Saho-Afar invasions; (2) the Haui, dwelling between the river Bagall and Assail, and the Eruwa and the Sozali; (3) the Hares, between the river Bagali and Kudali, and their allies, the Hares, who wander with their herds through the valleys of the Hadda, the Alabeket, the Sochek, on the south-eastern deserts; (4) the Hansa, at Saibar; (5) the Asa, in the district between the maritime region of the Adulis (Zulii) and the Abyssinian highlands, to the south of the Tewa, in the north of the Minifere; (6) the Debarka, two very small tribes dwelling in the region of the Mareeba south of the coast of the Benin; and (7) the Iru, on the north-west coast of Abyssinia.

But besides these tribes, who speak the Saho tongues, which is closely allied to the Afar language, the Saho gave rise to a few other branches, who, mixing in course of time with local peoples of other races, adopted their customs and language entirely. The Dongass, who speak the Kasa and Kasa, who are the former dwelling to the north of the river Labi, and the latter on the lower course of the river Azora, are the Kaffa, or Kaffa, of the same stock as the Debarka. The Saho language is known chiefly through the studies of Reinsch.

(5) The Somali, or their direct progenitors, as has been said, were in ancient times known as the Afar, or the Afar. They, however, are called Arab geographers of the Middle Ages. The name Soma appears for the first time in the documents of the Arab geographers. The most ancient sources show the Somali maritime region as being defined to the west by the Soma Assar (Nevis) (Gulf of Tadjur), and to the east by the coast of Tabo ( fuera); the former dwelling to the north of the river Labi, and the latter in the south of the river Azora, are the Kaffa, or Kaffa, of the same stock as the Debarka. The Somali were called the Masa (Hafun), and the masts of the Azania and the Zenj of Arab writers. But the Somali broke forth from these confines towards the south, crushing and absorbing the tribes, until they became the great tribes of the Somali races. This movement seems to have become more intense when the Somali passed over to Islam. It is said that towards the 14th century the Cushitic tribe Hawla, called that of the Ajura, succeeded in becoming masters of the territory between the two courses of the Webi and the Russ; in that century the Cushitic tribe Hawla, or Hawla, of the Cushitic language, which is the same as the Cushitic language of the Cushitic tribes of the south, had occupied the whole of the Cushitic territory.

Diodorus Siculus; the most important of the works of E. de Lassus;
Gyptus de Manicou, Schleicher, Jahn, etc.

(c) The Gallis seem to have dwelt in ancient
times to the S.E. of the river Well. Unknown
reasons caused their formidable invasions of the
Sidama countries and of Abyssinia in the middle
of the 16th century. They were at that time
heterodox; they were ignorant of the use of
metals, so much so, that, according to tradition,
they made use of the horns of cattle for swords;
they did not possess the horse, although in the
course of time they became the best horsemen of
Ethiopia. Having scattered or subjugated all the
Sidama people of the north-east and north, they
succeeded in pushing themselves into the western
districts, and even settled between the higher
courses of the Baro and the Didesse. They also
planted themselves in Abyssinia proper, not only
in the southern districts of the Shoa, but also to
the north of the river Jimma as far as Lake Hayk
and the frontiers of the province of Angot.

Enraged by the success of the Gallis, they founded military colonies here and there, of
which that of Metéa in Gojam is important.

Thanks to the beauty and fruitfulness of their
lands, in the 18th century, they attained the highest
political influence in the kingdom. One of their
women practically governed the State towards
the middle of that century, and some of their women
acquired the throne. To a less degree the Gallis
also spread towards the south; their extreme
limits are met at a distance of a few days’
journey from Lake Rudolf, and the influence of
their speech may be traced in the language of the
Pokomo, south of the equator and to the north-
west of Lamo. By reason of all these movements
from place to place, and through the inevitable
crossings with the populations already existing in
the lands newly occupied, the Gallis ethnical type
was profoundly altered. While, on the one hand,
some of their tribes do not differ in appearance
from the true Abyssinians, others, on the con-
trary, have all, or almost all, the characteristics
of negro populations.

The changes in their social and family habits
are equally profound. Thus, formerly they had
no tribal heads, but nominated a kind of leader
called *lakht*, who remained at his post seven years.

Later on, wars and contact with peoples living
under a monarchy brought about the develop-
ment of the principle of monarchical power, or at least
placed that of a republic on more solid foundations.

About the second half of the 18th and the begin-
nings of the 19th cent. there grew up in the regions
to the south-west of the Shoa (Ghurers, Jimma, etc.,
little Gallis monarchies, having characteristics of
their own.

The Gallis call themselves by the national name
Imorma, or 'sons of Orma,' whence the name
Oromo or Oroma, under which they are also known.

Their chief division is into Baraituma and Boran.

The most important Baraituma tribes are the Karaya, Wollo, Obo, Marsaw, Waramo, Itu, Ablata, and Warasula; the
most important of the Boran are the Metéa, Hooco, Obo,
Gedil, Lahan, Illu, Soodo, Qasho, Yaluma, Badagda, alamun,
Laga, etc. From a geographical point of view we may
mention the Boran, who occupy a vast extent of territory, the
southern part of the Gallis country, between the region of Lake
Stefan and the river Juba; the Karaya to the north of the
precinct between the Somali of Ogaden and the Sidama; the
Aka to the south of Harar; the Itu, Itu-Chicheroo, Ghersa,
Metéa, and Warasula, between the Shoa and the Harar; the
Ablata, the Gombita, and the Gacka to the west of Askoba;
the Gedil, the Lahan, the Soodo, the Shoa, and the Juba; the
Keku, the Illu, the Soodo along the upper course of the
Aka; the Hora, the Hora, the Jula, the Shoa, the Didesse, and the
Juma; the Juma, the Karaya, the Shoa, the Didesse, and the
Juma; the Shim, the Juma, and the Juma; the Khafa, the Juma,

6. The Knumas appear to be the remains of a people variously named (Bazah, Hame), which extended to the southernmost outposts of the Egyptian highlands (Dembelo) as far as the river Atbara at Metemma in the territory of Fayoum, almost as far as the Blue Nile. Other isolated pockets of this race have been found in Eretria and Arabia. Somewhat recent events have brought about their almost entire destruction in the countries bordering upon Abyssinia; the more distant tribes are gradually undergoing change by contact with other peoples. Chiefly of Knuma origin are the Alphens, who speak the Tigrè language, between the Baria and Kasaal territories; and perhaps of the same origin are the Dalbana, a tribe in the Atbara territory which many assert to be Arabian. The Knumas are almost all collected in the middle valley of Gazal and in part of the valley of Tak-kazé, which together form the south-west part of Eretria. They are divided into many small tribes: Torma, Logoda, Osseli, Goma, etc.; Tolu, Amoula, Calun, Foda, Belema, Elit, Elime, Selel, Logodat, Taywa, Gotta, Alumhu, Ghega, etc. They are at a very rudimentary stage of civilization, although they are tolerably perfect in agriculture. Their customs and laws are very democratic, and are based upon universal equality. They are, for the most part, ruled by the advice of their elders, and they hardly recognize any effective authority of chiefs. They have no idols. Their god is called Anna. Religious offices are handed down from father to son in certain families, as those of the Aula Mannas, who have the duty of causing rain at suitable seasons; the Aula Mannas, who keep the locusts at a distance from the Knumas country; and the Parda Mannas, who announce the time for beginning the ingathering of the grain, indiarubber, and honey. The first two offices carry with them the pain of death if the charms turn out ineffective. But the religious practices of the Knumas consist in manifestations of a gross superstition rather than in the worship of Anna. The Knuma language, which differs much from the Baria tongue, has been described by Reimisch.

**HANBAL.**—See Ibn Hanbal.

**HAND.**—I. Introduction.—The hand, as that member of the body which is used more than any other for all actions, whether ordinary, magical, or religious, became naturally a symbol of power. The hand of a certain being means the power exerted by him. Thus, to take a few instances at random, in Semitism usage an attack by a ghost on a human being is called 'the hand of the ghost.'

In the Scottish Highlands, invocation of 'the hand of your father and grandfather' means invocation of their power, etc., in Biblical usage, a passage into general speech, 'the hand' is a common phrase for power, God's or man's (Ex 25:4); and it occurs in innumerable connections. Similarly the phrase 'God's hand' in the Qur'an means His power, though the Wahhabis interpret it literally. In Christian art down to the 12th cent. a hand issuing from the clouds is regularly only in the gesture of benediction, or with rays proceeding from it—it is a symbol of God the Father. But already in ancient Egypt (the Book of the Dead) a hand comes from the clouds holding a number of human figures (souls), even in a late Greek fresco.

As a rule, the right hand is considered of more importance than the left; and it is usually mentioned before it in ceremonies affecting both hands, probably because it is used for many more purposes than the left, which is therefore more awkward. Hence many symbolic scenes begin with the left hand strictly for the lower purposes of life. In South Africa a man must not touch his wife in bed with his right hand, else he will have no strength in war.

Many Arabs will not allow the left hand to touch food, because it is used for unclean purposes, the right for all honourable purposes. In many magical rites there is a preference for the right hand, because it is more powerful; but not infrequently the unlucky left hand is used, perhaps with a view to increasing the sinister force of the magical action. In religious actions the right hand is the more important. Thus the Egyptians anointed the statues of the gods with the little finger of the right hand. But it has been generally used by most peoples in salutations, blessings, lay-

ing on of hands, etc. (cf. Gn 48:4). In divination the Greeks regarded the right as the lucky hand, but the Romans mainly thought the left to be so. But with them the east was the favourable side, and, as the seat of government, they had the east on the left hand. 3 They did, however, frequently regard left as unlucky, as is obvious from the fact that the common people were saluted with a kiss or otherwise; hence, perhaps, it was called salutaris digitus. 4 The touching of a fetish with the forefinger by a chief is found among some African tribes. 5 Jews touch the sword with the forefinger on entering the house or leaving it. In the ritual of the Church various rites are performed with the thumb—e.g. anointing and signing with the Cross in baptism. In later Jewish belief each of the fingers of God's right hand has a special function. 6 For the universal use of the hand, especially the right hand, in ordeal of water or fire, see ORDINAL.

The custom of wearing jewels on the hand (e.g. in rings), though now mainly decorative, probably arose out of magical reasons. The jewels were amulets by which the hand was protected. Occasionally, amulets are bound about the hand or wrist. 7 For similar reasons, or in order to sanctify the hands of certain persons, these were sometimes anointed. This ceremony is found in early Celtic ordinals—bishops, priests, and sometimes deacons. Having their hands thus consecrated, they are still continued in the Roman Catholic Church. 8 Where tatooing is practised, the hands are sometimes tattooed; and this, while it may have some other purpose now, doubtless was once regarded as a magical protective.

Tattooing the hands with special marks is practised by the Melanesians 9 and by modern Egyptian women, both Muslims and Christians, the latter using the cross symbol. 10 These marks often have a religious significance (cf. Ps 110:1), e.g. 'To take one's life in one's hand' is suggested by the carrying of something precious through dangers; it is a common occurrence in the Hâlds (cf. Ps 116:9, 118:6). 12

2. The sacredness of the hand in itself or for particular purposes is shown in various ways. The sacred book is kept in a sacred box, and it is pointed out that each part (fârka) of the hand is sacred: e.g., the root of the thumb is sacred to Bârâthâ, that of the little figure to Krâs (or to Fârâsâ], the tips of the fingers to gods, and the part between the thumb and the index to the Fôrî; and directions are given regarding the ritual slapping of water from the hand to a person in modern Hindustan the various parts of the hand are sacred to different forms of Viyân, and in the Kâra-sûyta ceremony homagie is offered to the thumbs, fingers, palms, and backs of hands. The parts of the body sacred to other gods are touched with the sacred fingers—an act gratifying to the deities. 13

The Tenth had similar ideas, for the space between the thumb and forefinger was called Wôdenapans, while the thumb was sacred. 14 The index finger was used by the Romans and other peoples as that by which the cup was clutched (cf. Ps 116:9). 15 The preference for the right hand is perhaps connected with the apparent connection of the sun from east to west, and the consequent idea that a sunwise course, keeping the object always on the right hand, is of good omen and the opposite is evil. 16

It still remains to be discovered why, among all races, savage and civilized, the right hand is generally used. Left-handedness occurs sporadically (as 3-5%) in the German army, and some people are ambidextrous. Some races run from right to left, or from each side alternately. There is no obvious physiological or psychological reason for the preference, and in fact most young children in this right-hand nation train right-handedness.

Since the hand signifies power, gods and heroes are frequently represented with several arms. This is most common in Hindu mythology and religious art; it is also found among the ancient Persians; and, though the Greeks were too artistic to make much use of it, a deformity, traces of it exist on Great Seal. A Lacedaemonian Apollo has four hands, Ares has had a hundred arms. 17 Two-armed gods. Two-handed gods do not share this deformity, but it is often attributed to giants and heroes. The crescent hand is probably also regarded as a symbol of strength (cf. Rev 16:8; 21:19). Conversely, singleness, one-handedness, in Greek and Roman mythology, indicates weakness. 18

The idea of the power of the hand is perhaps also shown in various myths of birth from the hand, etc. Poseidon was called Nûsà, as if standing on his hands. A reading of the hand is also in Lysippus. 19 In the Leporello, women who wished to become fruitful would consult the hand of the person from whose hands they were parted, and in Quiché and Amazones myth or Mêheren spitting into a woman's hand causes conception. 20

In the allusion of all hands, metaphors sometimes drawn from the gestures accompanying the actions thus described are in common use. For example, 'a man's hand is on a matter'; 'be not your hand on the sword'; 'the hand of peace' (cf. Ps 110:1); 'to say with a hand', etc. (cf. Ps 116:9). 21

The secretions, dermato-sudoriferous, gustation, motility, sensory, etc. (see CIRCULATION); and, on the whole subject, O. HAND

stitches another, just as the mere lifting up of the hand over a person in blessing causes a rapport, even without actual contact. The well-known emotional or psychic states often produced by touching, doubtless suggested the value of this more ritual use.

Conversely, it is through the hand that contact with sacred objects is often achieved. In ancient Arabia on entering or leaving the house the domestic goddess with the hand,

ingers both hands. Similarly sacred stones, etc., were stroked with the hand, sometimes previously dipped in blood or oil (cf. the primitive meaning of 'anoint,' 'touch, v.lf., v.s. 'to anoint with the hands'). Supplicants touch or stroke the beard or garment of a superior, and at the procession of the Magian, the crowd press forward to touch it with their hands. 9

The hand is usually laid upon the head, because it is the noblest part of man, and because, as a possible spirit entry, power of a spiritual or magical kind would pass into it from the hand (see HEAD). Some examples from the lower culture may be given first. In Melanesia, where man believed to possess more or less mana, one who possessed much of it would sometimes lay his hand on a boy's head to transmit some of it to him. 10 In Siam the priest laid his hand on and stroked the painful part of a patient's body, and recovery was supposed to follow. 11 Touching for the cure of sickness is also used by the Dayaks. 12 At the election to a high position in Uganda the hand was put on to the head of the 'Keeper of the Princess' at once becomesth king. 13 Toucging now to the higher races: among the Hindus, at the initiation of a Brâman, his union with his teacher is identified with a marriage, and is symbolized by the teacher's hand being placed on the boy's shoulder. 14 In Babylonia, healing or exorcizing was effected by laying the hand on the head of the sick man. 15 In Egypt the blessing of those going to the temple was conveyed to a newly crowned king by their laying their hands on him, thus conferring the gift of a long life and a glorious reign. This is often depicted on the monuments. 16 What was probably a usual practice in healing is also reflected in the myth of Isis, who laid her hands on a dead child and uttered spells, so that he lived. 17 Teutonic legend and myth speak of the king laying his hand on the heads of the people, and in a similar fashion the 'stone hand' was laid upon the heads of the pharaohs. 18 Among the Arabs a holy person conveys a blessing by the touch of his hand, and healing certain sicknesses is also performed in the same way by the shait. 19 In Tibet the Grand Lama at the ceremony of reception imparts his powers to people of high rank by laying his hands on their heads; inferior laymen have a cloth interposed between his hand and their heads; the lower classes are touched by a tassel which he holds in his hand. 20 Among the Hebrews the custom of laying on of hands had various purposes. In the case of the scapegoat the hands of the priest were laid on it in order to transfer to it the guilt of sin (Lv 16:22). The same rite was used with other sacrificial victims, and here the intention probably was to identify the offerer with the victim by physical contact (Ex 29:9; Lv 1:3; 4:26; Nu 18:19). A similar custom belonged to the Egyptians. 21 The same idea of identifying is seen in the laying on of hands. The hands of the congregation upon the Levites (Nu 8:21). It is also the act accompanying words of blessing (Ge 48:14), and it is used to transmit an office or to ordain. Moses thus ordains Joshua, and puts some of his honour upon him (Nu 27:18-20) and he is full of the spirit of wisdom because of this rite (Dt 34:9). This rite of ordination (πρωτεύειν) was also used at the appointment of members of the Sanhedrin, but was discontinued, perhaps because it had become a Christian usage. 22 Laying on of hands for the purpose of healing was probably also in use, as it is 7 M.'s 'lay thy hands on her;' 'they beseech him to lay his hand upon him;' and Ac 9:17 (Ananias lays his hands on the blind Saul) suggests. The waving of the prophet's hands over the affected place was expected by Nathanael (2 K 13). The practice was used by Christ (Mk 6:5; Lk 4:25) and the Apostles and others (Ac 9:18; 19:6, cf. Mk 16:18) in healing.

The expression 'fill their hand' in reference to consecration to the priesthood (Ex 28:19) has received various interpretations, but it is probably metaphorical, identifying installation in office (cf. Ez 24:2; and a similar Assyrian phrase, kuša maštu, 'to fill the hand,' to install into office). 23 Used by Christ in benediction (Mk 10:18; cf. Lk 24:47 'lifted up his hands, and blessed them'); the laying on of hands for purposes of blessing has always been continued in the Christian Church, though the hands are now not touched, the benediction of a number of persons (6:12). But for two other important rites the laying on of hands is used—confirmation, and ordination. After baptism and prayer for the reception of the Holy Spirit, the Apostles lay their hands upon the baptized, who then receive the Holy Ghost—a spiritual union—and also speak with tongues and prophecy. This, the rite of Confirmation, is probably the 'laying on of hands' referred to in Ac 8:17. It became a part of Christian initiation; but, being connected with anointing, its place tended to be taken by the latter in some Churches (on this see CONFIRMATION). In the Church was the Anointing the laying on of hands is retained, and there is no anointing. Here also, as in the Roman Catholic Church, the bishop administers Confirmation. In the Eastern Churches it is often delegated to a priest, the oil being consecrated by the bishop. In the early Roman baptismal ritual the exorcism which preceded the ceremony was accompanied by laying on of hands by the exorcist and then by the priest on successive days. 24 The special grace (χρησιμοσύνη) in ordination was also conferred by laying of hands (Ac 8:19 [the seven deacons], 1 Ti 4:14 [the ἀσιτάς], 2 Ti 1:6). Similarly St. Paul and St. Barnabas are 'separated' to their office by laying on of hands (Ac 13:3). This practice became, therefore, a necessary part of the rite in all branches of the Church. At the consecration of bishops, bishops alone may lay on their hands, who must be not fewer than three in number—a rule dating from at least the 4th cent. —save where the Pope consents, though consecration by one bishop has occasionally been allowed. At the ordination of priests, the bishop lays on his hands, with the priests present. According to the Syr. Didasc., iv., a priest lays on hands, but does not ordain (οἰκονομέω, νλ χρησιμοσύνη). The bishop alone performs the rite of ordaining deacons. The imposition constitutes the matter of the sacrament of Ordination, but since the 9th cent. the Roman Church has added the tridacres (or tridacrices) instrumentum. 25 Laying on of hands is also used in benedictions, visitation of the sick, absolution.
and, in earlier times and in the Eastern Church still, at the unction in baptism.

4. The hand in healing rites.—Some of the instances in the preceding section have shown that the touch or stroke of the hand is an important factor in the healing of disease. Laying on the hand, touching, stroking, rubbing, and massage are the chief features in some of the oldest and most primitive forms of medicine (see DISEASE AND MEDICINE). The power of the hand is wide-spread in European folk-belief, but it is only certain persons who are thus gifted—e.g. a seventh son or the seventh son of a seventh son. But—doubtless as a result of the power ascribed to medicine-men and priests, or to chiefs and kings, who often had powerful magic—monarchs or petty sovereigns, even within recent times, have been thought to possess healing in the touch of their hand (see FAITH-HEALING, KING’S EVIL).

5. The hand in magic.—(a) The hand, as the chief member of the body used in magical rites, is of great importance. It is with which powerful amulets or wonder-working objects are held. Thus a Bab. spell runs:

‘The circle of EA is in my hand,
The tamarisk, the powerful weapon of Anu,
In my hand I hold.
The date-fruit, mighty in decision,
In my hand I hold’

By the touch of a sorcerer or witch, even by pointing the hand or finger, much harm can be done through contact real or imaginary, as, for example, by the touch or pointing of one who wishes well or who is lucky works good. ‘After me may a lucky finger be pointed,’ are words occurring in another Bab. spell. Hence certain gestures of the hand or fingers are all-important in magic, whether for good or evil purposes, and perhaps this is reflected in the story of Moses’ uplifted hands at the battle with Amalek (Ex 17: 9). The wave or the lifting up of the magician’s hand can effect wonders. The uttering of spells is accompanied by various twisting of the fingers. Clapping the hands may raise or stop storms; uncovering them causes it to be resumed. Or, again, articles with which magical rites are performed or divination is exercised must be held only by certain fingers. But it is mainly as a protective against the evil eye that the hand (or certain gestures made by it) is important. Of these the most common is the mano corvina, in which the index and little fingers are extended to imitate horns, the others being bent over and clasped by the thumb. The hand is usually pointed towards the person who is feared. This gesture is both ancient and widespread in its use. It is represented in early Christian art as a gesture of the hand symbolizing the Deity. This figure thus combines the power of the hand with the magical virtues attributed to horns (q.v.). The hand clenched, with the thumb pointing downwards between the first and second fingers, the mano sec, is another common gesture against the evil eye, as also of contempt or insult. It is not improbably a phallic gesture, the phallic being a powerful amulet against the evil eye (See EVIL EYES). (b) A hand, usually with fingers extended, is often found on houses, temples, and buildings of all kinds, especially on or above the door, to avert the entrance of other witchcraft, or to prevent the entrance of malicious beings. It is painted, or the impression of a hand dipped in blood is made on the surface. The range of this custom is very wide; it is found in ancient Babylon, Phoenicia, Egypt, Assyria, and India, and is practised in the East by Jews and Muslims, while it is also found in Italy (see DOOR, vol. iv. p. 850 and ref. thereof). The ancient Hebrews set up memorials apparently bearing the hand (1 S 15: 18, Is 69 RV). Probably they bore the impress of a hand, as did Phoenician votive steles, dedicated to Tannit and Baalat, and the purpose of the hand may have been apotropaic. The hand also occurs on some articles of dress. Thus it is figured on the robe of a Mandan chief, and a red hand was also the hand badge at the sacred dances among the Dakotas, Winnebagoes, etc.

For the same reason hand-shaped amulets, representing a variety of gestures, or holding some other protective, or covered with symbols, are in wide use against the power of the evil eye. They were probably worn in pre-historic times, and they are known to have been used by the Phoenicians, Greeks, Etruscans, and Romans, and in ancient Crete, as they are now in India, Austria, Italy, Spain, Portugal, etc.

(c) The hands of the dead have also great importance in magic. There was a well-known custom of cutting off the hands, or right hand, or fingers of slain enemies and bringing them home as trophies. This was done by the Egyptians 5, the Hebrews (2 S 4: 4, 2 Mac 15: 2), and the Teutons 6, and was also very common among the American Indians. 7 The right hands of living prisoners 8 or their thumbs (Jg 1: 3) were also cut off, the object being to spoil their prowess for ever. In the case of the dead the body there may have been a similar idea of maiming their ghosts, since, where mutilation is a punishment, it is sometimes dreaded for its effects in the other-world. At the same time, as a victimization of the well-known belief that the part influences the whole, or that any part of the human body gives the possessor of it power over the spirit, the mutilation may also have served this purpose, as in the case of cutting off the head (see HEAD). This would account for the fact that the American Indians held a dance round the trophies, and it is suggested by the fact that the Khonds hung up hands of enemies on trees in the villages. 9 But it is also seen more explicitly in the custom of wearing the hands or fingers as medicine among the American Indians. 10 The same practice might be used in the case of any dead person, especially a relative or friend, for some specific purpose, the power of the dead still acting through the relic. Thus in West Africa a common component of the fetish-bag is a human hand; or finger nails or clippings are carefully preserved in memory of dead relatives, and are thought to be very efficacious. 11 The preservation of fingers and nails as relics is found in New Caledonia and other parts of Melanesia. 12 In Mexico a common amulet favoured by warriors was the middle finger of the left hand of a woman dying in childbirth. (Such women had the same

future abode as warriors.) The dead hand as a healing charm is also referred to by Pilley. Middle Eastern women in Egypt wore the dried finger of a saint or Christian as a charm against evil spirits. In European folk-custom similar usages are found. In Italy three joints of the ring-finger of an assassin are reduced to powder, mixed with a liquid, and sprinkled between a lover’s bowels; and in his sweetheart’s, in order to bring back her affections. In Ireland the hand of a dead man stolen from a churchyard gives the thief power to abstract butter from his neighbours as long as he keeps it in his house. The hand of an unbaptised infant disinterred in the name of the devil is also a powerful charm. The left hand of a male and the milk-pail causes the production of very rich cream. Both in Ireland and in Cornwall there was a belief that the touch of a dead hand healed certain maladies. In Germany the possession of the hand or thumb of a thief was believed to give its owner great magic power. A hanged man’s finger hung in the beer-cask caused the beer to sell fast. Witches were also commonly believed to make their magic salve or powder from the fingers of disinterred children. These modern survivals are patterned on the earlier animistic beliefs regarding the relics of the dead referred to above. An interesting aspect of them is found in the so-called ‘Hand of Glory’ or ‘Diebsherze’. In the Middle Ages the dried finger or thumb of a newly-born child, anointed with grease and ignited, was believed to make a thief invisible, and to cause a profound sleep to fall upon all in the house which he entered. The mere laying of such a finger on a table caused them to continue in sleep while the thief went on with his nefarious work. In the 17th century, thieves sometimes murdered pregnant women in order to obtain the unborn child’s finger. The hand or finger of a dead unbaptised child had a like efficacy. A similar superstition regarding the outcast leg and arm of a woman who had died in her first childhood in Mexico. The dried and pickled hand of a dead man, especially of a criminal, anointed with unguent and ignited, or placed in a candle made of human fat was placed, had similar magical powers; but, if any one remained awake in the house, the thumb could not be ignited. On this superstition a number of folk-tales have been founded. It should be observed, however, that other objects have the same properties and are so used among other peoples.

Where the dead are tied for magical purposes, their hands are supposed to strengthen those of the dead (Dayaka 12; Australians 13); and in New Zealand they were still used for this purpose. Among the Yersea, an Amazon tribe, the palms of the hands are a special delicacy.

(d) Magical omens are often drawn from the hands, especially from their testing, when the West Highlanders, if the right hand itches, money will be received; if the left, money will be given away. An itching right palm means blessing from a stranger, while an itching in the left hand signifies that one will receive a letter of money. In the north of Norway it was thought that, if the right hand itched, you would part with money; if the left, you would receive it. In Cairo it is thought that, if the right hand itches, money will come; but, if the left hand, ill-luck. Similarly the negroes of Jamaica believe that, if the right hand itches, you will get money; if the left, you will spend it. Other omens may be illustrated by the following examples.

It is a Jewish belief that any one who, on the right of Holohana Beach, in trying to read his fortunes from his shadow, does not see his right hand, will lose a son during the year. If he does not see his left hand, he will lose a daughter; if his finger, a friend. In China, if a child has fat hands, he will become fat and wealthy. In Norway, if a Ded jumps on the hand, the person will be sought by a good friend. Omen also come from the appearance of various animals on the right hand or on the left—the former being usually lucky, the latter unlucky.

(e) One form of ‘skrying’ or crystal-gazing, is to gaze into ink poured into the open palm (see art. CRYSTAL-GAZING, vol. iv. p. 365). The so-called science of chiromancy or palmistry, the reading of the past or future from the lines of the hands, has always found many credulous believers both in ancient and in modern times.

6. Gestures.—(c) As a means of communication or of emphasizing speech, gestures of the hand as well as the use of fingers or hands in betokening numbers have been universally employed; but perhaps nowhere has ‘sign language’ been more extensively used than among the American Indian tribes. Chiromancy was extensively used by both Greeks and Romans, and it is much practised in modern Italy. Many gestures, whether actually used or represented in art, are universally understood—hand or finger to mouth = silence; wringing the hands = grief; the clenched fist = anger; the hand to the face = sadness or grief. Hence it is natural that, where speech is directed to magical or religious purposes, in spell or prayer, it is usually accompanied by gestures, some of which tend to become conventional. Pointing with the finger is often held to be of magical efficacy, the power streaming, as it were, from operator to victim. This gesture is found among savages, magicians, and in later Tantrism. Hence it is in doctrine to point with the finger towards, e.g., the heavenly bodies or other worshipful objects, or at friends or superiors. Other magical uses of the hand have already been referred to.

6. In prayer or adoration no gesture is more common than the lifting up of the hands, which is usually open. It is the gesture of appeal, a kind of acted prayer. In Tonga, people put off a finger-joint to propitiate the gods, and, holding up their hands, confess that they have done wrong. The priest of the Congo, in speaking to a superior, stretch out their hands towards him, the attitude being precisely that of prayer. This was also the usual attitude of prayer in Egypt, represented so often on the monuments, and referred to in a text which says: ‘The hands of men and gods are lifted on high seeking for thee, even as those of a child (are stretched out) after his mother.’ Osiris is also

11. The dead are tied for magical purposes, their hands are supposed to strengthen those of the dead (Dayaka 12; Australians 13); and in New Zealand they were still used for this purpose. Among the Yersea, an Amazon tribe, the palms of the hands are a special delicacy.

14. W. C. Tipton, J. S. E. 1801; Liebesmuth, 282 f.

Both lifting and laying on of hands were and still are used in the Christian Church for individual and general benedictions, but in the latter the position of the fingers has been regarded as of some importance, and a symbolic interpretation has been given to it, while the blessing is always bestowed with the right hand. From comparatively early times in the Eastern Church the gesture has been that of the extended hand with the thumb joined or crossing the third finger, the other fingers open, or the second and fourth slightly bent. Among the mystic interpretations given, one is that the first and second fingers form the initial and final letters of Ιωάννης, and the thumb crossed on the third finger and the bent fourth finger form the initial and final letters of Χριστός. The Western form of benediction is, for a deacon or a priest, the extended hand; for bishops, the thumb and first and second fingers raised, the rester resting on the palm. This was at an earlier period the form used by priests also. The three upraised fingers signify the Trinity, the two closed fingers the two natures of Christ.

These positions of the hand are met with in early Christian art, and occasionally others are depicted—thumb and first finger or first and second fingers or four fingers raised. This gesture is made in all such benedictions. The Western gesture is the form taken by some pre-Christian amulets against the evil eye, and it is also one of commanding attention. In Buddhist worship, especially open, with fingers pointing upwards, signifies blessing.

The position of the fingers in signing oneself or any object with the sign of the cross is important and is mystically interpreted—five fingers outstretched signify the five senses of the Trinity, etc. At the Enchrissia the cross is symbolized by the elevation of the celebrant's hands.

(d) In taking an oath the position of the hand is of importance. It is placed upon some sacred object, the idea probably being that the power of the object will do harm to the person if he breaks the oath. This custom is found in Samoa (hand on sacred cup or stone), among the Hebrews (hand on generative organs, though here the oath partakes of a covenant [Gen. 24, cf. Gen. 43]), among modern Jews (hand on roll of Torah or on page with the Decalogue), and among Muhammadans (hand on Qur'an). Again, the hand is raised, as if calling the gods or God to witness the oath—a custom found among the Greeks, the Egyptians, the Hebrews (Gen. 41, Gen. 42; cf. Rev. 19, 1); hence 'to lift the hand' signifies 'to take an oath' (Ex. 6, Ps. 75, etc.), modern Jews, and generally in Christian usage, as in judicial oath-taking in Scotland. Shaking hands is sometimes used to confirm an oath or covenant, or as a pledge (e.g. 2 K. 10, Ex. 15, Ps. 9). To avoid the necessity of keeping an oath and to escape the consequences, certain gestures of the left hand or of the oath-taking right hand are used in folk-custom.

(e) The gestures or position of the hands in representations of divinities are often of importance, and reflect those already referred to. They hold various sacred objects, symbols, and the like. This is especially noticeable in early and later Christian representations or symbolic art, where our Lord or another Person of the Trinity holds His hand in the attitude and gesture of benediction. In Northern Buddhist art there are many recognized positions of the hands given to representations of Buddha and Buddhist saints, each with its appropriate name, e.g. the 'meditative posture'—one hand resting on the other, palms upwards; the
HAND

With unwashed hands was highly dangerous (these
being the openings by which a demon might enter).

1. Hand-shaking. — This is a general mode of salutation even among such low savages as the
Australians, now more, not less, ceremonious, and an obvious expression of sympathy by means
of contact. But it has also been a very common method of clinching a bargain, expressing a covertly,
and the like, each of the two persons thus giving himself over into the possession of the other
by contact, and so having a hold over him. This custom was prevalent among the Romans, Greeks,
Hebrews, and most other peoples of antiquity, as it is with most modern races. The hand is struck
into that of the other person, hence the phrase 'striking a bargain'; and in some usages, if this
hand-shaking does not take place after a bargain, the bargain is null. The hand-shaking is even
more effective when each puts into his hand before 'striking' or when, as among the Iberians, Goths,
and in the Highlands, the ball of the thumb is moistened and the parties press thumbs. Hence,
also, charity in kind is one of the most important parts of the ritual of marriage, not only
among Christian races, as set forth in the Church rituals, but also among many savage and barbaric
folk. It is also found in the Rigveda (x. 92. 30). The ceremony is at once a pledge and a symbol of the union which will later be consummated. In various religious or magical ceremonies, in
which several persons are engaged, they sometimes join hands, probably by way of giving
expression to the solidarity of the rite.

Washing of hands. — (a) The obvious effect of water in removing dirt from the body, as well as
the universal ideas regarding the sacredness of water or its being the seat of a spirit or divinity,
suggested other kinds of uncleanness—that of a tabu state, of guilt, and the like—might also be
removed by washing. And, as the hands were the main parts of the body by which uncleanness
threshold contact arose, were a possible entry to the body for demons (as in the Hindu belief re-
garding bâtás), whose ceremonial washing has everywhere had great importance. Indeed, with many peoples all washing of hands is more or less ceremonial.

Contact of the hands with any thing or person unclean or dangerous produces a tabu state, and no food must be touched with the hands while it lasts, because the uncleanness or con-
tamination passed over to the food, and so into the body. This is common in the lower cultures, e.g., in Polynesian; and it is illustrated by the proverb, 'I went to Hades to see his dead mother and would have touched her had she not forbid-
neil him saying that, if he did, the road to the upper world would be closed to him.'

Among the Greeks the danger of unwashed hands is illustrated by the story of Astylos, who, having
approached the altar of Zeus with unclean hands, was struck dead; while no one could go beyond the
warpârphâpous until he had washed his hands. The Romans had a similar belief, and no one with hands
stained with crime would touch sacred things. They must be washed first in a living stream. The
Jewish belief that to touch eye, nose, ear, etc.,

was held — that is the opening of the eyes of the priest. In the use of the hand, as the hand, besides the rest of the body in pure spring water is specially mentioned as a symbolic cere-
mony for lighting one of the power of evil spirits.

(b) Ceremonial washing of hands takes place before religious or magical acts. It is frequently
used before prayer, and this is best illustrated from Muhammadan usage. The Muslim must
wash his hands before prayer, the Qur'an: 'When ye prepare yourselves for prayer, wash your faces and hands up to the elbows' (v. 8. iv. 78). This washing is done three times—
first the right, then the left hand and arm. When washing the right hand, he says these words: — O
my God, on the day of judgment, place the book of my actions in my right hand, and examine my
account with favour'; and, while washing the left:

'Place not at the resurrection the book of my actions in my left hand.' The Jews are also care-
ful to wash their hands before prayer, the custom being deduced by the Rabbis from various passages
in the OT, where there is no direct reference to the custom. The Hindu usage at the Brâhmad-Puja
service may be noted. Although here there is rather an offering of water to the Pâtrîs, that they
may be refreshed and their hands washed. Water is taken in the right hand and poured on the ground
in the right hand: 'It was offered so as to pour over the side of the palm between the root of the thumb and forefinger, the 'father's space' (Pâtrîtrâka), and again so as to pour over the opposite side of the palm.

(c) Washing of the hands before sacrifice is also a very wide-spread practice. In Egypt the ritual
washing of the priests before offering sacrifices included the whole body, though stress was laid upon the
hands. Hence the name of the priests—ârâbôt, 'the washed,' or 'sâhîkhbôt,' the clean of both
hands.' In heaven the gods washed their hands in the laver before the door in heaven; and this act
was performed on their images. Similar customs prevailed in Babylonia, where the lord must wash
and be ritually pure before approaching the gods. Here also this was reflected back upon the gods,
who, as well as worshippers, must cleanse their hands before taking part in the sacrificial banquet.

In Greek and Roman sacrificial ritual the purity of the hands by washing in lustral water was in-
sisted on, and a vase of water for this purpose stood at the entrance of the temple. Among
the Hebrews the ritual law is quite explicit regarding the custom of washing hands before sacrificing (cf.
Ex 30:20-21). The ecclesiastical usage of ablutions of hands in the Christian Church before or during
the celebration of the Eucharist may also be referred to in this connexion. It is ordered in the early
liturgies and has remained a constant custom since.

(d) Before many rites of a magical kind the washing of hands is also customary. The custom of
the âµýkâdâmâ the midwives had to wash their hands before running round the fire with the infant.
Before touching seeds at planting, of women, the Lower Congo region must wash their hands lest
the crop be destroyed. Among the Romans, at the

HANDICRAFT.—1. Definition.—The term 'handicraft' may be defined as the constructive adaptation by man to his needs of the material presented by the environment. It will thus include, on the one hand, the provision of implements, weapons, utensils, clothing, shelter, the preparation of food, and the like, but will exclude, on the other hand, activities such as those by which food and raw material are provided—gathering of fruits and roots, the processing of agriculture, hunting, fishing, etc.—as well as self-defence and war, and other activities in which, although manual dexterity and co-ordination of bodily powers are requisite, the result is either not material, or, if it is, is not produced by a structural or formal modification. A simple adaptation, such as the use of stones as missiles by apes or by men, will not come within this definition, while it is doubtful whether the psychological processes which underlie the operation of nest-building, even in the higher apes, or the sense of taste of the lower animals towards the activity of the orang which applied a piece of iron or other material as a lever and utilized straws of wire-setting, which it un twisted, as a saw to break out the tap root, (Jenyns, 4th Nov. 1912) may possibly be described as the psychological threshold of handicraft.

2. Implements of stone, bone, and shell.—The earliest undoubted examples of the products of man's technical skill are the stone implements of the Pleistocene period. Whether the implements known asoliths are actual specimens of man's early attempts to produce a tool to meet his requirements or are the results of natural forces is immaterial. It may be assumed that the earliest process of manufacture consisted of rough chipping to increase the utility of a stone naturally suited in form to some particular purpose.

Implements as simple in form and showing in themselves as little signs of human workmanship as soliliths have been recorded among primitive races in modern times. The Sert Indians use stones which have undergone no process beyond the fixation as hammers or as weapons in hand-to-hand fighting (W J. Boone, 'The Sert Indians,' 77; L. O. Bird, 'Handicraft,') and the Andaman Islanders use whetstones, chips, and flakes which have been split by simple pressure after breaking in the fire (T. E. H. Man, 'On the Aborigines of the Andaman Islands,' JAI xx [1895] 390).

The implements of the river-drift gravels of Europe belong to a stage when man had already acquired considerable technical skill, while a marked increase in dexterity is seen in the smaller but more carefully formed, as well as more highly specialised, implements of the cave-dwellers. The favourable conditions of archaeological study in France and the method of a detailed method of analysis and classification have made it possible to follow closely, in a series of known relations in time, this advance in skill, as well as in the process of specialization. The classification of the Stone Ages in Europe thus offers material of the greatest value in tracing the gradual development of man's technical ability.

The Palaeolithic age has been divided into three stages—Lower, Middle, and Upper. In these stages the Mesolithic, Streypan, Chellean, and Acheulean implements, so called for characteristic sites in France, belong to the Lower Palaeolithic; Monsterian implements to the Middle; and Aurignacian, Solstitian, and Magdelanian to the Upper. Each group is still further divided by

1. P. 1058 and note 1.
2. Crookes, PRS ii. 105.
French archeologists. Through all the stages, from the simple flake of the Mesovian gravel to the highly elaborate examples of the flint worker's art in the leaf-shaped implements of Solntrè, there is an immediate recognition and adaptation to a particular purpose. In the Strepyan stage the forms include coarsely flaked scrapers, knives, and the scraper, a pointed implement which has been described as 'not unlike in size and form two hands opposed palm to palm.' This implement—a natural form, a module of flint which had been worked, but of essentially modified—is still more characteristic of the Chellean stage, which also includes scrapers and a dagger form. In these implements the flaking was apparently produced by oblique blows with a pebble. The Chellean industry is of worldwide distribution, occurring in the river-gravels of France, England, and throughout Africa, Arabia, Palestine, in the valleys of the Tigris and Euphrates, in India, and in some parts of Canada and the United States. In the Acheulean stage—a direct development of the Chellean—the chipping of the flint becomes finer, and the implements, especially the boucher, show a better edge. In the Mousterian age there is an increase in the range of implements employed, as well as a marked improvement in the methods of workmanship. The boucher disappears, but its place is taken by the Levallois flake, a large implement with a rounded point, dressed on one side and then struck from the nodule with a single blow. Side-scrapers, end-scrapers, notched scrapers, and awls are characteristic of this period, in which man began to make use of caves for dwelling-places.

In the Aurignacian stage of the Upper Paleolithic period, the improvement in the working of flint continued, and the same implements were made, including curved pointed flakes with secondary chippings, carinated scrapers and gravers' tools to meet the requirements of artistic development, which now found expression in ivory and bone carvings and engravings. The distinguishing feature of implements of this period is the secondary flaking known as the Aurignacian retouch. At this time a new material was introduced; awls of bone and ivory, and other implements, such as spear-heads and rods of ivory, appear. The working of flint reached the highest stage of development in the Solntrè period. Primary arrow-heads of the earliest phase were succeeded by the implements known as laurel-leaf points—flat and very thin implements with remarkably delicate secondary flaking of great regularity, probably produced, not by blows as in earlier types, but by pressure.

The Australian aborigines produced extremely delicately flaked points of stone, latticed made of bottle glass, by means of pressure, the implement used being a bored-geared stone made of a bone from the hind leg of a sheep (L. Baloux, 'On the Method employed by the Natives of N.W. Australia in the Manufacture of Glass Spear-heads,' Man, III, (1902) 65). The Flinders and the Lake Mungo stone, produced by pressure on a bone. The Apachee, after breaking a boulder by means of a pebble set in a wavy handle, wrought the implement into shape with a sperm-whale tooth. Torquemada describes the making of obsidian knives by pressure with wood, the flakes being split off a block held between the feet (see J. Bever, Ancient Stone Implements of Great Britain*, p. 25).

The Magdalenian period witnessed a decline in skill in flint-working. The implements become less elaborate, and are often lacking in finish. This is due largely to the employment of bone and horn, which brought about a new and greater diversity of form and consequently a wider application in use. The simple flake-point develops into the bone, and later with two or more; arrow-heads and spear-points show great variety in form, to permit of different methods of attachment to the shaft. Spear-throws of bone or ivory are used, as well as the mèton de commande, an implement conjectured on Eskimo analogy, to be an arrow-straightener. Bone pins, needles, and bodkins found in large numbers suggest an increased elaboration in dress.

The culture of this period is frequently compared with that of the Eskimos, especially in view of the use of bone implements by the latter for both hunting and domestic purposes. In the Neolithic Age in Europe, the great variety in forms of implements and the purposes for which they were employed bear witness to a profound change in the mode of life. For which period of human development is broadly distinguished from that which preceded it. Although the rude stone implements of the kitchen middens of Denmark and elsewhere argue a civilization and a technical skill certainly below that of the cave-dweller in the later Paleolithic period, a knowledge of Japan, Korea, Siberia, and Portugal, of horses, deer, and the use of clay vessels, for which evidence appears at a comparatively early stage in Neolithic civilization, demonstrate that a rapid multiplication of human needs was accompanied by a parallel increase in effective means to satisfy them. The characteristic industry of the period—the making of implements and weapons of flint—remains relatively simple, and is marked mainly by a greater variety in form and by specialization. An important development in flint knapping techniques, hammering, and polishing—permitted the use of stones other than flint and chalk.

In the earlier stages of the Palaeolithic period, it is not possible to assign a generally accepted significance as a weapon or tool. The same uncertainty exists in the case of the neoliths. Some of the rough axe-like tools may be either unfinished weapons or implements made for other purposes. Nor does the fact that flint shows an early origin. The mammoth and hammer-stones which were used to shape the great blocks of stone at Stonehenge were of the roughest description, although this monument was erected at the beginning of the Bronze Age. Arrow-heads and spear-points of the earliest phase could be followed, as it develops, from the form in which it is a square butt, through the barbed form fitting into a notch, to the fully developed tang which was fastened to the shaft. The stone adze or axe, perhaps the most characteristic of all stone implements, can also be followed through a sequence of forms, from the coarsely chipped and roughly shaped implement to the well-balanced weapon, carefully ground all over and brought to an edge, which exhibits the highest point of development in this branch of Neolithic technique.

The usual method of attaching the adze was by fastening it to a handle with smooth stone or other form of string, as is done by modern primitive races among whom stone implements are not so common as in a transverse hole in the handle. The tendency to split the handle is ingeniously overcome by the peoples of the Swiss Lake Villages, who fitted into the handle a socket of bone which took the force of the blow. At a later stage, perforated axe-heads appear, the hole of which is covered by a piece of leather. In Great Britain this implement may be referred to the Bronze Age. The hole was bored by a cylindrical drill, or in some cases by a hollow tube, possibly of elder wood.

The greater skill in technique and the multiplicity in form and use of stone implements which took place in the Neolithic Age and in the one phase of a general advance in culture. But in the case of these implements the limits of development were fixed by natural laws, and whether among modern primitive races or in pre-historic times was the technique of the Scandinavian daggers or the transparent blades of the Egyptian knives surpassed.
The Australians, like many other primitive races, which first encountered by Europeans, were in the Stone Age. The use to which they put their implements and weapons and the methods of manufacturing and working these are, as a rule, dependent upon the general character of the culture of prehistoric Europe, as well as on special points where the purpose of a particular implement is not clearly discerned from its form or character.

One of their most useful implements, periodically as a tool rarely as a weapon, was the axe, which was the product of a long series of improvements in the form of quarts and pebbles with a rounded pebble, and then of grinding upon the mortar mills, the stones used for grinding seeds. It was mounted in a twisted handle, either as an axe or as an adze, and fixed in position on perpendicularly. As an ax it was used for hitting trees for felling, cutting open trees, catching the opossum or taking honey, taking off sheaths of bark from trees, shaping wood for shields, and the like. As an adze it hollowed out wooden vessels. A knife is a haft was used as a pick; fragments of stone set in a handle of gum made a saw; stone hammers were made of flaked pebbles set in a handle; pounders were used for breaking in seeds; stone drills were sometimes, though rarely, employed; and all kinds of axes were used as scrapers. The last-named implements were sometimes made of teeth, which also furnished knives and drills. The Australian native made a considerable use of shells. The Aborigines used them for beads, ornaments, and other small articles.

Their implements of bone included awls made from the log, bone of the kangaroo, a stiletto or needle by the women to sew, and the edge of the bark which they sewed into canoes, and for piercing the septum of the nose for the receptacle of the bone bead. (W. H. Thomas, Notes on Australian Soldiers, London, 1880, p. 46 ff.)

Axes of both shell and stone were used in Melanesia, the area of distribution being well-defined in each case. The most common islands (except Rennell and Bellona) and the New Hebrides. Shell was used by the Santa Cruz people, Ceram Island, and New Guinea. For cutting teeth, shaving, and fine carving, obsidian, chert, and shell's teeth were used (Cordington, The Melanesians, Oxford, 1861, p. 318 ff.)

2. The introduction of a new material in the discovery of metals (probably in Asia Minor, or in Egypt, whence its use spread to the Mediterranean and the rest of Europe) was necessary to render possible further development in this department of human activities. It has been assumed that the use of metals was first discovered by the toil and skill of many in the handling of copper ore among the stones used to build up the primitive hearth. While this theory, on the ground of its strong probability, holds the field, it is generally conceded that, in the circumstances where it was first introduced, the Bronze Age was preceded by a Chalcolithic Age in which native copper was employed in the same way as stone, and adapted to use by being hammered into the shape required. The Indians of Lake Superior, where native copper abounded, and possibly the early inhabitants of the Mediterranean area, passed through such a stage of development. That a Copper Age generally preceded the Bronze Age proper is a matter upon which it is more difficult to obtain conclusive evidence. Not only would copper implements be melted down for use in making bronze, but, in most regions where copper is found, it is not even enough to re-melt them in the same way as stone, and adapted to use by being hammered into the shape required. In Ireland, and again in the Mediterranean area, implements occur which are sufficiently pure to warrant their being called chalcolithic.

Apart from the link afforded by the Chalcolithic period where it occurs, the connexion between the civilization of the Neolithic and early Bronze Ages is sufficiently well-defined in the form the implements themselves, especially of the celt. The early metal celt, notwithstanding the greater refinement and economy made possible by the qualities of the material, is practically identical in form with the stone celt. The development from the flat celt, based upon the stone form, can be followed in all its stages—through the flanged and stopped forms, in which the men were made to fit over the curved handle, to the socketed form into which the handle fitted, and to which it was fastened by a string passed through the ring of the celt. The same essential identity in form can be traced in knives, spear-heads, daggers, and other implements in which stone was superseded by bronze. By the end of the Bronze Age, the art of working metal had attained a comparatively high degree of excellence; gold and, more rarely, silver were employed for ornament, and the adaptability of bronze for purposes other than those of implements and weapons had been discovered. It is probable that iron was first worked in the region south-east of the Euxine. In Europe it was in the first instance disseminated from the Iberian peninsula, as a costly, almost a precious, metal to be used sparingly, later as the staple material for a wide variety of articles. Its use became general, the art of metal-working in Europe, especially as shown in the bronze mirrors, articles and ornaments for personal use, horse trappings, etc., frequently enriched with beautiful ornament and coloured enamel, began to pass from the stage when it could be classed as a primitive industry and to take its place as an element in a higher plane of culture. In Africa the Iron Age probably began at a very early date, owing to the abundance of the raw material, but the metal is still produced among the natives by smelting in a primitive form of low blast furnace, such as has been five hundred years in use in prehistoric Europe, of which the product is practically a wrought iron. This primitive form of furnace, consisting of a shaft or trough of clay with holes for the introduction of the blast, is still found in India, Borneo, Japan, and, in Europe, in Catalonia and Finland.

Over the larger part of Africa the production of iron is of great importance. It is worked in Upper Nile valley among the Nilotic tribes (the Luo being noted for their iron), in the Bantu tribes of East Africa, and the negro tribes of West Africa, where the swords and knives, which show great diversity of form, are especially remarkable as examples of blacksmithry. The Masai and other Bantu tribes have been noted from time immemorial as workers of iron; the Zulus, however, do not appear to have practised the art to any great degree. In the Shire Highlands it is said that every village had its smith-house, and smiths who made axes, spears, needles, arrow-heads, bracelets, anklets, bow, two-edged and one-edged knives, and the like (A. Werner, Routes and Explorer Travels in the Interior of Africa, London, 1860, p. 201 ff.)

Before leaving the subject of metalurgy, reference should be made to the famous bronze castings of Benin. Casts, though of inferior quality, are still made in this day, but the process being employed. Wax is modelled on a clay core and covered with a clay mould, to which the wax is waxed and dried, through a hole, and molten metal poured into it. Modern bronze casting in West Africa, J.H.A. (1910) 362-369. The rame was the method of making hollow vessels of copper and white metal (W. Rosenbahn, Notes on Malay Metal-work, J.A.I. xxx. [1913] 167-71).

4. Basketry.—Basketry and the making of pottery are, psychologically considered, the two most important arts in early primitive handicraft, as they both involve a distinct creative act, not merely an adaptation, as in the case of the early stages of making a stone implement. Basket-work, including in the term that which is used to make cups, fulls many functions in primitive culture; it furnishes, next to the skins of animals, one of the most primitive forms of clothing, as, for instance, the plaited mats worn in the Caroline Islands; it provides the sails of the Polynesian and Melanesian canoes; it is used to form a shelter against wind and rain, as in the interlaced bouquets of the temporary huts of the Australian Aborigines; and the plaited mats and dab used in the lake-villages of Glastonbury, and it provides vessels for the collection, storage, and cooking of food, as well as mats,
cushions, and other furniture of the house. In Somaliland and Abyssinia, where the pottery is of
poor quality, baskets are used as milk-vessels. Basket-work, whether in the form of a receptacle or as a
wrapping, was largely used for mortuary purposes
by the Indians of N. America and the ancient Peru-
vians. Bodkins wrapped in mats of soft grass
straws have been found in narrow excavations in Nubia
(D. E. Derr, 'The Red Coloration on Ancient Bones from Nubia,' Exp. Brit. Assoc., Dundee, Lon-
don, 1912, p. 163). A simple variety of basket of the
plaited type is that common in the Pacific, which
consists simply of a palm-leaf split down the middle,
the midrib being coiled round to make the rim.
The pintails are then plaited together to make the
body of the basket. The inhabitants of the Swiss
lake-dwellings in the Neolithic and Bronze Ages
were expert in the making of baskets—checkered,
twined, and coiled. Specimens of coiled basketry
have been found on the pre-historic site of el-
Amrah, south of Abydos—so far the oldest to be
discovered. Baskets of the same type are still
found up the Nile.

In America basketry was of especial importance
(cf. Art (American), vol. 1, p. 827 f.).

The vegetable kingdom supplied the Indians with the
greater part of the material for making their baskets, they also
drew upon the animal kingdom; sinew, skins of the smaller
mammals, beavers, and spruce porcupine quills were employed.
The texture of the basket-bottles and bolling-baskets, in which
water was heated by throwing in hot stones, was almost
sufficiently close in many instances to enable them to hold
water. Sometimes a layer of clay was used to give a waterproof lining.
Among the Havanapai Indians of the Mohave stock baskets
for cooking were made of this fabric, which was also used
as lining. One form of basketwork made of narrow slats of wood, rods of
hardwood, and twine, was used as armour on the Pacific coast
of America, the Mississippi coast as far south as the Hupa
Indians of California. Captain Smith speaks of the Masapo-
 peoples of Chesapeake Bay as using similar armour. Water
shields are used in many parts of Africa.

5. Pottery.—The art of the potter follows close upon that of the basket-maker in the development of
culture. In all parts of the world, must be conceded from the fact that the earliest
pottery forms follow closely those of basket-work, and in some regions the use of clay vessels for
purposes of storing liquids or for cooking utensils would appear to have grown out of the devices
employed for rendering basket-work more suitable for those purposes. A simple form of cooking-
vessel in use among the Havanapai is a flat tray of
basketwork, on which seeds, crickets, or pieces of
meat were roasted in the fire. Another form of
the basket-work led to the employment of a clay
lining. This was turned by the heat into a flat plate, which was later turned, used as a brazier.
The origin of the parching pot of the Zulus is
indicated by the native name, which means a
roasting tray of twigs. By the obvious process of
raising the edges of the tray, whether of basket-
work or clay, it becomes a bowl. It has been
held that pottery generally was moulded in
basketwork in the eastern United States. It has also
been suggested that the method of building up a
pot by means of a clay coil is based upon the
technique of coiled basketwork. It is possible,
however, that in some cases the moulded forms of
basketwork on early fragments of pottery both in
America and elsewhere may be due to the use of
this material to produce ornament by impression,
or it may be that this is from to be
the common practice, which occurs, for instance, in
the Andaman Islands, of covering the pottery with
basketwork. The style of ornament of the pre-
historic pottery of Europe, and especially the
beaded form, suggests a derivation from, or at
least the strong influence of, a basketwork
pattern, the simplicity of regularity in the
structure of which has been preserved by the con-
servative primitive mind by a corresponding regu-
larity in ornament. Before the introduction of the
potter's wheel, for which the earliest evidence has
been found in deep deposits, little or no change
which appears in the Mediterranean in the Middle
Minoan period of Crete, symmetry in form is
usually obtained by moulding the pot on a base or
in a shallow trough, the surface of which is
smoothed with basketwork, as among the American Indians,
in pre-dynastic Egypt, and in the Mediterranean in
the Neolithic and early Bronze Ages. Among the
barerees, who are noted for their skill in
making pottery, employ a board on which is a ring
of coco-nut leaves sewn together. In some cases
the base of another pot was used, as in New
Caledonia. In Papua, for the early stage of pot-
manufacture, a gourd was used as a mould. The
base was slowly turned as the pot was built up.
The Kabyle woman uses her food for this purpose,
while squatting on the ground. The use of a slip
in primitive pottery is not uncommon before the
introduction of glasswork. The Pueblo used a
slip, usually white, made of carefully prepared
clay, and it occurs in certain classes of pottery in
the Mediterranean area. Ornament is usually
achieved by impressing, for which the finger,
pieces of wood or basketwork, or stamps may be
used, or by incision (the method commonly em-
ployed in the geometric designs of the European
pottery of the late Neolithic and Bronze Ages in
northern Europe and in the Mediterranean); where a
slip is employed, the incision sometimes goes
down to the fabric. Paints may also be used.
In Tunisia, in the hand-made fabrics the pigment
is smeared on with the fingers. Most elaborate
and artistic examples of painted ware are to be found
in the Mediterranean Kamara pottery. While, in
a more primitive type, the Pueblo painted pottery
shows some highly effective designs, the ornament
being derived and adapted from the motives of
textile prototypes to be given to the latter in order of time, in most regions of the world,
must be conceded from the fact that the earliest
pottery forms follow closely those of basketwork, and in some regions the use of clay vessels for
purposes of storing liquids or for cooking utensils
would appear to have grown out of the devices
employed for rendering basketwork more suitable
for those purposes. A simple form of cooking-
vessel in use among the Havanapai is a flat tray of
basketwork, on which seeds, crickets, or pieces of

however, that in some cases the moulded forms of
basketwork on early fragments of pottery both in
America and elsewhere may be due to the use of
this material to produce ornament by impression,
or it may be that this is from to be
the common practice, which occurs, for instance, in
the Andaman Islands, of covering the pottery with
basketwork. The style of ornament of the pre-
historic pottery of Europe, and especially the
beaded form, suggests a derivation from, or at
least the strong influence of, a basketwork
pattern, the simplicity of regularity in the
structure of which has been preserved by the con-
degree of proficiency in weaving, as the majority of those tribes use bark-cloth, employ a simple form of loom, and thread the ends of the warp are fastened to a light cane. They are kept taut by a string which is fastened to the cane and passing under the body of the weaver as she sits on the ground (Hose-McDougall, *Pagan Tribes of Borneo*, London, 1912, p. 225). More usually the warp is kept in position by stone or clay weights.

The large number of stone weights and sandstone wheels found in Britain and other parts of Europe with remains of Neolithic and Bronze Age date shows the importance of the industry and the extent to which it was practised in pre-historic times. The piece of the looms may be taken by a few cross-beams. When this is used, the weaving usually proceeds from the bottom, and the cloth as it is made is rolled on the lower beam. The warp is passed between the threads of the warp by means of a shuttle. In a still more highly developed form of loom, the weft is fastened from the upper cross-beam to the threads of the warp is used to raise or depress alternate threads, the shuttle being thrown or passed through the aperture thus made. A stick is used to push the weft and secure the proper consistency of the fabric.

In the simple form of weaving, the web is passed over and under the threads of the warp alternately, but variety in the pattern may be introduced by varying the number of threads over or under which the web is passed. Further variation may be introduced by different coloured threads. In the manufacture of the silk among the Bisawas in Peru the pattern is produced by inserting a number of threads, which are then dyed. After dyeing, the binding, which has preserved the original colour of the material, is removed (L. Wray, *Notes on Dyers*). To bind the silk, a woollen thread is fastened to the face, with the assistance of water or some mucilaginous fluid. Practically the process is one of telling.

Considerable skill in weaving was attained by the ancient tribes of both Mexico and Peru, while among the modern the greater importance in India and the Far East was accorded to the many uses to which dressed hide may be put, skill in its preparation is by no means confined to the cold regions of the world. The skin of an animal—usually with its natural shape preserved—is a primitive, and in warmer climates at the present day still a common, receptacle for carrying water or other liquid. The Australians used the skin of opus to supply the purpose. Among other uses to which skin or leather was put was the making of skin boats by the Eskimos, of shields, bags, and pouches, or meal-bags, by the North American Indians, while the skin of the buffalo or bison furnished the material for the wigwam or tipi as well as the well-known buffalo robe. In Patagonia the tents were made of the skin of the guanaco. Hides are used for the walls of huts among the pastoral tribes of the Upper Nile.

The skins of the thinner-skinned animals and of birds were used chiefly for ornament, but the Eskimo women made close-fitting under-coats of bird-skins, sewn together with sinew, or feathers next to the person; the skins were prepared by chewing. The skins of the smaller mammals—squirrels, foxes, and the like—were simply dried before use. A slightly more elaborate process was used for the hides of larger mammals, such as the moose, seal, elk, ox, or bear, which were to be worn with the fur adhering to the skin. The inside skin or dermis was removed with special tools, a piece of walrus ivory or an antler being used to remove the fat, and a stone being used to plane down the skin to an equal thickness. The shape of certain classes of Palaeolithic flint implements justifies the assumption that they were scrapers used for the same purpose. The American Indian women used three tools to cut away the flesh, a hoe-shaped scraper to cut away the skin, and a hoe- or chisel-like tool with serrated edge to roughen up the inside side of the skin and render it flexible. The skins were dried on frames, and sometimes treated with a solution made from the brains of the animal.

A third process employed by the Indians, but not found among the Eskimos, is the preparation of a material analogous to buckskin or chamois
feather, which involves the removal of the hair, is carried out by boiling the dressing
of the skin with a preparation of brains, and a careful manipulation and softening of the skin
while drying. The Athapaskan Indians were especially adept in this process.

In utilizing the skins in the making of garments, both Eskimos and Indians displayed great skill.
The difficulty experienced by the furrier in cutting the skin without damaging the hair was cleverly
overcome, the implement used being the woman's knife, a short or flint-blade, crescent-shaped on the
outer edge. Among the garments made by the Eskimos may be mentioned the shoes with
soles of raw hide and uppers of dressed skin, the hooded upper and the under coat, breeches, deer-
skin stockings, and outboard boots reaching above the knee, for the men, and for the women two flocks,
two pairs of deerkin boots, of which the upper is worn with the hair outside and is shot with soles of
seal skins. Much care is shown in cutting, to secure that pretty fur and fringes of hair should
show as an ornament at the wrists, shoulders, and borders, sometimes varied with inserted material.
Tacitus (Gerae 17) records that the German women ornamented their skin dress in much the same
manner. The buckskin garments of the North American Indians, especially the Algonquins,
were ornamented with fringes, wampum beads, and paint. Among the Mandans the deerkin tunic
was strung with seal-scales, beads, and er-
mellons. The leather of the tassels were ornamented
with porcupine quills and fringed with scalps.

5. Wood-working. Our knowledge of the
size of culture and the people of the Stone Age in Europe—of the Neolithic period
—outside certain well-defined limits, is largely
based upon analogies afforded by modern primitive peoples. We know that at the time as they were first
described, themselves in the Stone Age. It is
only in a few instances, where circumstances were
peculiarly favourable, that any relic has survived with its original form, and materials less durable
than stone, ivory, bone, or pottery. No evidence has survived of the skill in wood
possessed by the Palaeolithic man; but the new extinct Tasmanians attained a considerable degree of
dexterity in working this material with stone imple-
ments identical in character with some of the
earliest forms of palstaves.

The Tasmanians, who habitually went naked, except in winter, when kangaroo skins were sometimes worn, had as their only shelter rude sheds made of an under-tractive of bark to wooden stakes; their weapons both for the chase and for war were made
of wood, the nearest product of much skill and care, the shaft, if not perfectly straight, being heated by fire, and then shaped to a point before the skin was fastened to the side of the teeth; it was then strapped to a point, and, after the bark had been removed with a stone scraper, it was hardened in the fire. The notched stone
scrapers of Palaeolithic and Neolithic times are simply the use of similar weapons.

The Australians, whose culture has been compared with that of the Palaeolithic Monesterian period, show a decided advance on the Tasmanians; their spear is frequently provided with a bark, and the head is a separate piece of hard wood or stone; they do not possess the bow, but use a throwing stick for hurling the spear; their best-known weapon is the boomerang, returning and non-returning, the former being a striking example of mechanical and technical skill. Their stone axes, adzes, and knives were provided with wooden handles. They used two kinds of arrow, of wood and os; one to ward off the blow of the club. Bone was used for awls and grongias. The Bushmen of South Africa make a Stone Age culture of a primitive type comparable with the Palaeolithic culture of Europe. They use the bow; their arrows were made of reeds sharpened, bound with sinew, and tipped with a fletching of an ostrich, or a grey feather which had been sharpened with a stone spokeshave, by rubbing on the side of the wood to form the head, or compressed with a flake of quartz or other hard stone was used.

In the pastoral tribes of E. Africa, or non-existent, as in Melanesia and Polynesia, wood or horn is usually employed for vessels for carrying liquids. In S.E. Asia the interloping of the bimbos are used as water-vessels; in Melanesia and Polynesia gourds or bamboo or wooden vessels are used as a substitute for pottery.

10. House-building. The most primitive form of artificial shelter of ancient peoples was
against stakes, such as is used by the Tasmanians and the screen of interlaced boughs used by the
Australian hunter as a temporary shelter for the
night, already described. The Neolithic pit-
dwellings of Britain were holes in the ground,
with a central pole to which a roof of boughs stretched from the edge of the pit. Californians
lived in dwellings made on the same plan. The Bushmen's hut consisted of a few boughs
brought together and covered with mats of reed
sewn together at the sides. In the Egyptian Sudan, Abyssinia, and Somaliland, the hut is
figured and made of hide or mat; among the
more settled peoples, of branches or clay. The
hut of the Bantu is a durable structure, usually
circular, and conical or beehive-shaped. In Uganda,
substantial huts are made by fastening screens of
reeds, carefully sewn together, to a circle of posts, the whole being thatched with reeds. In the
case of the king's house the walls are built by peasants, but the roof is built by professional thatchers.

Among the forest peoples of Africa, the house is a rectangular structure built of poles with a thatched roof with a pitch. The rectangular house with mud walls, a composite structure, is found among the W.-Nyamwezi and a few other related tribes of E. Africa. The habitation of the Indians of America exhibit all stages of development—from the simplest form of wind-break to the more complex, erected for temporary purposes, through the tipi of hide and the adobe building, to the massive stone architecture of ancient Mexico and Peru.

Where manufacture of stone vessels is advanced, skill and ingenuity in their preparation were displayed. The Iroquois used posts covered with bark for the three kinds of houses they inhabited, including the longhouse as much as a hundred feet long, and was divided internally into compartments. On the N.W. coast of America, cedar slabs were employed in house-
building. These were split out of the centre of wide trees and fastened upright in a frame about ten feet high, on which rested split bark or boards laid on rafters, supported in the middle by long beams running the length of the house, and
themselves supported on four posts with totemic
emblems. The Iroquois long-house finds a parallel in the communal house of New Guinea. The communal house of Melanesia (which are not, however, divided
in compartments, though each family group or, in the latter case, the chief, his wife, and hearth), and the houses of the Kenyas, Kayans, and Borno of the Kayan and
Kenyah houses are divided into compartments—one for each family. Considerable architectural skill is
required in their construction; some of them have four hundred yards long; they are raised on piles, and a verandah runs down the whole of one side.

The best-known examples of pile-dwellings are those of the S. Swiss Lakes, of the Neolithic and
Bronze Ages, and the pile-dwellings of New Guinea, erected on platforms built out into the water; pile-
dwellings also occur in Africa—in the Nile Valley among the Nuer, on Lake Nyassa, among the Ba
Kunea, and on the West coast—and in various
parts of North and South America.

The construction of the house in Samoa is a matter of considerable detail. It is sometimes thirty feet in diameter, and is supported in the middle by four posts and a central pillar. The post are composed of a number of small posts or five feet apart; the rafters form the roof, or compareed with the spaces between being filled with small ribs, ingeniously joined until the requisite length is attained. The side at the end of the house are circular, the aching and jointing of those being considered the supreme test of a workman's ability. The thatch is made from the leaves of the sugar-cane turned over small reeds.

Before leaving the subject of building, the Pueblo stone dwellings of the S.E. United States may be mentioned. They
HANICRAFT

consist of a number of rooms built adjoining or on top of one another. One or two single-room houses are first built, and then additions are made from time to time horizontally and vertically. The lower stories project before the upper and are connected by a bridge. The entrance to the lowest story is not from the ground, but from the first floor, to the room above. Room or rooms are entered from the tops of the lower. The walls are of stone laid in adobe mortar, beams of small trunks-trunks for the upper floor.

II. Rafts, canoes, boats. Among the most primitive means of conveyance by water is the raft made of a barge of logs or papyrus (used on the Nile), or made of the leaf-stalks of the amath-putus (Lake Nyasa). Similar rafts are used in parts of Melanesia. The Tasmanian were not acquainted with either boats or canoes, but used as a substitute a kind of half-raft, half-boat, made of the bark of various kinds of trees, but usually some species of eucalyptus made up into three cigar-like rolls. It was about nine feet in length and three feet broad in the middle, tapering to each end (H. Ling Roth, *Aororines of Tasmania*, London, 1899, p. 164 ff.). The Ika of the Seri Indians (California) closely resembled the Tasmanian raft, but was of greater dimensions, sometimes as much as thirty feet in length, and was used as a substitute for a small log paddy. The logs were greased to prevent the raft from rolling, and was constructed by a man sitting astride; a stage only slightly more advanced was the raft of several logs. A raft-like canoe of bark, resembling the above, is reported from the Lakes of Borneo.

The commonest form of canoe was a sheet of bark, carefully removed from the tree and shaped over the fire, with the ends several feet wide. The usual length was ten or twelve feet. The canoe of sewn bark was also in use—two, three, seven, or even more pieces of bark being used. The gunwale was strengthened by a mangrove pole, and the body was kept by cross pieces and ribs. The dug-out canoe, which in most parts of the world is a characteristic form of the primitive boat, was also found in North Queensland, and at Port Essington an outrigger was employed. At Cape York the double canoes were used, in length some fifty feet, and propelled with both paddles and sails. While the outrigger canoe is clearly an introduction from New Guines, it has also been suggested that the sewn canoes may have been of the Canoe is the Most Important and Most Widely Used Form of Water Transport in the World, 893 ff.). The commonest form of canoe in the Melanesian area is the dug-out with the single outrigger. In Fiji, New Caledonia, and New Guinea, large double canoes propelled by sails were also found. In parts of the Soloman Islands, finely made plank-built canoes occur. What seems to be a stage in the development of the plank-built canoe occurs in Borneo, where the freeboard of a Kayan dug-out is increased by planks along the gunwale (Hose-Dougall, I. 301). The Polynesians, who were born navigators, carried the art of canoe-making to a high degree of excellence, especially in Hawaii and in New Zealand. In Tahiti, where there were regular war-dugouts, the canoes were both single- and double-ended, with an elevated prow and stern, the stern-post being sometimes as much as eighteen feet high, and ornamented with the carved figures of the gods. The elaborately carved prow- and stern-posts are characteristic throughout this region.

The Tahitian war-canoe were capable of carrying fifty fighting men. The Tahitian cannon boat was a canoe with a gunwale sewn on with canes. The large double canoes were propelled by the boat, the hull being carefully shaped and then polished with oar and sewn together. Religious ceremonies were performed when the boat was laid down and when the canoe was launched. In Hawaii a special deity presided over the builders of canoes. In New Zealand, canoes sixty or eighty feet long were built of huge planks cut from the solid tree and lashed together. The figure-heads and stern-posts were painted as well as elaborately carved. Balls of rushes were used, but not outgrown.

In the Melanesian canoes various totemic charms were hung up at the stern to ensure calm and successful voyages. The important canoes had names, and rejoicings followed their completion. A human life was often bidden for the upper bow of the canoe, or heads were entered from the lower. In the Eastern Solomon Islands, if no life was taken on the first voyage, arrangements were made with a neighbouring chief that a victim should be forthcoming. For the heathen canoes were kept with a view to taking their heads when the canoes were finished (Codrington, 360 ff.).

12. Specialisation.—An important factor in the development of an industry is the tendency towards specialisation. This tendency appears at an early stage in human culture, mainly in three forms: specialisation of locality, specialisation of sex, and specialisation of workers as a class.

The localisation of an industry may arise from a variety of causes, but usually is attributed to a plentiful or peculiarly well-adapted supply of material in a given locality. In the Palaeolithic period in Europe flint implements were imported to the Channel Islands, for instance, probably from the adjacent French mainland, owing to local scarcity of suitable material. The large number of Neolithic implements of marked characterisations found at Presqu'ile de Weser, in Germany, indicates that the flint is specially suitable for making flakes of large size, suggests a localised industry, while both at Callot and at Grimes' Graves, where no flint is mined, it is evident that there was a factory, from which partially manufactured implements were probably exported to localities which possessed neither flint nor the means of producing an inferior quality. Spines near Mon, and Caddington and Stowe Newtoning in England, may be mentioned among a number of sites where the character of the finds has suggested that they are the workshops of the craftsmen of the Stone Age.

In the Bronze Age, the distribution of material had a much more marked effect in promoting local efficiency in manufacture. In the earlier stages, it is true, favourable circumstances, e.g. an easily accessible supply of native copper, such as was obtained in Egypt, Cyprus, and Western Asia, would determine the relative date of its utilisation, and give those localities an advantage in experience. But the rapid advance in the civilisation of southern Europe and the improvement in transport led to the exploitation of copper- and tin-producing localities, such as Cornwall and Spain, and the transport of the ores from these districts to the place of manufacture. The same course of development occurred in the Iron Age, where favourable circumstances for a time produced an early localised iron culture, of which evidence is found at Halstatt.

Modern primitive races also afford examples of localised industries. The Novobor Islands, for instance, are noted for their manufacture of clay pots. In Melanesia, canoe building was often the special work of certain towns because suitable timber was found near; other towns were celebrated for their fish-traps; the Samoans were famous for their mats (Brown, *Melanesians and Polynesians*, London, 1910, pp. 306 ff., 304).

Owing to various causes—natural, economic, and religious—an early form of specialization in industry has been determined on sexual lines; i.e. certain spheres of activity of have been assigned to each sex. To man has fallen the provision of animal food, the care of cattle, the fashioning of weapons and most implements from stone and metal. Women, on the other hand, have been responsible for most of the useful arts in their early stages. The making of baskets, pottery, spinning, weaving, the preparation of skins, the making of clothes from cloth and skin, and the preparation of food, including the grind.
falling trees, cutting them from the bush, and the like. They also had to supply the carpenters' food, and these unskilled labourers from work if it was insufficient or of inferior quality. As the house progressed, payment was made for certain definite portions of the work, the principal payment being made when the two sides and one of the rounded ends were finished. It was considered a great honour to be paid in payment. If the builders were dissatisfied with the payment, they left the work unfinished, and no other builder would complete it. If any one did, he was visited with severe punishment at the hands of other members of the tribe. The regulations in trades other than building were practically the same (G. Brown, p. 306 ff.).

HANDS, LAYING ON.—See HAND.

HANGING.—See CRIMES AND PUNISHMENTS.

HANIFA.—See LAW (Muhammadan).

HAOMA.—1. Derivation of the word.—The word haoma (Skr. soma, Pahl. and Pers. hom) comes from an old Aryan root Am = Skr. om, 'to pound,' 'to squeeze.' Haoma, the utenial in which the twigs of the haoma plant are pounded, āmara, the ghūr, or the part of the day when this plant is pounded, and āvedana, the priest who pounds it, come from the same root.

2. Haoma in the Avesta.—In the Avesta we meet with four Haoma:—(1) Haoma, whom for convenience' sake we may call Haoma the prophet. Chs. 8, 10, and 11 of the Yasna speak of him as well as of the plant. He is described in two different ways. Further allusions are found in Ys. ili. (19 and 20) and Yashts x. 88-90 and Aeshi xvil. 5—(2) Haoma, the plant; see esp. chs. 9, 10, and 11 of the Yasna. (3) Haoma, who may be called Haoma the hero (Ys. xii. 7; Ys. ix. 17, xvil. 37, 38).—(4) Haoma Khvarengangha (Ft. xil. 116). In the Fravardin Yasht we have a long list of the departed worthies of ancient Iran who had rendered some service to the community. The group in which Haoma Khvarenganghal is mentioned seems to be a list of the names of some of the immediate successors of Zarathustra. It appears, therefore, that this Haoma Khvarengangha, whose Zoroaster is invoked, was a great man of Iran, who had done some good deeds that commemorated his name.

These four different Haoma have one or more special names in the Avesta. Haoma the prophet is called Haoma Frashāh; Haoma the hero is called Haoma Frēzēm (Ys. ix. 7, 11, 24). Haoma the hero is known as Haoma Frashāh (so repeatedly in the Yashts). The fourth Haoma, as we have said above, is named Haoma Khvarengangha. Haoma Frashāh is also called Frashēm as well as Darsakā. The Haoma Frashāh of the Gādē and Aeshi Yashts is quite different from the Haoma Frēzēm of the Fravardin Yashts. This Haoma Frashēm is known as Frasišēm (Ft. xi. x. 20, 24). Haoma the hero is known as Haoma Frēzēm (so repeatedly in the Yashts). The fourth Haoma, as we have said above, is named Haoma Khvarengangha.

An interesting example of primitive industrial organization existed in Samoa, where the trades of boat- and house-building, tatau, etc., though not strictly hereditary, were carried on for generations by certain families, who thus acquired prestige. The trade was, however, open to any man who cared to attach himself to any craftsman until he acquired sufficient skill to begin work on his own account. Each particular trade had its presiding god, and was governed by well-known regulations. The times of payment and the different stages of the work were prescribed. In the case of building a house, a man was presented to the master-builder, and its acceptance signified agreement to do the work. The occupation of a craftsman, for whom the bench work was being built, was the unskilled labour, such as
HAOMA

507
dimes of the Peshdadian dynasty, before the time
of Vivanghant (Vievreaal of the Vedas), the father
of Yima (Yama of the Vedas). He was a very
learned man (vādāy-pāsit), versed in the old
religious literature. For seven years he spent
of his time in divine meditation in the Hukairya
peak of the lonely mountains of the Elburz. 3
Before Zaraster, he was the first man or prophet to
practise the worship of Macayzianian religion. 4
As Zaroster had his own religious compositions,
so had Haoma. 5 He had his Gāthas (imseta
29, 30) and, as an opponent one
Keresani. 6

It was this Haoma who gave his name to the
plant, which he seems to have discovered, and to
the Haoma ceremony, which was, it is said, first
introduced. According to Yasti x, 7 he was the
first man who produced the juice in a mortar
(Aケース) on the Elburz mountains. It appears
that, while absorbed in deep divine meditation in
his retreat in the mountains, he discovered this
plant growing on the heights, and found it to be
nutritious, health-giving, and invigorating. He
introduced it to the world as such; but, in order
to make it doubly efficacious, he instituted a form
of ritual, designed to absorb the mind of the people
in holy and religious thoughts. A plant, in itself
health-giving and vigorous, when partaken of under
a partial inspiration of divine thoughts, was likely
to be beneficial to the mind as well as to the
body.

4. The Haoma plant—Haoma is a medicinal
plant which grows in Persia and in Afghanistan.
It is a species of Eleuther (Nat. Ord. Guttifer).

(1) The Avestan description of the plant.—Mountains
and mountain-valleys are mentioned as places
where the plant grows luxuriantly. In some pas-
sages Mount Elburz (called in the Avesta Hara
Bereziatu) is specially mentioned as its habitat.
But it must be borne in mind that the name
Elburz not only denoted the present Mount Elburz,
but also the whole range of mountains extending from
the Hindu Kush in the East to the Caucasus in the
West. The Haoma is described as a plant with
branches and sprigs, 8 possessing medicinal prop-
erties, and as "golden-coloured." 9

(2) The properties of haoma.—The religious or
spiritual inspiration, believed to give wisdom,
courage, success, health, increase, and greatness.
In such a state the devotee becomes as powerful as
an independent monarch, and is able to withstand
many dangers coming from ill-disposed persons. 10
Heaven, health, long life, power to contend against
evil, victory against enemies, and fore-warnings
against coming dangers from thieves, murderers,
and plunderers are the six gifts bestowed by haoma
when adequately praised and prepared. 11
Haoma is especially sought for by young maidens in search
of good husbands, by married women desirous of
being mothers, and by students striving after know-
ledge. 12 It affords special protection against the
jealous, the evil-minded, and the evil. 13 It is
a check upon the influence of women of loose char-
acter, who change their affections as frequently as
the wind changes the direction of the cloud. 14 For
all these reasons, haoma is called nāma-pāsit, vi-
pāsit, nāma-pāsit, danghū-pāsit, i.e. Lord of the
house, the village, the district, and the nation. 15

(3) Qualifications required of the man who would
drink haoma with advantage.—These are: good
thoughts, good words, good deeds, obedience to
God, and righteousness. 16 On the other hand,
Haoma curses those who are sinful and evil-
disposed. 'I, Haoma, who am holy and keeper
away of death, am not a protector of the
"May thou be childless, and may evil be spoken
of thee." 17

5. Antiquity of the Haoma ceremony.—It
appears from the Avesta that the Haoma ceremo-
y was in existence as early as the time of the Pesh-
dadian dynasty. It is as old as the time when the
ancestors of the Persis and the Hindus, and even
of the ancient Romans, dwelt together. It seems
to have been always accompanied by the Barasum
(q.e.) ceremony, as it is even at the present day.
Now, it appears that the ancient Romans, who
were the Roman fire-priests, and many of whose
practices resembled those of the atravanas, or
Iranian fire-priests, used twigs of a particular tree,
whenever they were holy and sacred. This practice
reminds one of the Parsi priests, who also use twigs of a particular tree when
performing the Yasna ceremony before the fire. The
twigs are now replaced to a certain extent by
metallic wires.

6. The plant used after purification.—We said
above that the twigs of the plant are brought
from Persia. They are not used directly in the cer-
emony. On being taken to a temple, or dar-i-maher,
they are washed and purified, and then laid aside
for a period of at least three months. The con-
secrated priest takes a quantity of these twigs, and
washes and purifies them with water, reciting the
formula of Khshnohta Ahruraha Mandāt, Achem
Vohu, etc., which means: 'Picked be Ahura
Mazda. Pista is the best good and happiness.
Happiness to him who is pious for the best perty.'
After being thus purified with water, the twigs
are kept in a metallic box, similarly washed and
purified, for at least thirteen months and thirteen
days before being used in the ceremony. When
so prepared and purified, they are kept in a metallic
box for a period of several years afterwards. This ceremony has no direct
connection with the Yasna ceremony with the
Yasna ceremony.

The Fenddād (v. 43. 44) says: "The identification of those
Haoma twigs which have come into actual contact with blood and
impurities; but present custom, which is designed to make assurance doubly sure, demands the purification of all haoma
twigs intended for use in religious ceremonies. Again, the
Fenddād requires the twigs to be laid aside for one year;
but present custom prescribes a period of thirteen months and
thirteen days.

7. Description of the Haoma ceremony.—This
ceremony falls under four heads: (1) the preliminary
preparations; (2) the ceremony of purifying or con-
secrating the haoma twigs; (3) the ceremony of
preparing and straining the haoma juice; (4) the
ceremony of drinking the haoma juice.

(1) Preliminary preparations.—Two priests take
part at this stage, as in the whole of the Yasna ceremo-
y. One of them with the ēshāb (i.e. ritual for
qualification), either small or great, duly observed;
the other first prepares the ānuyanghānā (stripes of date-
fruit), the murgān (twigs of a pomegranate tree),
and the jītēs (fresh goat's milk). All the ēshāb (the
necessary sacred utensils) are employed, and
put into the kūndi (the large water vessel on the
stone slab supplied for it). The fire is kindled
in the vase, and the ánez (fragrant wood) and
be (frankincense) are placed on the sacred
stone. Two water-pots—one small and the other

1 Fx. 12. 87. 2 Fx. 12. 3 Fx. 18. 3 Fx. 11. 4 Fx. 17. 5 Fx. 12. 6 Fx. 11. 7 Fx. 23. 8 Fx. 22. 9 Fx. 17. 10 Fx. 12. 11 Fx. 11. 12 Fx. 11. 13 Fx. 12. 14 Fx. 11. 15 Fx. 12. 16 Fx. 11. 17 Fx. 12. 18 Fx. 11. 19 Fx. 12. 20 Fx. 11. 21 Fx. 12. 22 Fx. 11. 23 Fx. 12. 24 Fx. 11. 25 Fx. 12. 26 Fx. 11. 27 Fx. 12. 28 Fx. 11. 29 Fx. 12. 30 Fx. 11. 31 Fx. 12. 32 Fx. 11. 33 Fx. 12. 34 Fx. 11. 35 Fx. 12. 36 Fx. 11. 37 Fx. 12. 38 Fx. 11. 39 Fx. 12. 40 Fx. 11. 41 Fx. 12.
The priest takes a few pieces or twigs of the haoma plant out of a cup, and, holding them between the fingers of his right hand, washes them thrice with the water. While doing so, he recites the Khosha-dhara formula three times. He then formulates the bāj and the khesunman of Haoma aksa-coesanga, wherein he says that he does this for the homage, glory, pleasure, and praise of Haoma, the giver of the strength of purity. Then, reciting the Ašem four times, he dips both his hands, together with the twigs, in the kundī on his right hand. He dips them four times in the water thrice in the direction pointing from his position to the opposite side (i.e. from north to south), and once in the opposite direction. Having thus made the twigs wet, he pulls them apart and dips the purified twigs in the sauktra water. Then, drawing the haoma before him, he inverts it and places it on top of the agni-shaped image of the haoma twig; the rest are placed over the foot of the makh-wesi (moon-faced); two crescent-like stands. He next places a piece of the worshipped beside the haoma twigs.

**The performance proper of the recitation of the haoma juice.** — The priest begins by saying: 'I invoke all the belongings (i.e. the requisites for the performance of the ceremony) of the Haoma, for the sake of Ahura Mazda.' Then he enumerates some of the important requisites which lie before him on the stone slab. While reciting their names, he looks at them. The requisites which he enumerates are: haoma, myasana (i.e. the darun, or sacred bread, which is spoken of as khanegham myasana, 'appropriate or sacred food'), the consecrated water (saktra), the twig (Khosha), the fasting bread (vahyiyaho), pure good water (saktra vanguyaho), mortar for pounding the haoma (bødama), fragrant wood (asaman) and frankincense (bakata or busi), and fire (atiha). The prayer, in which he invokes or enumerates the requisites, and, while reciting their names, looks at each of them as if they lie before him on the stone slab, forms a part of the 24th chapter of the Yasna. He recites that chapter from section 1 to section 12, omitting therefrom, in sections 1 and 8, the words, imāneh kariyaš aksa-coesangat (this jīvad, or fresh milk, held up with right hands), because, at the time when he recites this prayer, the jīvad is not yet placed on the stone slab. Sections 9 to 12 of this 24th chapter are the same as sections 4 to 7 of the fourth chapter.

The haoma ceremony may be performed either in the haosum-gath or in the haosum-gath, i.e. during the morning or the evening hours. So, after reciting the first 12 sections of the 24th chapter, the priest recites the 13th section if he prepares the haoma juice in the haosum-gath, or the 17th section, if he prepares it in the haosan-gath. Having thus recited the khesunman of the particular gath during which the ceremony is performed, he recites the khesunman formular of the particular day of the month and the particular month of the year on which he performs the ceremony. Then he proceeds to recite the prayers contained in the 4th chapter of the Yasna from section 17 to 22 up to the word vaityaha, omitting the portions which refer to onthay sobat and svaosha asuyaya (in sections 22 and 23). Next he recites the prayers contained in the 22nd chapter of the Yasna, from section 1 to 3, omitting the reference to vaityaha svaosha (fresh milk) in section 3, smaller of the two water-pots, and with the water of that pot makes the kundī containing all the utensils pāde. Then he prepares the sauktra water and ties the barsone wires. Having done all this, he next proceeds to make the haoma twigs pāde.

(2) The ritual of purifying the haoma twigs. — The priest takes a few pieces or twigs of the haoma plant out of a cup, and, holding them between the fingers of his right hand, washes them thrice with the pāde water. While doing so, he recites the Khosha-dhara formula three times. He then formulates the bāj and the khesunman of Haoma aksa-coesanga, wherein he says that he does this for the homage, glory, pleasure, and praise of Haoma, the giver of the strength of purity. Then, reciting the Ašem four times, he dips both his hands, together with the twigs, in the kundī on his right hand. He dips them four times in the water thrice in the direction pointing from his position to the opposite side (i.e. from north to south), and once in the opposite direction. Having thus made the twigs wet, he pulls them apart and dips the purified twigs in the sauktra water. Then, drawing the haoma before him, he inverts it and places it on top of the agni-shaped image of the haoma twig; the rest are placed over the foot of the makh-wesi (moon-faced); two crescent-like stands. He next places a piece of the worshipped beside the haoma twigs.

**The performance proper of the recitation of the haoma juice.** — The priest begins by saying: 'I invoke all the belongings (i.e. the requisites for the performance of the ceremony) of the Haoma, for the sake of Ahura Mazda.' Then he enumerates some of the important requisites which lie before him on the stone slab. While reciting their names, he looks at them. The requisites which he enumerates are: haoma, myasana (i.e. the darun, or sacred bread, which is spoken of as khanegham myasana, 'appropriate or sacred food'), the consecrated water (saktra), the twig (Khosha), some product of the cow such as fresh milk (goshudū or goshī hadda), a twig of the pomegranate tree (HS overall asgadagām), pure good water (saktra vanguyaho), mortar for pounding the haoma (bødama), fragrant wood (asaman) and frankincense (bakata or busi), and fire (atiha). The prayer, in which he invokes or enumerates the requisites, and, while reciting their names, looks at each of them as if they lie before him on the stone slab, forms a part of the 24th chapter of the Yasna. He recites that chapter from section 1 to section 12, omitting therefrom, in sections 1 and 8, the words, imāneh kariyaš aksa-coesangat (this jīvad, or fresh milk, held up with right hands), because, at the time when he recites this prayer, the jīvad is not yet placed on the stone slab. Sections 9 to 12 of this 24th chapter are the same as sections 4 to 7 of the fourth chapter.

The haoma ceremony may be performed either in the haosum-gath or in the haosum-gath, i.e. during the morning or the evening hours. So, after reciting the first 12 sections of the 24th chapter, the priest recites the 13th section if he prepares the haoma juice in the haosum-gath, or the 17th section, if he prepares it in the haosan-gath. Having thus recited the khesunman of the particular gath during which the ceremony is performed, he recites the khesunman formular of the particular day of the month and the particular month of the year on which he performs the ceremony. Then he proceeds to recite the prayers contained in the 4th chapter of the Yasna from section 17 to 22 up to the word vaityaha, omitting the portions which refer to onthay sobat and svaosha asuyaya (in sections 22 and 23). Next he recites the prayers contained in the 22nd chapter of the Yasna, from section 1 to 3, omitting the reference to vaityaha svaosha (fresh milk) in section 3, smaller of the two water-pots, and with the water of that pot makes the kundī containing all the utensils pāde. Then, reciting the words imāneh haosanam, etc. (ib. sect. 2, Spiegel), and taking the haoma twigs into his right hand from his left hand, he places them in the kundī, or mortar. Next, reciting the words imānehka urvardm, etc. (ib. sect. 4), he similarly places the urvardm, or pomegranate twigs, in the mortar. Reciting the words asāt vanguyahyo, etc. (ib. sects. 5 to 11, Spiegel), he pours into the mortar, with his right hand, a few drops of the sauktra water which lies before him. He then invokes the Gavagaiya and Ohrmazd, by reciting the words bundh, the date (with holes which serves as a strainer) and places it on the haoma cup at the foot of the mах-rū. Re-citing ašem hahvah and the barsone, the priest dips the sauktra water in the lātā, or pestle, from the kundī, passing it round in a circle within the vessel, touching its rim from within. The circle begins from the north and progresses in the direction of the east. Then, reciting the words ašetāt dim, etc. (Ys. xxvii. 1, Spiegel), he lets the lower end of the pestle, and, while reciting the words rašudmārī gum, etc. (ib. sect. 1), the upper end of the pestle, touch the stone slab. As he recites the words sathakhi, etc. (ib. sect. 2, Spiegel), which signify that the Daeva, or evil influences, may be beaten or struck, he strikes the metallic mortar with the pestle, making sonorous sounds. At first he strikes it from without, i.e. strikes the pestle on the outer rim of the mortar. The sonorous blows are given in the order of east, south, west, north. When striking on the north side, he gives three more strokes. Then both the priests say, Baktaw Gaddi sahōyad, etc., i.e. bāj, i.e. 'May the Evil Spirit be broken! May 100,000 curses be on Ahriam!' The priest then recites Pradadāhi Ahrāhi Mandādo (Ys. xxvii. 3–7, Spiegel). Next he recites four Yathā allī urvāyā. While reciting the first three, he pounds the haoma and the urvardm twigs in the mortar; and, while reciting the fourth, he strikes the haoma on the outside with the pestle. In like manner he recites Mandā at mōi (ib. 8, Spiegel; or Ys. xxxiv. 18) four times, to the accompaniment, with the simultaneous pounding during the first three recitals and a striking of the kheriām during the fourth. This is followed by a recital of A Āiramād ishyō (ib. 9, Spiegel; or liv. 1) with like pounding and strikings. Next comes the recital of four Ašem vaḥo, during which the priest pours a little of the sauktra water into the mortar three times. Then, while reciting the words Haoma pāriha-bhera, he gives a little push to the pestle which is within the mortar, and causes it to turn in a circle in the direction of north, west, south, east. While reciting the words ašem, simē, humayō, tara, which
HAOMA

509

form the last part of this passage, he takes up the twigs of the haoma and the swārām from the mortar between his thumb and fingers; and, holding the pestle also, he touches the Yāstukh with the ring of the Yāstukh, and then now to act as the naṣta, enters the yazasaha-gāthā. Reciting an Aṣṭam voḥā and a certain number of Yathā ahā vairiyō, the number of which depends on the number of the priest's days, the priest then takes the haoma cup of the Yāstukh in his left hand, and the vəras ring in his right hand, and finishes the bij of the vəras which he had commenced some time before. To do this he recites two Yathā ahā vairiyō and the Yamānchka with the Khaṇum of the Frawahki of Zoroaster. He next dips the vəras ring in the vərasa water cup and places it in its own cup. Then he takes from his seat, and, taking the haoma cup which contains the juice prepared and strained, as above, places it in an adjoining niche in the hall. He brings the jindm and pours it into its plate (jindm no tashīt). In a plate on the stone slab he now places the darsu, or sacred bread, which was kept till now in another plate, and places it by the side of the juice. Then he recites an Aṣṭam voḥā and Ahmān radačchā, etc., finishes the bij, and performs the baṣaḥti.

This closes the ceremony of preparing the haoma juice, more properly spoken of as the ceremony of straining the haoma (Höm gātā). With its completion terminates the paragōma, i.e. the first or the preliminary preparatory ceremony of the Yasna. The second priest, who now has entered the yazasaha-gāthā and who is to recite the whole of the Yasna, mounts the stone slab or platform which serves as a seat. As he does so, he recites two Yathā ahā vairiyō. While uttering the word shyapadāsman of one Yathā he places his right foot over it, and, while reciting the same word of the second, his left foot.

The Dēdātān-Dēdātān (xvii. 30-35) tries to explain part of the symbolical sense of the ceremony of preparing and straining the haoma juice. For example, the haoma twigs are poured during the recital of four Aṣṭams. These four Aṣṭams symbolize the coming of Zoroaster and his three future apostles. The pure water, which is squeezed out by four applications of holy water (āvāk) with religious formulas, is noted even as a symbol of the understanding and birth of the four apostles bringing the good religion, who are he who is called Zarāsīdāh and they who are to be Bīshādād, Bīshādād-nah, and Kāshādāh.1 The stirring of the metallic kēnārā by pouring and straining the haoma reminds one of the triad of thought, word, and deed on which the doctrine of Zoroaster rests. The Dēdātān says on this point: "The metallic mortar (kēnārā) which is struck during the straining of the haoma, his word is evoked along with the words of the Avesta, which becomes a reminder of the thoughts, words, and deeds on the coming of those true apostles into the world.2 The three ceremonial processes of pouring the sacred water into the haoma mortar for the preparation of the haoma juice are symbolic of the three processes of the formation of rain in nature, viz. (1) evaporation, (2) formation of clouds, and (3) condensation as rain.3

The juice, prepared as above, by pouring the haoma twigs together with the swārām in the sacrižu water, is called vam-haoma.

(4) The ceremony of drinking the haoma.—The last ceremony in connexion with haoma is that of drinking it. We saw above that its preparation and straining formed a part of paragōma, i.e. the ceremony preparatory to the performance of the Yasna. The ceremony of drinking it forms a part of the ceremony of the Yasna itself. It is included in the recital of the 9th chapter, and finishes with the recital of the 11th. In these three chapters the priest sings the praises of haoma. The mode described in a highly poetical strain at the recital of the haoma juice which lies before him. On his finishing the description and the praises of haoma, at the 9th section of the 11th chapter, he collates the above.

1 SSB xviii. 170. 2 Th. 170. 3 Th.
HAPPINESS

or स्वामक्षेति, makes his hand přd, and, coming to the सांक, lifts the cup containing the haoma juice from the stone slab, carries it round the sacred fire in the vase on the slab opposite, at the same time making the सांक (sandalwood and frankincense) from their stone slabs, and placing them on the fire. He then comes back to the सांक, and, holding the haoma-cup, says to the सांक, "May the haoma juice be of twofold, threefold ... ninesfold efficacy to you." Next he hands the haoma-cup to the सांक, who, holding it in his hand, looks into it, again recites a few words of praise, and prays that the drinking of it may bring spiritual happiness to him. Finally, he holds up his padas, or cloth veil, to his mouth and drinks the whole quantity at once, but in three draughts. In the interval between each of the three draughts the零售er recites an Ashvar-slok.

During the recital of the Yasna, the haoma juice is prepared and strained twice. As described above, at first it is prepared and strained by one priest in the ceremony. It is drunk by another priest during the recital of the 11th chapter of the Yasna. Then the priest who drank it prepares it a second time during the recital of the three chapters of the Yasna from the 25th to the 27th. The process of pounding the haoma twigs and striking the mortar continues during the recital of the 33rd, 34th and 35th chapters, during which the second preparation terminates. Though the ceremony proper commences for the second time during the recital of the 25th chapter, it may be said to begin with the 22nd chapter, because all the requisites of the ceremony are enumerated and invoked at its commencement. These two preparations and poundings are spoken of in the Avesta as अय or to it, अय (that brings a few words श्रवणम्), i.e. the first and the second squandering of the haoma.

HAPPINESS. — This term belongs to the ethical rather than to the psychological sphere, though referring to a condition of mental life. In ethics its use has been almost universal, yet in such varying senses that the substitution for it of more definite equivalents is much to be desired. A formal and a material meaning may be distinguished, the latter subject to a threefold division.

1. Formal meaning. — The practical human good, the end of action. In this sense 'happiness' is a mere abstract term for the desirable in life, implying nothing as to its concrete constituents.

Thus Zeller: 'This conception is in itself a purely formal one, admitting of any desired material interpretation.' (Fortuyn, 1882-84, III. 300.) Also Sorley: 'To say that the ethical end is happiness, is, to use Locke's terminology, a trifling proposition'; for in doing we merely give it a name. ('Ethics of Naturalism, 1883, p. 7.)

Aristotle (Nic. Ethica, l) assumes that all men agree in calling the good 'happiness,' but differs in the practical aspect of the term. This was true for the ancient world, and for some modern thinkers of the Greek type, but is no longer universal. Happiness has come to include various specific connotations which are particular and debatable interpretations of the good, and not merely equivalent names for it, though the latter is sometimes claimed by Hedonists for their own interpretation (J. S. Mill, Utilitarianism, ch. iv.). Kant and his successors, especially, deny the possibility of happiness being either the end or the supreme good, though it is an element in the complete good. This formal use of the term should therefore be abandoned in favour of the more abstract term 'good' or 'ultimate end of action.'

2. Material meaning. — (a) Pleasure, or the absence of pain. — This is the meaning which has been given to the term by Utilitarians since Gay, and which has been advocated by Sidgwick (Methods of Ethical Theory, 1906, p. 12) to the exclusion of any other. J. S. Mill, by his assertion of qualitative differences in pleasure, and hence in happiness, forms an exception to the Utilitarian tradition, using the term 'happiness' in its second (material) meaning as the pleasure of an objectively higher order of activity (Utilitarianism, ch. ii.). Kant's usage agrees with that of the orthodox Utilitarians, although he puts an opposite ethical value upon the idea (Werke, ed. Rosenkranz, 1835-40).

'The notion of happiness ... is only a general name for the subjective determining principles.' (Wll. 157.) 'A rational being's consciousness of the pleasantness of life uninterrupted by other sensations and desires is almost indistinguishable from the non-existence of subjective disturbance or pain.' (J. S. Mill, Utilitarianism, ch. iv.)

This happiness, as merely the feeling accompanying the satisfaction of desires, is qualitatively alike, irrespective of the nature of the objects causing the satisfaction. As such, it is a subjective and necessary law for conduct, but is only a name for the satisfaction of any and every desire.

(b) The feeling accompanying the systematic activity of the whole self, the feeling of self-activity or self-realisation. — In this sense, 'happiness' is distinguished from 'pleasure,' which is limited to the feeling accompanying partial or limited activities.

'If it is the form of feeling which accompanies the harmonious adjustment of the various parts of our lives within an ideal unity' (J. S. Mackenzie, Man of Ethics, 1900, bk. ii. ch. v. 14). 'Happiness is not the sum or aggregate of pleasures; it is their harmony or system—or rather, the feeling of this harmony.' (J. S. Mill, Utilitarianism, ch. iv. 48.) 'Pleasure is an aggregate of primary and relative, enduring only while some special activity endures and having reference only to that activity. Happiness is permanent and universal.' (J. S. Mill, Utilitarianism, ch. iv. 9.)

Happiness is the feeling of the whole self, as opposed to the feeling of some aspect of self' (J. E. Dewey, Psychology, 1897, p. 293.) Mill's conception of happiness consists in the pleasures of the exercise of the peculiarly human or higher faculties belongs to the same category.

This distinction between happiness and pleasure has been criticized by Kant (vii. 120) and others, on the ground that it is based upon the nature of the objects causing the feeling rather than upon the nature of the feeling itself, and, therefore, that happiness does not differ qualitatively from pleasure. Inasmuch it allows no end of action other than that of pleasure. As Ladd puts it (Philosophy of Conduct, p. 479): 'Ethics can divide pleasures into higher and lower, noble and ignoble, or difference (sic) pleasure from happiness or even from blessedness, only by introducing into the psychological composition of pleasure-pain something from the outside. That something is a standard of moral values.'

While this criticism is valid psychologically against the attempt to distinguish qualities in pleasure, and is also valid ethically against the attempt to make happiness, as a distinct kind of feeling, the moral end, it does not necessarily invalidate the use of the term in the authors criticized. Although the pleasure of partial and that of systematic activity may be alike in kind, it may still be convenient to use the term 'happiness' to denote the latter, though its moral significance be derived wholly from the character of the activities which condition it. Happiness would thus denote the affective side of the virtuous life. So Spinoza: 'Happiness is not the reward of virtue, but virtue itself.' (Ethics, bk. v. prop. 42.) This use of the term, however, while justifiable, is no excuse of misinterpretation to be retained.
HAPPINESS (Buddhist)

Happiness is applied alike to physical health, material well-being, and spiritual beatitude. Etymologically the word has no connexion with hap, happening, or luck. Grammarians assume that the second term, **sukka**, is a substitute for the first *sukak* (= Greek *Greek*). The word would then be equivalent to the original meaning of our "well-".

In Buddhist psychological analysis, feeling, or emotional sentiment (vedana), is resolved into three phases: **sukka**, **dukkha** (pain), and **adukkkhama-sukka** (neutral feeling). The last of these, to which modern psychology in the main ascribes a mere zero point between positive degrees of the first and second phases, is in Buddhism ranked as an equally distinguishable constituent of consciousness (Maj. v. 302; Soet, *loc. cit.*). We do, indeed, meet with a layman who pronounces a twofold division of feeling more orthodox (Maj. i. 59; Soet., *loc. cit.*). But the Buddha, when appealed to, explained that he divided feeling variously, according to the aspect under which he was treating it of his teaching (cf. his method in another connexion, Maj. ii. 32). When, e.g., he distinguished feeling under two heads, he was treating of sensuous feeling and spiritual emotion, to both of which the term **sukka** was applicable.

We may pause, before considering the chief division of the Buddha on **sukka**, to note the way in which, in one of the canonical dialogues, the psychological analysis of feeling is applied to ethical training. The teacher is the noted woman apostle Dhammakantha. (She finally refers her interlocutor—her husband—to the Buddha, who endorses all she has said.) She first gives the orthodox division (as stated above), and then adds a dictionary definition of each kind. She thus speaks:

> In happy feeling, what is happy, what is unhappy? In happy feeling, what is happy, what is unhappy? She replies: In happy feeling, the state (element) is happy, change is unhappy; the reverse for unhappy feeling. In neutral feeling, knowledge is happy, want of knowledge is unhappy feeling—an answer that reveals the weakness of the few.

E. S. Mill is representative in that professedly, at least, he takes a special kind of feeling as the end. Those who use the term 'happiness' in this sense are usually careful not to assert it as the ultimate end, but to make it only an aspect or component of the end (Mackenzie, Sath). (ii.) *Hedonism* should also be the term applied to systems in which the second meaning of happiness is taken as the end, since a kind of pleasure is still presupposed, although it is not in the form of a final end. The idea of happiness as an end carries with it all the ambiguities of its definition, and systems which propose this end receive different names according as they have.

(i.) *Hedonism* (p.v.) is the term applied to systems which propose happiness in the first sense as the end. It may be used in two ways. First, the system may be of such character that what one is led to believe to be an end, may be the end, and the idea that one may be mistaken in the belief. The idea of happiness as an ends carries with it all the ambiguities of its definition, and systems which propose this end receive different names according as they have.

(ii.) *Hedonism* should also be the term applied to systems in which the second meaning of happiness is taken as the end, since a kind of pleasure is still presupposed, although it is not in the form of a final end. The idea of happiness as an end carries with it all the ambiguities of its definition, and systems which propose this end receive different names according as they have.
HAPINESS (Buddhist)

nexion with the practice of jhāna. The brief discourse has been set down by the compilers with the rhetoric progress and iteration of the Butanses retards, suitable for oral teaching. He commences with this refrain:

"With him who should say: "This is the supreme happiness and pleasure (or bliss) (the inner experience), I do not agree. And why? Than such happiness there is another happiness sweeter and more excellent. And what is that?"

In successive replies it is pointed out that the stages of jhāna, four of rūpājāna, five of arūpājāna, are each of them a sweeter and lofter happiness than kāma-sukha and each preceding mode of sukha. The last stage of arūpājāna was the attainment of catasaya or trance, described in the usual formula, elsewhere amplified, as the cessation of perception and sensation. Nevertheless, of this also, happiness sweeter and more excellent, it is to defend the position and to withdraw the original bone of dissent, Gotams concluded:

"Other teachers say: "The samana Gotama predicates happiness of the trance-stage: what and how is that?" Thus are they, the Vanita One does not predicate happiness only where there is happy (pleasurable) feeling; he also predicates happiness wherever and wherenwhereas it shall be stated.

These observations, referring his hearers, as always, to the spirit rather than to the letter, were the Buddha's method of teaching that the word sukha could represent concrete states of being, activities, ideas, memories associated with happy consciousness and genuine 'well-being,' no less than the idealisations and designs of desire. He might have extended his final remark to most of the preceding stages of jhāna; for, whereas, in the first three stages, the happy feeling, accompanied in the first two by that zest of pursuit known as piti, is the prevailing factor, the fourth jhāna is explicitly defined as a state wherein all positive feeling, joyous or melancholy, is merged in neutral feeling, so that the consciousness is one of complete equanimity and clarity of mind.

A unique compound may here be added—upākkhelittha occurring in Āguttara, iv. 418, as the conscious state which was to cease when the fourth jhāna was attained, and which can, therefore, be taken to mean the happy feeling of, or belonging to, or accompanying equanimity.

Sukha was, moreover, the predominating nature of celestial existence; so far at least as the six realms of deva in the Kāmaloka extended. To re-birth in these heavens the moral average layman aspired, believing that he would there enjoy pleasures of a sensuous sort, but intemper, more numerous, and less fleeting than those of earth (cf. Rhys Davids, Dialogues of the Buddha, ii. 533 ff., 345 ff., 262). Nor would he, as deva or devaputta (son of the gods), be incapable of lesser emotions and satisfactions to which the term sukha might equally apply; whatever the behaviour, in many Buddhist legends told in Nikāya and Jātaka, of the sentiments of Sakka, god of a Kāma-realm, and of those of the many devas who flocked to earth to hear the Buddha and his saints preach, or to commune with and admonish here and there a saint in sāvāca.

Sukha, then, we repeat, is of very wide import, consisting all pleasure, pleasantness, happiness; and it is equally applicable to the lowest and loftiest kinds of experience so designated. We have also seen that the neutral feeling accompanying vague intellecction merges into ecstatically happy feeling when the vagueness passes; and, again, that absorbed reverie and abstract contemplation, if rightly induced and persisted in, lead to emotionless quasi-ascetic states which can also be described as sukha, because they are a means whereby the saintly life is nourished and advanced.

In the next place, the natural desire of mankind to attain happiness and avoid pain and sorrow is fully recognized, believed in, justified, and explored by Buddhism. As a system of ethical philosophy, it may be classified as a monistic, monistic or hedonist, i.e., neither egocentrically nor altruistically so, but of the kind termed by H. Sidgwick "the greatest happiness of all beings". It recognizes in happiness an ultimate to which every human aspiration is in the last resort reducible. Accepting the current proverbs of the day, it sees in happiness the resulting benefit of mundane wisdom (Theragathā, 393). Happy re-birth, as a deva or as a fortunate human being, is the legitimate quest urged on the laity and the simpler-minded, less saintly Vīśhaka (Devā, iii. 181, 185, 191 ff.; Aṅg. i. 58, ii. 192, iii. 76 ff.). Meritorious acts are justified as happiness-bringing (suksatās) for self and others, and good conduct is the best of the worth of a practical doctrine (Aṅg. i. 190 f.; tr. in Buddhist Review, April 1911). Again, it is only the quest of the highest good that gives adequate opportunity for ending sorrow (Maj. iii. 245; Aṅg. i. 249). The mission of a Buddha is frequently declared to have as its object not only, in negative terms, the breaking of sorrow but also, in positive terms, the attainment of the good, or, weal, and the happiness (āśā rājukṣās) of all beings. In the wrestlings of the Buddha and of his disciples, there is a parallel whereby he could qualify for that high mission, Gotama admits that the quest of sukha was the ground wave that bore him along (Aṅg. i. 249 f.), and in the midst of his self-devised career he claims that this quest is won for good and all;

"Ay, young sir, I verily am of those who have happy, even though you see me exposed in this hut to the obliq lights of winter. Your well-baked sitcom, happy after his kind, may, the king himself with all his pleasures, is not to me as I. They may be sufficient with torments through greedy desires, envy, or blunders. But one who has cut off at the root all those sources of suffering dwells at ease, for he has won peace (Aṅg. i. 198 f.; Maj. i. 492 f.). A fortiori, happiness is commended not only for the babes in religion, but also for earnest disciples as a reasonable and sufficient aim of the religious life (e,g. Maj. i. 140 f.). And, adopting as a name for their rāmamānus word a word which would seem to have been applied to the careful cool organic consciousness of physical well-being (67th Sutta), the Buddhists qualified Nibbāna as supreme happiness (parānukṣās): These things to know en as they really are. This is Nibbāna known of supreme consciousness, 509.

The happiness thus commended and extolled for and by saints and those qualifying for saintship was, of course, neither the kāma-sukha, nor the jhāna, nor any under edukāsa, or feeling on occasion of sense, nor the sukha associated with ideas of the same. The attitude enjoined with regard to such feeling was very uncompromising. "Pleasant (sukha) feeling, bhikkhu, is to be considered as (equivalent to) pain (or ill); painful feeling is to be considered as a jealous; neutral feeling is to be considered as the highest permanent. A brother by whose are thus considered is an Aryan of supreme vision; he hath cut through craving; he hath rolled back his bonds; through supreme grasp of vain conceits he hath put an end to sorrow (Atthadānas, 58; Samm. iv. 207).

Coming next to ideal emotion, or the three modes of feeling when associated with ideas (domanassa, domanassas, upākkhet), we find the admission that, for spiritual health, these three modes of feeling are not at all condemned as ill, but amenable when unaccompanied by such thought as is engaged upon sense-experience (vīttattā-vīttathā). (Such is the implication of the phrase translated 'pre-occupation and travail of mind' in Rhys Davids, Dialogues, ii. 312 f., the terms vīttattā, vīttathā being essentially terms of senscognition, and used only in the first stage of jhāna, when the mind is not yet abstracted from such cognizance.)
HAPPINESS (Greek and Roman)—I.

GENERAL.—I. Greek teleology: happiness attends fulfilment of function. — ὀόδοιος, when critically appraised, could not mean to the Greeks ‘a happy temperament,’ to which a genius was propitious. This might be very well, but it was not of ‘knowledge (as Soliloquy and Platonism)’ or of ‘wisdom (as St. Paul). The term was applied to well-being judged from outside by a certain agreed standard of perfection. The Greeks, however, serious their practical doubts, never showed any hesitation, save in the Atomic School, in accepting teleology: everything was made for some end and found its satisfaction in fulfilling its function, in realizing its idea or its notion; only in science, as in the Orient, did this idea was real, true, good, and therefore happy. Man was contrasted, as a single type, with the rest of creatures; never (oddly enough) with other and different members of his own species; his differentiation lay in reason, implying self-consciousness and self-criticism, above all, recognition of a law—and that a universal one, beyond the private and the particular. Thus, the only state deserving the title ‘happy’ in the truest sense was that of the philosopher, who alone used formative or speculative reason rightly, and so fulfilled the end for which he was made. It is clear, that, like Kant’s categorical imperative, this vague axiom can give no special guidance for individual cases; no help to men of different character, aim, and station.

In the end, then, Greek ethics set up in the various schools an ideal of life singularly alike, a purely typical excellence which was bound to end in a negation rather than in any positive content. Except the early Cynic model, which soon passed out of favour, there is little to choose, in essential detail, between the ‘sages’ of Plato and Aristotle and that of the Stoic and Epicurean schools; indeed, the Cynic model, significantly enough, tended later to approach this common standard. Happiness, then, in every Greek system of religion or philosophy, is singleness of aim, uprightness of heart, and the undisturbed peace of one who rests in ultimate truth, and has hold of reality. It is always set in contrast with the aims of the worldly-wise, cumbersed with much serving or the pursuit of many ends. Not within the limits of our period do the modern features of such distinct human activity towards the conquest and improvement of the world, and complexity of life; nor towards social service. This was the ‘happiness of the greatest number,’ multi-form legislation to secure better conditions for the poor.

2. Enemies of happiness: impulse and convention.—Happiness, then, as above described, lay in

VOL. VI.—33
HAPPINESS (Greek and Roman)

reason (as private judgment, which mirrored an external order and laid hold of objective truth), not in impulse or custom. The body and conventional society was the two great essence of wisdom and, therefore, of happiness. The aesthetic and anti-civic tendency of Hellenic morals is now well established, in spite of some feeble protest. The dualism between the state's true welfare and all earthly concerns begins in Pythagoras and Heraclitus, and only increases in intensity down to Aristotle and then later Stoles. The conventional order, φύσις, the State, was never really the true home of the sage who desired to be perfect and therefore happy. Happiness lay in understanding and accepting the world-order, not in average honesty or public life in a small city. It was, then, directly dependent upon knowledge, as wide as that postulated by Plato in his "Ideal.

Upon this Epicurus, the anti-teleologist, insists as strongly as the rest: his last advice was "to remember the dogmata," which explained the physical world by science. The Atomic theory, which put accident above providence, had existed from early times as a heresy defying the orthodox belief in a rational world-order. But, if the axioms of Democritus and Epicurus mark the start of the rest, there is substantive agreement in actual life and in their portrait of the wise and happy man; he is, as he said, 'the wise man accepts the world-order of nature,' by taking his proper place in it; and, it need scarcely be said, even this accidental system assumed a half-personal look. Nature was even defined in Lucretius (55 BC), to the loss of all religious education and utility, and the gain of that moral independence and earnestness without which ethical theory is dry bones.

Happiness in Knowledge of Nature or the world-order (αὐτὴ φύσις ἐστὶν αὐτὴ λόγος).—Happiness therefore lay merely in living according to Nature, in finding the wider law which was higher and more imperative than the customs of a city, or the edict of a tyrant. Except some sophists, perhaps, in empty theory, or Aristippus for a short time, none believed that the individual could stand alone, or be safe in following impulse and running counter to convention. There has never been much discouragement in the whole of history on the virtues, on what makes an 'A gentleman,' and the like; the indecency of the Cynic was reprobated by all, and Epicurus soon turned aside from pleasures to find a unique satisfaction in the simple life, in a temper permanently cheerful. But the sanction demanded was from the Universe itself, not from any local or partial authority; the happy wise man was the cosmospanian. And here we meet two questions: Does Nature, after all, recognize the goodness and respect the happiness of the sage? And, if not, is the consciousness of duty done and right defended at the cost of life sufficient for happiness? It is clear that these doubts were at the root of the movement which gave a welcome to Christianity, turned the self-poised independence of the Stoic into piety, and brought back in countless forms the cult of various tutelary beings.

4. Virtue to be self-sufficient or found in union with God.—When the Porch became a practical guide instead of an academic paradox, men like Plato and Socrates turned from the subject of average men; like Aristotle and the Peripatetics, they postulated for happiness not bare virtue but a moderate equipment of external goods. Where Zeus had shut the door on everything but the 'good will,' they let in the (uncertain) elements (Diog. Laert. vi. 65) of health, competence, and strength. So Adam Smith admits as constituents of happiness health, a good conscience, and freedom from debt; Lucian makes equally merry over those who demand a good deal from the world and fortune and those who pretend to despise any such demands and to deem virtue self-sufficient. With the collapse of the city-State system, the correspondence between merit and receipt was destroyed; a sextet of thinkers in the Stoic, professing to 'rationalize' the world-order (see Bussell, The School of Plato, 1896, Marcus Aurelius, 1900), ended in pronouncing it unknowable and incomparable with the human ideals of right and wrong. They still adhered to the axiom that the λόγος spoke in everything; the cruelty of lion and tyrant was quite in place, like death or disease; but there was no real interrelation between these several units, each displaying its nature. The sage could help feeling dissatisfied only by sealing his lot with a few maxims to be kept ready against doubt. Nature, whether as the actual system around us or as its ideal perfection conceived by the thinker, made no allowance for the virtue of the good: the world lay in the 'Evil One,' as St. John said (1 Jn 5:18), or, as Seneca preferred to say, under Fortune. Flight from the world, instead of the Platonic attempt to embody the ideas in the body, to hew out a piece of the world's sufficiency of virtue was an article of faith, because it was the last and only certain possession of the wise man, and he was not stoop to make terms with an alien and immoral power. Hence pius resignation and religious prayerfulness and ecstasy, or self-loss, became the distinguishing marks of the whole school, and the end of self-sufficiency was gone, and only in surrender to a divine order or to a tutelary god, as with Apuleius, were safety and happiness to be found.

II. DETAILS.—All Greek philosophy sought the permanent in the fleeting and changeable; and, in human life emerging into self-consciousness and purposeful interest, the individual was the centre for which pure subjective feeling and impulse was ruled out as self-defeating. All schools were agreed (as soon as the question was once posed) that (a) well-being is the aim of all effort and all inquiry; and (b) wisdom, or knowledge of the good, can alone give security and guidance; that (c) 'none can sin against the light' or his own good if he knows it; that (d) ethical conduct, already personal and universal, is a pure matter of insight; and that (e) to know good is to follow it, and to attain it is the highest happiness or satisfaction known to man.

2. It is noteworthy that no Greek school placed the ideal of perfection (and, therefore, of happiness) in active social service; the end was always self-realization, and everything was regarded from the individual's standpoint, though the subject was conceived objectively; the very frequency of classical protest that 'man is a social being' bears witness to their profound antipathy to the subject of average men; like Aristotle and the Peripatetics, they postulated for happiness not bare virtue but a moderate equipment of external goods. Where Zeus had shut the door on everything but the 'good will,' they let in the (uncertain) elements (Diog. Laert. vi. 65) of health, competence, and strength. So Adam Smith admits as constituents of happiness health, a good conscience, and freedom from debt; Lucian makes equally merry over those who demand a good deal from the world and fortune and those who pretend to despise any such demands and to deem virtue self-sufficient. With the collapse of the city-State system, the correspondence between merit and receipt was destroyed; a sextet of thinkers in the Stoic, professing to 'rationalize' the world-order (see Bussell, The School of Plato, 1896, Marcus Aurelius, 1900), ended in pronouncing it unknowable and incomparable with the human ideals of right and wrong. They still adhered to the axiom that the λόγος spoke in everything; the cruelty of lion and tyrant was quite in place, like death or disease; but there was no real interrelation between these several units, each displaying its nature. The sage could help feeling dissatisfied only by sealing his lot with a few maxims to be kept ready against doubt. Nature, whether as the actual system around us or as its ideal perfection conceived by the thinker, made no allowance for the virtue of the good: the world lay in the 'Evil One,' as St. John said (1 Jn 5:18), or, as Seneca preferred to say, under Fortune. Flight from the world, instead of the Platonic attempt to embody the ideas in the body, to hew out a piece of the world's sufficiency of virtue was an article of faith, because it was the last and only certain possession of the wise man, and he was not stoop to make terms with an alien and immoral power. Hence pius resignation and religious prayerfulness and ecstasy, or self-loss, became the distinguishing marks of the whole school, and the end of self-sufficiency was gone, and only in surrender to a divine order or to a tutelary god, as with Apuleius, were safety and happiness to be found.

II. DETAILS.—All Greek philosophy sought the permanent in the fleeting and changeable; and, in human life emerging into self-consciousness and purposeful interest, the individual was the centre for which pure subjective feeling and impulse was ruled out as self-defeating. All schools were agreed (as soon as the question was once posed) that (a) well-being is the aim of all effort and all inquiry; and (b) wisdom, or knowledge of the good, can alone give security and guidance; that (c) 'none can sin against the light' or his own good if he knows it; that (d) ethical conduct, already personal and universal, is a pure matter of insight; and that (e) to know good is to follow it, and to attain it is the highest happiness or satisfaction known to man.

totelian text ἢ ἔριξαν ἀλώλοτρον καὶ τοὺς παραδόσεις προέξεσθαι, while προέ is at the same time God Himself.

4. Roman 'virtue' was very early conscious that respect for custom, and the traditions of a proud ruling class, insured to hardship and State-service, with no keen desire to distinguish private from public life. The Senate expelled the usurious Bacchanals—both symptoms of unruly or sceptical subjectivity. They had all Hegel's distrust of the man who protects his own salvation; and yet, in the long run, did the precarious tenure and uncertain title come to light, throwing a man back on his own inner resources and reviving the old Platonic asceticism. Peripateticism was three centuries ago in a compromise with the worldly and social spirit. Aristotle was quite sincere, for instance, in holding that human good is specific and attainable in this life by an activity of the soul, not needing a comprehensive knowledge of the universal good which is in Plato supernatural. But how imperfect and provisional is his portrait of the natural man, and with what emotion he speaks of the highest life of God and of man! For the average man in the world neither Aristotle nor his school gave any real guidance in the management of conduct or the pursuit of happiness. When Theophrastus stoutly defended the value of external good (leisure, security, and affluence), he was speaking on behalf of a privileged aristocracy, the elect of wisdom.

The weakness, then, of ethical appeal in the Greek world was due to (1) the small number who could reach the ideal; (2) the ascetic and transcendental character of the happiness promised to them; (3) the increasing sense of the instability of fortune, the submerged props on which rested the joy which should be manifest in ever-changing possession; (4) the confusion of moral and intellectual good (to the detriment of the former), and the permanent entanglement of right action with 'knowledge of the good.' Impeccable custom and just regulated the life of ordinary men. Philosophers taught no striking novelties in ethics, and merely laid stress on a negative goodness, aloof and remote, which could have no public influence. The lower happiness was allowed by Plato in the Republic to those who implicitly obeyed authority; it was but the external form. Aristotle only gave definite shape and object to this ideal yearning. However far he diverged from Plato in the general, he never swerved from the doctrine of highest happiness in contemplation alone. He passed from the docetic and mystical stage of his Eudemus (quoting Silenus' maxims, 'Best of all not to be born,' and calling death 'going home'), from the devout theological attitude of the Eudemian Ethics, to a cooler tone in his praise of θεωρία, and of a god who is the last term in science rather than in religion; to a far more sympathetic attitude to the actual world of men and things. But, though he changed the highest ideal from devotion to inquiry, he always placed happiness in intellectual, not in social life a διανοητὸς πάθος. In his admiration for virtue, as excellence won by endeavours, he was quite as sincere as Kant in his reverence for Duty; witness his poem, 'Ἀγαθὴ πολιτεία γίνεται ἐπιτελεῖ | ὁμολογία κατ' ὄρθον ἔχει; but, as with an apostle like Bradley, this dualism and striving denoted an imperfect sphere, and had to be transcended by that which alone gave freedom to science. He believed the best to be within the grasp of a few only whom Fortune had equipped with competence, health, and leisure. In his Platonic Protagoras, he calls worldly goods (strength, beauty, and honours) mere semblances or shadow-pictures (εἰκοναγωγός); and compares the soul in the body to a living prisoner yoked with a corpse. How far he transcended the ascetic dualism of principles is known to every reader of the de Anima. Quite clear is the negative (or cathartic) character of moral as distinct from intellectual 'virtue'; it prepares the way for the chief good, but is not to be identified with it. Aristotle reverences Eudemus, ἢ μέγας ἢ μικρός ἄνθρωπος κατεχόμεθα τοὺς | φυσικοὶ τις καὶ μικροί πόλεμος | ὁ ἄνθρωπος τε καὶ ἐκεῖνος δεῦρο εἰσί | ἱστορίας τε καὶ ἔρεμος ἔν τινα ἕτοι. In his early and more devout phase, this happiness was a divine gift or recompense; later, the sage became independent and worked out his own salvation; on his deathwards the precarious tenure and uncertain title come to light, throwing a man back on his own inner resources and reviving the old Platonic asceticism. Peripateticism was three centuries ago in a compromise with the worldly and social spirit. Aristotle was quite sincere, for instance, in holding that human good is specific and attainable in this life by an activity of the soul, not needing a comprehensive knowledge of the universal good which is in Plato supernatural. How far

TILL THE SUMMARY.—We may sum up the doctrine and practice of the ancient Greeks thus: happiness or well-being as the avowed object of our human activity is twofold—higher and lower, positive and negative. What is the 'instrument of a Divine reason' but, owing to the complex and accidental character of his body, he is hindered in the pursuit of goodness and truth. The first stage is, therefore, to order his ideal of perfection (happiness) to consist in a harmony between the three parts of the soul (reason, spirit, and appetite); Aristotle was equally clear that moral virtue (or human excellence) involves a control of these duties, which all thinkers and teachers have called 'our lower nature.' Above this negative victory over the disorderly elements in our self, which gave a certain domestic peace, was a far higher realm of true happiness. Every one is familiar with Plato's portrait of the soul, freed from earth and sentiment, and enthroned in heaven, as its eternal form. Aristotle only gave definite shape and object to this ideal yearning. However far he diverged from Plato in the general, he never swerved from the doctrine of highest happiness in contemplation alone. He passed from the docetic and mystical stage of his Eudemus (quoting Silenus' maxims, 'Best of all not to be born,' and calling death 'going home'), from the devout theological attitude of the Eudemian Ethics, to a cooler tone in his praise of θεωρία, and of a god who is the last term in science rather than in religion; to a far more sympathetic attitude to the actual world of men and things. But, though he changed the highest ideal from devotion to inquiry, he always placed happiness in intellectual, not in social life a διανοητὸς πάθος. In his admiration for virtue, as excellence won by endeavours, he was quite as sincere as Kant in his reverence for Duty; witness his poem, 'Ἀγαθὴ πολιτεία γίνεται ἐπιτελεῖ | ὁμολογία κατ' ὄρθον ἔχει; but, as with an absolutist like Bradley, this dualism and striving denoted an imperfect sphere, and had to be transcended by that which alone gave freedom to science. He believed the best to be within the grasp of a few only whom Fortune had equipped with competence, health, and leisure. In his Platonic Protagoras, he calls worldly goods (strength, beauty, and honours) mere semblances or shadow-pictures (εἰκοναγωγός); and compares the soul in the body to a living prisoner yoked with a corpse. How far
followed of the two great Hindu sects, the followers of Siva giving the name as Haradvarā (Gate of Hara, or Siva, the destroyer), those of Vignan calling it after Hari, the 'tawny one,' a title of Vigna Kṛṣṇa. The place was also at one time known as Kapila, after the saint Kapila Muni, the scene of whose devotions and asceticism at Laktāra, called Kapilāśvara, 'Lord of Kapila,' is shown at Kapilāsthāna in the hills adjoining Hardwar (Atkinson, Himalayan Gazetteer, 1904, p. 506). Hien Telang calls the Ganges at this point māḍha-bhadra, 'very propitious'; and even in his time vast numbers of pilgrims used to bathe in the sacred stream. I have only to have been the scene of a cult of Buddha, because, among the broken sculptures at the Nārāyanasālī or Nārāyanabalā temple, Cunningham identifies one small figure of Buddha in the second, surrounded by smaller images of ascetic attendants. Doubtless this is only one survival above ground of many images of the Master. Hien Telang also notes also of a neighbouring site, known as Gangañāvāra, 'gate of the Ganges,' and here undoubtedly a cult of the river-goddess prevailed from a very early period.

Thames, 1884, ii. 109, Cunningham, Arch. Rep. ii. (1871) 231). Hien Telang adds that Daksha made a great sacrifice here, and invited all the gods except Siva. But his consort, Sati or Uma, jealous for the honour of her lord, induced him to drink the poison of the sacrifice, and she was ordered to mar the sacrificial. Accompanied by the terrible goddesses of Dakshāśa and her train, Virabhadra attacked the assembled gods, with the result that Siva, god of death, was cut off, and Svarṇa, goddess of learning, and the Mātri, or mother-goddesses, had their noses cut off. Sva, lord of sacrifices, was decapitated, and he now forms the constellation Mrigāśira, the antelope's head. A variant of the tale makes Sati in her wrath destroy herself on the scene of sacrifices by leaping into the same for the sins committed during three previous lives. The place where this river proceeds, for the purification of the three worlds, is the third division of the celestial region, the seat of Viṣṇu (ib. Wilson, London, 1894-77, ii. 374 f.).

A remarkable legend, told in connexion with Kankhal, a town close to Hardwar, has been interpreted to represent a conflict between the rival cults of Vigna and Siva, in which the first the former, but finally the latter, acquired the ascendancy. The story as told in the Purāṇas (Wilson, Viṣṇu Purāṇa, i. 129 ff.; Dowson, Classical Dict. of Hindu Mythology, 1894, p. 336), and the narrative of the story that Daksha made a great sacrifice here, and invited all the gods except Siva. But his consort, Sati or Uma, jealous for the honour of her lord, induced him to drink the poison of the sacrifice, and she was ordered to mar the sacrificial. Accompanied by the terrible goddesses of Dakshāśa and her train, Virabhadra attacked the assembled gods, with the result that Siva, god of death, was cut off, and Svarṇa, goddess of learning, and the Mātri, or mother-goddesses, had their noses cut off. In the time of Akbar, because Abī T-Fazl speaks of Mākā, known as Haradvarā on the Ganges. It is held sacred for its length (cosat 37 miles). Large numbers of pilgrims assemble on the 10th of Chaitra (March–April) (Alim-ākbari, tr. Blochmann and Jarrett, Calcutta, 1873-94, iii. 300). Both Sāiva and Vaiṣṇava sects are thus agreed upon the sanctity of this place. In fact, as generally the case in India, the most famous sacred places are those whose sanctity dates from a period antecedent to the rise of the present religions. Hardwar, as the place where the great river issues from the hills, was naturally regarded as sacred from the very earliest times, and thus became a fitting abode of the deities who in succession acquired the devotion of the people. The first was the river-goddess; then Buddha; then the Hindu gods of the later period. Besides this, in the Mahābhārata we have a hint that a serpent-termed poison, called the boon, one of the Pandava princes, is said to have come here to bathe, and met Uśā, daughter of the Naga king, who besought him to marry her (Mahāb. i. 214). Both stories are unlikely, but the act of bathing, in the holiness of the place on river legends describing the birth of the river. The former allegory that the river springs from Kailāsa, the paradise of Siva; the latter, that it falls from the toe of Viṣṇu — in support of
HARISCHANDIS—HARPIES

original stone marked with the footprints of Vyágo, is said to have decayed under a tree some time ago; but a substitute has been provided.

The bathing steps have been the scene of more than one eruption of cholera. In 1811, before the rule of British India, the stars of the name of Dharma, Vyasa, taking human form on purpose to test Harishandra's sense of duty, expressed himself satisfied. Harishandra and his wife were tried, and since that time the son was resurrected and restored to his kingdom, where he reigned in his father's stead. The whole story is told with much pathos in the seventh and following chapters of the Markandeya Purána, and is a favourite subject of modern vernacular literature.

The Harishandras are nearly all of very low caste, mostly Doms. They claim to practice the tendered down to them from Harishandra's Dom master, who was taught to do as his master had been taught in the intervals of his employment. They worship Víspu as the Creator of the universe; and, if they have any other definite doctrines, they are those of the Bhakti-mâyya (see E.E.E. ii. 536 ff.).

HARMONY SOCIETY.—See COMMUNISTIC SOCIETIES, vol. iii. p. 780 ff.

HARPIES.—Rarely do a mythological figure express so unmistakably its nature as the Harpies. They are the 'Apórragai, 'Snatchers,' creatures of rapine, and rapacity. On a black-figured vase in the Berlin Museum (Cat. 1855, Arch. Zeitung, 1855, p. 9) two Harpies are figured, and they ask them their name in the dual. 'Apórragai, 'the two Snatchers' (see fig. 1). From this vase we are certain that in the 5th cent. B.C. the Greeks conceived of the Harpy as a winged divinity of human female form. The vase is of special interest because, though the two winged figures are inscribed as 'Harpias,' the name of which they form part is the slaying of Modusa. This shows that Harpies were apt to be confused with another type of monster, the Gorgon. The Gorgon is always represented from the Harpy by the mask-like face with tusks and protruding tongue (see GORGON), but the Gorgon is sometimes figured in Greek art as performing the functions of a Harpy, i.e. snatching away human beings.

The function of the Harpies as Snatchers comes out clearly in Homer (Od. xx. 77 fl.):

Penelope is telling the old Lydian story of how the daughters of Pandaros waited in their father's hall while Aphrodite planned for them in Olympus a goodly marriage; but they never came to marriage age, for

Sometimes the Snatchers snatched away the maid, and gave them o'er
To the hateful ones, the Etrusci, to serve them evermore.'

The Harpies here are little more than ministers of untimely death; they are only half-way towards impersonation; and to give them a capital letter is really to crystallize their personality prematurely. It must always be remembered that to the Greek, even when the Harpies became fully personalized, their name carried its adjectival sense of 'snatchers' in a way lost to us.

To Homer, in the passage cited, they are death-demons near akin to the Etrusci, the angry ghosts. But here, as so often, Homer has moved somewhat away from primitive conceptions, of which, however, in this very passage, he betrays a haunting remembrance. The Snatchers were originally not death-demons but simply winds. Penelope, just before the passage cited, prays in her desolation that the 'storm' (θύρης) may 'snatch her away'

1 J. P. Partridge's tr. p. 62 ff. The story also occurs in the Padma Purána.
Harpies

(ἀρπαγόταται, just as the 'storm-winds' (θύκαλαι) snatched away the daughters of Pandareos:
in E Ψευδομερναίου μακραί δίκικι ρηδίκα
O.D. xx. 68).

Clearly the Harpies are equated with the storm-winds. It is only incidentally as Snatchers that they perform the functions of death-demons.

As winds the Harpies have a double function: they not only snatch away to destruction; they give life. Homer (I. xvi. 150) tells us that a Harpy, Podarge ('Swift-foot'), was the mother of the horses of Achilles by Zephyros the West Wind. Both parents are winds; but, as was natural in a mare-breeding country, the Harpy was conceived of not as a woman, but as the creature who was swiftness embodied—a fleet horse. The notion that winds could impregnate was wide-spread in antiquity. Vergil (Georg. iii. 274 f.) says of mares:

'... scipe sine ullis conjuxit vento gravidae, minax dicta.'
The winds are breaths and souls (νεφέες); and, when breezes are spoken of as 'life-begotting' (ισνεφές) and 'soul-rearing' (ψυχαγοράς), this was not to the ancients a mere metaphor. Winds, says the author of the Geoponics (iv. 3), 'give life not only to plants but to all things.'

It depends, however, on what quarter of the world one lives in which wind will be beneficent or maleficent. The principal myth in which the Harpies are concerned was a Thracian one—that of the feast of Phineus; and here the Harpies clearly stand for pestilential winds which come from the South—in a word, for the sirocco, which blights man, beast, and vegetation. The feast of Phineus is clearly depicted on the famous cylis (fig. 2) in the Würzburg Museum (JHE. 334). Phineus, to the right, reclines at his banquet, attended by the women of his family, one of whom holds a large flower in token of plenty and fertility. The Harpies, the sirocco-snatchers, have been at their work fouling the feast, but for the last time

question of the 'Harpystomb' and for the interpretation of the Cyrene cup with supposed figures of Harpies); J. H. Harrison, Prolegomena to the Study of Greek Religion, Cambridge, 1905, pp. 176-226 (on the almost inextricable confusion between Keres, Gorgones, Harpies and Sirens, and for the various art-monuments). Among the modern Greeks some functions of the Harpies, but not their names, are exercised by the Nereids (p. 6); but, as the Nereids perform all the functions of Nymphs in general, to discuss them here would only cause confusion.
HARRANIANS. — The Harranians were a Syrian religious community named after their headquarters, Harrān (the Haran of the OT, and Carrhae of the Greeks). The first mention of them as a sect seems to be in the Chronicle of Dionysius of Tell-Mahre (ed. Chabot, Paris, 1906, p. 86), composed about A.D. 840; he confuses them with the Manicheans, and records an occurrence of the year 764 in which they were concerned. Owing to the fame acquired by various professional men and writers belonging to this community, they attracted the attention of Muslim authors, who composed numerous monographs about them and their tenets. Some of these are preserved, at any rate in part, in the Fihrist, or Bibliography, of Ibn al-Nadim, composed A.H. 377 (A.D. 987); and accounts of them are given in the Maqāṣid al-Dhahab of Mâṣlahī, composed A.H. 332 (A.D. 943), and in his later work, the Tahqīq, composed A.H. 345 (A.D. 956). Much is also heard about them in the 6th cent. of Islam, especially in the 'Guide of the Perplexed' of Moses Maimonides (A.D. 1153) and the 'Guide of the Perplexed' of Moses Maimonides (A.D. 601 (A.D. 1204)). The community seems to have disappeared during the devastations of Mongols by the 7th cent. of Islam.

Islamic writers usually call them Sabians (Sabadān); even in the Qurān, where those bear who are treated with some respect; and, according to some of the Muslim authorities, the Harranians adopted it in A.H. 218 (835), in order to obtain integration in the Qurān (A.D. 243, Cairo, 1281), after Yūnūs b. 'Abd al-A'la (†304 (917)) after Abdallah b. Wāhīb (†317 (928)) after Muhammad b. 'Abdallah b. Wāhīb (†318 (929)), and in the Jāzirah of Maqāṣid, which, though somewhat vague, is a correct location of Harrān, but would not suit the Harranians. If these authorities are correctly given, the connexion between Harrān and the Sabūdah must have been three-quarters of a century earlier than the date given in the Fihrist; and the earliest geographer Iqtahshār (c. A.H. 300 (A.D. 912)) mentions Harrān as the city of the Sabā'īn (p. 76, ed. de Goeje, 1870), without any suspicion that the connexion was less than a century old. 'There,' he says, 'are their seventeen ascetics (hadana). Neither of these authorities was accessible to Chwolson. Further, it would appear from good traditions that the followers of Muhammad were known by their enemies, and even to some extent among themselves, as Sabūd, and this seems to bear some relation to the title which Muhammad connect with Abraham, Hānīf, and which he gave his own community. For Christian writers frequently speak of the Harranians as pagans, Anḵēth, and Abraham is constantly mentioned in context, much more than Moses, and more decidedly than in the narrative of Genesis. The controversial but decidedly learned writer, Ibn Ḥarrawī (†1083), in his Fīsūʾ al-Mawālikin (Cairo, 1317, i. 36), has no hesitation in identifying the Harranians with the Sabūdah of the Qurān, and supposes that Abraham was sent to convert them, and that during his time they took the name Hānīf. According to him, they believe, like the Māzdaeans, in two eternal elements; they honour the seven planets and the twelve constellations, and paint them in their temples; they offer sacrifices and incense; but they have five prayers similar to the Muslim ceremony, they fast in Ramadan, turn to the Ka'bah in prayer, and regard the same months as unlawful as are regarded by the Muslims; their religion is identified with that afterwards restored by Muhammad except that they had introduced the worship of the stars and idols, which Abraham endeavoured ineffectively to abolish.

Although this account has many inaccuracies of detail, it is confirmed in some important matters by the others; and it seems to solve one of the puzzles of Islamic history, viz. the adoption by Muhammad of the name Hānīf, while he himself was called 'Abd by his contemporaries. But this would imply that the latter name was used either by or for this community in his time, whence we should suppose that the story adopted by Chwolson was a fiction invented by its enemies—a supposition which is by no means unlikely. The origin of the appellation Sabūdah is obscure. Tabarī in his history (i. 178) derives it from one Sabī, a son of Me'mūs, but in his discussion of the 'Guide of the Perplexed' of Mozes Maimonides (A.D. 601 (A.D. 1204)) the community seems to have disappeared during the devastations of Mongols by the 7th cent. of Islam. The Sabians gave place to a new sect, 'to desire,' since that verb is also found in Syria, and there would have an exact analogue in the name murūdīn, 'aspirants after the knowledge of God,' which is taken by al-Fihrist, and has even been used as a title of a sect.

The accounts of the Harranian system preserved by the Muslims purport to come either from members of the sect with whom the authors came in contact, or from Arabic translations of their sacred books. One of the latter was made by order of a qādī of Harrān, and, according to the account of the Fihrist, was widely read; of another, called the 'Book of the Five Mysteries,' he had come across a mutilated copy. A Harranian calendar was composed by Abū Saʿīd Wāhīb b. Ibrāhīm, the Christian contemporary of Ibn al-Nadim, who gives it in extenso; and another is embodied by al-Bīrūnī in his Chronology of Ancient Nations (A.D. 390 (A.D. 999), tr. Sachau, London, 1879, pp. 314–329). The Fihrist also embodies a list of Harranian gods, and some other matter of an analogous kind. A magical treatise called Ghaybat al-Sabda (A.D. 340 (A.D. 1048), also contains what is ostensibly a lengthy extract from a Sabīan book. Finally, Shahristānī reproduces a lengthy dialogue between the Sabians and the Hindu.

From a comparison of these documents, Chwolson inferred that the Harranians were, as the Christians called them, pagans, i.e. a community who had retained a mixture of Babylonian and Hellenic religion, over which there had been superimposed a coating of Neo-Platonic philosophy (chiefly among the educated), while certain features, had also been adopted from one of the monothetic cults, possibly through the influence of the surrounding Muslims. This view perhaps harmonises the evidence before us as well as it is possible to harmonize it; yet the Muslim authors seem to call attention to certain features whichSab′ian shares with Islam, especially their daily prayers measured by inclinations and prostrations, which imply that they were a real sect, i.e. followers of a system founded by some person or persons, rather than that their worship was a survival modified by unconscious syncretism. The 'prophets,'
whom they professed to follow were Hermes and Agathodemos, whom they identified in Shahra-
stant’s time with Zeus and Idris (Zoech); these
names appear to belong to the Hellenic period of
Hellenic religion (G. Murray, Four Stages in
Greek Religion, 1912, p. 86).

Of the deities mentioned above, the most
authentic appears to be the list of gods, which,
however, is so seriously corrupted or mistranslated
that little can be made of it; in another account
the Harranians are said to sacrifice to the gods
of the seven week-days, whose names are partly
Babylonian, partly Greek. To these the sacrificial
animals were variously golden men, golden
shapes, the god of the jinn, the lord of the hour, the god who makes
arrows fly; the god Tawûs (or Tammtûs), who was slain by his master, who then ground his bones in a
mill, and scattered them to the winds; Haman, the
prince, father of the gods, the prince of the
jinn, the greatest god, the god North, the lord of
fortune; etc. The account of their sacrifices
contains much that is incredible; the sacrificial
animals were, according to it, in many cases burned
alive; and on one day they would sacrifice a child,
whose flesh was thoroughly boiled and made into
cakes, which were then eaten by a certain class of
the worshippers. On a particular day they prayed
for the destruction of the Mosque of Harrân, the
Christian Church, and the Women’s Market; to be
followed by the restoration of their kingdom.
It seems clear that the calendar is the work of an
enemy of the sect. The story, however, of the
human sacrifice appears to have been brought up
as frequently as the modern accusation of the
same kind against the Jews. Dionysius (loc. cit.)
asserts that they annually entrap a victim, whom,
whom, after keeping for a year, they decapitated
with a view to divining by his head; and this story
is separately told in the Fihrist, where, in lieu of
decapitation, a bull’s head is said to have been
brought to the priests and then thrown to the
sheep that the head came off. The victim, according
to this account, was a person who displayed
“mercurial” qualities, which are explained in the
Ghayat al-Bakim. In the story of the Fihrist one
of their victims succeeded in escaping and invoking
the Muslim authorities, who severely fined the
delinquents; we may, however, be sure that the
practices described in this calendar would never
have been tolerated by the Muslim rulers. Al-
Biruni’s calendar agrees in some respects with that
of the Fihrist, but contains many more names.
The chief accounts agree in making the Harranians
pray towards the north, and fast for thirty days,
during a period between February, March, and
April. They had a law of purity resembling in
several respects that of the Jews, and they had a
table of un lawful meats, wrongly identified by Ibn
Hamm with that of the Qur’an, since they tabooed
the camel.

Most of the accounts make star-worship a chief
characteristic of the Sâbi’an system, and in the
magical treatises published by Dory they are
credited with an elaborate astrological theology.
As, however, the author gives reasons why no
Sâbi’an can ever divine the mysteries of his faith,
the authenticity of this document is self-condemned.
The Book of the Five Mysteries, from which ex-
tracts are reproduced by the author of the Fihrist,
appears to be the book, in which there are for the
confirmation of the deities and responses repeated by the khatûn (priest)
and a congregation of youths, apparently identified
with the Prophet (as uncertain word, which may
be masc. or fem.); it is thought that the word is so
poor that the author of the Fihrist suggests that the
translator was either a bad scholar or translated
literally.

Mas‘ûdî and Shahrastanti treat the Sâbi’ans as
philosophers rather than as pagans; besides temples
to the planets, which, according to Mas‘ûdî,
were in a variety of geometrical figures, they had
temples of the Chain, Matter, and the Soul. In Mas‘ûdî’s time
only one temple remained—that of mây-xûr, ‘the
great goddess,’ which, however, the Muslims sup-
pose to be dedicated to Abraham, and therefore
in the Qur’an Asar. The knocker of the door
bore an inscription in Syriac characters which
Mas‘ûdî was told meant ‘Whose knows himself is
religious,’ supposed to come from Plato. He also
tells of a ceremony of initiation undergone by the
Sâbi’an youths in the vaults of this temple, similar
to one described in the magical treatise, the number of
Shahrastanti’s ‘Debate’ makes the Sâbi’ans defend
by metaphorical arguments their practice of approa-
ching the First Cause indirectly by sacrifices and
prayers to the intermediaries, who are the powers
attached to the celestial spheres.

Many works by Sâbi’an authors are still extant,
but they appear to throw no light upon their tenets.
Their famous man of science was Tabû b.
Qurrah (A.H. 211-288 [A.D. 829-903]), who trans-
lated various Greek scientific works into Syriac and
Arabic. Equally distinguished as a secretary of
state was Ishrâm b. Hûlâl (313-384 [925-994]),
many of whose letters and poems are preserved.
We learn from his biography (Yâkût, Dict. of
Learned Men, ed. Marçouly, 1910, i. 284-306)
that the fellow profession was medicine, as was
the case with other Sâbi’ans of note. Ishrâm was
famous for his accurate acquaintance with the
Qur’an—a qualification indispensable in his posi-
tion. The private letters of this personage do not
appear to differ in their religious expressions from
those of professed monothists.

Until some discovery is made of genuine works
belonging to the sect, their origin and tenets must
remain obscure. A certain amount of veracity is
attached for the Syriac words which they contain;
and it is noticeable that some Muslims call them ‘Chaldeans’
and others ‘Chasdeans’ (so Pahlavi ‘Chast,height’,
† 606 [1200]), which perhaps was a title that they
assumed. The polonic put in the Qur’an (vi. 74-
83) into the mouth of Abraham, who endeavours
to convert his father from the worship of idols, and
himself repudiates the worship of the heavenly
bodies, bears a curious likeness to that which
Shahrastanti ascribes to the ‘Hânîs’ in their reply
to the Harranian Sâbi’ans.

LENNARD.—Besides Chewbacca’s work mentioned
above, there is text and notes of the extract from Qur’an 25:43 by
Dory and du Goeau, in the Attle du cimetière de l’Ori-
entalistes, Leyden, 1868, ii. 392 ff.

HARTMANN.—See PREISHEIM.

HARVEST.—The ceremonies and observances
of primitive races before, during, or after harvest
belong to a group of customs which have gathered
round the critical seasons of the year. The exact
date at which such celebrations or ritualistic
observances are carried out varies according to
the character of the community. Among tribes whose
chief occupation is hunting, the opening of the
hunting season will, as a rule, be found to be
marked by a kind of dance and the securing of a
plentiful supply of game and the success of
the hunters. In agriculture, the most critical
season to the primitive mind is the time of sowing.
This period is one of intense activity, in which
and practices intended to ensure the growth
and fertility of the crop. As the year goes on, various
means are employed to influence the occurrence
of natural phenomena or to avert the evil conse-
quences of untoward conditions, such as an inadequate
rainfall. Harvest observances, though in their most obvious aspect in a civilized community they celebrate only the turn of the year and the fruition of the labors of the preceding months, depend, to the primitive mind, on the religious observances and the rites of the earlier stages; and consequently the harvest is not simply an occasion for rejoicing, but a time at which natural forces have still to be propitiated.

Taking harvest rites as a whole, the essential elements resolve themselves into three: (1) propitiatory rites; (2) observances to secure fertility; (3) communion, and the offering of firstfruits, usually accompanied or followed closely by a feast, a period of licence or rejoicing, which in the course of development tends to become simply a celebration of the end of the labours of the year. These elements do not necessarily all appear in all harvest practices, and are often distinguishable. A rite may exhibit features which would justify its classification under more than one head.

1. Propitiatory and cogitate rites antecedent to the harvest.—In all ages a spirit which manifests a soul or spirit to objects both animate and inanimate, the act of destruction involved in plucking fruit or killing an animal for human consumption, is peculiar to both the races that habitually eat spirits of the animal or vegetable world must be propitiated to avert the evil which would otherwise inevitably follow. In the case of corn, which impresses the mind merely by the regularity of its growth and the effect of space it gives, the feeling of danger is intensified by the fact of human intercourse with the plant being in course of operations, as well as by the organized and prolonged effort required to secure the crop. This deduction from the general character of religious beliefs and practices of people is fully borne out by their practices at the opening of the harvest.

Among the ancient Egyptians, the reaper, after cutting the first few blades of corn, sprinkled for the impiety of his act by beating his breast and uttering the lament which the Greeks called the Istanum (Ps. 73. 5). In Greece (Hes. v. 751) a celebration of vegetation was bestowed in the Lycoio song, a song sung over the corn-stack (Tolos), and in Babylon the death of Tammuz (obviously, from the legend, a personification of the corn) was bewailed by the women. The feast of Demeter (Chloé), which was held at Athens on the sixth of Thargelion, at about the time when the corn was ripe, was a solemn feast of purification and of marshalship, and probably was originally the feast of atonement and propitiation before the gathering of the harvest. The carrying of the corn to the Nandi woman, when she goes with her daughters to pluck the first corn (obviously her right), is enjoined by the same motive; the plucking is a solemn function with a regular ritual, and the crop as a whole is consecrated and accepted by the spirits (see A. H. Haddon, The Nandi, Oxford, 1906, p. 48). Among the Thunguli of Manipur, no work other than that of attending the crop is done from the time of the first germination, or even before, except the setting of the hay. Among the Madras group of the same district, a season lasting for four days is observed before the beginning of the harvest (C. C. Munden, The Naga Tribes of Manipur, London, 1911, p. 207 E.). Any action which might prove prejudicial to the crops is thus prevented.

A ritual must be observed at the time of plucking the first fruit or seed, before the real harvest begins, to secure a plentiful crop and to avoid evil to the spirits (see A. T. F. H. Ross). Another indication of the sacredness of the corn is that the first sheaf is sometimes cut by one specially designated. In England, among the Burghees, the first sheaf is cut by a Kromba, a man belonging to a tribe whose members are under an age-agreement. Among the Kings of Southern India, the man who has to cut the first blades of corn is chosen by an astrologer, and in the ceremony which follows he is not allowed to mix with other members of the tribe until the last mouth of the blades he has cut has been sown. In one part of Yorkshire, the first corn was cut by the vicar, and in another part the vicar was asked.

(1) The corn-spirit.—Customs connected with the gathering of the harvest and the threshing of the corn which are practised, or were practised until comparatively recent times, are closely connected with the fertility of the crop, and particularly with the survival of a belief in a spirit irremovable in the corn, or closely connected with it. The existence of this belief is affirmed by the epithets corn-mother, corn-mother, and corn-spirit, according to the nature of the crop. In Lithuania it was believed that an old woman sat among the corn; both in Germany and in Poland, children were warned against entering the cornfields or throwing down the corn because of the 'corn-mother.' The corn-mother is sometimes identified with the corn-mother, and the children are warned against entering the cornfield because 'Deak sits among the corn'; the last sheaf is sometimes known as 'the Dead One,' and in children's games played in Transylvania Death is represented by a child dressed in maize leaves. At Dinkelsbühl in Bavaria, the corn-mother was said to punish the farmer for his sins by giving him a bad harvest.

The precise character of the beliefs is still more clearly indicated by customs followed at various stages of the work. The spirit is supposed to reside in the last sheaf of corn, the object of the reapers or threshers to drive it away or catch it. In Hanover, the reapers beat the last corn with sticks until all the grain has fallen from the stalks, when the corn-spirit is said to have gone. A more common practice is to make the last sheaf of corn into a doll—the corn-mother. At Dantzic, the doll is brought home in the last waggons. Frequently the doll is dressed in women's clothes, as in Holstein. When the corn-spirit is conceived as an old woman, the doll is made by one of the elder women, but when the corn-spirit is thought to be young, as a maiden, it vitally usually falls to the lot of a young girl. This presents an analogy to the Mexican belief that the corn-spirit aged as the crops grew and approached maturity; victims of appropriate age were offered at different seasons, varying from young children at the first growth to old men sacrificed at harvest-time. At Bruck in Styria, the ideas of youth and age were combined. The doll was appropriately bound, usually by the oldest married woman under fifty in the village, but the finest ears of this sheaf were picked out to make a wreath for the prettiest girl, who carried it to the farmer. The corn-mother was either placed in the barn at once or carried on a pole behind the girl who took the wreath to the farmer, and then placed on a pile of wood to form the centre of the harvest supper and dance; it was afterwards hung up in the barn until the threshing was over. Sometimes the man who cut the last sheaf of corn from which the doll was made was wrapped up in the corn-mother and carried round the village by the other reapers. The wreath was then suspended in the church on the following Sunday, and at Easter the grain was rubbed out by a seven-year-old girl and scattered among the young corn, while the straw was given to the cattle at Christmas to make them thrive.

The customs described present, on analysis, several elements which are closely akin to the animistic beliefs of more primitive races. Briefly, these elements may be stated to be: (a) the immutability of a spirit in the crop and especially in the last corn cut, to which material expression is frequently given by an emblem or figure, usually human; (b) the conception of maturity in the corn-spirit, accompanied, however, by a parallel conception of youth; (c) the idea of sympathy, or connexion in the performers of certain rites, shown, for instance, by the age of the binder of the doll and the weaver of the wreath; (d) the function of a sacred character of the act of cutting the last blades of corn, the reaper being sometimes identified with the corn, sometimes treated as though guilty of a crime (e) the vitality of the corn-spirit, as signified by the preservation of its material representation, which ensures fertility in the future when given in part to the cattle and in part mixed with the crop of the following year.
The ritual of Osiris and Isis in ancient Egypt and the myth on which it was based, as well as the epithets Ματρίση, Τελεσφορέα, Καρποφόρα, applied in Egypt to Penia, Meryt-Amen, Edfu, and Dendera, are the kernel of worship of Gaia, Demeter, and Kore, seem to point to an earlier belief, in which these deities were identified with the corn in the same manner as the 'corn-spirit' of more primitive races—a phase in a general belief in a vegetation-spirit out of which grew the worship of Adonis, Attis, and Dionysus, as well as of the deities more specifically connected with the corn (see G8 ii.; and G9 iii. chs. i.—ii.).

(2) Various forms in which the corn-spirit is conceived.

Among the Slavs, the last sheaf is known as the 'Wheat-mother,' the 'Barley-mother,' the 'Oats-mother' or 'Barley-mother,' the 'Rye-mother,' or the 'Palm-mother.' In Sweden, a branch of the oak is thrust into the sheaf and tied with white ribbon. In Germany, the last sheaf is known as the 'Granny,' its special character being that it is not frequently the case, not merely by a name being given to it, but also by a special manner of cutting it. In the Low Countries, the sheaf is placed in the barn during the winter, and is cut in the spring by the reapers through its middle. In Switzerland, the last sheaf is called 'the buffalo sheaf.'

(3) Connection between the last sheaf and the reaper.

Reference has already been made to the custom whereby the last sheaf is hurled or made into the form of a puppet by a woman of an age appropriate to the conception that it is set up of an old or young woman. By an extension of the custom, the puppet is frequently known by the same name as the doll, or is specially identified with it.

In East Prussia, the reaper who cuts the last blades is said to get the grandmother. In Sweden, at Allhamb, the man who cuts the last sheaf and the last strip of corn is said to be the 'old woman.' By association, the reaper is said to have 'the dog.' By Neumasse (West Prussia), both the last sheaf and the last strip of corn are called 'the old woman.' By Neumasse (West Prussia), both the last sheaf and the last strip of corn are called 'the old woman.'
HARVEST 553

Wolf has been driven out by the last stroke of the fall, a man is led through the village with a chain round his neck, as though he were to be punished. In the morning, when the man is at the cornfield, the wolf's skin is laid about in a similar manner at Christmas.

The custom of burning a live cock, pig, or ox on the harvest field is said to be a transference of the spirit of the corn to a material object.

2. Fertility charms. The importance of an adequate rainfall for the proper growth and nourishment of the crops is so great, it is not surprising to find that many of the customs connected with the harvest should appear to have as their object the securing of such a rainfall by means of sympathetic magic. The custom of dressing the corn-mother with water, as it was carried home, was an instance of such a rain charm.

In Neussan, both the sheaf and the reaper who cut it out, when dressed with the sheaf, were washed with water. In Poland, the woman known as the Jaka was dressed as she was carried home. Sometimes men were dressed behind the farm-gates with pots of water ready for the home-coming. In Rutlandshire, where children were carried on the last cartload of the hay, a regular pitched battle with water and apples was fought between the maidens and the men; from the gate of the farm until the wagon came to rest in the barnyard (Brand, loc. cit.). In Bulgaria, the corn-effigy was thrown into the fire. It had been carried round the village.

In Carlisle, the man who has been wrapped in straw to personate the corn-mother on the threshing-floor is rolled in a broom. The custom of dressing the men, at which the Athenian women planted and tended with special care, has been mentioned before. A custom which is peculiar to the Barnsley district, in which the Corn-mother is dressed in live corn—practices intended to secure the fertility of the crop by sympathetic means—will be mentioned later.

Fraser (GB, ii. 225) suggests that the throwing of the corn-mother into the river may be a survival of the practice of throwing the body of a human being into the river. In the custom of burning the 'Ceres' at Auxerre after the harvest dance and of burning the corn-mother in Bulgaria and scattering the ashes recalls the practice in Egypt of burning a human victim and scattering his ashes on the fields to secure the fertility of the crops.

Many customs are intended to secure a plentiful crop in the following year.

In Westphalia, the 'harvest-mother' sheaf is made heavy with wheat, and in the hope that all the sheaves in the next year will be equally heavy. At Alt-Pillaus, eight or nine sheaves are bound together to make one huge sheaf. In Scotland, in the Isle of Lewis, the 'old wife' is dressed up, her dress including an apron tied round to form a pocket, which is stuffed with bread and cheese and a stick.

Frequently it is believed that the same object will be attained by preserving the material emblem of the last sheaf and carrying it to the harvesters, whether they are men or women. At Guildford, in the east of England, the last sheaf is kept in the barn until the next reapers enter the farm. In Scotland, the last sheaf is known as the 'old' and it is supposed that it is the sheaf of corn in the barn that is kept until the next harvest.

The custom is supposed to live throughout the year; and the practice of mixing part of the grain from the 'corn-maiden' with the seed ensures the presence of the spirit in the crop of the following year.

On the Skirian farm, the wreath which formed part of the last sheaf and had been kept through the winter is scattered among the following crop; its influence on the well-being of all forms of life is shown by the straw being placed in the fodder of the livestock. In Tarnow, in Galicia, the wreath is mixed with the seed corn. In the north of Scotland, the 'old man' was given to the cattle on Christmas morning, at Balnhidder to a mare in foal, or the oldest cow. On 1st January, the 'old wife' is kept throughout the winter. When the man or woman is ploughing, they carry the grain taken from her in their pockets, and give it to their horses to feed on as a sort of sacrifice to the corn.

The marriage procession in Bolland is obviously intended to bear on future fertility, as is the custom of mixing part of the grain from the winter, buried in the fields from seed time to harvest to quicken growth. The old Frenchmen suspended a goat skin in the field from sowing time to harvest to stimulate the growing of the corn; in Upper Bavaria the last sheaf is called the 'goat.' In the course of the maize harvest dance of the Alkays, in which all the people in the village dance and the leaves, a small image of dried clay was unwrapped from banana leaves and held at the level of the face by the dance of the corn-mother for adoration. It was then put away in its usual resting-place—a store of flour (W. S. and E. Boulenger, With a Tobacco People, London, 1910, p. 180). At the close of the Nandi harvest ceremony, after the old man has eaten a pregnant goat, the women take two pheasants from the nearest nest, one of which is kept throughout the year in the water jar and the other in the granaries. In the Malay Peninsula, where the 'rice-child' and the 'rice-mother' appear together, the 'child' is kept to be mixed with the seed in the following year. The Chams of Biah-Tahan, Indo-China, keep three ears of corn to form three burros in the 'field of secret villages' in the following year. A custom which bears some analogy to the 'child' or 'rice-mother' of the Malays appears in Normandy, where a small sheaf is wrapped up inside the big one. In West Prussia, a simulated birth takes place on the field. With this may be compared the legend in Greek mythology of the intercourse of Demeter and Iasion in a corn-field, which resulted in the birth of Trioun. At Dijon, where 'beast's' nest and corn and the site of the ancient corn-market is the field where the reapers are wont to pick a sheaf and eat the first of spring. In Barry, the corn-spirit is born on the field as a cow-calf.

On the other hand, the 'bag' is sometimes passed to other farms. In some parts of Pembroke, after the 'bag' has been cut by the reapers in their stocking cap and with the, 'corn-mother' in the bag, it was taken, usually by the ploughman, to the field of a neighbour, where the work was still in progress, and thrown at the foremost ploughman. The ploughman immediately raises the bag and runs away, pursued by the reapers working in the field. In parts of Scotland both an 'old wife' and a 'corn-mother' may be kept; on the one hand, this is the result of a competition between two sets of reapers, those who themselves get possession of the 'corn-mother' whilst the others get the 'caulich' or 'bag.' According to another account, the competition is between two ploughmen, and the 'caulich' being passed on from farm to farm and retained by the farmer whose harvest was completed last. In North Uist the 'caulich' was put on the thresher and the burning corn of lazy crofters. The same custom was followed in thrashing; e.g., in Dunbartonshire, if the last sheaf was cut by the crofters the last sheaf was taken to a farm where the thrashing was still unfinished.

Sacrifice and fertility. It appears that cutting or binding the last sheaf entails certain penalties, while the farmer who finishes his harvest later than his neighbours is in some districts punished with the custody of the 'bag.' The obvious explanation is that the consequences are decreed by rustic wit for lack of dexterity. On the other hand, the close identification of the last sheaf and the reaper, when viewed in the light of other practices, suggests a less obvious reason. In the Romani and in other parts of Europe, when all the hay has been cut, the 'old hay-man' is said to have been killed. In Bavaria, the reaper who cuts the last sheaf is said to have killed the 'old man.' In Lithuania, 'Robe's' head is cut off; sometimes a straw pyramid is put under the last sheaf, and the 'old woman is struck dead.' A stranger who crosses the field is pursued and tied with straw-bands, and must pay a ransom before he is released, or the farmer himself may be bound when he enters the field. In Mecklenburg, the reapers advance in a body towards the thresher, shouting and sharpening their scythes as if preparing for a sacrifice; and so also on the threshing-floor. At Wiedingharse, in Schleswig, any stranger on the threshing-floor is nearly throttled with the flail, which is put round his neck as if he were a sheaf of corn.

The custom of human sacrifice to secure the fertility of the crops appears to have widespread. In the earlier stages of the practice the victim appears to have been regarded as the embodiment of the corn-spirit. There was nothing to be done but to be the reason for scattering his ashes on the field, or throwing his body in the river; while the solemn feasts at which the victim's body was eaten by the ancient Mexicans was supposed to be a fertility rite, and that they also believed that by partaking of the body of the corn-spirit they ensured a good harvest. It has been conjectured that the head-hunting practices of the Naga of Manipur may have been a custom of setting up a straw figure at which they
shoot with arrows at certain times, may be connected
with agriculture. When the figure is hit, the one who hits it in the head, it is said, will take a harvest, but if it hits it in the stomach will have good crops (T. C. Hodgson, 110). The connexion between human sacrifice and fertility is also
found in the customs of the Indians of Guayaquil of scattering human blood on the fields at the time of sowing, while at the Mexican harvest a criminal was crushed between two falling stones when the firstfruits were offered. The Mexicans, as already stated, offered a series of sacrifices to
make the maize thrive, culminating in the sacrifice of an old man at harvest time. Among the
Pawnees and Sioux, human sacrifice was offered in the spring; and, in one case described among the
latter, after the heart of the victim had been taken, the flesh was cut in small pieces and scatter-
ed on the fields.

Instances of human sacrifice to secure good crops are recorded in Western Asia, among the Egyptians and among the Bushmen and other races, usually in connexion with the sowing of the crops, or at the time of their early growth, to promote fertility. Among the Khonds, part of the victim was buried as an offering to the earth-goddess; if the victim wept copiously, it was a sign of a plentiful harvest. (O. M. Roscoe, Memorials of Services to India, London, 1866, p. 115.) Among an agricultural tribe in Uganda, the women dance at about the time of the harvest. The Tahitians offered a human victim at the yam harvest, placing it head first into a hole in the ground. (J. A. Hille, Tahiti-speaking Peoples, London, 1887, p. 280.)

Great ritual and ritual preserves traces of human sacrifice in connexion with fertility. The legend of Agamemnon tells how he was offered down the precipices of the Acropolis; it has been suggested, may have consisted of a primitive custom of casting a stylus of the vegetation spirit down a steep place. In a similar fashion, later concorded to Khonds, a human victim was sacrificed at the altar by the Brahmins. A legend at Habi, near Besancon, tells how a head, thrown into a river, caused the current to move. (J. G. Frazer, The Golden Bough, 1922, p. 1140) speaks of water springing up whenever the blood of the victim dripped (cf. p. 113, 114). The ceremonial of the Bruneians and other races was of another sort: an ox for a human victim at a 'firstfruits' ceremony.

Frazer (GB 3, 292 sq.) suggests that, when the European customs are considered in the light of the practices followed by primitive races, we are justified in concluding that it was the practice at one time in Europe to offer a human sacrifice on the harvest field, the victim being identified with the corn-spirit. The penalty paid by the last reaper was death, as, he being nearest at the time the spirit was driven from the corn, it would be natural to conclude that it had entered into his body.

Communion, harvest supper, firstfruits, and the corn festival. It remains to consider the question of the harvest supper and the offering of firstfruits, which are closely connected, although by no means identical. Attention has already been called to the custom that the 'harvest maiden,' in which a man or woman is sometimes wrapped, should be present at the dance or supper which usually follows the ending of the harvest.

In Le Vendele, the 'Cere,' before being torn to pieces and burnt, was the centre of the dances. In the North Riding of Yorkshire, the 'mole doll' was presented at the meal supper. In Lewes, the farmers and reapers drink to 'the one that helped us with the harvest.' At Daventry, the old man was carried to the supper, and a portion of everything was given to him; but this was eaten by the woman who bound the sheaf, had it as her partner at the supper and dance, and was known by the same name for the remainder of the year.

The presence of the harvest figure at the supper, and the importance attached to it, suggest something more than a mere feast of rejoicing at the consummation of the year's work. Instances have already been quoted of the killing of an animal, such as a cock, a pig, or a bull, on the harvest field as an embodiment of the corn-spirit. The bodies of these animals were sometimes given to the reaper who killed or caught them; sometimes, especially in the case of a larger animal, its flesh was eaten at the harvest supper, as in the case of the goat killed at Gretnahoe. As Dijon, the ox killed on the harvest field was partly eaten at the supper, and partly pickled and kept until the spring. In Bavaria, the man who made the last stroke in threshing had to carry the pig to a neighbouring barn where the threshing was still going on. He ran the risk of being beaten, but at the harvest supper he received a number of dishes in the form of pigs.

From the numerous instances of eating the body of the slaughtered animal, bearing in mind their special relation to the harvest and the significance of other customs, it would not be unreasonable to conclude that the harvest supper is a survival of a form of solemn feast, of which the great festivals in Greece connected with the worship of Demeter and Kore, the Halos (the threshing-floor festival), and the Eleusinians were probably a development. Hippolytus (Philosoph. v. 3) says that in the Mysteries the Epoptes were shown the mystery of perfect revelation—a cut conceals the general use of the crops for ordinary consumption. (3) By a logical extension of idea the sacramental feast grows into an offering of firstfruits to the powers that preside over the crops. (4) The solemn ritual of the harvest meal is frequently accompanied or followed by a period of licence, in which the ordinary rules of conduct and respect for superiors are disregarded, or in which an inferior may even take the place and usurp the authority of his superiors. On this point it may be recalled that these changes of personality and irregular conduct are usually adopted for purposes of disguise, and that, even when such saturnalia are not the concomitants of ceremonies held at harvest time to drive away the spirits of the dead—as, for instance, is the case after the harvest among the Hos of Assam, and in the 'devil driving' of the Hindu Kush tribes, when the evil spirits are expelled from the granaries—the harvest is a critical period of the year when malignant influences may be expected to be especially powerful.

The harvest supper observances as a whole, taken in conjunction with the beliefs which underlie other harvest customs, point to an origin in a belief that the crop is taboo, and that to cut it or eat it is a dangerous act, of which the risk can be averted only by the process—familiar in the practices of magic—of a solemn covenant based upon a communion in which that which is feared or desired is brought into the closest relation with the one who is afraid. In this case, by eating the material manifestation of the dangerous element after special prayers, the primitive mind of the savage believes he becomes one with it and immune from its influence.

HASAN 'ABBAD.—A village and ruins in the Attaq District of the Panjab; lat. 33° 48' N.; long. 75° 14' E.; forming part of the great city known to Greek and Roman authors as Taxila (Tάξιλα), a close transcription of the Pali or Prakrit name Thakśalī, Skr. Ta$kśalī, 'hewn rock or summit' (MacDermot, Indians, who, by Ptolemy, London, 1885, p. 118 f.). It takes its present name from that of a Muhammadan saint, Bābā Hasan 'Abbād, who lived under Mīrā Bhārshā, son of Tāhir (Elliot, Hist. of India, London, 1867-77, i. 259; Asis-Allāh, tr. Blochmann and Jarrett, Calcutta, 1873-94, i. 516). The sanctity of the place—a list of the numbers of pilgrims—dates from early times. Hind Tejān, the Buddhist pilgrim of the 7th a.d., describes the tank of the Naga Rāja, or snake-king, Elapatra, to which, when the people went to rain or fine weather, they used to go in company with some Buddhist ascetics (arāṇakas), and, snapping their fingers, invoked the aid of the Naga, and at times offered fruits (Elliott, Hist. of India, London, 1868, p. 137). The place seems originally to have owed its sanctity to a holy spring which gushes into the fountain of the modern saint. Round this, as is common in India, a serpant-cult grew up, the Naga, or dragon, being supposed in particular to have control of the weather (Crooke, PB*, 1890, ii. 136 f.). The Buddhist legend was succeeded by a Brahmanical version; and that again by a Muhammadan story, of which the saint Bāhāwāl is the hero; finally, the Sikhs, connecting the site with a tradition of the warrior, came to the place fatigued and thirsty, invoked Bāhāwāl for a cup of water. The saint, indignant at the presumption of an unbeliever, flung at him a stone several tons in weight, which the gouris caught in the air, leaving the impression of his fingers on it, which are visible to this day. The whole series of legends is an interesting example of the manner in which a place, owing its sanctity to some natural feature, is adopted in turn by the followers of rival faiths. The importance of the place in Buddhist times is shown by the apeos, the priests and the remains of a temple discovered by Cunningham.

HASAN AL-BASRI.—Hasan al-Basri (Abd Sa'id) was born at Wadi 'l-Qura near Medina in A.H. 21 (A.D. 641-42), two years before the end of Quran, Oct. 610; he was at Basra, A.H. 91 (October—November, A.D. 708). Ibn al-Athir says that his age was then eighty-seven, in which case the date of his birth would be A.H. 23. Both his parents were originally slaves. His father, Ya'qub, was a native of Ma'arim in the neighbourhood of Basra, was taken prisoner in A.H. 12, during the conquest of Iraq by Khalid ibn Walid, and became a freedman of one of the inhabitants of Medina—of Zaid ibn Talhāt, the Prophet's amanuensis, according to some authorities. Tabari (922-300), the biographer of Hasan's father was Hāthib, and that he was a Christian, while al-Sha'ra'ī (Tabaght al-kubrā, i. 11. 13) declares that he was of Nabian extraction. These statements are significant, in view of the great influence which Hasan and his pupils exerted on the early development of Muslim theology. The name is most probably derived from that famous Egyptian mystic, Dhu 'l-Nun, who died in A.H. 245 (A.D. 859-60), is said to have been the son of a Nabian slave. Hasan's high reputation for orthodoxy was possibly gained, as Dovy has suggested, at the expense of his pupils, who gave currency to his speculations. At any rate, he was in touch with all the religious movements of the period, and must have taken a leading part in the theological controversies which were then agitating the Muhammadan world. We are expressly told that he disputed on the subject of free will (qadar), but afterwards returned to the monotheistic dogma (Ibn Qutbi, Kitāb al-ma'ārif, ed. Wustenfeld, 1850, p. 228. 12). A commentary on the Qur'an is ascribed to him (Brockelmann, Gesch. der arab. Literatur, Leipzig, 1911, i. 67); and he is said to have explained the meaning of Apostolic Traditions, whereas the younger generation were content with restating them (Qat al-qulub, Cairo, A.H. 1310, i. 147, line 6 from foot).

Whatever may be thought of the well-known story which attributes the origin of the Mu'tazilite school to a difference of opinion between the master and one of his pupils—Wael ibn 'Ata' or 'Amr ibn 'Ubad—there can be little doubt that in Hasan's circle the dogmas of Islam were freely discussed and expanded; it was this freedom that caused his activity as a teacher to have such fruitful results. But if, in fostering the spirit of inquiry, he overstepped the limits of traditional authority, the sayings and anecdotes recorded by his biographers show that his religion was intensely real. His ordinary demeanour was that of a man under sentence of death, and he looked so well he had been created for him alone. Like many of his fellow-Muslims, both men and women, he found in asceticism the only means of escape from the wrath to come. No man, in his opinion, deserved the name of theologian (fāqih) unless he had renounced the present world and fixed all his desires upon the future life. Muslim asceticism soon developed mystical tendencies, and Hasan seems to have gone some distance in this direction. It is asserted that he was the first pioneer of mystical science in Islam, and that he made it a subject of discussion, and explained its ideas in terms that were not used by any of his contemporaries (Qat al-qulub, i. 186. 2). He was the founder of the Basrī school of mystics, who maintained that the knowledge which, according to a maxim of the Prophet, it behoves every Muslim to seek consists in knowledge of the heart, and in a scrupulous examination of the thoughts that enter it, so as to discern whether they are spiritual or sensual, intuitive or intellectual (ib. i. 129, 16). Prayer-meetings (majālī al-dhaher) were held in his house at Basra (ib. i. 143. 18). Those who attended them were persons inclined to quietism, interested in communicating to one another their spiritual experiences, in studying the Qur'an together, and in conversing about religious questions. While it is easy to believe that Hasan, as Quhaibri and other Shi'ī writers mention, attached more value to inward piety and humility than to outward acts of devotion, like fasting and prayer, there is no evidence that he was a Shi'ī in the full sense of the word. He was driven to righteousness by the god of fear, not drawn, as the true mystic always is, by a spontaneous and irresistible rapture of Divine love. His character appears in a legend told by 'Abdu'l Ilah in the Ta'liqāt al-Ajwīd (ed. Nicolson, 1905-07, l. 87. 17). 'Uba al-Ghulam, one of his disciples, had crossed a river on foot, while Hasan himself remained behind, to prevent those who were afraid of being drowned and powerless to follow. Hasan asked him how he was able to work such miracles. 'For thirty years,' 'Uba replied, 'thou hast done what God commands, but I have done nothing!'

HASIDEANS—HATRED

REYNOLD A. NICHOLSON.

HASIDEANS, HADISMS.—The Hasidaeans (Hebrew or Aramaic, from Heb. חסיד, plural of חסיד, 'pious') were the precursors of the Pharisees. The names of the two religious parties have practically the same meaning: חסיד was 'pietist,' and 'Pharisee' (יוד, יוד, 'separated') means 'separatist.' During the period of the Seleucids in Palestine the Hasideans were the enemies of Hellenism, and opposed the introduction of Greek ideas and manners into Israel. As shown by the name they bear, they were an exclusively religious party; they were rigid zealots; they formed an arm's chief support of the Pharisees, a party of rigorists. In reality they were the descendants of Ezra and Nehemiah, who expelled the foreign wives; they continued the tradition of the Scribes.

As far as we now have information preserved concerning them enables us to judge, the Hasideans did not differ essentially from the Scribes. They were men completely devoted to the Law (םירש וֹנֵעַל, even so far as to take up arms in its defence when it was threatened by sinners and lawless men (1 Mac 2:53); but, as soon as proper means were restored, they threw aside their weapons, as their hands were better suited to handle the sacred scroll than to fight with the sword.

According to 1 Mac., the Hasideans played only a very minor part in the Maccabean war. The events which took place in Palestine at the beginning of the national revolt against the Seleucids show this very plainly. The high priest Menelaus, who had been put to death in 163 B.C. by command of Antiochus V. Eupator, was succeeded by Alcimus ('Aλεξιμος, 'Aleximos, 'Alexianus, Αλεξιμος, Yāqūn), who was of priestly stock, but did not belong to the ruling branch of the Onias family. Josephus (Ant. xx. x) tells us that Antiochus Eupator offered his services against the patriotic Jews who were trying to shake off the Syrian yoke. The king, we are told, entrusted him, along with his general Bacchides, with the pacification of Judaea, and at the same time raised him to the high priesthood (1 Mac. 7:9). It is at the time of this mission that the part taken by the Hasideans appears clearly. The comparative study of parallel fragments from the first and second Books of Maccabees sheds clear light on their attitude in the national revolt. If we had only the account in 2 Mac., we should be left in no doubt that the Hasideans took part in the national war, in spite of the obvious errors contained in the narrative. It is there stated that 'being called by Demetrius Soter into a meeting of his council and asked how the Jews stood affected and what they purposed, he [Alcimus] answered thereto: 'Those of the Jews that he called Hasideans, whose leader is Judas Maccabees, keep up war, and are righteous, not suffering the kingdom to find tranquillity' (2 Mac. 14:10).

Thus, according to this account, the Hasideans were under the command of Judas Maccabees, and are represented as the promoters of the war.

In 1 Mac., on the other hand, the Hasideans are the peace party; it was to obtain peace that they sought Bacchides and Alcimus, the deputies of King Demetrius. This is how the author describes that mission:

'And there were gathered together unto Alcimus and Bacchides a company of scribes to seek for justice (ὑπερφύσια ἕσθις). And the Hasideans were the first among the children of Israel that sought peace of them; for they said, "One that is a priest of the house of Aaron is come with the forces, and he will do me no wrong."' (1 Mac 7:14).

The Hasideans, then, were not the instigators of the war. In reply to their request for peace, the royal envoys, thinking they would make an example, had sixty of them put to death. Thus, according to 1 Mac., the Hasideans, grouped round the Scribes (from whom the Pharisees also sprang), form an independent party, acting in opposition to Judas Maccabees and his followers, as they acknowledge Alcimus not only as high priest but as the lawful representative of Syrian policy.

From the seemingly contradictory texts which we have just quoted it is easy to understand the rôle of the Hasideans. At the outset the Maccabean war was essentially and exclusively religious: the Jews were fighting with the Syrians to defend the Law endangered by the persecutions of Antiochus IV. Epiphanes. Hence the particular and even rigorous character of the Hasideans, a very rigid and exclusively religious party, in the national revolt. The religious aim pursued by the patriots was attained on 25th Chisleu 152, when Judas Maccabees purified the temple defiled by Antiochus Epiphanes, and restored the Jewish religion. The treaty of Lydda (162), which ensured the religious liberty of the Jews, thus gave full satisfaction to the Hasideans, who are not again mentioned among the belligerents. Henceforth the Maccabees alone and their soldiers continued the struggle against the Syrian king and for the political liberty of the country. We hear nothing more of the Hasideans, and we have every reason to believe that those forerunners of the Pharisees became blended with them.

In any case an incident which happened during the reign of John Hyrcanus I. (135–106 B.C.), and which exhibits Pharisaism and Sadduceism at that time fully developed and in direct opposition, proves that the Pharisees of that period, engaged solely with religion and its immediate interests, were indeed the heirs of the Hasideans. John Hyrcanus was entertaining the Pharisees at a feast, when one of the guests named Eleazar demanded that the royal high priest should lay down the priesthood and rest content with the civil and military power (Jos. Ant. XIII. x. 5). That is precisely the position which the Hasideans took up at the beginning of the national revolt—the absolute separation of the religious from the political domain.

See also ABASCATERIALISM (Jewish), vol. ii. p. 97 f.

HASTINAPUR (Skr. Hastinipura, 'elephant city'; or, according to other authorities, named after a mythical Raja Hastin).—An ancient city in the Meerut District of the United Provinces of India, situated on the Bāhr Gangā, or 'Old Gangā,' an old course of the river; lat. 29° 9' N.; long. 78° E. The legendary account of Hastinā will be found in the Pānini Pārta (tr. Wilson, London, 1864–77 iv. 139 f.), which states that the old city was washed away by the Gangās. This, the capital of the Kurava tribe, figures largely in the epic of the Mahābhārata. The buildings, which were probably built of clay and wood, have now disappeared; and nothing remains to mark this famous site but some shapeless mounds.

W. Crooke.

HATRED.—1. Psychological analysis.—The term 'hatred' designates a mental state of revulsion from some thing that offends either the sense of right feeling of ill-will, intensified by the desire to harm or injure or make a speedy end of the object hated. This applies in chief to hatred of persons by persons, at the root of which lies the desire to
destroy. 'Hates any man the thing he would not
call?' asks Shylock (March. of Ven. r. 67);
'whosoever hateth his brother,' says St. John
(1 Jn 3. 15) 'is a murderer.' But it applies also to
hatred of things. Thus, a person's desire to
inanimate objects, or beliefs, and the
like. Even when a schoolboy says that he 'hates
lessons,' he means not merely his feeling
of aversion to them, but also his wish to make
a summary end of lessons, if only he could; and,
likely enough, he gives embodiment to his wish
by tossing his books to the other end of the
room.

The intensity and duration of hatred in general
bear no definite or fixed proportion to the amount
of injury received. Much depends upon the nature
and temperament of the individual hated; and,
especially, upon his private estimate of himself,
and his sensitiveness to any affront to his dignity.

The outward corporeal expressions of hatred are
clearly marked and well known: biologist, psycho-
logist, and poet alike have duly recognised them;
and how they show themselves in the lower
animals, as well as in man, has been strikingly
brought out by Darwin in his book On The
Expression of the Emotions in Man and Animals.
The menacing attitude of the body, the lowering
countenance, the suspicious and unsympathetic
look, the leer, and the coldness of behaviour are
some of the modes of the object.' In the animal;
and these objective signs (it is important to observe)
have much psychological significance, inasmuch as
they react on the emotion proper, intensify it, and
induce them to live.

Hatred is not designative of a mere passing
mood (like some forms of anger), but of a settled
attitude or disposition, which pervades ill-will
and can hide its time and plan means for the
injury or destruction of its object. It must be
distinguished from antipathy, which is a merely
sentimental or constitutional dislike (for the most
part irrational) of an object, leading to shrinking
from or avoidance of the object but not to its
destruction—as we see, for example, in the
antipathy to poisonous crawling creatures which
affects many people.

Hatred attaches itself to the malevolent side of
human nature, and is to be classed along with such
reprehensible emotions and sentiments as
envy (q.v.), jealousy, revenge. It is essentially
anti-social and self-centred.

The justification for it is love (q.v.), and the
characteristics of the one are best seen in contrast
with those of the other. If, then, (1) we
view the two in themselves, we find that love is a
conserving and attractive force, while hatred is
destructive and repellant. Again, (2) regarded
from the side of the subject, love is a feeling of
pleasure on satisfaction with the person loved,
together with the desire to do him good or to pro-
mote his welfare; hatred is a feeling of dissatis-
faction with the object of it, mixed with pain but
frequently intensely pleasurable, together with the
desire to harm or to secure his ill-fare. Hence,
live clothes his object with all amiable qualities
and is apt to be blind to faults and defects; hatred
clothes its object with all detestable qualities,
and refuses to see any good in it. Further, love to a
person is prone to make him whom it entertains it well
disposed towards all whom (or with which)
that person associates—even towards his status in
society, or the nationality to which he belongs;
while hatred produces the exactly opposite effect.

No doubt the most effective of all the human
object of love is one great means of turning an enemy into
a friend (hence the supreme wisdom of the
injunction, 'Love your enemies, bless them that curse
you, do good to them that hate you!' Mt 5:44).

Hatred is prone to turn a friend into an enemy.
Love begets love, but hatred breeds hate. Once
more, (4) viewed as successive states, the two show
psychological peculiarities of a very interesting
kind. (a) If, from not one cause, we assume to
hate a person whom we have greatly loved, our
hatred will be intensified by the fact of our previous
love, and greater than if we had not loved before.
This, no doubt, arises in part from the fact that we have lost a source
of pleasure and are pained; but it involves also the
fact that we feel ourselves injured by unrequited
affection, and the further fact that we are chagrined
at having expended our affection on an unworthy
object. On the other hand, when we come to love
a person whom we previously hated, our love
will be proportionate to our previous hate, and all the
greater that hatred has preceded it. One reason
for this is that, in the circumstances supposed, we
are conscious of having got rid of a source of pain;
but two other things have to be taken into account,
viz., the newly-aroused feeling that by formerly
hating the person we have done him an injury or
an injustice, and the consequent desire to make
amends for this injustice. Again, (b) our love for
a person is apt to be diminutive, and, even, perhaps,
turned to dislike of him, if he does not love, much
more if he actually hates, the things and persons
that delight us; while community of likings or of
interests goes some way towards making us well
disposed towards one whom we hate.

All these are psychological facts, revealed in our
actual experience of life, which must be taken into
account by the ethicist in determining the values of
hatred, and by the legislator, who cannot with
impunity ignore the working of any human emotion
as it shows itself either in the individual
or in the community.

2. Ethical and religious aspects.—As a source
of pleasure, hatred has undoubtedly power. But
this does not necessarily mean that it is to be
ethically condoned and the development and
growth of it encouraged. On the contrary, char-
acter is one thing, pleasure is another; and it is
the function both of ethics and of religion to
emphasize the fact that 'the life is more than
meat,' and that the higher aspirations of man
his spiritual ideals count for most. Hence, the
psychological fact that the intensity of love may
be increased by the circumstance that we have
been previously hating does not justify the con-
clusion that therefore we ought to hate. For
if hatred is in itself deleterious to character, it
must both restrict the power of loving and lower the
kind of love. The increase of love that is de-
pendent on hate is an increase on the level of a being
to whom hate seems in itself desirable; but, if
perfect love ruled as between man and man, such
a conception would be impossible. Love would
then be greatest of all, because it implied the
abolition of hate and, therefore, substituted the
higher pleasure for the lower, or the highest
pleasure of all, from which the lower, having
degradation in it, is excluded. It is a matter of
quality, then, not of quantity or degree. Psychol-
ogical experience is not an infallible guide to
ethical and religious estimate.

(1) From the ethical standpoint, it is easy to see
why hatred, in so far as it is expended by persons
on persons (or even on the lower animals) is con-
demned. Its pleasure may be intense, but it is
too dearly bought. The consequences it entails
are far-reaching and disastrous. It lets loose
many of the most malignant of human passions,
such as retaliation and revenge—hence, we apply
to hatred such epithets as 'cruel,' 'deadly,' 'fierce,'
'vindictive'; it aims at injuring or even destroying
the object hated; and it cramps and distorts the
HA TRED

nature of the person harbouring it, blunting his sympathy and perverting his judgment. Above all, it is the mark of deepest alienation of love from another, ignoring the fact of the universal brotherhood of mankind, and transgressing the fundamental law of love, or mutual affection and mutual helpfulness, on which the existence of society depends. As its object in destruction, it repels instead of binding together, it dissolves instead of uniting things. That there is such a thing in man as a natural and legitimate resentment of injury received, ethics fully allows; and this, when rationalized, becomes the powerful thing we know as 'moral indignation'—which is the spontaneous protest of the conscience against wrong inflicted. But it demands more than a conscientious protest: it requires hatred—hatred, however, not of one man by another, but of everything that would interfere with the proper and higher development of a man's nature or of human nature in general; hatred, therefore, of vice or wickedness or wrong. But even then, while it enjoins hatred of vice, it will not allow hatred of the man who practices vice: it is the transgression, not the transgressor, that is to be abhorred. Hence the condemnation by ethics of misanthropy. 'Hatred of mankind' is selfish and abnormal, and destructive of the very idea of mankind, which presupposes society and, therefore, unity among the members; otherwise, it would be meaningless. In like manner, ethics condemns us to war in itself: war is man's hatred of man, with the lust of blood. Carried out to its full extent, it would become a state of universal hostility, which would speedily mean the extinction of the race. Once more, vindictive punishment is condemned by ethics because it is founded on hate, and is meant only to gratify the maligant nature of him who inflicts it. Men—

... (text continues)

In like manner, A. Bain strongly maintained the existence of malevolent affections as native to human nature, and the need of reckoning with them in ethics. He was brought out in his famous controversy with F. H. Bradley in Mind (reproduced in his Dissertations on Leading Philosophical Topics)—a sufficient account of which has already been given in art. ANGER. In that article also will be seen the bearings of evolution on malevolence.

There is still another point to be noted, midway between the extremes. As its representative may be taken Thomas Brown.

"We are formed to be malevolent in certain circumstances," he says (Philosophy of the Human Mind, Lect. iv.), "as in other circumstances we are formed to be benevolent; but we are not formed to have equal enjoyment in both." The moral affections which lead to the infliction of evil are occasionally as necessary as the benevolent affections. If vice exist, it must be loathed by us, or we may learn to imitate it. If an individual has injured another individual, there must be indignation to feel the wrong which has been done, and a need to avenge it. The malevolent affections, then, are evidently a part of virtue as long as vice exists; they are more accidental and occasional purposes of nature, not for her general and permanent interest in our welfare,... We are made malevolent, in a certain sense, and malevolence that may be said to be vicious when it operates for the terror of iniquity, that otherwise would flourish in unbridled darkness, through the world, but in open light, perpetuating its iniquities without shame or remorse, and perpetuating them with impunity. But, that even this vicious malevolence may not outlast the necessity for it, it is made painful for us to be malevolent even in itself.

What must determine as between these different views are clearly (1) consideration of what actually
HAWAII

obtains in our experience of human nature; (2) how this stands related to the ideal, which must test its value; and (3) determination of consequences, based on the fact of the solidity of man's religious belief.

WILLIAM L. DAVIDSON.

HAWAII.—The Hawaiian group of islands lies in the Pacific Ocean between lat. 15° 54' and 28° 15' N., and long. 154° 50' and 160° 30' W., and is of purely volcanic origin. On the Island of Hawaii the twin volcanoes Mauna Loa and Kilauea are in constant activity, while the extinct crater of Haleakala, on the Island of Maui, is one of the largest in the world. The natives are of pure Polynesian stock, and are regarded as the extreme northwestern outpost of this family, the Islands having been colonized in three great migrations from the Samoan group. The language has undergone little change from that of Hawaii, but is influenced by a Tahitian, New Zealander, or Samoan with little difficulty.

On this, E. A. Warner writes as follows (Men, Past and Present, Cambridge, 1896, p. 653), and, also Wallis-Gordon, Anthropology, 1899, p. 139; 'Migrating as an unknown date eastwards from Malaysia (for further details see art. Eretokoot, vol. v., p. 653), the Indonesians appear to have first reached the coast of the east New Guinea, and from there, and still more to the west, quickly confirmed to their extent the voyage, accompanied all their subsequent migrations over the Pacific waters. Thus we have, in Tahiti, Men, 1896, 1897, 1898; in the old capital of Balai, in Baratonga, Aes, "the land under the wind;" in New Zealand, Hawaiki, "the land where one came the Most;" in the Marquesas, Hawaiki, "the lower regions of the dead," so to return of Hawaiki, "return to the land of thy forefathers," the words with the vikings in Indian sacrifice were speeded to the eastward; lastly, in Hawaii, the name of the chief island of the Hawaiki group.

In conformity with this, the native belief obtains that the soul of a Hawaiian leaves the Island of Hawaii, and is conveyed to Samoa, and in Samoa a similar story turns the soul towards New Zealand. In Hawaii, oral tradition itself clearly gives the details of the first landing of the Samoans on the island, and, with all the available dates can possibly be given, this migration is supposed to have taken place as early as the 2nd cent. A.D. A Samoan chieftain, having thus been逐 submitting to his victorious rival, and, enhancing his followers in his remaining war-canoes, set his matting sails for the unknown ocean. The Polynesian knowledge of astronomy is remarkable, and it enabled them to steer a straight course; but it has been surmised that a chain of islands existed which have since been submerged by volcanic disturbances, and that the fugitives were thus able to obtain fresh water and supplies; otherwise, the journey seems well-nigh a miracle.

The Hawaiian counted time by the generations of their principal chieftains, beginning with Wakes, who was the semi-mythical progenitor of all races, and the Calendar (Polynesian). Events were counted thus: 'So it was in the time of . . . .' giving the name of the ali'i, or high chief. The length of a generation was 10 years; 100 years of 100 years each. Fifteen generations from Wakes is the time of Nau- ulu, and fifteen generations more brings the chief Ma'anui, 1823 years ago.

The native Hawaiian is tall, well formed, very strong, and possessed of great endurance. He is an expert climber, swimmer, and sailor. His national sports are sledding and surfing, while the dance is considered the necessary accomplishment of both sexes. In colour he is a dark reddish-brown. The nose is clear-cut and wide of nostril, the lips large, but well chiselled, the hair straight, abundant, and black, and their industry, as well as their docility, is indicated to the same degree by their resemblance to the British.

In the families of very high chiefs (ali'i ali'i), the practice of incestuous marriage was common, and was regarded as sacred, the offspring of brother and sister being treated with more than royal honours. The son was never allowed to shine upon them; and, if the shadow of a low-born vassal fell across their threshold, the offence was punishable by death. The tabu stick—a staff surmounted by a ball wrapped in white tapa cloth—was placed by the hut, and warned the passer-by that the ground was the possession of kings or priests, and must not be profaned upon pain of death. The tabu was strictly enforced, and is one of the most widely known institutions of the Islands. The royal colour was yellow; the next in rank was red. The king's badge of office was a feather cloak, made from yellow birds, fastened under the wings of the o, and worn with infinite skill and care into a web of coco-nut fibre. The lot, or wreath, was also of the precious yellow feathers. The red feathers of the vaka made wreaths and decorations for the nobility of the second order, though kings by no means disdained them. A few scarlet feather helmets are still preserved, which have almost the shape of the Greek helmet, but are larger and without the nose-guard. The hālau, or royal staff, was of wood, or wood and bone, topped by a tuft of brown, veined feathers. It was carried as a staff, or like the mass of European royalty. At a royal funeral, the hālau bearer never left the corpse until it was finally given in charge of the friend designated to give the final rites and concealment.

The greatest importance was attached to aristocratic birth. Kauai, the island where the first migration landed, claiming the greatest purity of blood. Upon coming of age, the children of a chief, boys and girls alike, were required to appear before the elders assembled in council, and there to recite their genealogy and the deeds of their ancestors. In this oral fashion, the history of each great family and the history of the race were preserved with surprising accuracy and wealth of detail. The neophyte's recitation often took two whole days to repeat; and, if he failed to be letter-perfect, he was remanded, to appear the following year before the historians to the tribe. Such a disgrace seldom occurred, for the child began his lesson in earliest infancy, and pride of race induced ardent study. At the close of the ceremony a feast was held; and the youth, now supposed to have reached maturity, received gifts, was permitted to enter the councils of the elders and to give advice, and was released from many of the burdens services devolving upon children. At this time the novice selected his own manakau, or household god, or was permitted to wear sacred clothes.

The natvres were never cannibals, as has been erroneously believed. Tradition tells of the coming of a tribe of exiles, probably natives in war-canoes, who took possession of a flat island in the north coast of Oahu; when the inhabitants discovered their custom of eating human flesh, they fell upon the little colony and exterminated it.

There being no metals in the Islands, wood was
used for weapons—clubs, spears, shields, etc.—and for such simple implements as were used in cultivating the 'aro' (a lily root), their chief food staple.

A peculiar feature of the King's warroads was the large shield which was carried under the arm, and which was used as a parry and a weapon. The shield was made of the stouter parts of the trunk of the fern, and was about two feet wide and one foot high. It was carried by a chain. The shield was used only in battle, and was not carried in the ordinary processions.

When, upon Captain Cook's first voyage, the natives learned the possibilities and powers of metal, it became the one object of desire; and it was owing to the theft of nails from the long-boat, upon Cook's return journey, that a sailor killed a native, bringing about the fight in which the explorer lost his life.

The moral code of the community was remarkable, owing to the importance of the woman. Marriage was dissoluble by mutual consent. In the families of chiefs, if the wife insisted upon a separation, the husband was bound to return her in all honour to her nearest of kin, together with the marriage portion she had brought, or its equivalent. Except for its aesthetic value, marriage apparently had no sacred aspect; but a wedding was, of course, an excuse for prolonged revels. The kava, the only fermented drink of the primitive people, was but slightly intoxicating; but of this day they drank large quantities, further excitement being supplied by hulas and the music of wooden drums and gourd rattles. Funerals were always attended by feasts and prolonged ceremonies.

The natives differ as to the propriety attending these feasts, some admitting that the utmost licence formerly existed, others denying the tradition. It is, therefore, probable that the customs varied in the different tribes. The body of a chief must not on any account fall into the hands of his enemies, nor be exposed to the ground. A chief, ensuring power over the soul; hence extraordinary precautions were taken. The flesh was cut from the skeleton and destroyed. The remains were then wrapped in mats, a few of the choicest treasures of the deceased were added, and the body, packed in a wooden casket, or hidden in a canoe bow, was carefully concealed by the closest surviving friend. Tradition tells of one devoted follower entrusted with his chief's body, who ground the bones to powder, which he mixed with the poi and served at the feast to the assembled warriors, thus ensuring his master's future safety. To make fish-hooks of the bones of a rival chieftain was the greatest insult one tribe could offer another; hence, between enemies every effort was made to learn the whereabouts of a grave, and put its contents to base use. Among the people it was, and still is, the custom to place the dead man, wrapped in tapa and matting, in the bow of his canoe, which is cut in half, and carried to one of the numerous cliff-caves. At present the custom is falling into disuse, owing to the desecration of graves by foreigners, who seem unable to feel respect for the dead, unless they are interred after their own custom.

With the exception of the hula, lava-built temples, the Hawaiians erected no permanent structures. Their houses were of palm or grass built to poles, with finely woven matting for floors and curtains, the Island of Niihau being famous for its weavers. The door must face no other opening, the belief being that, if such be the case, 'what goes out must immediately depart,' meaning that no rest or permanent residence is possible in a dwelling thus constructed. A raised platform, covered by a mat, served as the bed.

Very little privacy was maintained. The house was preferably built over or near a beneficent ha'aka, or household divinity, which might be personified by a stone, a tree, a bush, or any natural object. Any one might throw a stone, or the stones, or place a short of the protection of a spirit. Chiefs owned their own ha'aka, sometimes curiously painted logs, in which some resemblance to an animal or man could be traced; the sword became the hereditary treasure of the tribe into whose custody it was adopted. It was troublesome in legends for several generations, when it disappeared, having been buried with the chief who possessed it at the time.

The favour of the sea being most necessary to the community, it was invoked through Uku-pano, the shark-god, who, with his followers, could drive the fish to or from the shores, giving or withholding the daily food of the native. The red fish were the perquisite of royalty; but, if they ran within the reefs in great numbers, it was considered an omen of death in the family of the chief. The last recorded run preceded the death of Kalakaua, which occurred in San Francisco, 20th Jan. 1891, and which had been predicted by the natives upon the appearance of the fish several weeks before the event. Uku-pano is credited with occasionally adopting a human child, to whom he gives a portion of the grace which he has the ability to change into a shark at will. These sea-children possess the ravenous mien and dangerous temper of the god. The mark which Uku-pano leaves on the body is not the orifice below the shoulder-blades, garnished with teeth. The phenomenon is said to have appeared recently. Alagio, the sky-god, received little attention except among the cloud-diviners.

In ancient times the sick and aged were made away with. This fact has often been denied; but statements continually occurring in the native folk-lore make it more than probable, though the Hawaiian is kindly, gentle, hospitable, and given to generosity and self-sacrifice. Great importance is attached to the idea that the chief who has the privilege of wearing his malo, or matting loin-clothes, woven as beautifully as linen, is considered highly. Gifts of hair were highly considered, and were painted fine and worn with the white-tooth charm, shaped like an inverted question-mark, called pua'a. There is implicit belief that articles closely associated with a person retain something of the spirit of their owner.

The soul after death was supposed to journey to Kanai, and to leap from a cliff into the sea, descending until it fell into the under world, whose sky is the bottom of the ocean, there to lead an aimless and shadowy existence under the supervision of Milu—god of the under world, but spirits, particularly those of chiefs and hali'akau, or witch doctors, continued to haunt the earth, and the Hawaiians lived in terror of these visitations. Victims slain in human sacrifice reappeared and haunted the site of any temple fallen into ruins. These apparitions were always heralded by the rolling of poko, or temple drums. The ghosts set upon and immolated any man who chanced to cross their path. Evil spirits play a far greater part in the religion of the people than beneficial influences, good fortune, happiness being the direct gift of some particular local or household deity. The chief gods (aha) actually take a secondary rank to the ha'aka, or house-hold gods, who are the direct objects of prayer, in times of volatilities, who completely overmasters all others with her fiery presence.

The legends concerning her are very numerous. She shows herself now as a beautiful girl, whose eye must immediately depart, appearing at a feast, dances so divinely that her identity is guessed; now as a beg, demanding imposition; now as a witch doctor, sucking the wakker. The most famous story is of her defeat in sledding, when, furious at being beaten in her favourite sport, she turned...
Pulu, the literal pig-headed demi-god with whom she was contending, into a lava hill, together with all the onlookers. Strangely shaped lava-house in the district of Puwea are pointed out as the abodes of the illustrious members of that Coastland party. The sport resembles king-hunting, the stake boards being formed by walls of earth that have been turned, and highly polished; the smooth outlines of a steep hill is all the surface required.

Péélé always resented the penetration of any of her numerous disguises, and dealt out volcanic vengeance with savage impartiality. Fine spun lava, shedding from the molten throat of Kilauea, is known as Péélé's hair, and three small, extinct craters, leading from the ocean to the lake of fire, are known as Péélé's footsteps. When she rose, like Aphrodite, from the sea, she sought a permanent resting-place, but her first three steps mark descent into the earth, and the sea entered, forming a pool. At last, when the fourth foot step formed Kilauea, fire sprang about her feet, and the goddess had found her home. Péélé was supposed to be parted to the house of Kamehameha I. (born A.D. 1758), the first chiefman to bring all the isles under one rule. When, in 1861, the town of Hilo was threatened by a vast lava-flows from Mauna Loa, the Princess Ruth, great-granddaughter of Kamehameha the Great, made a pilgrimage to the devastad districts, cast gifts into the river, and implored Péélé, in the name of the ancient friendship of her race, to return to her vengeance; within an hour the lava ceased to flow, the city was saved, and multitudes of natives who had escaped to the station returned to the ancient beliefs.

The temples, or heiau, were seldom dedicated to any one particular deity (they were temples where any one of the gods might publicly be invoked), two of them the Pe'i-god, and a house of Pu'ukopono, being the exceptions. Heiau was an enclosure, usually oblong, formed by walls of lava rock. At the side, facing the entrance, was the altar. The house of the priest occupied one corner. Between the two, but situated in the centre of the square, was the case, or place of oracles, from which the prophecies were issued. Only the chief, or high-borne, might converse thus directly with the gods after suitable gifts had been made to the temple. The people had to sell to them the interpretation of the kahuna, who exercised a power only second to the chief. They claimed the power, known as aana, of praying to death any one who offended them. They could mine crops, cause storms, bring down pestilence, and interpret the will of the gods. They could cure all forms of sickness, hold communication with the dead, invoke the favour of the sea, and interpret the omens. The earliest traditions show that these oracles were taken chiefly from the clouds, the flight of birds, and the actions of fish. In later times, after the introduction of foreign animals, a black pig became indispensable to the diviner, both the condition of the vital organs when killed and his instinctive selection of some symbolic food being indications from which the future was predicted. Much also was to be learned of impending events by dissecting a fowl.

Bits of coloured cloth, or tapers, were supposed to concentrate influences. A kahuna employed to torment an enemy first sought to gain entrance to his hut, and there to hide some malefice charms. The next move was to obtain some portion of the victim—a nail-paring, a lock of hair, spittle, or anything intimately connected with his physical being, was procured and consigned to some isolated place, and there remained in continuous prayer and incantation, until the victim languished and died. In this case the doomed person suffered severely. If it was desired to inflict agony, a piece of cloth, containing earth from the doorstep and various charms, was beaten, stars drawn thereon, and disease and death and cures by reversing the method, though occasionally they administered some nostrums. Their influence continues to be strong among the natives, though every effort has been made to stamp out the Kahuna, and his practices.

The Pe'i-godness inhabited the two groves set aside for her; and her images, carved from the sacred trees, are supposed to have cost the life of their sculptors. Naturally all sacred groves and temples were protected by tabus.

The first attempt to collect and translate the more popular legends was made by King Kamehameha himself (Legends and Myths of Hawaii, New York, 1888), with the aid of one of the American missionaries. It has been claimed that in order to collect the stories, he departed from the traditional texts; but they are sufficiently close to the originals, in spite of their strange resemblance to the Greek hero-stories, to be seriously considered. The epic of the Hawaiian Helen is undoubtedly authentic, notwithstanding its analogy to the Trojan myth, carried out even to the taking of the city on the cliff by the rescuing party, according to the oracle that told them to besiege with moving walls. This was accomplished by the advance of the besiegers bearing wooden shields that touched each other, enabling them to press on under protection, and cleared out within to enable their bearers to scale the ramparts by their own weight.

The first Europeans to visit the Islands were shipwrecked Spaniards in 1527. In 1556 the group was officially discovered by Juan de Gaytan, on a voyage from the Moluccas to the Sandwich Islands, and received the name of Los Majos. In 1778, Kamehameha the Great was born on the Island of Hawaii. During this period continual intestinal wars distracted the people of the various Islands, until Kamehameha brought them under one government.

In 1778, Captain James Cook, commander of H.B.M. ships Resolution and Discovery, touched at Waimae, Kauai, whence he proceeded to Niihan, departing thence for the north. On his return in November, Cook sighted Maui, and, off Kona, entertained the chief on board the Discovery. On 11th Feb. 1779, Captain Cook was killed by the natives, in reprisal, the Hawaiian tradition tells, for an attempt to take an idol from a neighbouring heiau. On 26th May 1788 the English ships King George and Queen Charlotte touched Kona, and, in May of the same year, a French exploring expedition, under La Perouse, visited the island. In 1790, Kaiana-a-Ahuna accompanied an English captain on the ship Nootka to China. The relations with foreigners remained friendly until the wilful massacre of the natives at Oahu, Maui, by the American, Captain Meaford, of the Eleonora, resulted in a reprisal by the chieftain, Kamiamonou, in the capture of the tender of the Eleonora and the killing of all the crew, except an Englishman, Isaac Davis, and John Young, boatswain of the Eleonora. Davis became councilor, and received great consideration. In 1791, Kamehameha was proclaimed king of all the Islands. In 1792, Captain Van Rouver, with the Discovery and the Chatham, cast anchor at Kealakekua Bay, on his way north. On his return he presented the first live stock ever landed in Hawaii. He was well received by the natives upon his third visit in 1794; but in Jan. 1796, Captain Brown, of the Decoy, and Captain Gardner, of the Prince Leboo, with some of their men, were killed in Honolulu harbor.

Several revolts against the power of Kamehameha were suppressed. In 1816 the Russians arrived, entrenching themselves in the forts at Hauan and Waimae, and in 1818 they ejected them, stronghold at Honolulu. The Kuriok, commanded by Captain Kotzebue, the first battleship to enter that harbour, brought reinforcements to them
there. In the same year the national flag, designed by an Englishman, was adopted. In 1819, Kamehameha I. died and was succeeded by his son Kamehameha II., who broke away from traditions, and, in Oct. of that year, openly proclaimed the idea of an army. This departure, angering many of the lesser chiefs, resulted in a revolt, which, though at first successful, was suppressed by Liholiho several chieftains having received baptism, a reaction set in against the old religion, and, in 1820, a general destruction of idols and temples took place at the instigation of the Anglican missionaries. This large number of souls is believed to be of all classes and rank, and, if Egyptian representations of enemies' heads as a footstool are accurate, the heads of many heads may be found here. It is not unlikely that the head is a symbol of immortality, and thus one of the oldest religious ideas.

Though the Hawaiians are now adventurously Christianized, the old beliefs persist. It is difficult, however, to say anything certain about the ceremonies, though traces of the kahuna are to be found in every walk of life. Their gods they take lightly, but the priests are a serious matter. Evil ghosts take the place of devils, and are under the control of the witch-doctor, who may direct their destructive influence upon whom he will. Healing, happiness, and even life itself can be given or taken at the will of the Kahuna.

LITERATURE.—Many of the older explorers and missionaries in the South Seas are still the authority. As to Hawaiian, Cook, Tovey, London, 1773-84; and W. Ellis, Polynesian Researches, go. 1833; the most important of this material is collected in T. W. and G. Garland, Anthology of the Hawaiian, London, 1843; H. E. Hill, Travels in the Sandwich and Society Islands, 1826; J. Renn, Ka Moana, a History of Hawaian Affairs, Paris, 1848; W. H. Grover, Notes on the History and Culture of Hawaii, 1894; S. Culin, Hawaiian Games, in Amer. Antiq, ser. I. 1899, 245-247; and J. R. Ward, 'Lahiki,' a Legend of the Hawaiian Islands, in J. P. XII. 1909, 246-247; E. Tregear, The 'Creation Song' of Hawaii, in Journal of the Polynesian Soc. 1903, 36-46; A. Krämer, Hawaiians, Osttimorians, and Sumbans, Stuttgart, 1898; D. Logan, Hist. of the Hawaiian Islands, their Resources and People, Chicago, 1877; T. G. Thurston, Hawaiian Folk Tales, 1877; H. H. Graden, Hawaiian Myths of Love and Death, New York, 1888; R. B. Emerson, University of Hawaii: the Sacred Songs of the Hula (Bull. 339), University of Hawaii, Honolulu, 1903; and the Bulletin of the Bernice Pauahi Bishop Museum of Polynesian Ethnohistory and Natural History at Honolulu, 1906.

HEAD. — 1. Importance of the head. — Innumerable rites performed on or in connexion with the head show the importance which is universally attached to it. As the uppermost member of the body, which contains the organs of sight, hearing, taste, and smell, it is naturally much honoured; while, as containing such a vital organ as the brain, which, when it is connected with the process of thought mainly at comparatively late stages of civilization, it is regarded as a seat of life or of the soul. The head, with its many apertures—nose, mouth, ears, sutures of skull—is a chief spirit-enter, either for a divine spirit or a god (as in the process of inspiration) or for evil spirits. In either case it must be carefully guarded. Hence among many savages and also in the higher culture the head is regarded as peculiarly sacred, and is the subject of many tabus. When a Maori touched his head, it seems as if he put his fingers to his nose and snuffed up the sanctity adhering to them from the touch. In Tahiti, Burns, Melanesia, etc., this sacredness of the head makes it taboo to

the touch of woman, or it must never be below any place where it was adopted. In 1819, Kamehameha I. died and was succeeded by his son Kamehameha II., who broke away from traditions, and, in Oct. of that year, openly proclaimed the idea of an army. This departure, angering many of the lesser chiefs, resulted in a revolt, which, though at first successful, was suppressed by Liholiho several chieftains having received baptism, a reaction set in against the old religion, and, in 1820, a general destruction of idols and temples took place at the instigation of the Anglican missionaries. HEAD. — 1. Importance of the head. — Innumerable rites performed on or in connexion with the head show the importance which is universally attached to it. As the uppermost member of the body, which contains the organs of sight, hearing, taste, and smell, it is naturally much honoured; while, as containing such a vital organ as the brain, which, when it is connected with the process of thought mainly at comparatively late stages of civilization, it is regarded as a seat of life or of the soul. The head, with its many apertures—nose, mouth, ears, sutures of skull—is a chief spirit-enter, either for a divine spirit or a god (as in the process of inspiration) or for evil spirits. In either case it must be carefully guarded. Hence among many savages and also in the higher culture the head is regarded as peculiarly sacred, and is the subject of many tabus. When a Maori touched his head, it seems as if he put his fingers to his nose and snuffed up the sanctity adhering to them from the touch. In Tahiti, Burns, Melanesia, etc., this sacredness of the head makes it taboo to
on the head to absorb its virtues, by the Digger Indians; and rubbing the head with the brains of a dead man who was wise gives success in war, according to the Maidu. Rubbing the head with the blood of a sacrificial offering, probably to identify one’s self as in possession of its virtues, occurs among the tribes of Muhammad’s time. The Romans at the Lupercalia, and the Lacon. The same application of sacrificial blood is also used as a charm among the Jews and among the Jews of Algiers. The so-called ‘Blessing of Lamasism is poured out into the hands of the living, and often both hands, and poured on the head with it, after which the Lama places the ‘Vase of Plenty’ or a piece of gold on the lowest head of each, repeating a spell. The head is then touched with other sacred objects. Where blood is rubbed into a man’s hair, it is sometimes drawn from ears on the head (see I. W. I. iv. 431). Similarly, in Samoa, if a man found a dead eagle, or if he committed transgression, he beat his forehead till it bled, and at ritual combats where the heads were beaten with clubs, the blood was an offering in angry.

2. Heads of deities, etc., with nimbus.—Here, again, as illustrating the importance of the head as the chief member of a god as of a man, it is often represented with rays shooting out in all directions, or with a circular disk behind or surrounding it. These were undoubtedly suggested by the sun and its rays, and were intended to typify the Divine power shining and radiating from the head. Hindu divinities have often such a nimbus, of a more or less elaborately shaped form, in Greek and Roman art it is also given to deities, especially those representing sun and moon, and Tенtonic and Slavic deities have often rays or stars around their heads. Mitra has a double nimbus. The rays of Buddha are also given to emperors and kings, to Oriental heroes or saints, etc. Buddhist art in India and Tibet shows the head with a nimbus. But it is in Christian art that the nimbus is most widespread. It is of different forms, usually circular, but occasionally triangular. It is found, or in any case, a series of rays emanates from the head. The field of the nimbus is ornamental or plain; and it surrounds the heads of the three Persons of the Trinity, the three gods, saints, prophets, living persons, allegorical figures, etc. In the case of the Divine Persons, the nimbus is usually cruciform, this being properly distinctive of them.3

3. Many-headed gods, etc.—The custom of representing gods with several heads, like that of representing them with several hands, is probably the result of the current importance of the conception of many members of this natural that in a god they should be multiplied. Nowhere is this more common in art and myth than in India. Nine headed deities, saints, prophets, living persons, allegorical figures, etc. In the case of the Divine Persons, the nimbus is usually cruciform, this being properly distinctive of them.3

Tibetan Buddhist divinities are occasionally many-headed, like Padmapani with eleven heads—probably a borrowing from Indian art. Such monstrous forms do not occur among Torres Strait islanders, though they are sometimes given to heroes.3 Monuments, giants, dwarfs, and dragons in myth and Marchen often possess many heads, which cause considerable trouble to the heroes who fight them. The Greek Geryon had three heads, Hydra nine, Briareus fifty, and the giants of Norse mythology have three, six, or nine hundred. In Marchen the usual numbers are three and seven.

In Christian representations of the Trinity the Godhead is often depicted as a being with three blended heads, or three faces appearing on one head with four, three, or two eyes. Satan is also occasionally depicted with the divided form of the Trinity of evil—and with heads on chest, stomach, and knees.3

4. Men and deities with animals’ heads.—In various arts of ritual men often wear the heads of animals, usually those of sacrificial victims. Among savages these are often worn at sacred dances, e.g., before hunting. Thus, at the Mandan buffalo dance, each dancer wears the skull of a buffalo’s head with the horns attached, and imitates the movements of the animal, in order to procure good hunting. Similar customs were allowed among the Celts and Teutons. At the New Year festival, ritual sacrifices of men dressed in the heads and skins of animals took place, and these continued in Christian times, though forbidden by the Church. Figures of horse-headed men appear on old Gaulish coins, and these, as well as numerous Irish legends of Dagda, or goat-headed men, doubtless reflect animal customs.3 In modern European folk-festivals, dances are sometimes performed by men wearing antlers or skulls of deer, etc., and these may be traced to older ritual customs. Among the Mandan.3 In all such customs there had originally been some idea of assimilating the wearer of the head to the animal, and in some instances this was connected with totemism. The same purpose was served where a mask representing an animal’s head was worn, as among many savage tribes.

Where earlier worshipful animals tended to become anthropomorphized, or where a divinity was blended with a worshipful animal, there was often a fusion of the two in myth or artistic representation. The god had some part of him in animal form, and very often possessed an animal’s head. Probably in all religions this has existed to a greater or less extent. Some, however, were able to shake themselves entirely free of such monstrous forms, though they may still be found associated with demoniac beings; in others they continued to play an important part, as, e.g., in the Egyptian religion.

In India, Ganesa has an elephant’s head, and in China a god called the ‘Divine Horseman’ has a human body with a bull’s head. In Greece, where such compound forms generally came to be distanced, traces of them were still to be found. The Phrygian Demeter had a horse’s head, and in Archaic excavations have revealed representations of female priests with heads of sheep or cows.3 Figures of Pan with a goat’s head, of Apollo with a ram’s head, and others are also known. But it is in Egypt that this method of representing the gods was most conserved from pre-historic times onwards. Some of these inevitably have animal’s heads, others only occasionally (see ETYMSK ABSONUM, v. p. 345).3

In some instances a divinity is represented wearing an animal head-dress, and sometimes also the skin of the animal—a custom perhaps connected with the practice of placing on the head and skin of a sacrificial victim on the image of a god,
HEAD

as well as with the assimilation of a god and a worshipful animal.

Conversely, human-headed divinities or genii with animal bodies occur sporadically—e.g., in Babylon the fish-god Oannes (Es), winged bulls with human heads, etc.; in Egypt the Sphinx; with the Tahitians, the Tahiwi was represented as a hawk with a human head.

5 The head as trophy or cult-object.—(a) Trophy. -As the head is the most prominent part of the body, the use of a trophy by an enemy thus claims victory over his enemy; at the same time he is able to bring back a proof of his prowess, and, as a result, the greater number of heads he can show, the more he is honoured as a valiant man, and the higher respect and status does he obtain. The practice is thus analogous to the cutting off of an enemy’s head (see HAND, § 6 (c)).

The Babylonians and Assyrians not only left dead enemies unburied, but, as a further method of insult and hurl to their graves their heads; and this practice is frequently referred to in the inscriptions or is portrayed on monuments; e.g., L. G. Watkin, Asia Minor 1904. It is also known that in the day of battle was cutting off a head from the enemies of the gods. Thus we find that even in Rome there was a custom of cutting off the heads of defeated enemies (see Seaver, G. W. A. R. 1903). Among the Egyptians the practice was also followed. The heads of the gods were cut off and brought to Gise (I. 299); David cut off Goliath’s head and brought it back to Saul; the Philistines cut off Samson’s head, and the sons of Asahel cut off Ish-bosheth, bringing it to David (1 Sam. 17. 51; 2 Sam. 21. 16; 2 Sam. 11. 19). The heads of the Akk’s 70 sons were struck off and placed in two heaps (2 Sam. 21. 19). In later times this custom was observed by the Assyrians. Among the Persians, the heads of defeated enemies were cut off and placed in heaps, and thus the head of the enemies of a god is shown in the lists of the gods and offered to them or to ancestral spirits. When the skull of an enemy was cut off and brought to the king, he would offer it to the gods and offer it to them or to ancestral spirits. When the skull of an enemy was cut off and brought to the king, he would offer it to the gods and offer it to them or to ancestral spirits.

6 Preservation of trophies. -These trophies served a more permanent purpose than that of immediate tokens of victory, as some care is taken to preserve them, and they are usually placed on the walls of houses of worship, or in some more or less sacred place. They are a standing witness to the prowess of individual or tribe.

Herodotus (iv. 108) relates of the Tauri that they impaled the heads of shipwrecked persons and fixed those of enemies on a long pole above the roof of their house. Among the Celts, townships and palaces were filled with these ghastly trophies, over doors, on walls, or as a sort of banner. The Teutons and Gauls, in particular, preserved the heads of those whose heads were cut off or thrown down the walls of churches, or in some other sacred place. It is well known that in the religious ceremonies of the ancient Greeks and Romans, the heads of deities were carried in procession, and that these were preserved in sanctuaries and in the temples of the gods. The heads of those who were slain in battle, or who were captured, were often preserved in the temples of the gods, and were carried in procession from place to place. The heads of those who were slain in battle, or who were captured, were often preserved in the temples of the gods, and were carried in procession from place to place.

(b) Various parts of the head sometimes take its place as trophies, e.g., the ears; after the battle of Ligniatus nine sacks were filled with the ears of the slain. 4 Jaw-bones or even whole months were also used as trophies, e.g., in the case of two men who were killed in battle, the head of one of them being cut off and fixed on a pole, the head of the other being cut off and fixed on another pole, and so on. The heads of the Chinese. 5 The Tucap wore the mouth of the slain as a bracelet. 6 Noses served the same purpose, and were worn with ears as necklets among the Arabs. 7 Montegi, in their proces 8 In the case of the few Hebrews, Ashantis, and other African tribes.

In most of these cases the heads or parts of the head are sent to the chief or king or displayed before him as a sign of prowess, or as a symbol of victory. But they are occasionally dedicated to a divinity. This is suggested by the Bab. and Egypt. instances cited above, and it is also found among the Celts, who cut off the heads of their enemies and placed them on the walls of their houses, and among the Greeks, who cut off the heads of their enemies and placed them on the walls of their temples. The heads of the latter were preserved in sanctuaries and in the temples of the gods, and were carried in procession from place to place.

8 Preservation of trophies. -These trophies served a more permanent purpose than that of immediate tokens of victory, as some care is taken to preserve them, and they are usually placed on the walls of houses of worship, or in some more or less sacred place. They are a standing witness to the prowess of individual or tribe.

9 Herodotus (iv. 108) relates of the Tauri that they impaled the heads of shipwrecked persons and fixed those of enemies on a long pole above the roof of their house. Among the Celts, townships and palaces were filled with these ghastly trophies, over doors, on walls, or as a sort of banner. The Teutons and Gauls, in particular, preserved the heads of those whose heads were cut off or thrown down the walls of churches, or in some other sacred place. It is well known that in the religious ceremonies of the ancient Greeks and Romans, the heads of deities were carried in procession, and that these were preserved in sanctuaries and in the temples of the gods. The heads of those who were slain in battle, or who were captured, were often preserved in the temples of the gods, and were carried in procession from place to place. The heads of those who were slain in battle, or who were captured, were often preserved in the temples of the gods, and were carried in procession from place to place.

10 Various parts of the head sometimes take its place as trophies, e.g., the ears; after the battle of Ligniatus nine sacks were filled with the ears of the slain. 4 Jaw-bones or even whole months were also used as trophies, e.g., in the case of two men who were killed in battle, the head of one of them being cut off and fixed on a pole, the head of the other being cut off and fixed on another pole, and so on. The heads of the Chinese. 5 The Tucap wore the mouth of the slain as a bracelet. 6 Noses served the same purpose, and were worn with ears as necklets among the Arabs. 7 Montegi, in their proces 8 In the case of the few Hebrews, Ashantis, and other African tribes.

In most of these cases the heads or parts of the head are sent to the chief or king or displayed before him as a sign of prowess, or as a symbol of victory. But they are occasionally dedicated to a divinity. This is suggested by the Bab. and Egypt. instances cited above, and it is also found among the Celts, who cut off the heads of their enemies and placed them on the walls of their houses, and among the Greeks, who cut off the heads of their enemies and placed them on the walls of their temples. The heads of the latter were preserved in sanctuaries and in the temples of the gods, and were carried in procession from place to place.
The Dayaks believe that those whose heads are alleged to be the slaves of their captors in the next world—an idea which is strongly held by the Lhoose of India, who cut heads off after a battle.1 Again, heads are taken by the Dayaks after a death, because it is supposed that a man of consequence cannot be buried or that a dead relative will not rest until this is done in his name; or by the Formosans, because the spirits of ancestors are pleased to see the lute adorned with heads.2 The Sukis also take heads at the death of a chief, and in Celebes a chief's tomb is supplied with two heads of enemies or of slaves.3 This custom also obtained among the Celts, since skulls have been found buried with the dead.4 Sometimes in Borneo the spirit of the head is expected to persuade its former friends to come and be slain, and a prayer to this effect is addressed to it nightly, while in the Congo district the spirit of the head cut off in war is believed to haunt members of its family.5

(c) There can be no doubt that, whether in conjunction with preserving the skull or not, where the custom of eating the brain is found (e.g. among the Dayaks, in Luzon, in New Guinea, in New Ireland, in the Torres Straits Islands), or of eating a mass of food in which a head has been cooked (as among the Batonga and the Garos), this has also an animistic basis. It is usually expressly stated that it is done to acquire the courage or wisdom of the dead man. In some cases it is enough to eat some part of the head—the eye (Sandwich Islands, N. Zealand, Marquesas Islands) or the tongue (Torres Straits, ancient Karmanians)—to acquire these qualities. The same purpose underlies the practice of using the skull of an enemy as an occasional or usual drinking-vessel. The liquid is the medium through which the powers of the owner of the skull or his spirit are transferred.

This was done by the Gasts,9 Irish milk drunk from a skull restores to warriors their pristine strength;10 Scythians,11 the ancient Amha,12 Fujiwas, peoples of the Oga,13 Umbas (priest drinks beer from skull of king to be possessed by his spirit),14 Ksakysheps (because good qualities of mind come from the brain).15 A similar custom occurs sporadically in folk-medicine and in magic. In Germany other people's pigeons will come to your cot if you give your pigeon drink from a human skull.17 In the W. Highlands to drink from the skull of a suicide is a potent cure for certain ailments.18

(3) A distinction must be made between the practices already referred to, where an enemy's skull is concerned, and those connected with the heads of relatives or ancestors. Here also, however, the animistic basis is obvious, and it appears quite clearly from the Calabar custom of cutting off the head of a great chief, that it is kept for some time and then kept it secretly lest it and therefore the spirit of the chief should be stolen from the town, and from

the Polynesian idea that the spirit acts from the skull and is a guardian of the family. 1 Whatever the method of burial, the preservation of the skull or head of dead relatives out of affection, or in order to have a good office to trade with them, or to gain their good offices because of their pleasure at the respect shown to them, or for actual cult purposes, was probably an expensive and is found in many parts of the world. It is met with mainly among the Melanesians and Polynesians, but it exists also in Africa and sporadically in Americas, chiefly in the southern part of the continent.

Bodies buried without heads were found at cranbourne Chas., dating from neolithic times, and these suggest separate preservation of the head. Elsewhere skulls have been found buried alone. 2 Herodotus reports that the scattered bones made bare and cleansed the head, and, having gilded it, treated it as sacred and accorded to it (iv, 50). In Egypt the myth of Osiris told how, after the disembarrassment of his body, his head was buried at Abydos or at Memphis. The sanctuary at Abydos was therefore holiest of all, and the symbol of the city was the coffins containing the head. This may point to some separate treatment of the head in early Egypt, especially if Egyptian civilization and religion were indigenous in Africa, where the head is often venerated. Before the rise of the custom of extracting the brains through the nose in mummification, the head was cut off for this purpose and filled with gesso, and a formula was recited to the head of one man being confused with that of another. Among some Arunta tribes, a chief is buried with his head above ground. After the flesh has decayed, the skull is cut off and cremated. Relics of Aurunah, preserved at a thirteenth century, were washed every Sunday, and the water carried to the sick and diseased, who derived benefit from it. Among the Krishna people, a man is buried in the exhibition of the head, the living were preserved in the temple of the gods, and some jaw-bones were placed there. 3 Among the Soa, N. Africa, the preservation of a skull preserves the spirit of the dead, and the accumulated skulls of a family tribe thus constitutes the spirit house.

The custom of the widow carrying the husband's skull as a memento or amulet is found among some African tribes, in New Guinea, and in New Caledonia. In New Caledonia the head was twisted off ten days after death, and the skull preserved, offerings of food being made to it during sickness. 4 In various parts of Melanesia it is believed that the dead man's spirit can be obtained, through his skull, for the benefit of the survivors. 5 These skulls are carefully kept, and food-offerings are made to them. 6 In the Solomon Islands the skull is preserved in a sanctuary, and is usually enclosed in a piece of wood fashioned in the form of a fish, or in a miniature war-club. Also the skull is full of native incantations, and through it the help of the spirit can be obtained, mainly by means of offerings. 7 In Tahiti the skull was preserved separately from the body, and was usually hung from the roof of the house. 8 In Nanumanga it was believed that the soul, when called on, came back to the place where the skull was kept to drive away disease, etc. Here the head was exhumed after burial. In Netherlands

...
woman, or an animal's head eaten by an animal, causes conception. In an Eskimo tale a seal is caught in pieces by the hunter, but the head slips into the womb of his wife and the girl is regarded as a sign of fertility for a woman to tread on a human skull. Reference may also be made to the power which the decapitated heads of monsters have of growing on again. Birth from the head is sporadically found, e.g., in the Greek myth of Alcestis born from the head of Zeus, and in Hindu stories. In Polynesian myths the cocoon-tree is supposed to have originated from a human head or from the head of a coconut Octopus, and in the New Zealand Maori myth the incident of a tree sprouting from a buried human head occurs. In a Samoan myth, big originate from human heads flung into a cave by a cannibal chief. Various creation myths tell how part of the universe was made from this or that part of the head of a being or of a plant; while in a Chaldaian cosmogony preserved by Isidore the head of Bélu is cut off, the blood is mixed with earth, and from this man and animals are made.

d. Heads of animals.—These also have a distinctive place in custom and ritual, and from early special attention is paid to the head of a sacrificial animal. Among the Veddas, when game is obtained, the head and a portion of the flesh of each deer taken is cooked as an offering to Kande Yaka, and afterwards eaten by the community. The Wannaimrei of W. Africa place the head of the killed beast before the huts of the natives along with a little flesh. When the Dayaks offer fowls to the water-goddeses, they cut off the heads and throw them into the stream. Herodotus reports of sacrifices in Egypt that the heads of the living (or evil) were pronounced upon the head after it was cut off and then it was either sold to strangers or thrown into the river. No Egyptian would eat the head of any animal. This custom is confirmed by monumental evidence, and the head appears as an offering quite as often as any other part of the animal. Probably some sacrifice particular only is referred to by Herodotus. Among the Hebrew sacrifices occasional directions are given for the treatment of the head. That of the Passover lamb was to be eaten along with the flesh. In the case of the burnt-offering the head is mentioned as one of the parts which must be laid on the altar and burnt (Lev 1:1; 7:30). In the case of the sin-offering of ignorance, the head is one of the parts which are not sacrificed but taken outside the camp and burnt (Lev 4:30; cf. 7:2). Among the Teutons and Scandinavians, heads of sacrificed animals were sometimes the important part of the offering assigned to the gods; but, again, they were sometimes suspended on trees in the sacred grove and thus consecrated by the sacred smoke of the fire. Similar customs obtained among the Cela, and are referred to in Acts of Saints, who tried to combat the popular paganism in Gaul. Among these peoples, with whom the bear is an object of reverence—Alans (q.v.), tribes of northern Asia, some American Indian tribes—when one is killed in the hunt, its head has particular care bestowed upon it. Thus among the Oglala (q.v.) the head and skin are borne solemnly through a smoke offering, and the bear's head is placed on a platform, as shown by a picture in the book cited. Among the Hidatsa and Flathead the bear's head is placed on a platform on a pole, as shown by a picture in the book cited. Among the Ojibwa, the head is placed on a pole, as shown by a picture in the book cited. Among the Hidatsa and Flathead the bear's head is placed on a platform on a pole, as shown by a picture in the book cited. Among the Ojibwa, the head is placed on a platform on a pole, as shown by a picture in the book cited.
HAD

accredited with pious virtues. Offerings are set before it, and on the feast day, called the "Holy Day of the Dead," it is fed from every dish served at the feast.1

The Ainus set skulls of sinless bears in the place of honor in their huts, or fix them on poles and sacrifice to them, believing that the spirits of animals dwell in the skulls.2 The Oiakake hang the head on a tree.3 Among the African Indian tribes who surrender the bear's head is tied to a tree as a mark of respect, or on a post after being painted. Homage is paid to it, and it is expected to bring good luck to the hunters.4 Analogous customs are found elsewhere.

In Timor, skulls of turtles are hung under the house, and papers and objects fixed above the door.5 Among the Greeks and Romans it was customary to place the head of sacrificial victims, especially of the ox, above the door of the house in order to ward off evil. Such heads were found in Elam, Ur, Tell, and Nippur.6 The head of the October horse was cut off and defaced, and, after a fight for its possession, it was probably thrown over the wall of the city or on the roof of the house.7 Among the Scandinavians, Toulousans, and Alps the heads of sacrificial victims were fixed on trees or on houses in order to keep off evil influences, while the significance of this custom is found in many practices recently surveyed.8 In these regions, the heads fixed on houses must be traced to the carved heads or other animal heads on gables of medieval buildings in Germany, France, England, etc., regarding which occasional legends are told. Where an actual skull was fixed on the building, it may be that of an animal killed as a foundation sacrifice.9

It is thus obvious that the animal's head serves an analogous purpose to that of the human head, and that the similar custom with respect to both have their origin in similar ideas respecting the spirit acting through or from the head. This is apparent in the Baganda belief that in ghosts of slain buffaloes are dangerous. Hence the head is never brought into a garden of plantains, but eaten in the open country, and the skull placed in a specially built hut, where offerings are made to it, to induce the ghost to do no harm.10

In many cases magical rites are performed with animal's heads for different purposes, e.g., to cause a supernaturally good animal in question to fall to the hunter,11 to prevent disease spreading by burying the head in the grave of the deceased,12 or charms are made from animal's brains,13 or they are worn as dried ornaments.14

7. Rites connected with the head. — The importance of rites connected with the head is seen in the number of such rites connected with it or performed upon it. In the article HAND it has been seen how the laying on of hands takes place upon the head, while it is also upon the head that anointing and the anointing of sacred liquids usually take place (see ANOINTING).

(a) The head is often anointed at different occasions in life; and, whatever secondary purposed this or

(c) The placing of ashes, dust, or earth on the head has been frequently recognized as a sign of abasement or of grief and mourning. Many African tribes, for instance, anf of an infan to wear ashes in approaching a superior. It is similarly used among Oriental peoples, and among the Hebrews it was a method of approaching God or a conqueror in humiliation, or as a token of excessive grief, and of mourning for the dead (Jos 7, 18; 2 S 13, 19; cf. Is 52, 11). The Egyptians also used it as a sign of mourning.

While this action shows humility, it thus helps to propitiate either deity or superior; and, though in mourning it is a natural act on the part of those who believe that insincerity is uncleanliness, mourning, etc., is a concomitant of grief, there may be some idea also of thereby propitiating the gods. The suggestion that the dust was taken from the grave or ashes from the funeral fire is common elsewhere.

(d) The covering of the head by certain persons at times, or habitually, is a matter of obligation, to omit which would be to incur ill-luck and danger. As things sacred are dangerous, and as the head is regarded as sacred, there are occasions when it might be harmful to the ritual act which is being performed or disrespectful to the divinity, to uncover. And, conversely, dangerous influences might fall on the sacred head at that particular moment. Shamans and priests frequently cover the head and the hand in performanccs ris hotel with the dead.

Among the Veddas the cloth which is held over a shaman's head, when his hair is being cut, also covers his head in the sacred acts. In certain? ritual acts in the magic rite of healing, the shaman has his head veiled. The priests of the East, when they enter a sacred place, because the gods covered the head with a h? white sacrificial cloth. The Roman priests, when sacrificing, covered the head and back of the head with the toga (vela capite). The custom was traced to the advice given by Helenus to Hecuba, but Plutarch suggests other origins—humility, the avoidance of hearing ill-conceived words, or a symbol of the soul hidden by the body. The Greeks also covered the head uncovred during the rites of the orich und the eternal. Scandinavians regard it as inoffensive to pray with the head uncovered. Jews also cover the head at prayer out of reverence. Ex 32, 13 (Jehovah hid his face, for he was afraid to look upon God), and the mantle, or turban, is placed over the head of the name of God. Among Christians the head is uncovered at prayer and in church, but women have the head covered, following St. Paul's Instructions (1 Co 11, 4), and as certain parts of the service the priest wears a biretia, and the bishop a mitre.

(e) The veil of the bride, which takes place among so many peoples, savage and civilized, may be traced to the idea of danger to the head, which was commonly adopted at the time of marriage. The ecclesiastical rite of the veil of virgins who dedicated themselves to the religious life ('taking the veil') was connected with the idea of avoiding marriage with Christ. Many in the early Church held that all unmarried women or virgins should wear a veil.1 Muslim and other women must always be veiled, as it would be immodest to let any one see the head or face, especially the former. Among Jews, though not now in Western countries, it was considered indecorous for a woman to be bare-headed. The custom of covering the face or head with a veil or with the mantle on occasion existed among the early Hebrews, with the same idea of indecorum (Ge 24, 60). The same rule has been followed in the Christian Church with regard to virgins almost from the earliest times, but it is dishonouring to his head for a man to pray covered, according to St. Paul (1 Co 11, 11). On the other hand, uncovering the head is often regarded as a token of respect, whether to divinities or superiors, just as it is an act of etiquette in the modern world. It is not easy to reconcile this with the former practice, unless the idea was that of exposing a part regarded as sacred before those who were sacred or superior.

Van Geenp (p. 260) regards covering the head as an act of separation from what is profane. This is undoubtedly one aspect of the custom, emphasized, e.g., in the Christian rite of marriage, where, at the benediction of the pair, a veil is held over their heads. Covering the head is also an occasional token of grief, or mourning.4 In some instances veils are struck, chaplets, and crowns are worn as protective of the head from evil influences. See D. Davies, vol. p. 289.

(f) Distinctive marks are often made on the forehead by branding or painting, or they are symbolically signed with the hand. In India such marks are painted on the forehead; and, according to their form, they denote the sect to which a man belongs—Savitriis have a horizontal and Vaisnavites a vertical sign.5 Among the Buddhists of Eastern Tibet, Lamas pass through an ordeal of initiation in which six marks are scored in their crown with an iron lamp. A similar custom must have existed among the Semites, for in Is 20, 2, they have been scored according to a sacred sign, the Taw, placed on the foreheads of those who had not given themselves over to pagan cults, and who would thus be saved from slaughter in the day of destruction. Similarly in the Apocalypse the worshippers of the beast have his mark on their foreheads (or their hands), and they are doomed to drink of the wrath of the wine of God (Rev 13, 14-16; cf. 20, 4). On the other hand, the servants of God are 'sealed in their foreheads with the names of the Lamb and His Father' (7, 14).

In the Psalms of Solomon, the mark of the Lord is on the righteous to their salvation—probably on their foreheads, since 'the mark of destruction' is placed thereon (19, 10). Hebrew prophets apparently bore some distinctive mark on the face or hand (see 1 K 20, 4). In Christian baptism, from comparatively early times, the candidates were signed with the Cross on their foreheads at various stages of the service, e.g. in connexion with exorcism, and at confirmation the same sign was made with the thumb dipped in the consecrated oil. The whole conception of baptism implies a ' seal' or mark by which the faithful were known to God—baptism conferring a spiritual character— is connected with these ideas of an actual mark made on the forehead, as is obvious from the language used regarding it in early writings (see EX 18, 8, 28). In signing oneself with the protective sign of the Cross, sometimes called 'sealing,' it was usually traced on the forehead.

Many passages in the Apocalyptic Acts show that by this invisible 'seal' demons were expelled. But a later method was to make the sign by touching first the forehead, then the region of the heart, the left, and afterwards the right shoulder. In Christian usage the symbolic marking took the place of actual marking or branding. Similar marks were, however, still made by some Gnostic sects—e.g. the Carpocratians (branding or marking on the lobe of the ear). 1

12 C. Germain, Num. III, 277.
Denker, l. c 224 Leipzig, 1899), to decry a 'morning blush of the illumination.' For one thing, the significance of that absence is discounted altogether. It is clear that in the Odyssey, a product of the same stage of culture as the Iliad, the magic word is employed in the treatment of wounds (Od. xix. 457); and for another, the surgical art, just because the injury it deals with are potent to the eye, and may be healed by the skilled hand, occupied a distinct position within the sphere of medicine. This is seen even in the legal enactments of ancient Babylon, in which the healer of wounds is put alongside of the veterinary surgeon, the architect, and other artisans who in the Hellenic age are mentioned at all (see below). The absence of exorcism from the surgical practice of the Iliad could be regarded as a symptom of the icon's 'spirit of light' only if that were, in its references to disease, made no mention of magic remedies at all. In point of fact, however, the warriors who deals so rationally with the wounds inflicted by the presence sent by Apollo, and have recourse to supernatural means of healing — the consultation of priests, seers, and dream-readers (II. 1. 63), purifications, prayers, and sacrifices (445 F. C.). In the Odyssey likewise the illness of individuals is regarded as sent by the gods (v. 306, iv. 411), and from the gods alone is the remedy to be procured (v. 307). The prevalence of theurgic medicine in the Homeric age must therefore be recognized as a fact beyond question. Then in the ever-increasing employment of religious expedients against the onset of epidemics in later times, and the vogue enjoyed for centuries by temples of healing, show us how long the power of magic held its ground in the sphere of medicine. It is also a significant fact that Pindar, when enumerating the subjects which Asklepios learned from Cheiron (see below, I. A. 6), does not shrink from co-ordinating exorcism with his Divine internal medicine. Even Sophocles, whose view of trago, as expressed by Ajax (Aj. 885), is read by J. Hirschberg as a condemnation of the use of Asklepios, in Augenheilunde, Leipzig, 1906, p. 55; he might also have added Trachin. 1001), was actually the priest of the healing hero Aminos (II. B. 11), and, as such, successfully strove to secure the naturalization of Asklepios, the bestower of dream-oracles, in Athens. A very different problem is raised when we ask whether the predominance of the supernaturalistic element did not act as an obstacle to practical progress in religious medicine, or whether genuine medical knowledge might not develop even under such conditions. In order to answer this question, we must turn to the two civilised peoples who practised the healing art prior to the Greeks.

(c) To the Babylonians a science of medicine free from the occult was always a thing unknown. At the first glance, indeed, it might seem as if at a remote period popular beliefs were assimilated as mere superstition by certain outstanding rulers, but on a closer inspection this view proves to be fallacious. The ancient Semitic priests (city-king) of Lagash, Gudea, whose reign is now dated to 2150 B.C. (A. Ungnad) or 2350 B.C. (E. Mayer), certainly says, in his report about the building of the temple of Ningirsu, that he has 'expelled the dreadful sorcerers, the (what follows is unintelligible) from the city' (Statute B 3, 15 f., as in Thueau-Dangin, Die numm. u. akkad. Konigsnachr., Leipzig, 1907, p. 69, cf. Cylinder A, 15 f., p. 108). But to speak of him as on that account the founder of the formation of civilization in history (J. Jeremias, Meso u. Hurunans, Leipzig, 1908, p. 40, n. 3) is a miscomprehension. Gudea was, in fact, a priest, a rationalist. The inscriptions of his statues and cylinders record little else than his exertions in
HEALTH AND GODS OF HEALING (Greek)

The Ebers Papyrus, compiled from other writings during the XVIIIth dynasty, and its nearly contemporaneous counterpart, the Hearst Medical Papyrus (ed. Reisner, 1905), frequently supplement the medical recipes by magic incantations, and while for his administrative proceedings he resorts to omons of various kinds, as also, according to Jastrow (Die Religion der Bab. u. Assyr., Gnesen, 1908-09, ii., 292), R. Oppenheim (Die altorientalische Religion unter ihrem Einflusse, Leipzig, 1907, p. 371 E.), infer that Egyptian medicine was at first empirically, and reduced to matter of the New Empire and under Babylonian influence. But is this not too bold a conclusion to draw from such scanty data? The gymnosophical text in question consists 3 only three columns, the Ebers Papyrus comprises one hundred and ten pages; in the latter, moreover, the incantations are met with specifically, and large portions of the text have none at all. Thus the absence of incantations from the Kahun fragment may be merely fortuitous. In a word, a people with no intense belief in the supernatural as the Egyptians—a people whose cult of the dead was completely permeated by magic even in the Ancient Empire—cultivated a purely rational medicine the present writer finds it impossible to estimate, such as serious to the necessities, of the health of the body, and to the treatment of diseases, in the case of the Egyptians.

We turn now to the question how far these two civilised peoples of antiquity, with their marked leaning towards the occult and the mysterious, had in truth progressed in the science and art of healing. Modern writers on medicine have shown that the Egyptian doctrine of the vessels (skeuism) was a real contribution to the knowledge of science, and that the Egyptian pharmacy furnished materials of considerable value. But the Babylonian medicine likewise, debased by the ritual of exorcisms and dependent upon other though it was, recognition, as has been shown by F. Kühler in his valuable Beiträge zur Kenntniss d. assyr.-bab. Medicin (Leipzig, 1904), the use of rational remedies, employs the injection (Kühler, p. 39, § 44) and the cataplasms (§ 39, 38, etc.), and gives directions as to diet (§ 7, 30, 69); and, according to Oeser (in Kühler, p. 66), the squatting position is prescribed for colic (§ 3, 11, 15) does in reality afford great relief.

In the Nile valley and in Mesopotamia, therefore, the healing art was a combination of the occult and the rational, and this peculiar system of medicine exercised an influence upon the Greeks at a very early period. The Egyptian doctrine of skeuism survived in the Greek theory of 'humours' (Schneider, op. cit. 325), the Egyptian pharmacy in that of Greek; and a striking illustration is found in the fact that, as demonstrated by Le Page Renouf (Exc. xi. 1878), the diagnosis of pregnancy in the 'Hipppocratic' treatise voj idox — probably written by a Cidian — is identical in language to that of the Brugsch Papyrus. How this Egyptian diagnosis made its way to the Cidian may be explained by the fact that, according to Diogenes Laertius (vii. 97), the Cidian mathematician and physician Eudoxos spent fifteen months with the medical priests of Heliopolis in the reign of Nektanebo (365-304 n.C.) and Eudoxos would certainly not be the first of the Greeks to avail himself of such an experience. The avenues by which Babylonian medicine reached the Greeks have not yet been definitely ascertained; but the present writer is convinced that the practice of incubation, i.e., sleeping in a temple as a means of healing, which is of great importance in the religious medicine of the Greeks, was an importation from Babylon. H. Magnus (Aeh. zur Gesch. d. Medicin, 1. Breislaw, 1902) § 6 E) maintains, it is true, that incubation was common in Egypt from the earliest times; but the present writer has not been able to discover any mention of it in ancient Egyptian sources. In all probability, the practice was introduced into Egypt through the medium of the Sarapis worship.
HEALTH AND GODS OF HEALING (Greek)

founded by Ptolemy L. and was shortly thereafter transferred to the cult of Isis. Sarapis—the subject of much discussion—is, however, as C. F. Lehmann-Haupt has shown (II. A. 18), simply the god Eos of Euboea, for his customary name, the name of Sarapis ('king of the watery deep'), the supreme healing god of the Babylonians (Jastrow, op. cit. i. 286 ff.). In the sanctuary of Eos at Babylon—where the goddess was very venerated—the rite of incubation was performed on behalf of the dying Alexander by several of his generals. The theory that Mesopotamia was the cradle of incubation is warranted also by the fact that in that region dream-oracles were sought after for all emergencies, and especially for disease (Jastrow, i. 267 ff.), from the earliest times. Unfortunately, we have as yet no work dealing with the ritual prescribed; and this is all the more to be regretted in view of the important rôle played by dreams in reading. Jastrow's work has so far only reached the discussion of the oil-oracle; the still unpublished matter relating to dream-oracles for healing purposes is noted in Besold's Catalogue of the Konyunjak Collection, v. (1890) nos. 2410 ('omens, including medical presciptions') and 2413 ('omens derived from events which seem to occur in dreams'). The question of the relation among the Babylonians and Assyrians was an institution with well-defined rites is shown by an incidental reference in the annals of Assurbanipal (ed. Jansen, K. B. ii. (1881) 157). In the same connection also, the unvarying accordance of the sun-god, which, in his daily course, has lain down towards the end of the night, in order to obtain an oracle on the king's behalf (cf. ib. 301). The Greek practice of incubation, however, also, exhibits the two features here indicated, viz., incubation on behalf of another (cf. II. A. 15 and 17, and, moreover, the preference for a time towards morning, so-called 'material sustenance' (Philostr. Vita Apollon. ii. 36; cf. Artemidor. i. 7). Plutararch (Septem sep. cons. 15) tells us that incubation was an ancient Greek practice, and that the reverence of the Hellenes (Herod. iii. 239) to the Dodonian Selloi, the όρμοτάνα χαμαμεταν of Zeus, may be regarded as the earliest witness to it (so Weilker, Kleine Schriften, iii. (1850) 90, and Dümmler, Philol. i. (1897) 6). The naturalization of a Bab. practice in Greece at so early a period is not inconceivable, as another passage of the Hippokratische Onkia (269 b), shows dependence on Bab. cosmogony (F. Jansen, Karmologie der Babylonier, Strassburg, 1890, p. 244). Incubation would seem to have reached the Greeks by way of Lydia; thus, in Assurbanipal's annals (v. ii. 173), a dream which was sent by the god Asur to Goges is mentioned (cf. Jansen, in Thürmer, Pergamos, Leipzig, 1888, p. 413), while in the valley of the Meander there were several incubation-shrines of the subterranean gods, one of them being the Platonion, near Nysa, the ceremonies of which were a reflection of the Bab. practice (II. A. 17, below). Mention should also be made of the curious affinity between the Bab. harrusipcy (Jastrow, ii. 213 ff.) and the Etruscan—a correspondence dealt with most recently by G. Körte in Röm. Mitt. xx. (1905) 338 ff. in connexion with the bronze liver of Pisa (see ETRUSCAN RELIGION, vol. ii. pp. 533, 537). Here, again, we learn that we are but beginning to realize the complex influences which stemmed from Mesopotamia to the West.

If the religious medicine of the elder civilized peoples thus made its influence felt among the Greeks, the question arises whether its further development, after its settlement upon Greek soil, was essentially upon the same lines as before, i.e. whether the fusion of religion and medical empiricism can be traced also in the therapeutical practice of the Greek sanctuaries. While this, notwithstanding the ridicule poured upon incubation-shrines by Aristophanes in the Ploutos, and obviously also by the conceptions of the graeco-latins, has not been sufficiently taken for granted until lately, the discovery of the Epidaurian stela recording the miraculous cures (idiases) of Asklepion (as related about the end of the 4th cent. B.C.) has brought about a defection from this view, and the majority of modern investigators stigmatize these sanctuaries as 'hives of profanation and superstition'. The latest discussion of the question (S. Herrlich, 'Antike Wunderkuren', in Progr. des Humboldt-Gymnas. zu Berlin, 1911) comes eventually to the same negative result. The best writer, however, after renewed consideration of the subject, cannot but adhere, in essentials, to the earlier standpoint, as set forth in Pauly-Wissowa, ii. 1686 ff.

Arguing from the difference between the contents of the Epidaurian syma-stela and the condition of medical practice in the Imperial period (Kavvadias (in his Fes de l'Epidaure, Athens, 1903, p. 115, in the 'Ippaipos' of Xanthopoulos, 1900, p. 267 ff., in the Melange de Perrot, 1905, p. 42, and, finally, at the meeting in Athens, Comptes Rendus, 1905, p. 278 ff.) has come to the conclusion that in the Greek period the curative procedure of the Asklepia consisted entirely of miraculous acts of the god, a conclusion which, in the case of the syma, while in the Roman period, in consequence of the institution of dream-shrines, and the therapeutical method, an infusion of rationality. But the inference is by no means beyond dispute. To begin with, it would be strange indeed that the Asklepia of the most flourishing period of the Hellenic age should be able to resist the intrusion of rational procedure, while, in a period of growing superstition and craving for the miraculous, they should open their doors to naturalism. It is not a question of the theory on the Epidaurian syma, but exaggerates their importance. In Pauly-Wissowa (loc. cit.) the present writer had pointed out that the syma—according to which, e.g., persons with a vacant eye-socket incubate, and leave the shrine with a seeing eye—are not historical documents, but merely a compound of the Hellenic, miraculous minds, and that none of the individuals said to have been cured by the god can be historically traced. Wilhelm (Jahrb. d. österr. archiol. Instit. iii. (1900) 40) has certainly sought to identify Arystbe, an Epistor named in stela II. no. 31, with a Molossian chief of the period in which the syma were redacted, but in that case this particular syma would be severed from the group as a whole. The Greeks had, in point of fact, a great store of legends about the cures and resuscitations of Asklepios in the mythical age (cf. Pauly-Wissowa, ii. 1633 f.), and one of these miracles—the raising of Hippolytus to life—was extolled upon a stele bearing an epigram in the Epidaurian hieron (Paus. ii. 27. 4). Our redaction of the syma, then, really preserves the substance of these tales of the marvellous in a pseudo-historical form, its object being to convince the inquisitive that the immediate miraculous action of the god had not ceased with the mythical age. A frequently recurring feature of the syma is the statement that, when the sleeper awoke, his dreams were found to have already fulfilled; and here again the record follows a mythical pattern, as seen in Bellorophon's dream (Pindar, Olymp. xiii. 56). If, accordingly, the

This argument is advanced in opposition to the view of S. Herrlich (loc. cit. 20), though only by way of supporting the contention that the occult element maintains its supremacy also in the Roman period; otherwise Weilker, Kleine Schriften, iii. 78.
Epidaurus ismata belong to the class of mursucul- 
ous stories designed to incite passion, such as an- 
skin with all in religions, we cannot regard them 
as documents drawn up from the actual practice of 
the Asklepiads.1

The theory of Kavadas ignores the ma-
tic aspect of incubation; and so O. Rubensohn 
(Festscr. für Vahlen, Berlin, 1900, p. 13) takes 
the further step of asserting that in the Greek 
period the cult of Asklepios was not concerned 
with dream-oracles, but that those were intro- 
duced at first by the Sarapis-Iasis cult. In point of 
fact, however, Asklepios was known to the 
Greeks long before the worship of Sarapis 
reached them, and was based precisely on the 
prophetic significance of dreams (see below, II. A. 
74, 15, 27—30); and above, the reference to 
the Dodonian Selloi; cf. II. B. 1 and 3). A dis- 
tinction was made between 
\[\text{ὥς τοῦ ἱεροῦ τοῦ ἤσσεινω}
\] 
(divine oracles given in dreams), and 
\[\text{ὄρκος ὄρκος}
\] 
(oracles of the soul itself in dreaming).

The author of the \textit{προφήτης} in the Corpus 

\textit{Hippocr.}, probably a Cnidian physician, 
believes in both kinds, but not of the former 
class (ch. 87 [v. 540, Littre]), as those had 
already been dealt with by experts,2 confining 
himself to the \textit{νάταρος} class, in which the soul reveals 
what will be good or evil for the body. Besides 
that, the author of dreams is recognized by 
the post-Hippocratic physician Herv- 
philos, the anatomist (Plut. de Pasc. Philos. v. 2). 
Even Democritus believes in dreams who reveal 
the inner state of the dreamer in forms (εἰκόνες) emanat- 
ing from themselves (Plut. id.; Sext. Empir., 
deo. 
Math. 384), and Aristotle acknowledged the ma-
tic effects of \textit{νάταρος} dreams (\textit{ὕπνοι} \textit{ὡς τοῦ ἱεροῦ} 
\[\text{μερισμάτων}
\] 
, p. 462 ff.), while the Stoics, again, regarded 
dreams of healing as manifestations of divine 
providence. In view of such favourable 
recognition on the part of the Stoics, it seems 
only right, and also of course, incumbent upon the 
official directors of the practice of incubation to do 
all they could to ascertain the divine will as 
disclosed in the dreams. Everything turned, therefore, on the correct inter- 
pretation. The special literature of the subject 
formulates two classes of revelations (Artemid. 
[i. 2]: (1) \textit{δήμως δεύμως ἔρμως}, \textit{dreams to be followed 
literally}—even there, however, interpretation had 
its limits whenever the literal application of 
the prescription threatened the patient’s life—
and (2) \textit{ὄρκος ὄρκος}, which indicates the 
remedy indirectly.3 As regards the latter, 
Artemidorus (iv. 22) deprecates all perversity of 
interpretation, and asserts that the \textit{νάταρος} of the 
gods, when given in enigmatic form, are 
nevertheless quite clear; thus the dream of a lamb 
sucking the breast of an invalid signifies an 
application of \textit{αὐξημένως}. Preposterous interpreta- 
tions were a characteristic feature of the Imperial 
period—\textit{e.g.}, a vision of the Athena Parthenos of 
Phidias was fantastically interpreted as signifying the 
application of an injection of Attic honey (Aristid. 
ii. 406 [Keil]).

Again, interpretation of dreams and a therapo- 
tical practice founded thereon are met with—to 
leave Asklepios out of account meanwhile—in the 
Plutonion near Nyma (II. A. 17, below), in the 
Dionysian dream-shrine at Amphiakleia (15), 
in the cult of the Dioskouros at Byzantion (14), 
and in the Amphiereion at Ormos (19). Now, it is 
quite impossible to understand why incubation, 
the characteristic feature of which, from its 
1 A very significant circumstance is that the supposed original 
work of Hippocrates, belonging to state i. no. 16 (Thesmodes), 
proves to be a fabrication in a pseudo-archaic script.

2 As, \textit{e.g.}, the prescribed bleeding to the amount of 100 pounds 
(Aristides, ii. 460 [Keil]).

3 As \textit{e.g.}, the prescribed bleeding to the amount of 100 pounds 
(Aristides, ii. 460 [Keil]).
HEALTH AND GODS OF HEALING (Greek)

Westernmann, Biographis Gr., Brunswick, 1845, p. 450, is a blend of fact and fancy. His birthday is attested by a reliable source—a Cahn archive; while we may probably rely also upon the statement that, on the whole, the practices of the earlier age, in keeping with the higher state of its medical knowledge, and the less debased character of its religion, were superior to those of the later period. The later ages then, would be introduced by the death of his parents to migrate to Thebes, that he lived at Larissa, and eventually died and was buried there (cf. Asis. Gry. vii. 56). The nation of his origin is likewise pointed to that country, as it is not met with in any previous generation of the Asklepiadæ. There is nothing to show that he ever returned to his native place, and Hermog's enlisting treatises in Cos have not yielded a single fact regarding him. It would thus seem certain that he left the island for ever at an early age. The ancestors of a later day were manifestly at a loss to account for this. The Vita gives three distinct reasons, viz. (1) an injunction intimated in a dream (Soranos); (2) his desire to widen the horizon of his medical knowledge; and (3) his being accused of burning the Cudian library (so Andreas, perhaps physician in ordinary to Ptolemy II, whom Galen [cf. 720, Khun] stigmatizes as a wind-bag). The charge implied in the last-mentioned explanation is attributed by S. Rainach (art. 'Medicus,' in Darmenb-Saglio, 1814) to the jealousy of the priests of Asklepios but erroneously, as the relations between these and the Asklepiadæ (on which cf. Lefort, Mus. belge de phil. [1906], 151 ff.) were always of a friendly character. This conjecture could have arisen only from the antagonism between the Cudian and the Coan schools of medicine, as it was in reality meant to expand the lead of the latter as a plagiarist who availed himself of the professional literature of the former—a point which Testas obliterates by transferring the burning to the Coan library, though he to the later of non-religious medical literature (καὶ μὴ βεβηλοποίησας τοῦ τάξους τῶν εὐνόμων βιβλίων καὶ τοῦ βεβηλοποίησας). The statement of Andreas makes no mention whatever of the burning of the library, but it is a suggestion of these occurs in Varro, according to whom (Opi. PL. 29. 4) Hippocrates first copied the records of cures deposited in the Coan sanctuary by those restored to health, and then burned the temple. This is obviously nothing but an abortive attempt to interweave the anti-Coan version of Asklepios with the history of the origin of scientific medicine just noted. That the latter hypothesis, however, was not put forward wholly at a venture, but might find some support in a genuine practice of healing in the Asklepiadæ, is shown by the testimony of Apollodoros to the furtive practices of Asklepios, and the reference prescribed by the god in the fragment of a comedy in Aelian. fr. 100 (above, p. 543). The present writer would add a reference to an Athenian votive relief of the 4th cent. B.C. published by Ziesch (Ark. Mit. xli. [1892] 235, fig. 3), representing a patient stretched upon a στάδιον, and a surgeon engaged in treating him, while Asklepios, figured on a much larger scale than either, stands passively by (in the stationary type in Roscher, l. x, scheme 1.). Here, then, we have monumental evidence of the fact that the personage of the temple engaged in therapeutic practice under the sanction of the god.

It is thus impossible to deny that genuine medical treatment—directed, it is true, by oracles of healing—was practised in the Asklepiadæ of the Greek age. As regards the Cudian, we are not able meanwhile to judge, for investigation of the Greek period has so far yielded no original votive tablets dedicated by restored patients and dated, with the records of the prescribed remedies, such as are supplied for the Roman period in the pathological narratives of P. Grumius (Lebebe) and J. Apelles (Epidauros), but it is at least an allowable hypothesis that the curative methods of the earlier age, in keeping with the higher state of its medical knowledge and the less debased character of its religion, were superior to those of the later period. This would then be at its height, while practical medicine still maintained a close connexion with the occult, as in the Cudian medical school (cf. Gomperz, Gr. Descr. i. 250), and probably even more in that of Rhodes—the first to become extinct (Galen, x. 5 [Kühn]). The Cudian author of the treat 'Asklepios,' art. 37 (cf. 371) on the principle: 'Prayer is certainly very good, but one who calls upon the gods must himself also do his part' (ἐάν καὶ εὐτυχεὶς ἄλλωσιν τοῦ ἄνθρωπος ταύτῃ τετραδίκερα). Some of his interpretations of dreams are such as we might ascribe to an Asklepiad priest, as, e.g., ch. 88 (abbreviated): 'If in a dream one fights in opposition to the doings of the day, it signifies some bodily disaster, and this is to be counteracted by emetics, disting, bodily movements, exerting the voice, and [last, though not least] by prayer.' We seldom meet with the case where the priest function is discharged by a physician. Three instances are given in Paulus-Wissowa, ii. 1855: a fourth is probably to be found in Kallipho, the father of Democritus, who himself was a student of Asklepios in C犍kut (aus. cit. Δημοκρίτου) and, as the healing art was then hereditary in families, probably also, like his son, a physician. But we cannot say whether the priest was such unless we suppose the vocation of interpreting dreams. In the Pistonion near Naus, dream-reading was the function of the ἀναφυταὶ τοῦ θεοῦ (cf. 38). We must doubtless assume that persons specially versed in this art were to be found in all dream-shrines. It was only natural that these adepts should have tried to discover the meaning of the divine utterances, with vouchers vouchsafed by the god. And in finding these meanings they were in no way guilty of a 'pious fraud!' (Herrigli, op. cit. 18), but were rather the victims of self-delusion. The priests themselves, the Delphic inquirers, the priests and also the Delphic priests in their task of moulding the incoherent utterances of the Pythia into intelligible sentences (cf. the critical estimate of this function in Schömann, Griech. Alterth., Berlin, 1897, ii. 318). The facts thus adduced seem to the present writer to justify the view that the gods of the Greeks, as among the Babylonians and Egyptians of an earlier age, religious medicine did not dispense with rational remedies. That practical modes of treatment were associated with miracle, 'faith's favourite child,' is shown not only by the craving for marvels which ran riot in the Egyptian medicine, but also by the legend narrating the founding of the Asklepiadæ of Naupaktos (Paus. x. 39. 18) and the Iasulos Tiberinaus (Ovid, Metam. xv. 660 ff., etc.). We may also suppose that, alike in the waking state and during incubation, cures were not infrequently wrought quite apart from the oracular adjourn and solely by means of suggestions, and then exalted as the miraculous works of the deity. We shall not pursue the subject further here, as we are meanwhile concerned only to follow the traces of rational therapeutics within the sphere of religious medicine. From the former alone is there any real passage to the altogether rational conception of θεοπάθεια in the Asklepiad cult, with regard to whom the reader is referred to the section on the 'rational value of much treatment' (cf. 36 ii. 2). Her radiant figure appears as something out of keeping with the mystical and, in essence, non-Hellenic, divinity that surrounds the practice of healing the sick.

II. HEALING GODS AND HEROES.—A. GODS.—

The following list touches only incidentally on the deities of childbirth.

Digitized by Google
HEALTH AND GODS OF HEALING (Greek) 545

The belief in gods implies also belief in their sway over health and disease; and, accordingly, in all manner of troubles, but especially in the case of local ills, the physician, or diviner, sought help from the deities. Originally, however, there existed no belief in special deities of healing. In Od. v. 397 the references is quite general — the gods looked after, or helped, in his troubles. Every deity, or group of deities, such as Apollo, Asklepios, Eileithyia, etc., are not to be interpreted off-hand in a medical sense, for, as will appear from the following synopses, they have usually quite a different meaning and reference to the general, but taken for granted that at the outset the sufferer appealed simply to his family or tribal deity. It might seem to have been the most natural course to seek Apollo, the ancient god of healing, but we may probably find an explanation of his special function in his having become a son of Apollo, the god of medicine. But, nevertheless, his local personalized, the snake-collared rod, remains to this day the specific symbol of medicine.

1. Zeus. — Zeus, the sovereign of the Greek pantheon, is the supreme master of sickness (Od. ix. 411), seldom appears as a healing god. His common epithet, Ἴνης (gen. Thess. Louv. i. 2. 4, 19), is the plural of Ἴνα, and it is only rarely used in a medical sense. The name of Zeus, which means “ruler” (cf. O. Weinrich, Athene Heilungswunder, Griechen, 1899, p. 41), and Ἴνα (Ath. Mitt. xxvii. [1891] 223), does not have the same meaning as the healing god. In the Persian pantheon, and in the Iliad, these deities are depicted as the discoverers of medicine and the heroes, in the Persians, and the gods of battle and victory, erected to him and Athena Soteira in the Parnassus, to celebrate the restoration of Athens under Conon (H. Brunn, Gesch. d. gr. Kunstgesch. 4, Stuttgart, 1888, i. 720), just as the Zeus Soter and Artemis Soteira of Megalopolis signalize the achievement of Epaminondas (Paus. viii. 30. 10). The list of good old gods of the titles Ἐλευσιος, Ἀυγεύς, Οἴνος, Τυρφᾶς (cf. O. Weinrich, Athene Heilungswunder, Griechen, 1899, p. 41), and Ἴνα (Ath. Mitt. xxvii. [1891] 223), whether the title Ἰατρός (in Rhodes [Heusich.]) bears a particular reference to Zeus as the queller of plague is a moot point (see below). The stone on which Osiris was delivered from his madness was called Ζεῦς Ἰατρός, e.g. Ζεῦς Ἰατρός (Paus. iii. 22. 1); and we light at length upon the physician in Egypt, dux, and in the Ζεῦς Ἰατρός of the same, who were dedicated to the god. In the Ps. of Sophocles, Ἰατρός (I. 150-155, and those in Melos (7) [Panofka, Hell. Gr. [Gr. xvi. 4, 253], though we cannot at Thessaly

1 The Zeus Asklepios at Leporium (Paus. v. 5. 8), which Asklepios is supposed to have founded, is not the Asklepios of Asklepios, but of the Asklepios of the Asklepios of the Asklepios of Leporium (Curtius, Ptolema. ii. [1867] 17).

VOL. VI. — 35
joint cult need not be earlier than the time of Skopas himself (Dümmler, in Pauly-Wissowa, ii. 1975). Nor, finally, does the statue of the Eileithyia — in the position of a parturient woman — in the temple of Eileithyia at Tegae, and popularly known as Δαυὴ ἕν τὸνσαυμ, (Weikel, op. cit. iii. 185), afford any evidence for the Tegean cult of Athena. The title θεότηται under which Athena (together with Zeus and Hera) was worshipped, but this to Steph. Byz. (= τονθεότητα, in Lebes) may be understood quite generally as referring to the divine hand held protectively over the hour. A slight uncertainty about the cult moved the site from Epeiros under a new name as θεότητα εὐτέρος by Lycercus (Plut. Lyc. xi. 2: Para. iii. 18 2) has undoubtedly a medical connotation. Gruppe (op. cit. 1904) quite unwarrantably infers the existence of inoculation in the cult of Athena from Pind. Ol. xii. 56 (Bellef. ron) and Para. ix. 34 1 (Iodama).

3.9. Helios — The links which connect Helios with his health and medicine are fewer than the affinity between the ideas of light and life might lead us to expect. As he punishes by inflicting blindness (Str. rh. iii. 266), he is the restorer of sight to Orion (Stesich. fr. 39) and is therefore invoked by Polybestr (Enr. Hesb. 1067). His cult yields no evidence here; the invocation of the Zoster, fr. 13 (Bergk) concerning him. A battle-song, while his title Soler in Megalopolis belongs to the age of sycariotism (Para. vii. 31 4). It is worth remembering, that like Asklepios (schoel. Aristoph. Plout. 707) speaks of the Hellenic lampadeta as the wife of Asklepios, a detail which, as the present writer thinks (Roscher, i. 1469), goes back to Hesychius and Medes, the daughter of Helios, and Agamele and Medes, his grand-daughters, are sorceresses skilled in herbs; and the Hellenic Panthea likewise was proficient in the medical sciences of the Hellenic doctors. Such panaceas were dressed up as Asklepios and Herakles, and the panthea, the wise women, cf. Weikel, op. cit. iii. 20 ff.

4. Poseidon — Posidon's only link with healing is his being worshipped as θαρύν among the Ttians (Clem. Alex. Protrept. 26). It is very curious that in the θεοὶ ὀφθέοι the warrior-physicians in Marschall and the satyrians, who are everywhere else regarded as Asklepiads, are spoken of as sons of Poseidon. The verse in question is in a corrupt state: θεοὶ ὀφθέοι ὀφθέοι ὁπλωτεῶν, ὑγιεσὲς—Weikel (Op. Cycl. ii. Bonn. 1945) 326 — proposes the emendation: ὑγιεσὲ ὀφθέοι παντεῖα. Wilmowsit (Jepilo, Berlin, 1886, p. 47), however, in view of the local cult of Poseidon at Tanos, maintains the view of their descent from that deity, and the present writer expressed agreement therewith in Pauly-Wissowa, ii. 1888. But the question has been discussed at length by Leofér (Nagheel θανá de Phil. x. 1905 216 ff), who decides against Wilmowsit and in favour of Weikel; and rightly so, as the scholia to θι. xi. 511 cite the Portheis, not with reference to the genealogy of the two warriors, but in order to establish the medical proficiency of each. Moreover, a corruptly transmitted version does not warrant the conclusion that he has the constant tradition of their descent from Asklepios. To Leofér's arguments might be added the testimony of Aristox. (78 D) : Their connexion with Asklepios is affirmed throughout the whole world. 2 This identification was wrongly read into Or. 352 by Gravis and Zonotos, whose view was adopted by Strab. 763: ci Lib., Aristot. 3: Leipzig, 1909, p. 176; Lobeck, Aristotelis henem. Tannr. ist., 59 1844 1851 142.

5. Aristos — Aristos was an ancient Thesalian deity akin in character to Zeus and Apollo (Paus. θυσ. lix. 64), and was worshipped in Coös as θεός and θεότης (Weikel, op. cit. iii. 185). Having been reduced to the rank of hero by the people (Epeios), he becomes the son of Apollo and Cyrene the Latian nymph, and the pupil of Cheiron (Apoll. Rhod. ii. 510). Various benefits in the sphere of husbandry, and also — as a gift of the Muse — the arts of medicine and divination, were ascribed to him (40. 512). He was said to have taught medicine and the healing of wounds to the beneficent influence of Staurus by expiatory sacrifices and the cleansing of weapons (Thesph. de Vent. 14). Phebe calls him the son of Faion (schoel. Apoll. Rhod. iii. 167), but this is to be understood here as a designation of Apollo, and not as the eponym of the Panes (Gruppe).

6. Cheiron. — Cheiron, the representative of magic healing, is found in the local deity of the herbarious Mt. Pelion, viz. the Codrim Cheiron, the representative of pharmacognosy, which forms and transforms from the sphere of the occult to rational therapeutics. His name has been traced to ϑείος, either as the 'hand' skilled in art (Weikel, Κ. Α. Ε σ. i. 3; H. Usener, Gottheiten, Bonn. 1896, p. 167; Weikel, in Pauly-Wissowa, iii. 2302), or as the 'hand' applied to the sick with magic effect (Weineich, op. cit. 158). Tradition speaks more distinctly of his pharmaceutical than of his surgical achievements; in 11. iv. 219 and x. 822, Asklepios and Achilles respectively receive from him ἡμαὶ ὄψιν for relieving pain or staunching wounds. One of the very few tools of the warrior-surgeons in the Iliad, as being free from the accessories of magic, is an inheritance from Cheiron. In a tribe dwelling near Mt. Pelion, and claiming Cheiron as an ancestor, the hero — so the tale goes — handed down from father to son as a mystery (Dinach. fr. 60. 19), and the Mystagania of the Iliad, as being free from the accessories of magic, is an inheritance from Cheiron. A tribe dwelling near Mt. Pelion, and claiming Cheiron as an ancestor, the hero — so the tale goes — handed down from father to son as a mystery (Dinach. fr. 60. 19), and the Mystagania of the Iliad, as being free from the accessories of magic, is an inheritance from Cheiron.
HEALTH AND GODS OF HEALING (Greek) 547

3. Apollo.—Apollo is a very intricate figure, and the various explanations of his name have not as yet furnished the key to his original character. This is true even of the most recent attempt—that of Usener (op. cit. 308), who recognizes the 'deus pulsator malorum' in an assumed primary form 'hypo-apollo' (Hypo-apollo), as yet no connexion with medicine, though he is certainly the sender and stayer of pestilence (II. i. 43 ff.), and the chant of entreaty addressed to him is called a 

'sermon' (I. 479), which is simply the name of the physician of the gods just dealt with. This may be formally accounted for by the fact that the river thebais is called 

'apollo', and the uncer- tain meaning of the word renders it difficult to discover the material ground of the usage. If the word signifies 'cleanser' (Skr. sarvarājan; Pictet, in Kuhn's Zeitschr., v. (1885) 40), its employment as an invocation to the queller of pestilence would be satisfactorily explained. As an epithet of Apollo it occurs also in the 

'Hymn to Apollo Pythian' 94 (Ifraon), subsequently the form used was simply (Hypa-) 

'haude, or 

'Hauade'. At first, and for centuries, the expedients used to counteract pestilence were purely theoretical, consisting of a 

'mucron, lepto- ', or 

'harpephore 

(N. i. 52), sacrifice, and peace (I. 447 ff.); instances for a later period are given by Welcker (Kt. Sohr. iii. 33 ff., 'Beuchen von Apollo'). The Ideas in the Empedoclean universe that Hypaia became a half-dried lake is notable as an early example of a rational remedy (Diod. Lact. viii. 2, 70, and coins of Selinus in B. V. Head, 

'Hesiod, Thesmophoria', Oxford, 1891, p. 9. The con- ception of Apollo as the god of pestilence probably rests on the solar aspect of his character. He was worshipped at Lampsacus specifically as 

'Hapton' (Masch. 

'hunt. s. 17. 15). In this relation he is the one who punishes—the death-god; and here his sister Ar- emis is associated with him (Niohids, Coronia). On the other hand his benign influence, especially in connection with 

'hymns' (also at 

'Lydis, 

'Mastic, 

'Pseud., iii., Berlin, 1845, no. 972), in Delos, and at Mileto (Strabo, 656), which 

'Callistus' 

'contemptus', 

'terminus' (in Basess (Paus. viii. 3. 4), 'A神kēsos (in Athens 

'state of Calamia, Paus. i. 3. 4), where, instead of the great plague, we should think of some earlier epidemic); 

'Artemis in Elis, Paus. vi. 24. 6), and 

'tenarr' (in a Clarian oracle (Weinreich, op. cit. 

'p. 160). But the Paian was also a chant of battle 

'Iliad' (ii. 338; Thucyd. vi. 32, etc.), and thus Apollo acquires a sphere of action far transcending the domain of pestilence—that, namely, of the averter of evil in general, as implied in the titles 

'Aronapora (Aristot. 

'Fyg. 161; CIG 464) and 

'Zarpi (ref. in RE 

'i. 68). The epithet 

'Arks (Soph. 

'Fed. 

'i. 1006) is not, as the Bickes thought, a derivative of 

'Arks, but is taken from the refrain of the Paian in its longer form, 

'ton 

'Pau. (i. 154), and has therefore as wide a connotation as the latter. Now, though the more extensive sphere of 'deliverer' might very readily have been contracted to the narrower one of 'physician,' our available evidence of the process is but scanty. The Delphic god, it is true, delivers oracles for 

'symptom' (op. cit. 150); but, as regards his being consulted in any particular case of disease, the present writer can recall only the instance of Alyatas (Herod. i. 19), and the 'arrousis' prescription (an amulet of worms from a she-goat's head) given by the Pythia for epilepsy (Alex. of 

'Altayl, 568 (Fuselmann)). The reason why Apollo was also a god of medicine is found in the fact that Asklepios was conjoined with him at a relatively early period (cf. 20 below), and the healing function could accordingly be delegated to the latter. But the Epidauros 

'seismata, Apollo, as the sovereign authority, is named first—though he does not intervene in the actual cure; while Asklepios—as a departmental chief, to speak—occupies the place in the 'Hippocratic' oath: 

'Ασκληπειον (cf. 

'Asklepios, etc.).

A cult confined to 'Asklepios' is found only in the Miletian colonies round (RE ii. 54; Farnell, COS iv. 355 and 409), and here the worship of Asklepios sank completely into the background, only the Asklepieion known to the present writer being that of Panticapaeon (Strabo, 74). Apollo is sometimes called 'Iapot' in the poets (Aristoph. Aves, 584; Plout. 11). His title 

'tirapauros in Arch. 

'Rom. 62 relates to the case of Orestes, and thus denotes, not the physi- cian, but the 

'athetos. Late writers speak of Apollo as the founder of medicine, but as having handed it over to Asklepios for its further develop- ment (Diod. Sic. v. 74; Philostr. Vit. Ap. iii. 44). Isolated indications of his medical activity are found in the cult of the 

'Kleode (Paus. iv. 54. 7; cf. RE ii. 51), 

'teoreidw (Laconia; cf. Str. 

'Αρχα, 1884, p. 81 ff.; BCH ix. (1885) 243), and 

'Unadi (Cyprus; Comment. in Rom. Montemvri, Berlin, 1877, p. 692). As a guest at the 

'altar' (see below), 'Asklepios' was likewise regarded as a god of healing.

88. Maleata.—The name 'Maleata' is, as regards its form, a geographic or ethnological adjective, and needs to be supplemented by a 

'nomon prooprion. Farnell (op. cit. iv. 238 f.) would accordingly supply the name 'Apollo' in all cases where 'Maleata' is used by itself to designate the deity invoked, as, e.g., in two archaic votive inscriptions from Laconia (IJA 57, 59). This view, however, is in conflict with the fact that Maleata and Apollo are mentioned side by side in the sacrificial rubric found in the Pirene (CIL ii. 1651), of which Farnell gives a somewhat forced explanation. It will therefore be more in place to recognize, as Wilamowitz (Jegyl. 96 ff. does), in Maleata a deity originally distinct from Apollo. The identification of the two is attested as regards 

'Sparta (Paus. iii. 12. 8); 

'Asklepios Malata, 

'the Epidaurian 

'hiria (ib. ii. 27. 7, and several inscriptions, IG iv. 332, etc.), and the Asklepion of Trikka (IG iv. 360, 29). If this identification was a later development, it was probably effected in Epidauros, where Asklepios would form the connecting link. Gruppe (op. cit. 189. 3) is hardly successful in explaining (op. cit. 338; 

'opoulos; 

'πολις . . . πολις) Apollo Malata as the 'gentile Apollo,' or in locating his place of origin, as also that of Asklepios, at Gortyna in Crete.

p. Artemis.—For the function of Artemis as a death-goddess associated with Apollo, cf. the preceding; in this capacity her special victims are females (J. xxi. 453, vi. 426, 428; etc.). Gruppe, (op. cit. 1299, 1273. 4) regards her as having been the source of psychical and nervous disorders. The other aspect of this activity is her having been the restorer of those so afflicted, as, e.g., Orestes (Ther. frg. 97), and the Pristis (Baccyl. x. 96.) In gratitude for the cure of the latter, their father erected in her honour, as Hapat and as 

'Kaphe, temples in Luni (Callim. Ecfr. 224), a point so far borne out by the ordinary myth of the Pristis (Pausanias), which relates that 

'the maidens were cured by 

'Malata, etc. (see above); and in the Artemision of Luni, Luni is the 

'only healing-shrine assigned by tradition to the goddess (cf. the Report of excavations in Oesterr. 

'Lndern, 1906. 1907). The same Pristis found in this inscription several dedications to Hapat, p. 81 ff.). Her connexion with healing fountains, however, is attested by the epithet 

'Gyaspasia (Mithileis [CIG 2172, etc.], Cyzicus (Arist. i. 2031), and Rhodos (Leon. and 

'Panellus of the ancient Artemision of Ephesus
HEALTH AND GODS OF HEALING (Greek)

contained votive models of limbs in gold, silver, and ivory (Musacchi, op. cit. Ephesos, London, 1908, pp. 223, 238). Cf. also her title 'Epesko (4th. Milt. xxxviii. [1912] 7 ff.). Her obstetric function is indicated by the titles Aptyela (Camb. Soc. 1835, 323) and (2) Episkopos (especially in Boeotia); cf. Wernicke, in KE ii. 1347, 10, who, however, wrongly regards ‘Epesko as the hypostate of Artemis, while it was really an epithet of Hera, and, as personified (Preller-Robert, i. 511 ff.), still remains closely connected with her. Similarly, Mylitta (Bab. M. Azizollou, 1871), which brings to mind the epithet ‘H.' (cf. Schrader, KAT, p. 423, 7). The Heb. yeshedeth (Osele, in Neunberger-Pagel, i. 70) is merely an artificial form designed to explain Epesko.

10. Healing Nymphs.—(a) As presiding over medicinal springs: (1) the Twicer (Paus. vi. 22, 7), Liasios (Misn. ap. Athenaeus, 608), or Liasios (Strabo, 366)—connected with ‘Epesko—nymphs of a healing fountain in Elis, and forming a tetrad, viz. Pegaia, Kalliaphis, Synallaxis (probably a peionym of the Pegasos), Kura (recovery), and Iasia (cf. Hom. v. 16. 5. and 16); (2) the Anigridan nymphs, as named from the warm sulphur-springs on the lower Anigra in Tripolybia (Strabo, 346; Paus. x. 8. 10, and 82), and having to do especially with skin-troubles—here we should note the combination of theurgy (prayer and vow) with rational remedies (bathing in a mineral spring).

(b) The sacred springs of Ischia (IG Sic. et Ital. 929 ff.), the votive offering of a physician.

(c) We have here numerous instances of the case where the refreshing properties of ordinary natural springs gave rise to the cult of local nymphs, generally in connexion with the worship of Zeus or of his localizing god. In the Orphic worship at Orpitos (19 below).

II. Pan.—Pan, the Arcadian mountain and forest spirit, like his Italic counterpart Faunus, possessed mantic powers. He had an oracle in the Lykian (schoel. Theoc. l. 121), and another in the Asklepieion, with the nymph Erate as his ‘Erate (Paus. vii. 37. 12). He received the title ‘Erate in Troezen, because he stayed a peiiste of Orpitos on the feast of Echinos, but he moved here also in the waking state (Kohleb, Epigr. gr., Berlin, 1878, p. 303). In the Asklepieion at Sicyon, the porch was flanked by figures of Pan and Artemis (Paus. ii. 10. 2). With reference to the healing powers of Pan Ephialtai in the mid-day sleep, see Recher, iii. 1400. The epithet ‘H. is applied to him only in Orph. hymn. xi. 1. In conjunction with nymphs, Acheles, and Kephisos, he represents the hygie of Nature at the altar of Pan (19 below).

12. Hermes.—In the case of Hermes divine traces of the healing function are scanty. The titles Soter (Amorgos; 4th. Milt. i. [1876] 332) and Alexiakos (Aristoph. Fug. 425) are applied to him in quite a general sense. With reference to the epithet of ‘Erate (Pi. xvi. 185, Od. xxiv. 10, Hes. fr. 28 [Rasch]) is disputed (cf. Etyms. Magn., s. v.); if derived from ‘Erate (schoel. 1. to Pi. xvi. 185 explains it by ‘Erestoris), it would be a specifically medical epithet, but this is scarcely conceivable with so ancient a designation; perhaps the wordEpistates, in the guise of evil (‘Erestis). Hermes, Kriophoros was worshipped in Tanagra as the queller of pestilence, and in commemoration of his good services a youth carried a ram round the walls at Tanagra (Paus. xii. 10. 2). With reference to the votary action of Hermes survives in this custom, and accordingly the beautiful conception of the 'good shepherd' derives its origin from a cathartic rite.

Hermes is the god of sleep in general (Preller-Robert, i. 404), though it cannot be proved that insomnium had a place in his cult. As the god of the penitent, he was also the guardian of health; and it was perhaps on this account that Hygieia was in some sources represented as his wife—a detail which Cornut. 18 too artificially explains by reference to his eloquence.

13. Herakles.—'Born to avert the curse from gods and men' (Hes. Sch. 27), Herakles is preeminently the Alexiakos. In schol. Arist. Thea. 601 the image of Alexiakos, by Ageladas, in the demos of Melite is associated with the great plague, instead of with the pestilence of 390 B.C. (Preller, Arch. Münchenn, Berlin, 1856, i. 39) or the Persian invasion (Studniczka, Rom. Milt. ii. [1887] 91. 21). The shorter form 'Alexis was current in Coe (Arist. I. 60); in Delos and Aegina he was worshipped as ‘Apollyneides (BCH vi. [1882] 342, xvi. [1891] 671). Herakles Soter is found in tetradcrhmos in Thasos (Head, Hist. Num., p. 268, fig. 164), and in Hythrotai, and has a share in the Orphic altar (19 below). The ‘Erestis ‘H. was named after him (Theoph. Hist. Plant. ix. 7; schoel. Nic. Th. 628; Dic. iii. 49). 14. The Dioscoroi:—the widely diffused cult of the Dioscoroi as Soteres is sometimes connected with navigation (Horn. hymn. 33, Theoc. xxii. 6), sometimes with success in war (as, e.g., in Hom. Hes. xvi. 8), and has a share in the palace of Cronus collapsed (Callim. op. Suid. s. v. ‘Dioskoroi). The healing of Phormio the Corinthian at Sparta by one of the Dioscoroi (Theopompos op. Suid. s. v. ‘Dioscoroi) is also the cure of Telephus by Achilles. The Dioscoroi engaged in a regular practice of healing in their temple at Byzantium (PTEG v. 149, 15). The means adopted seems to be incubation combined with interpretation of dreams. Dounier (de Incub. 76 ff.) concludes from schoel. Paris. ii. 56 that this was the case both in Athens and Phocis (Paus. xii. 30. 3), and that at Byzantium, and, further, that in both localities their function was inherited by Kosmas and Damian, physicians and martyrs. Cf., however, below, p. 506, note 4. 15. Dionysos.—Apart from the epithets of general signification ‘Elastos or ‘Elastos, Paus. ii. 31. 5. 27. 2; IG iv. 177; and Hes. Eur. Lek. fr. 480, Dindorf: 'Pean of Philodamus,' BCH xix. (1896) 301, xxii. (1898) 513 is applied to Dionysos, he was worshipped specially as ‘Elastos or ‘Tyndyl by the epistates of the Pythia (Athenaeus, 22 and 86; Quast. cons. iii. 2). As Besithis tos he presided over the dream-Oracle at Amphikleia, where his priest, as ‘Elastos, icip in ‘Elaston, i.e. just as the Pythia did (Paus. x. 28. 11). It is thus clear that in this sanctuary the priests were concerned with incubation and dream-reading, as well as with the Plutonium near Nysa (cf. below). As regards the healing power of Dionysos conveyed by touching (‘Iatrews ‘Elastos in Orph. hymn. 50. 7), see Weinreich, op. cit. p. 27. 16. Demeter.—As ‘Erestis, she was worshipped as ‘Eporeps, was proficient in the magic of the nursery (Horn. hymn. iv. 227 ff.; elótraç, v. 228, a brilliant emendation by Tü Bergk, Gr. Literaturgesch. Berlin, 1872-82, i. 9. T. 26), and in imagination of the cante action of Hermes survives in this custom, and accordingly the beautiful conception of the 'good shepherd' derives its origin from a cathartic rite.
HEALTH AND GODS OF HEALING (Greek)

In Patera she had a ἀγροναστή, in which, however, she did not prescribe remedies, but simply revealed whether the sick would die or recover (Paus. vi. 21, 19). To this is a proof of her astral activity (Pyller-Boelter, l. c. 764, 2) is unwarranted, as this passage deals only with rules for dream-reading, while in Ὁμήρος, Ἀχιλλεια, 40, she has the recognized honor of the god. Peace, law, riches, and health. To connect the device ῥύτρα found beside the beautiful head on Metapontine coins (reproduced in Roscher, l. c. 279), from the Coin. of the Brit. Mus. with Demeter (Sallet), again, is prejudiced by the youthfulness of the head. In the medical domain, accordingly, nothing says that she, as Demeter, is correctly adjudicated. For the female breasts upon marble blocks from her temple in Cnidus, see C. T. Newton and R. E. Pullan, Discoveries at Halieis, London, 1882-83, i. p. 20.

17. Hades-Pihto—The dream-oracle in the Plutonion near Nyx on the upper Meander (Plutonion, 1. c. 153) is of great importance in the history of Gr. religious medicine. Here ἄνθρωπος τῶν ἱπτης incubated on behalf of the sick in a cave filled with earthy vapors, where the incurable was treated in the dreams received in the ecstatic trance. In many cases they let the patients themselves sleep in the cave for a few days without food, but even if an invalid was favored with a dream, the priest still acted as σύμβολο and ἀνεῖλεν. In the Plutonion, therefore, the task of interpreting dreams devolved exclusively, and that of incubation generally, upon the priests. Such, however, was exactly the characteristic feature of the Bab. dream-shrine, which, as we saw above (p. 34), was to be pur the of the Gr. institution. Higher up the Meander valley, near Hierapolis, was another Plutonion, having a cave pervaded by even more potent exhalations, which only the gods and the initiates (Strabo, 803). Whether incubation was resorted to here as well as Strabo does not definitely say, but Pausanias (x. 22, 12) states that dream-shrines of the sacerdotal deities were to be found in several cities of the Meander valley. From an inscription of the Imperial period (in Henze, Μεσόκομοι τῆς Μιλησίας, 1. c. 156), the Greek, οἱ καθισματικοί, is the inscription, which, it is true, is, being reduced in epic poetry to the level of heroes, but maintaining their divine dignity in the cultus. Amphiaras, as a result of his being confined to a locality, never gained any extensive sphere of influence, while the beneficent hand of Asclepius reached as far as did the influence of Greek and Roman deities.

19. Amphiaras—The Greek epic makes Amphiaras a hero of Thibet-Argive legend, and a descendant of the seer Melampus (below, ch. 5), but even as such his original divine (chthonic) status finds expression in the circumstance that he was at death translated to the under world (Pind. Nem. ix. 34). He presided over the sanctuary of Oropus. The high regard accorded to this dream-shrine is shown by its having been consulted by Creuses and Mardonius (Herod. i. 46, 25, vili. 184). The curative procedure of this Amphiaras of Oropus, which, from the number of these two statues, it is, true, was as bitterly satirized by Aristophanes in his Amphiaras (presented 414 a.c.) as was that of the Asclepius in his Ploutos (408 and 398 B.C.), formed the central feature in the activities of the sanctuary. The code of regulations (IG vii. 235) fixes the client's fee at one and a half drachmas, and makes mention of a leontomachos with two separate apartments beside the altar. An incubation-hall of later date, situated at the theatre (P in Dürbach's map, reproduced in RE i. 1886) was similar in design to the θεσπόντος of Epidaurus. The visitor, after a period of fasting—'in order to receive the oracle with a clear soul' (Philostr. Vit. Apoll. ii. 37)—and the sacrifice of a ram, prepared himself for the initiation of the god by abstaining from the food of the animal sacrificed (Paus. i. 34, 4, 5). We thus see that Amphiaras performed his cure, not by direct miracles during incubation, but by citation of the Epidaurian sanoitos, but by means of dream- oracles, which were, of course, submitted to the judgment of the dream-reader. An important factor in the treatment of invalids had been the separate apartments for men and women (IG vii. 4255)—which is often referred to from the days of Aristophanes and Xenophon (Ἀριστοφάνεια). The fountain of Amphiaras, to the south of the altar.
HEALTH AND GODS OF HEALING (Greek)

(F in map), was investigated by the physicians Erasistratos and Euenos (Athenaea, 48)—a fact which indicates that this was used for therapeutic purposes and not, as Pausanias says, only as a receptacle for thank-offerings of gold and silver coin. Many other healing shrines are mentioned in IG vii. 203, 67 ff., and 3498.

The great altar (Δ) according to Pausanias, contained five μαῖα — by which almost everything connected with healing in Attic religion was brought into relation with Amphiaros. The third μαῖα—the principal division—belonged to the god himself, to his son Amphipholis, together with Hermes (as θησεύς θεώτης [1]) and Bœotia (probably as the domestic goddess of Amphiaros). The σάββατα were associated with goddesses with the other names as follows: Helene, Zeux, and Apollo Paion (cf. the Delphic oracle in Demosth. Mid. 53) with the first; heroines and heroines with the second; Aphrodite (CLi ill. 136; θησεύς τῆς Άργου), Panacea Iasae Hygieia (representing the Attic Asklepieion), and Athena Paionia (Kerameikos), with the fourth; and nymphs, Pan, Acheloos, and Kephisos (cf. το γας) above the fifth. It is quite certain that Iaso was here regarded as a goddess (cf. the present writer's observations [Roescher, ill. 1488] in opposition to Usener). Aristophanes, in his frequent references of her as a child, the daughter of the Oropian deity, but in the Ploutos as the daughter of Asklepios; and as such she appears also upon a relief from the Asklepieion (AIA. Mit. xvIII. [1196] 345). Hygieia was first found in connexion with Amphiaros in inscriptions of the 1st cent. B.C. (IG vii. 372. 412), and was therefore at that period no longer a mere goddess, but a joint-possessor of the healing god. The existing and Magna Graecia had a subsidiary institution at Rhhamnous (Mela, ii. 3. 5); and excavations (Δαμων, 1891, p. 116), which have yielded a relief representing Amphiaros (standing upon the sick).

Alexida, the daughter of Amphiaros, is associated with the medical function by her very name (Ἀλεξίς, 'expellers'), were regarded as healers of epidemics (Plut. Quaest. Gr. 23).

Σακλιπέιον.—Considerations of space render it impossible here to treat of Asklepios in such detail as is due to the chief god of healing among the Greeks. The writer must, therefore, be content to summarize some of the more salient points, and for the rest to refer to his more exhaustive article in Roescher, ‘Asklepios’ (1884), ‘Hygieia’ (1889), and ‘Panacea’ (1902), and also the art., ‘Asklepios’, in RE. ii. 1986, 1842 ff., and ‘Iphieno’ (cf. 1906) 180 ff. The 181 localities connected with the cult of Asklepios (6, ii. 1865 ff.) are only a selection from among the 410 which the writer had at his disposal, and which form a still more effective testimony to the enormous expansion of the cult.

1. The origin and earliest spread of the cult, and the intrusion of Apollo.—The earliest history of the cult has been distorted under Delphic influence, but may be reconstructed from the extant fragments. The name ‘Asklepios’ was traced by the Epidaurian writer Iasilos (3rd cent. B.C.) to Αἴγλα (Ἄγλα) (IG iv. 960, line 51). Von Wille- movits (Iapoll. 93), combining this word with the Αἴγλα, proposed the primitive form Αἴγλωνια. Gruppe (op. cit. 1424 ff.) agrees with this, but believes that we have in Asklepios the continuation of two distinct personages, one a light-god, Asklepios (‘light-radiance’), connected with Apollo, and belonging originally to Gortyn, in Crete, the other an earth-god in the form of a snake (the characteristic feature of the name, from ἀρδέας, which became fused with the light-god in Boeotia and Phokia. The present writer cannot accept these theories, and, refraining from etymological experiments, would only emphasize the great migration days among the adherents of Asklepios. This is indicated, indeed, by the facts that the leading symbol of Asklepios was the snake, that incubation was a characteristic feature of his worship, that a residue of the chthonic ritual (θάνατος) survived at Tithane, an ancient centre of his cult, and, finally, that he had a double in Trophonios, there as and oracle-deity of Lebadeia, who was once identical with Asklepios, but was detached from him at an early date, when the physician deity had not yet been individualised. According to the thoroughgoing investigations of O. Müller (Orchomenos, 3, Breslau, 1844, p. 183 ff.), the original home of Asklepios was Thessaly, the devotees of his cult being the Thessalian, who in the tradition handed down by the separating theologians (Cic. de Nat. Deor. 112. 22 [57]; Joh. Lydus, de Mens. 4, 90), according to which his parents were Isychyra, the son of Echinos, and Koronis, the daughter of Philegys, is of great importance, as it points to a period when Asklepios had no connexion with Apollo. His surrender of a divine for a heroic rank was effected by epic poetry. Thus in Homer he is merely the ‘blameless physician’ (II. iv. 194), the disciple of Cheiron (218), and the only one who is mentioned by Homer (Iliad x. 456, 520, 2337, 2392). He was also a companion of the Thracian Munchus, Teiresias et teresidhes (202), with whom passages of later origin associate a brother named Podaleirios (II. 732, 13. 833). On Homer's authority the Asklepieion was founded by Cheiron at the ancient of all (Apollo. op. strabo, 437), and the river Lethe was the birthplace of Asklepios (oracle in Euseb. Prep. Evang. 11. 14. 6). But Pheidias and Le快速 were also coupled with him, his primitive habitations, as his education under Cheiron was associated with that region, while his place of birth was located by an Τέος in the Delphic champaign near Mt. Pelion. His earliest migration from Thessaly was southwards to the Minyan Northern Boeotia, and here Trophonios was worshiped in Lebadeia, and Asklepios in Mycenae, Hytios, Theseus, and Thise (RE ii. 1663). He was still a stranger to Southern and Western Boeotia, as also to Attica, to which his cult came from Epidaurus only in 420 B.C. On the other hand, he had at an early date gained a permanent footing in Phokis, which honoured him universally as its archon (cf. RE. 92. 12). It was in Phokis, indeed, that the worshippers of Asklepios came into collision with the Apollinian circle at a period when, in consequence of the Dorian migration, the cult of Apollo had forcibly established itself in Delphi. The traditional implacable hostility of the Philegysans towards the Delphic sanctuary indicates the violence of the conflict, which, however, ended in the triumph of Apollo.

A sweeping transformation of Minyan beliefs now ensued in favour of the intruder. Apollo becomes the father of Asklepios, Koronis the god's faithful mistresse, Isychyra the violator of his rights, but the offspring is taken into favour, so that he may henceforth act as the beneficent physician of mankind under the patronage of the Delphic god; then, as he made bold to infringe the cosmic order by restoring the dead to life, he fell a victim to the bolt of Zeus. Such is the substance of an Νεος (Res. fr. 125-126) (Kühnen) and the succeeding age (cf. RE ii. 1646) until the rising prestige of the Epidaurian hieros led to revision of the Asklepius myth which had the ascension of Delphi. In this new form of the saga the connexion of Asklepios with Thessaly, and the guilt and punishment of his mother—a Wack the explanation of the name, from ἀρδέας, which became fused with the light-god in Boeotia and Phokia. The present
HEALTH AND GODS OF HEALING (Greeks) 551

(8 of above). In the άιερον the latter beget Aesklepios by Aigle, daughter of an 'Epidauros' Philæras, and named Koronis, from her beauty, and makes him joint-possessor of the sanctuary. Such is the version given in the poems of Ibyllos in the first half of the 3rd cent. B.C. (cf. Ibyl. 29, 84; Paus. ii. 11. 7; IG iv. 950). A somewhat closer correspondence with the Εσε is shown by the Epidaurosian form of the myth in Pausanias (ii. 28. 7); here Koronis, being with child by Apollo, comes with Philæras from Thesee to Epidauros, and upon the 'myrtle-mountain' brings forth in secret the son who fills the world with his fame as soon as he reaches maturity (cf. RE ii. 667, n. 4; Arethusa). This version likewise won the sanction of Delphi.

Aesklepios, however, notwithstanding his having been thus forcibly given upon the Apollinian circle, maintained his independence in his own cult. This appears most distinctly from the type assigned to him in art, which, in contrast to the representation of the son of Leto, exhibits him as the fatherly friend of men, the παράκλητος (Herodas); hence the flippant jest of the sarcophagus on the tomb of the Envoy from Cos, at Pergamum, which suggests that the cult of Korysia in Titane (Paus. ii. 11. 7)—a worship in conflict with the standpoint of the Εσε—should also be noted.

The Εσε, therefore, is an epithet of Zeus that comprises two groups, which must be kept distinct. (1) Η τετράχορον. Here we have his consort Epione, a personification of the 'mildness' which popular etymology found in his name (Arethusa); he is often called to schol. II. iv. 195 (ις Μεσος), she was of Cretan origin, but, on grounds of mythical chronology, we should probably regard her as a Musée here. Epione is a fully dealt with in RE vi. 186-190. The first of his descendants are the two 'excellent surgeons' affiliated to him by poetic poetry, viz. Macheon and Podaleirios. The former was a native of Cos, and attributed to the worship of a few Greek Aesklepios, as, e.g., in Cos, at Pergamum, and doubtless also at Mytilene (cf. RE ii. 1860). Podaleirios is almost unknown in European Greece, but in Caria he is the ancestor of a famous family of Aesklepiades, and, according to v. Wilamowitz (Jegyl. 51), was originally a Carian hero. In the 4th cent. B.C. he was enshrined as a healing oracle among the Delians. The assertion that the two brothers were the sons of Poseidon (frag. of the Fortunata) was negated above (4); the fragment in question is nevertheless of interest as the earliest Greek record of the separation of surgery (Macheon) and internal medicine (Podaleirios). A legend of Byzas (Steph. Byz. s. a. Φωσκος) relates that, when the king's daughter had fallen headlong, Podaleirios restored her by bleeding.

The outstanding iatric figure of the group is Panakeia, a personification of the popular notion of the miraculous all-healing herbs already mentioned in connexion with Chiron and Heracles. As the daughter of Aesculapius he represents this omnipotence in the sphere of healing (on the centres of her cult, and her presumably Rhodian origin, cf. Roscher, i. 1496, n. 1). In the ancient oath of the physicians she alone—as a healer—is contrasted with Hygieia; subsequently she was associated with a sister named Iaso (Hermipp., Aitol. xxii. 40). The cult of the 'hard-working, with the addition of Akesa, we find a triad of female healers (Athenian relief, reproduced in Roscher, i. 1490; inse. from Pireus, CIL ii. 1651; the Peans of Ptelemais and Athens). The medical return of Aesklepios is composed by the daemonian Sphoakos (schol. Plut. 701). Akesa (Epidauros, Paus. ii. 11. 7), and Telephoros (Pergamum): the last-named is viewed in very different lights (Wecker, Göttlerba. ii. [1860]; Paus. ii. 1490; Pind. P. 283 ff.)—most recently as an incubation spirit by Ziehen (Att. Mitt. xviii. [1892] 241). The hymn in CIL iii. 171 identifies him with Akesa; Pausanias (ii. 11. 7) does likewise, but at the same time identifies him also with Eumachia (see below, under 2). Incubation is represented by Hymnos in Sicyon (Paus. ii. 10. 2), Athens (Ath. Mitt. ii. [1877] 242, 4), and Epidauros (Blinkenberg, 16. xiv. [1889] 390). (3) The personifications of health andutility. The leader of this group is the maiden Hygieia, who by many recent writers is wrongly regarded as a healing goddess. The name has a history in part independent of the Aesklepiac cult. It is found c. 500 B.C. as an epithet of the goddess of the Athenian citadel (cf. above, 2). The hymn of Lucianos (Pap. Att. ii. 593) makes reference to a maternal Hygieia, existing side by side with the 'Queen of the august Iphion of Apollo,' but does not connect her with Aesklepios. It is clear also, from Cornut. 16, that in some places a Hygieia was associated with Hermes (cf. above, 1). Finally, a maidenly figure designated Hygieia is found among the personifications of Enciae (Eunomia, Harmonia, Tyche) on vase-paintings (Jaun, Archdol. Beitrage, 216; A. Z. 1879, p. 86), and beside a youth named Klytios on the vase of Meidias (Inghirami, Mon. Etrusc., Fiesole, 92-97, v. 2, pl. xii.). But, while the representation of an abstract conception might be employed in many ways, the creation of a figure in the cultus is a different matter. Usener (Götternamen, 169), opposes, however, that an independent goddess designated Hygieia was known in Athens long before the settlement of Aesklepios there (420 B.C.)—a theory which the present writer refuses in Roscher, i. 1496. In the point in question the medium in which the worship of the goddess of health first emerged, there are good reasons for believing that this was the Aesklepiac cult. That Hygieia reached Athens in company with Aesklepios in 430 B.C. is an ascertained fact (cf. the final revision of the relative inscription, Ἐφαγ. 29998, 1901, p. 98). If she did not come from Epidauros (where her connexion with the 4th cent. B.C. is now attested by IG iv. 1299), she must have been brought from some other Aesklepiion in the Peloponnesus—Titane perhaps; her ancient worship there is discussed in Roscher, i. 2776. As the guardian of health, she forms a real contrast to the medical return of Aesklepios, and accordingly she does not appear in the healing scene of the Paeans; while, again, in the well-known Paean, a recension of which (4th cent. B.C.) was recently discovered in Erythrae, she is, for the sake of emphasis, put last of all. The sick might approach her with petitions, the restored with thanksgiving; her name in itself signifies the stewardship of the supreme blessing of life. But this blessing was not merely a thing to be regarded by healing, but rather—what was of more importance for national life—a thing to be safeguarded and strengthened by rational conduct. Not only, with this idea had a natural attraction for the race that instituted the athletic contest and the gymnasia. That it was familiar also to the followers of Aesklepios is shown by a curious story: a youth with the addition of Akesa, we find a triad of female healers (Athenian relief, reproduced in Roscher, i. 1490;
HEALTH AND GODS OF HEALING (Greek)

The fact that Aigle becomes a daughter of Asklepios seems to be due to the affinity between the idea of healing and flight and that of Poseidon, the patron of Asklepios, who is depicted at Olympia. The statue of Asklepios and his son, both of which are shown on the same column, was discovered at Olympia in 1877 (Roescher, l. 2782).

The ancient practice of torture was also a form of healing, and the lion was considered to be the symbol of Asklepios. The statue of a lion was discovered at Olympia in 1877 (Roescher, l. 2782).

The fact that Asklepios was also associated with the god of wine, Dionysus, is evident from the inscription on the column at Olympia. The statue of Asklepios and Dionysus, both of which are shown on the same column, was discovered at Olympia in 1877 (Roescher, l. 2782).

The ancient practice of torture was also a form of healing, and the lion was considered to be the symbol of Asklepios. The statue of a lion was discovered at Olympia in 1877 (Roescher, l. 2782).
HEALTH AND GODS OF HEALING (Roman).

In the version given in the Heisiodic Catalogue, fr. 28, 29 (Richt.). According to Theophr. Hist. Plant. ix. 10, 4, Melampsous treated their case with the άδερφα τον, which is consequently also called melampodion. Rhodes (Psyche, Freiburg, 1894, p. 333, 3) holds that this remedy was purely cathartic; but it may quite well be regarded as thereafter, and, as a counterpart to the pανακες of Cleon and others. There was a cult of Melampsous at Aegina, but there was no practice of the kind with which it is connected (Paus. i. 44. 5). According to Imhoof-Blumer, and Gardener ('Numismatic Commentary on Paus.' JBS vi. (1885) 58), the circular building upon a coin of that locality may be a representation of the temple.

6. Apis.—According to Eich. Suppl. 315 ff., Apis, the eponym of founder of Apis (Argolis), and the λαρδός των ουρίων Ασίων, came from Naupakos, and freed the land from monsters δέατα του κάθος (cathartia pharmakeia). He was subsequently represented (Porph. de Astr. iii. 16) identified with the Egyptian Aiaca (cf. Werner, op. cit. ii. 230).

7. The descendants of the Asklepiad Macchon (A. 20, ii. (1)).—This group is composed partly of originally local spirits or heroes, as, e.g., his sons Nikoimachos and Gorgos, who in the time of Pausanias (iv. 3. 3) were still active as healing heroes—especially for paralysis—at Phare in Messenia (cf. Paus. l. 636; RE xi. 1688), and partly those whose sole function it was to found Asklepieia, such as Sphyros in Argos, Polemokrates in the Thyateia, and Alexandor in Titane (Paus. v. 26), though in the latter locality the founded was according to school. Arist. Plout. 704, was Alexenor, the son of Asklepion. On the family of Asklepions which traced its descent from Neocles and Philoctete, Aristotle belonged—and on the Asklepieia of Rhodes, Cnidus, and Cos who sprung from Dodoneia, see RE ii. 1684.

8. Melipada Hemibates, daughter of Staphylus, and, in her beauty, hailed by his brothers at Astabos (Thracian Chersonese) much frequented by invalids; she had also an obstetric function (Diod. Sic. v. 62, 63).

9. Daron, ο Φαρ πος των τοναχων εχθρων among the Macedonians (Hesych, s.v. Δαρων). G. Curtius ('Griech. Myth.', 1897, no. 310) connects the name with Daron, the Thracian tribe of the Δαρωνα. To the latter pertains also the interesting Macedonian large silver coin with the legend Δαρωνας (Daron), which denotes, not a tribe, but a knight, a national quality (Gäbler, Zeitschr. für Numismat. xx. (1897) 290).

10. Eurostos: Ναυαριος ο Φαροβορης on the Bosporus (reference in Usener, op. cit. 171. 64, to Dionys. Peript. 115). 

Copious examples are furnished by Attica:

11. Amynos.—The 'healing hero Alkon,' whose existence had been ascribed solely upon the ground of a textual emendation in Ph. Sophoc. 11, proposed by Meineke, may now, in view of the findings of A. Körte in Ath. Mitt. xxi. (1896) 811 ff., be set aside, and his place given to Amynos, a hero who had a sanctuary on the western declivity of the Akropolis even before the cult of Asklepios came to Athens, and whose service Soxophiles acted as priest. In this capacity the poet gave the Epidaurian deity a hospitable reception, and was in consequence summoned Δίκης, and honoured with not less favours (cf. Usener, op. cit. 171. 64, to the sanctuary of Amynos, cf. Körte's earlier art. 'Bezirk eines Hellenottos,' in Ath. Mitt. xvi. (1893) 213 ff., with pi. xi. (a large leg with prominently marked muscles, which was wearing the unadorned beardless hair and a beard man on a smaller scale—probably the person healed.

12. The άδερφα τον in the vicinity of the Theseeion

(Deemoth. Or. xix. 244, xvii. 129; CIL ii. 1, nos. 403, 404 (δε δετία)....

13. Toxaris, as a άδερφα τον, specially concerned with fevers (Lucian, Syph. 102). He is not a fabrication of Lucian (Syph.), but the object of an actual hero-cult (Denecke, in Roesler, i. 2483 f. 1.

15. A άδερφα τον οικια Ορειχαλκοι (Oreikhalcoi) in Beroia (Becker, op. cit. 1928).

Reference may be made, by way of appendix, to healing statues and figures representing persons who in their lifetime had nothing to do with medicine, and yet were invested with miraculous powers, as, e.g., the statues of the Olympic victor Theseus in Thasos (Paus. vii. 11. 3; Lucian, Deor. Conv. 12), that of the pancratrist Pyladas at Olympia (Paus. vi. 61, Lucian, loc. cit.) that of a άδερφα τον οικια Ορειχαλκοι in the Troad (Athenag., 26), those of Alexander (Paris) and Pereginos in Parnum (Athenag., 28), and that of the Corinthian general Pellicus in the private possession of Enukrates (Lucian, Philopseudeu. 18 ff.). On these, see Weinreich, op. cit. 127 ff.

LITTERATURE.—This is indicated in the text.

E. THÄMER.

HEALTH AND GODS OF HEALING (Roman).—I. IN THE INDIGENOUS RELIGION. —In the sphere of medicine there is a religious element in the Roman character manifested itself in a partiality for supernatural, and a disparagement of rational, modes of healing. The fact that, in spite of the Roman tendency to deity special and unique occurrences and conditions, we find no distinctive gods of disease among the deities of the Indigentia (see the alphabetical list by P. R., in Roesler, ii. 188 ff.) is in reality an indication of the favourable conditions of health prevailing in the ancient agricultural State. Moreover, there were originally many deities of healing among the Divi indigentes, the gods of the State religion; and the Romans, like the Greeks of primitive times, were content to rely upon the evil-averting powers of the indigenous deities generally. Thus Mars, the god of war, is en- treated in the Carmen Arvalis (CIL ii. 230) to avert pestilence: 'Let no plague come upon the people; be content, O fierce Mars!'; and in the ancient prayer in Cato, de Agric. Cult. 141 (the dictum of which, however, according to R. Bietzenstein, in 1922, has been modified by the redactor), the same deity is invoked not only to prevent bad weather, failure of crops, etc., but, in particular, 'uti tu morbus visos invisoque defensora aversusque; uti tu ... pastores pecusque salva servas duxque bonam salutem valetudinemque mibi domo familiaque nostrae.'

With these prayers should be compared the shorter supplication in de Agric. Cult. 134 (to Janus and Jupiter) and 130 (addressed quite generally to all the gods: 'a' deus, si deas est'). The ancient Italian Salus, again, is not a goddess of health or healing, but the personification of the general welfare (cf. G. Wissowa, Religion u. Kultur d. Romer, Munich, 1912, p. 132 ff). She was, no doubt, confounded with the Greek Hygieia in later linguistic usage, but this can hardly have been the case in the official religion. In the frequently mentioned 'augurium salutis' (the leading reference is in Dio. Cass. xxx. 82. 24, where salutis is improperly rendered as σωτηρία, instead of άδερφα), the word is not a proper name at all, but simply an appellative. The attempt of Böttiger ('Medizinische Betrachtungen, in Kleine Schriften, i. (1837) 127 ff.) to connect the 'augurium salutis' with the snake-feeding Hygieia is altogether fallacious. The ancient Latin godess Streitus is regarded by Preller ('Rom. Myth.',...
HEALTH AND GODS OF HEALING (Roman)

Berlin, 1883, i. 234) as a deity of healing, but only on the ground of an untenable etymology in Augustine, de Civ. Dei, iv. 6. 8., 'stemma fasicum'; the sterno ('twigs of trees') given as New Year's presents, however, were made use of, quite generally, as symbols of prosperity (cf. Plant. Stat. 2 B).

On the other hand, the ancient Carma, shown by Wisowsa (op. cit. 236) to have been a goddess of the under world, has a distinct connexion with matters of health. According to Macrob. Sat. i. 12. 31, she presides over vitalibus humanis, and is associated with ut leculor et corda quaque sunt intrinsecum mortua salva sunt. From the late poetic treatment of Carma by Ovid (Fasti, vi. 101-106) it would appear at least that she practised the beneficent magic arts of which the presumptive posthumous praises himself in the Hymn to Demeter (see above, p. 458 f.). The Strega who thirst for children's blood she exorcises by touching the doorstep three times with a twig of arboreus, sprinkling the threshold with water, holding the entrails of a pig, two months old (Fasti, vi. 101: 'cor pro corde, pro fibris fibris' — a representative spell; cf. Riese, 'Aberglaube,' in Pauly-W., xxii. 33 (c)), and, finally, placing a hawthorn-branch in the window as a prophylactic. The peculiar deities of woman's life—Juno as Lucina, Diana Opifera in Nemi, and the host of local goddesses, as also the Roma, Magna Mater, etc., named in the Indigentates—can only be alluded to here.

A specific goddess of disease is found in Febris, whose personification bears forcible witness to the antiquity of the fever-plague in the plains of temple of the Tiber. Belief in disease-deities was, no doubt, quite common among the Babylonians (see above, p. 541), and the Egyptians seem to have had a 'special god of fever' (Pep. Ebers, ed. Josima, pp. 87, 93—unless the reference be rather to a god of inflammations); these, however, were hostile beings, whom the exorcism was directed by spells. The Roman Febris, on the other hand, was well disposed towards man, and prospered the remedies used for the disease. That these remedies were magical in their nature is shown by the 'remedia quae corpuscoribus aegrorum adnexae fuerunt' (Valerius Maximus, ii. 5. 6), obviously annullae for reducing fever, which after use were dedicated to Febris. There was an ancient sanctuary of Febris on the Palatine Hill, and two of later origin on the Quirinal and the Esquiline respectively. In later times this deity assumed the specialized forms of Febris Tortiana and Febris Quatiana (CIL viii. 996, xii. 3129). Magic remedies for both kinds of fever are given in Plin. HN xvii. 46.

Among the Dom Nominae of Italian origin there were two who are clearly associated with healing. (1) One of these was Fortuna, an ancient Latin goddess whose cult has been established in Rome by Servius Tullius. The chief seats of her worship were Antium and Freneste, in the latter of which she had, as Prima genetrix, an ancient oracle for sortilege. The cult of Primigenia did not reach Rome until 190 B.C. She was not, like the Greek Tyche, the goddess of fate who rules over all things, but was personified in innumerable special forms. Thus, 'Fortuna huius diei,' 'Fortuna aequora,' 'Fortuna publica' and 'private,' 'Fortuna Collegi Fabrum,' 'Fortuna balnearum,' and the like (Wisowsa, op. cit. 292), including 'Fortuna salutis' (CIL vii. 194, 201, 202), which may have quite a general reference, but as found in the votive inscription of Godesberg (CIL vii. 2994) is certainly connected with healing: 'Fortunis salutaribus [note the pl.] Aesculapio Hygisis.'—(2) The Etruscan, originally Falerian, Minerva (Wisowsa, op. cit. 241 f.) had a temple on the Capitoline Hill even prior to the institution of its triple Capitoline triad (Fortuna, p. 257, z. v. 'Quinquatra'). As the goddess of the handicrafts and the arts she was, in particular, the patroness of physicians; in the second century a.D. Stad Rom, Jena, 1846, p. 133), with which fact, it is true, the remark of Cicero in de Div. ii. 108 ('sine medicis medicinam dubit Minerva') is strangely at variance. There was also a temple of Minerva Medica upon the Esquiline (Wisowsa, 265, n. 1). A sanctuary of Minervae Medicae Caudicae (near Placentia) is often referred to in inscriptions (CIL ii. 1292-1310); here she prescribed medicines, healed diseases of the ear, and even condoned to restore the growth of the ear.

So much for the indigenous gods and those taken from the neighbouring peoples—deities who were worshipped in old-fashioned Roman or, it might be, in Italian forms, and, above all, in forms borrowed from the Etruscan religion.

II. GREEK INFLUENCES.—These in the end affected the Hellenization of the Roman religion. Of the gods thus borrowed from the Greeks, however, only a few are connected with our subject.

1. Apollo.—The Sibylinae Books, which cannot be dissociated from the worship of Apollo, began, so far as we know, to make their influence felt in Rome in 496 B.C. It is certain that these books, as also the Roma, Magna Mater, etc., named in the Indigentates—can only be alluded to here.

A specific goddess of disease is found in Febris, whose personification bears forcible witness to the antiquity of the fever-plague in the plains of temple of the Tiber. Belief in disease-deities was, no doubt, quite common among the Babylonians (see above, p. 541), and the Egyptians seem to have had a 'special god of fever' (Pep. Ebers, ed. Josima, pp. 87, 93—unless the reference be rather to a god of inflammations); these, however, were hostile beings, whom the exorcism was directed by spells. The Roman Febris, on the other hand, was well disposed towards man, and prospered the remedies used for the disease. That these remedies were magical in their nature is shown by the 'remedia quae corpuscoribus aegrorum adnexae fuerunt' (Valerius Maximus, ii. 5. 6), obviously annullae for reducing fever, which after use were dedicated to Febris. There was an ancient sanctuary of Febris on the Palatine Hill, and two of later origin on the Quirinal and the Esquiline respectively. In later times this deity assumed the specialized forms of Febris Tortiana and Febris Quatiana (CIL viii. 996, xii. 3129). Magic remedies for both kinds of fever are given in Plin. HN xvii. 46.

Among the Dom Nominae of Italian origin there were two who are clearly associated with healing. (1) One of these was Fortuna, an ancient Latin goddess whose cult has been established in Rome by Servius Tullius. The chief seats of her worship were Antium and Freneste, in the latter of which she had, as Prima genetrix, an ancient oracle for sortilege. The cult of Primigenia did not reach Rome until 190 B.C. She was not, like the Greek Tyche, the goddess of fate who rules over all things, but was personified in innumerable special forms. Thus, 'Fortuna huius diei,' 'Fortuna aequora,' 'Fortuna publica' and 'private,' 'Fortuna Collegi Fabrum,' 'Fortuna balnearum,' and the like (Wisowsa, op. cit. 292), including 'Fortuna salutis' (CIL vii. 194, 201, 202), which may have quite a general reference, but as found in the votive inscription of Godesberg (CIL vii. 2994) is certainly connected with healing: 'Fortunis salutaribus [note the pl.] Aesculapio Hygisis. The Latin form Aesculapius (Aesculapius, CIL vi. 2, from the Ionian Tiberina) goes back to Aesclapius (this from Nauvosa) or Aesclus (CIL vii. 6768), which corresponds exactly with the older Etruscan form Alsculapii. The name has been yoked between c and l in the common Lat. form has a G. counterpart in the Thessalian Aesklepios, which is to be inferred from certain proper names (Plant. Wisowsa, ii. 1465).
HEALTH AND GODS OF HEALING (Roman)

certain M. Ulpius Honoratus to Asculapius and Hygeia, "pro salute sua suorumque et L. Juli Secundus medicus, qui suram mei diligentius egit sedcundum doce," is of special interest as showing the co-operation of physician and deity. A Greek parallel to this is found in a dedication to Asklepios in Kibyra: here the person of Asklepios is engraving the god to the Tyche of the city, and to Dionysios, the doctor who had treated him (Wien Acad. Abh., xxx. [1893] 104). The Medeian inscriptions of the Insula Tiberina date from the age of the Antonines, and are a redaction of four narratives of healing (CIG 6980); an interpretation will be found in D. Deubner, de Insocr. Leipzig, 1900, p. 44 ff. We read in these that oracles were bestowed in dreams, and practically applied, but the directions given are of a purely theurgical character. A rival of interest in the cult of the god of healing in the reign of Antoninus Pius is indicated by the latter's memorial coin bearing a representation of the legendary foundation of his temple (H. Cohen, Med. temp. Paris, 1880-85, i. 271, fig. 17; cf. also the reliefs in Röm. Mediz., i. [1886], plates 6 and 7).

Of the diversified figures in the retinue of the Epidaurian god (see above, p. 551), Hygeia alone appears in Rome. She was there also called 'Valeutudo,' and is first mentioned in connexion with the year 180 B.C. (Livy, xl. 57), 'where the 'Salus' conjoined with Asculapius must, of course, be meant for Hygeia;' while she is referred to as Salus also in Ter. Acyria, 536. Conversely, the temple of the early Roman Salus is erroneously called aidee 'Tyanae' by Plutarch (Cato Major, 10). The confusion is explained by the affinity of the terms salus and valesudo. From the Roman Salus, however, the daughter of Asculapius is explicitly distinguished in CIL vi. 184 (Chester) as 'Salus ejus;' other inscriptions usually call the latter 'Hygeia' (CIL vi. 17-19, and 30573—the last dating from the reign of Antoninus Pius). It is true that in the temple erected by Marcus Aurelius and L. Verus in honour of the divine father and daughter in Lambessa (Numidia) we again find the dedication 'Asculapius et Salutis' (CIL vii. 25790). But the proper Latin designation of the daughter of Asculapius, as regards both her name and her character, is Valesudo (CIL viii. 7970), and the goddess is so designated on a dedicary of Acilius (see procod., col. note 2), as the name 'Valesudo' which is there attached to a female figure attending to the representation here referred only to Hygeia; compare also CIL v. 6415 (Paria): 'Aesculapium Bonam Valeutinum Martem'; and viii. 9810 (Mauretania): 'Bona Valeutinum sacrum.'

A pre-Hellenic goddess 'Valeutudo' occurs (CIL xv. 3812, 3152).

The diffusion of the Asculapian cult through the vast Roman Empire cannot be traced, but reference may be made to a remarkable representation of the god in a military type. He appears thus on several reliefs from Byzia (Jalabert, in Mélanges de la faculté orientale, Beirü, 1. [1906], pl. i. 1 and 2, pl. ii. 3-5: 'Aesculap en officier romain'). This is to be explained by reference to the worship of the emperor. The Cenome St. Alburnum, C. W. King, Antiqua Gemini et Ringa, London, 1872, ii. 9 depicts an emperor (probably Constantine) in warlike attire, and bearing the eagle of Jupiter

1 Hygeia had a rival in Bona Dea, a Greek goddess worshipped in Rome; and in the East, in Asia Minor, on the Aegean Island of Aegina, and in Rome identified with Fauna. Bona Dea (Wisseau, op. cit. 210). Bona Dea, in her temple on the Aventine, which was restored by Livius, seems to have exercised the functions of a healing goddess, inasmuch as her devotees stored in this temple 'some genus herbarum atque medicamen medicas' (Macrob. Sat. i. 18, 23). Wisseau (218, n. 1) associates with her the inscriptions CIL vii. 20065 and 202747: 'Dea Bona Valesudo'; but, on the other hand, the Bona Dea there referred to may be an epithet of the daughter of Asculapius.
and the snake-entwined aedoa. King wrongly interprets the latter symbol in a Christian sense ('the old serpent' overcome by Constantine). But in reality we find here a symbol of the Serpent, the python, used as the emblem of a Christian  order of the men of the Christian Church. This is the type used in the Greek mystery religions, and these symbols are found throughout the world, symbolizing the dualism in the human psyche.

**Concluding note on Cato the Censor:—Did the Romans, who, as we know, assumed at first a suspicious and antithetical attitude towards Greek rationalism and science, frame a popular medicine of their own for ordinary needs, in addition to their general supplications to the gods? And was Cato, the opponent of Greek culture, and especially of the Greek physicians (Plin. HN xxix. 14; Plut. Cato Major, 23), a champion of such indigenous medicine? That he was versed in medical matters is shown by his having inserted rules of health in his Panegyrica ad M. Avienum (Plin. vii. 171, xxvii. 290; Plut. loc. cit. 33; Friesian, vi. 84), and by the portions of his extant works de Agri Cultu, which deal with medical dietetics. It is a common opinion that he derived his knowledge of such things from the medical practice of the Italian peninsula (W. S. Thomas, loc. cit., 1883, § 55; Jordan, in Freiler, ii. 243, n. 3; F. Minser, Beiträge zur Quellenkritik der Naturgesch. des P. Plinius, Berlin, 1896, pp. 320-330; Die primitive Heilkunde des sabinischen Bauern), and the curious spells recommended for dislocations (de Agri Cult. 180) possibly come from a similar source. But the 'antipathy' of the Roman mind seems to have been of the same order as that of the modern mind against footsoreness (180) is an exotic feature. What to sources, again, shall we trace the long excursus (156-7) dealing with the dietetic and therapeutical properties of the various kinds of cabbages? The Brasica Pythogenea (157.1) cannot well have belonged to the pharmacopoeia of the Sabine peasants, and the Greek name Sulphon is used only in this section (157.7), while in ch. 116 Cato employs the Lat. term lasceripsicum. Finally, his remark that the assimilation of food tends to prevent perspiration of the body (157.11) is not a peculiarly Egyptian/journal of research with medical dietetics, but a monograph on the various kinds of cabbage, and showed in that work the great importance of the species for therapeutics and dietetics (Plin. HN xx. 78). And that this Cato work was directly or indirectly, Cato's source for chs. 156-3 does not appear from Cato's partiality for the cabbage tribe, but also from the curious prescription (157.14) recommending Brasica 'serraticas' with water for fistula, and with honey for sore—precisely the same directions having been given by Chrysippus (in Plin. HN xx. 78). It is quite possible, too, that the Commentarius (Plin. loc. cit.), or theὈποτόμον ανθρώπων (Plut. Cato Major, 23), according to which Cato was wont to treat himself and his family in sickness, may have been simply that work of Chrysippus. The Cato school of physicians fostered the relations between medicine and ἄθεωτος (see above, p. 544), and was on that account more acceptable to the religious sentiment of the Roman people than were the Hippocrates with their purely scientific methods. But it is certainly a curious circumstance that the chief opponent of Hellenism in Rome should thus turn out to have been the adherent of a mere Greek.
HEART

Among the Hebrews, traces of the same idea of the heart as the seat of emotion are to be found (Pr 7:26, Lc 23:29, Ps 16:10 [read 'liver' for 'glory']). But an advance had been made, and generally in the OT, the heart is at once the source and the symbol of life in its various aspects. This is well seen in Pr 4:8, 'keep thy heart with all diligence, for out of it are the sources of life.' The heart is the seat of emotion (so the expression of the head) and emotional life, including thought, memory, perception, will, imagination, joy, sorrow, anger, etc. (Ps 33:14, Gn 55:22, Dv 25:4, Ex 15:8, Ps 31:18, 1 K 8:56). Hence such phrases as 'men of heart,' (=men of understanding, Job 34:25, 3 Th 1:12; cf. Ps 10:4, 'void of heart,' = 'out of heart' (=forgotten, Ps 31:28). The heart is also the seat of religious feeling (2 Ch 17:7, Ps 37:27, Jer 24:30, 32:4, 11:11, 1 K 8:2, etc.); hence change of heart, a clear heart, or a heart of flesh instead of a heart of stone ( Ezek 11:10, Ps 51:10) signifies newness of life and character, and purity of conscience. Most of these usages are found in the NT (cf. Mt 5:12-18, 15, Lk 22:28, Jn 6:14, 15, 16:28, etc.), but St. Paul has particularly developed some of them, and with him the heart is the organ of belief as well as of disobedience and impenitence (Ro 2:18), and the immediate receptacle in human life of God's light and knowledge and love (2 Co 4:6, Ro 5:6; cf. Eph 1:18, 'the eyes of your heart being opened'). There also is the idea of 'the eye of the heart' (Eph 3:16).

Among the various usages, whether literal or metaphorical, have passed into religious speech, while in the majority of languages the word 'heart' has most of the meanings ascribed to it by the Greeks.

For the Arab meaning of 'heart' as = 'life,' see QARAS, vol. i. p. 671.

Among the Greeks and Romans the heart took the place of the liver as the seat of life, soul, intellect, and emotion. Even Aristotle regards the heart as the centre to which all sensory impressions were transmitted, though Plato assigns the mortal soul which governs the intellect and emotions to the heart, making the brain the seat of the immortal soul, and the liver the seat of the lower soul and source of sensual desires. (Eck 119, 111, Ps 51:10) signifies newness of life and character, and purity of conscience. Most of these usages are found in the NT (cf. Mt 5:12-18, 15, Lk 22:28, Jn 6:14, 15, 16:28, etc.), but St. Paul has particularly developed some of them, and with him the heart is the organ of belief as well as of disobedience and impenitence (Ro 2:18), and the immediate receptacle in human life of God's light and knowledge and love (2 Co 4:6, Ro 5:6; cf. Eph 1:18, 'the eyes of your heart being opened').

The importance of the heart as the seat of life is well illustrated by numerous Mārāden, like the Norse tale of 'The Giant who had no heart in his body,' in which a giant or some other personage secretes his heart, or, in other tales, his life or soul, in some exterior object, and until it is found and destroyed he is deathless. But it is also illustrated by other tales in which the heart, restored to a dead body, reanimates it. The oldest of these is the Egyptian story of 'The Two Brothers,' in which Bata hides his heart in a tree. His wife causes the tree to be cut down, and he dies; but his brother, having discovered the heart, makes a small bird of it, paints it, and he revives. Similar tales are found among the Bantas, Hottentots, Australians, Samoys, Indians, and others; but in the Hottentot instance the heart of the dead is preserved as the seat of life and emotion are to Plato, Timon, 60ff.

E. E. Payson, Hist. of the New World called America, Oxford, 1858, i. 698.

Prance to have a Feast with a special Mase and Office. But it was not till 1878 that this was permitted to the Church as a whole. In 1889 this Feast was made a 'double of the first class.' It is held on the Feast of the octave of Corpus Christi. Many confraternities and even States are devoted to the Sacred Heart, and innumerable churches have been specially dedicated under this title. The devotion to the Sacred Heart of Mary is of an analogous kind, though in her case the love which is symbolized by the heart is her love to God and her Son, which this devotion seeks to make the faithful imitate. The cult may also be traced back to the 12th cent., but Papal recognition in a partial form did not occur until 1799. In 1856 an office and mass were appointed by the Congregation of Rites, but these were not imposed on the whole Church, nor has any universal Feast yet been granted. 1

2. Eating the heart. —Since the heart is regarded as the seat of life, soul, and wisdom, as well as of courage and of similar virtues desired by the sage, the heart of a slain man, usually an enemy, is often eaten in order that his life, soul, courage, etc., may pass over into the eater and benefit him, as in the case of cannibalism, which is a form. Feasts of cannibalism (q.v.), exist not only where the actual eating of bodies takes place, but also where this wider form of cannibalism does not exist. It is considered sometimes with the eating of other parts which are also supposed to contain similar virtues, e.g. the liver.

In order to obtain cannon the Kamilaroi ate the heart and liver of a bison, while among the tribes of N.W. Australia the heart of the great hunters or warriors was eaten in order to acquire their cunning or courage. 2 Young men among the Eskimos of Bering Strait, when they kill an enemy for the first time, eat a portion of his heart. 3 In Africa the custom is universal among the tribes, and always with the same symbolic and magical intention, whatever other qualities may be ascribed to the heart. It is unnecessary to give references, since every work on native customs mentions this act. A similar custom is practised among the Toda. 4 Another custom connected with a similar idea is the custom of eating the heart (see CANNIBALISM, etc.); 5 in the Yoruba tribes of the west, good Ogun took the heart of sacrificial victims, dried them, then made them into powder, and mixed them with rum, and sold them to those who desired courage. 6 The custom of eating the heart was also widespread among the American Indians, and was sometimes mixed with sacrificial of a human victim. When the Pawnees made the periodic sacrifice of a Sioux chief, the chief was wounded near heart and devoured it. 7 Here there was doubtless the intention of satiating whatever peculiar proponent the victim was. 8

Traces of these customs occur in folk-lore. In the Mahabharat, Gwyn forced Kilydi to eat his own father's heart; this resulted in the latter's madness. 9 The Wends believe that the heart of a maiden or infant brewed in herbs will cure disease or inspire love. Hence graves are often violated to obtain the heart of a corpse. 10 Possibly the old German belief that 'a dying man's heart could pass into a living man, who would then show twice as much pluck,' 11 is derived from this savage custom. 12 The belief that witches removed and ate the hearts of men while still living, thereby causing their death soon after, may also be traced to the same one. 13 Heart disease is common in Africa: 14 Among the Ainu and other tribes of Northern Asia who sacrifice the bear, its heart is eaten, but the Gilyaks will not allow a woman to taste it. 15 In ancient times the hearts of such animals or birds as were believed to possess prophetic powers—wolf, hawk, crow—were eaten by those who wished to obtain such powers or to have their power of divination increased. 16 Traces of these customs are also found in Norse saga. 17 Ingjaldr, until then timid, became very fierce through eating a wolf's heart. Siegfried, having eaten the heart of the dragon, learned the language of the birds. Wise-women are said to have eaten, as their special food, the hearts of all animals slain. 18 In Syria and Asia Minor, eating the heart of a live pigeon is a remedy for heart-disease. 19

3. The heart in sacrificial rites. —The heart, as a vital centre, is often the object of special care in sacrifices, whether of animal or human victims. It is either offered separately, or, having been removed from the body, is offered with it or with selected parts of it. The Ainus, at the sacrifice of the sacred bear, sometimes placed its heart before it to assure it that it was still alive. 20 Among some of the Veddas, when an animal is killed, its heart is removed, and offered to Vedi Yaka, the spirit who is supposed to help them in killing game. 21 In the island of Sumba the hearts and livers of victims are offered with rice to the ghosts of the dead, and then eaten by the offerers. 22 The ancient Mexicans, when a human victim was offered, usually cut open the breast and tore out the pulsating heart, which was offered either separately or with the body, on the altar of the gods. Among the Egyptians, when the animal victim was slain and cut up, its heart was offered on the altar with the other parts, and the heart as an offering is often depicted on the monuments. 23 At the rite of 'Opening the Mouth' in connexion with the ritual of death, a bull was sacrificed, Its heart was torn out and offered to the deceased, and then the relatives ate it raw. 24 A curious custom is referred to in a Bab. atonement rite for a sick man. The body of a sucking pig was placed at the patient's head, its heart removed and placed above his heart, apparently as a substitute for it as containing the life— 'Give the pig in his stead . . . . Let the heart be as . . . .' 25

HEARTH, HEARTH-GODS

With regard to sacrificial offerings among the Teutons, Grimm is of opinion that among the nobler parts assigned to the gods the heart was one. It was also the case among the Romans, with whom, in addition, the parts burned in fire as an offering to the gods, included the heart.

Analogous to the separate treatment of the heart in sacrifice is the custom of separating it in death and burial rites. The myths of the reliefs of Celts—one of these bearing the heart—differ as different places, the heart at Athisbais, may point to some earlier custom of separate heart-burial in Egypt. But the usual custom was to remove the heart and deposit it in a thymele, in a vase under the charge of Tammuzet, or binding it on the leg. In order to retain the heart in the future life and provide for the soul, the four chapters of the Book of the Dead were recited and written on amulets, some in the shape of a heart. The 30th chapter was written on a scarab, which was placed over the place of the heart, its words being recited by the deceased at the weighing of the heart. There were also formulae for recasting the heart or preventing its being stolen.

In Christian custom the separate burial of the heart, sometimes in sacred ground, has now and then occurred. Bruce's heart is supposed to have been buried in Jerusalem; that of Livingstone was interred under a tree near where he died.

4. The heart in magic.—Like other important parts of the human body, the heart, as a seat of life, gave its form to heart-shaped amulets, which were worn to repel evil influences. This custom already existed among the Etruscans and Romans, making the heart the usual form of a heart-shaped amulet, and heart amulets are often found in Egyptian graves. Such amulets are still worn in Southern Europe—in Spain, Italy, and Portugal—usually as a charm against the evil eye; and they were also known in Scotland as 'witch-brooches.' Here also the custom of 'casting the heart' was known. On the head of a stick was placed a heart-shaped amulet, and this, with a band and a pair of scissors set in the form of a cross. On this rested a wooden cup of water, into which wolfram lead was poured. Search was then made for heart-shaped fragments, and this, even when sewn in a piece of cloth, was worn by the patient. An animal's heart was sometimes carried as an amulet for luck or to ward off evil influences. In Germany it was thought that an owl's heart gave luck in play, while to have a wolf's heart about the person would prevent one's being eaten by a wolf. In Moscow it was thought that 'the heart of a black cat dried and steeped in honey, and worn either at the beginning of the month or with the waning moon, would cause the wearer to become invisible.' The heart of a parrot was also held to be efficacious. The smoke of the heart and liver of a fish with the ashes of perfumes drives away the evil spirit. In Africa, fetishes often contain the heart of an animal.

5. The heart of an animal was also useful to counteract disease or repel the evil influences of witchcraft. The heart of the living, when torn out and hung on the fireplace or placed in the hearth where the heart and part of the liver and lungs of one of the stricken animals were cut out and hung over the fireplace or placed in the hearth. Sometimes, as in Sussex and Germany, the heart of an animal overlooked by a witch was stuck full of pins and roasted. The witch was then visited with misfortune, or, being tortured in the heart, came and confessed.

In Dorset a bullock's heart hung in the chimney was supposed to keep off fairies, and in Lincoln an animal's heart full of pins concealed within the fabric or walls had great protective virtue. In these and similar instances elsewhere, when the heart is stuck full of pins, there is probably an intention of hurting witchcraft, which is likely to cause intense pain at the heart, of which he often dies.

LITERATURE.—This is cited in the footnotes.

3 J. A. MacCulloch.

HEARTH, HEARTH-GODS—The hearth is, technically, 'a piece of floor prepared to receive a fire.' The Eng. word 'hearth' and its synonyms in other languages are reminiscent of an early stage of culture, of one-roomed houses, in which one fire served for cooking and for warmth. Central in the primitive round hut, as in the neolithic huts of Italy, it was merely a part of the beaten-earth floor, a depression, or small, shallow pit. In this form the fire-place is an oven, such as is made in camping-gounds to-day by wild peoples. The use of pottery tended to replace this depressed hearth by a level or raised area. Meanwhile the original oven was lined with stone, brick, or tiles. In another development a movable receptacle or tureen was placed in the pit. From this came the brazier or chafing-dish, the portable grate employed for heating purposes, and the stationary grate itself. In early times the grate-form is often modified for either use. Sieve and grate are ventilated fire-pans, and as such differ from the closed oven. A third development, also denoted by the term 'hearth,' the hearth-stove or of iron, originally the level area round the fire. The evolution of heating- and cooking-apparatus and methods follows these three lines. The closed receptacles have such forms as the porcellanous hearth-stoves of northern Europe. This method is also that of the plate, and the modern radiator is an extension of the same principle to hot water. Similar was the Roman system of hot-air heating, involving the hollow brick wall. Cooking follows the two chief methods of the oven and the grill. One of the first developments of domestic architecture involved the removal of the fire to the side-wall or a corner of the room. Later, the multiplication of rooms split up the hearth; the original combined cooking and heating central hearth may be seen in the kitchen or fire and oven, a mere 'office,' the social sentiment of the 'fireside' being transferred to the chief of the living-rooms, and later vaguely distributed over the house as a whole.

At that stage of early culture which was marked by the organization of religion, the methods and sentiments of the domestic system were applied to the houses of the gods. The altar of burnt-offering is a magnified kitchen-hearth, the fire-altar a magnified heating brazier, luxury being shown in the scented fumes rather than in the comfort of its warmth.

Among primitive peoples who have not developed the permanent hut, and in their camping-gounds, continually changed, employ a mere shelter or wourley (Australian) of brushwood, the pit-oven.
and the camp-fire are distinct. The camp-fire here has the associations of the 'fireside'; the natives sleep close to it, and spend hours talking together in its vicinity. The embers are carefully guarded from extinction during the day. But, as the civilized hearth was for ages the centre of cooking and heating a primitive apparatus, and its form is evolved from the primitive oven, it is necessary to describe the latter.

To make his cooking-oven, the Australian native digs a hole in the ground, and makes it in a fire of wood. When this is burning well, stones are placed on it. The moment these are red-hot, the food to be cooked is placed on them; green leaves are used to prevent scorching. Grass is spread over the food, and water sprinkled. The mass is then tightly covered with earth. Throughout the South Seas this method is universal; in many cases the oven is permanent, and generally is of a more elaborate character than the Australian. The pit is about 2 feet in diameter, and varies from 6 inches to a foot in depth. Its walls and floor are built hard; in clay soil the texture soon becomes that of burnt brick. Charcoal as well as wood is used for the fire. Stones of the size of the fist are placed in a layer when the gathering round the fire; when they are red-hot, the woman-cook removes them and clears the embers out of the oven, in which the stones are now placed. A layer of green leaves on the stones is sprinkled with water; green leaves are also placed round the sides of the oven. The food being put in, mats are laid upon it; earth covers these, and the oven is sealed, in order to prevent any escape of steam. The principle is a sort of dry boiling.

The stage at which a fire-receptacle is placed in the family is illustrated by the modem Bedawin. The oven is a vessel sunk in the ground, above which is an iron plate, the tezim, 'hearth.' This is specially employed for cooking bread. The hot stones are used for cooking various food-stuffs. Both methods are common throughout the East.

The ancient Hebrews used the hearth-pit both for cooking and for warmth. Like the fire-place still used by many of the poor in Eastern Asia, it was in the centre of the room, and its smoke escaped through an opening in the roof. This method may be regarded as practically universal at a certain stage of culture. Early Greece and early Italy possessed it. The antefurn, or the atrium of the Romans was originally a dining-room and kitchen in one; it was developed from the necolithic round-hut. The early Greek μητρόος, or one-roomed house, which later was the hall, had the στέρια or τέρια in the centre of the floor. When the στέρια took the place of the μητρόος, the τέρια was possibly retained there, or may have been transferred to the dining-room, τράπεζα, since food-offerings were placed in it before meals. In the same way the Italian atrium lost both of its functions: the kitchen, συλίνα, received the cooking-fire; the living-rooms were warmed by braziers, foculi, until the hypocaust system was introduced. The associations of the foculi were preserved in theump which always burned before the Larcs, whose original place was on the hearth. A niche

was often retained by them for the side of the kitchen hearth. Both Greek and Latin houses of the well-to-do in the most highly developed periods possessed private ovens. Possibly this was, in some Greek instances, a room of the φάτνη type. This was not the case with the Roman lararium. The developed domestic cooking-store and heating was a structure of the masonry or brick, a foot above the floor. But it still retained the primitive fire-pit character, since a rim of masonry converted it into a receptacle.

An arch opening at one side served as a 'tender' for fuel.

In Teutonic lands the central hearth of the one-roomed house lasted among the poor into the later Middle Ages. Its previous universal employment cannot be understood unless we take into account the large size of the central hall in the houses of the well-to-do, and the differentiation of the one house-fire into hall-fire and kitchen-fire were here of early date. The introduction of the chimney involved the change of position to the side-wall of the room. Until the 16th cent. the fire-place was built without a recess; a hood, or louvre, above the hearth and containing the entrance of the fire, solved the problem of smoke. The large recess admitted of a circular gathering round the fire (the primitive gathering round the central hearth was circular), and such pieces of furniture as the 'settle' assisted the 'sentiment,' as they ministered to the comfort of the hearth.

The evolution of the fire-place among the Hebrews is similar to that among the Greeks and Latins. The hearth was the receptacle for heating the kitchen. In the houses of the rich the brazier or chafing-dish was used for warmth.

The Hindus have preserved longest the combination of kitchen and dining-room—a fact ultimately not unconnected with the climatic conditions of India. The portable clay fire-pan is the eastern brazier. The kitchen is divided into two unequal parts, the main serving for the culinary operations.

2. The hearth in religion. The conception of the hearth as the centre of the house and home lends itself to metaphor. A remarkable case is the employment in the modern science of optics of the Latin word for a 'hearth,' focus, to denote the central point at which rays of light converge. The use of the term as a verbal 'focus' for sentiments of domesticity and family solidarity is notable in the Latin phrase in a foco. In English 'hearth' and 'home' is representative of what is perhaps the strongest example of the association. 'Hearth' was also a synonym for 'home.'

Hearth-cults emphasise in some cases the combination of fire-place and fire, in others the fire, in others again the figures of divine beings brought into connexion with the hearth. Among the latter, the sacredness of both components is derived from ideas of family life. They thus appropriately meet at its material centre.

The original connotation of the Greek term τέρια seems to have been the hearth with its fire. (See the 'Greek' article below.)

The worship of Vesta by the Romans was purely public. It has the look of a revival from a Greco-Italic cult, if the goddess was not actually borrowed from Greece. (See the 'Roman' article below.)

The Scythians honoured Heatsia, whom they called Tadari, as chief of all deities (ταταρεία). In Indo-Iranian cults the sacred fire assumes greater importance than the hearth or altar, so far as personalisation is concerned. But the receptacle is sacred. Sacredness also attaches to the fire-place and cooking-apparatus of the modern Hindu

5 The modern four-legged plates for keeping food warm on the hearth are formed on the ancient foculi, which was also used for the purpose. Bronze foculi were found in great numbers at Pompeii.

HEARTH, HEARTH-GODS

(see FOOD), whose kitchen is usually his dining-room. Orthodox Brähmāns still maintain a special room for fire-sacrifices, the homa-kāla, on the ground-floor. From ancient custom distinguished two degrees of piety, the one being represented by the homa-
kāla. In ordinary circumstances the 'householder' was satisfied with a single hearth of burnt clay for his private use, and the other for public worship. Gimb. compares the 'homu' and 'panse' the hūsīnp or estigot, a spirt that dwells beneath the hearth, and is seen burning thence by the peasants' imagination. The repeatedly recurring spirits of the dead dwell beneath the hearth may be attributed to its central position in the primitive dwelling, and to its being sunk in the ground. In Homeric religion, communication is made with the under world by digging pits, as with the upper world by raising altars. Thus the two forms of hearth, the fire-pit and the raised fire-place, not only served as centres of family worship and of public cultus, but bring together the gods above and the gods below, differentiating them.

Among the Damara (Ovaherero) of South Africa there was a remarkable cult of the hearth.

"The chief's daughter," says Anderson, "is to the Damara what the Vestal was amongst the ancient Romans, for, besides attending to the sacrifice, it is her duty to keep up the 'holy fire.' Outside the chief's hut, where he is accustomed to sit in the daytime, a fire is always kept burning; but, in case of rain or bad weather, it is transferred to the hut of the priestess (sic); this is the chief's hut, which, according to the custom of changing the site of the village, precedes and son with a portion of the consecrated fire. Every possible care is taken to prevent it being extinguished. . . . A portion of each fire is also given to the headman of each lodge, who receives it from the chief of the hut. The duties of a Vestal then devolve on the daughter of the empress.

The girl is probably the daughter of the chief's favourite wife. Later accounts supplement this, while correcting it. The residence of the chief is the oyisero, the 'holy house,' corresponding to the fetish-houses of West Africa. In the course of this is kept perpetually burning the okwero, 'holy fire.' A usual phrase, corresponding to the Greek ἱερόν, is the 'place of the holy fire.' The fire is made by means of two sticks (see art. FIRE, FIRE-GODS), the one of which is the omakwe, and the other the oyisero. The omakwe represents the akwomo, 'ancestor deity;' the oyisero his wife. The symbol of male and female is as marked here as in the Aryan arsha sticks. When a death has occurred, the soul of the dead is vaguely identified with the 'ancestor deity.' We might put it that his personality is merged in the omakwe; thus a series of ancestors may be regarded as one individual. The 'embodiment' of the dead man's soul is not a stick but is simply vague, but really believed, just as is the embodiment in snakes which belongs to the creed of the Kafris. The oyisero is technically the principal house of the chief. A certain unmarried daughter, omakwe omakwe, has charge of the sacred fire, which must never be allowed to go out. She officiates in certain social ceremonies like a priestess. The chief himself is similarly a priest for his people. Her popular name is 'the big girl;' another title is 'Favourite.' With the ashes of the sacred fire she or her mother, 'the big woman,' paints the faces of the warriors before they set out on expeditions. Near the sacred fire is a stone seat for the use of the chief and the medicine-man. Often there is more than one holy fire in a village. Every head of a household also possesses one, at which he performs the ceremony of naming his children. This may also be performed at the oyisero. The chief himself is perhaps 'introduced' to the omakwe. The father takes it in his arms and announces the name. For the ceremony of circumcision, performed at the ages of 4 and 7, the meat (which is holy, seru) is cooked at the 'place of the holy fire.' A portion of it is kept in the holy house for some weeks. Ap.

3. Moeller-Williams, Brähmāns, and Blumenau, Johannesburg, 1919, p. 360.

HEARTH, HEARTH-GODS (Greek).—The reverence paid by the Greeks to the hearth (seris) appears from its personification in the goddess Hestia, who is first mentioned in Hesiod (Theog. 464) and the Homer hymns (Aphr. 91 f., and Hymn. xxiv. and xxv.), and in each Greek house. A fire was maintained in the house, or pronaios (originally the king's house), and the fire of Hestia, and permanent fire was kept sacred to Hestia, and was regarded as a symbol of the whole house. The common custom of preserving a sacred fire in a chief's house was wide-spread (see Frazer, in JPA xiv. 145 f., and GbP, "Magic Art," vol. ii. ch. 17) and in Greece, Frazer, in JPA xiv. 145 f.; Montier-Williams, Religion Life and Thought in Greece, London, 1873, p. 418. Montier-Williams, Hellenic and Egyptian, 447-451. Le 29, 1903. L. E. S. Kennedy, in HB, xvi. "Hearth."

HEARTH, HEARTH-GODS (Roman)

as at Rome and elsewhere, it probably originated from the practical difficulty of re-kindling fire by the primitive method of rubbing two sticks together (see FIRE). It has also been suggested that the maintenance of the sacred fire at Rome was associated with the upkeep of a perpetual fire on earth; if the flame was extinguished, the sun might fail (A. B. Cook, in FL zv. [1804] 306 f.). In any case the custom had become so well established by an early period. At Athens and Delphi, if the sacred fire was extinguished, it was re-kindled from the sacred fire of the common hearths of these two cities tended by widows, who corresponded to the Vestal Virgins at Rome; but there was never a religious order of Vestals in Greece, and the great importance of these virgins has no analogy in Greek religion. The virginity of Hestia herself is, however, a noticeable feature in ritual and myth. The goddess took a vow of perpetual chastity (Homer, Iliad vi, 151), and sexual intercourse was forbidden in front of the hearth in private houses (Hes. Op. 733). At Sparta there was a priestess called Beeras whom the goddess (CIG i. 1253, etc.) bestowed on the goddess; but generally the public worship of Hestia was in the hands of man (cf. Aristotle, Pol. 13226). In some cities the house divinities in general seem to have been given place to a lamp (Theocr. as. 36; Atenenes 700 D); otherwise (as at Ellis [Paus. vi. 15. 9]) the ancient form of the hearth was retained. Certain houses became the meeting-place of the gay and the suppliant of the particular State, e.g. at Delphi and Delos. After the battle of Platea the Delphic oracle commanded that all fires, being polluted by barbarians, should be extinguished in the country, and new fire brought from the common hearth at Delphi (Plut. Arist. 20). From Delos sacred fire was carried by persons who ran round the hearth. At this festival, which was called Amphipompia, the child received its name (see Aristoph. Lys. 757; schol. on Plato, Theat. 160 E; S. Reinach, Cultes, mythes, at religions, i. [Paris, 1905] 187; ERE ii. 649). On the meaning of the word the passing down of the Eleusinian mysteries, see Farnell, CIG iii. [1907] 164.

Perhaps the chief importance of the hearth, both public and private, lay in the fact that it was an asylum of refuge. A priest who entered the house of another and sat at his hearth could claim protection (cf. Herod. i. 35; Esch. Ag. 187; Diod. v. 75; Strabo, xvi. 9). The hearth of a priest could not be entered but he could obtain protection, even from an enemy, by sitting at the hearth of Admetus, king of the Molossians, and taking the child of Admetus in his arms. Sometimes, however, the rights of asylum were violated; Thracians were dragged from the hearth in the Athenian senate-house, at which he had taken refuge (Xen. Helen. ii. 3. 52).

As the earth was commonly held to be the seat of the universe, we find that poets and philosophers identified the Earth-goddess with Hestia, the centre of the home (Preller-Robert, i. 427; J. E. Harrison, in JHS xix. [1899] 243). Just as there was no statue of Vesta in the temple at Rome, even in the time of Augustus, so in early times in Greece there had been no image of Hestia; the hearth, with its fire, was itself worshipped. Later, at Athens, there was an image of Hestia in the pryaneum (Paus. ii. 18. 6), but evidence for other cities is lacking. Pausanias notes (ii. 35. 1) that there was no image of Hestia in her temple at Hermione; sacrifice was made on an altar. Temples of the goddess were rare, as her chief sanctuary was the pryaneum of a Greek city.

In general art the Earth-goddess was represented under the form of a woman either seated or standing in a restful position, appropriate to a deity who, in Plato's myth, alone never leaves the house of the gods (Phaedr. 248b). The Greeks themselves derived her name from τήνα ("set"), though it is certainly cognate with Vesta, and may mean the 'bright' or 'shining' fire (Skrr. sin.).

HEARTH-GODS (Roman).—The fire-place, hearth, or focas was originally the centre of the Roman dwelling-house, both in a literal and in a figurative sense, and was situated in the pos-

---

Later times such an oath was common, especially when the interests of the family were concerned (see Jebb on Soph. El. 881; Roscher, i. 2923). Prayer was also offered to the hearth (or to Hestia) on solemn occasions, as in returning home after a long absence (cf. Eur. Herc. Fur. 595), or when death was imminent (Eur. Alc. 162 f.). The Orphics prayed to Hestia for health and wealth, and for all moral and material well-being (The Hymn lxxiv.). The first libation of wine was regularly offered to Hestia in public and private feasts; hence the proverb de' bunam specie (Livy, viii. 42). At Olympia, the first sacrifice was in honour of Hestia, who took precedence even of Olympian Zeus (Paus. vii. 14. 5). In public sacrificial feasts the last as well as the first libation seems to have been poured to the goddess (Homer, Hymn xix. 4; Comnus, de Nat. Deor. 28). For other details of sacrifice, see Preuner, in Roscher, i. 2917.

In private life the hearth was the centre of the family. In Attica, a child when five days old was carried by persons who ran round the hearth. At this festival, which was called Amphipompia, the child received its name (see Aristoph. Lys. 757; schol. on Plato, Theat. 160 E; S. Reinach, Cultes, mythes, at religions, i. [Paris, 1905] 187; ERE ii. 649). On the meaning of the word the passing down of the Eleusinian mysteries, see Farnell, CIG iii. [1907] 164.

Perhaps the chief importance of the hearth, both public and private, lay in the fact that it was an asylum of refuge. A priest who entered the house of another and sat at his hearth could claim protection (cf. Herod. i. 35; Esch. Ag. 187; Diod. v. 75; Strabo, xvi. 9). The hearth of a priest could not be entered but he could obtain protection, even from an enemy, by sitting at the hearth of Admetus, king of the Molossians, and taking the child of Admetus in his arms. Sometimes, however, the rights of asylum were violated; Thracians were dragged from the hearth in the Athenian senate-house, at which he had taken refuge (Xen. Helen. ii. 3. 52).

As the earth was commonly held to be the seat of the universe, we find that poets and philosophers identified the Earth-goddess with Hestia, the centre of the home (Preller-Robert, i. 427; J. E. Harrison, in JHS xix. [1899] 243). Just as there was no statue of Vesta in the temple at Rome, even in the time of Augustus, so in early times in Greece there had been no image of Hestia; the hearth, with its fire, was itself worshipped. Later, at Athens, there was an image of Hestia in the pryaneum (Paus. ii. 18. 6), but evidence for other cities is lacking. Pausanias notes (ii. 35. 1) that there was no image of Hestia in her temple at Hermione; sacrifice was made on an altar. Temples of the goddess were rare, as her chief sanctuary was the pryaneum of a Greek city.

In general art the Earth-goddess was represented under the form of a woman either seated or standing in a restful position, appropriate to a deity who, in Plato's myth, alone never leaves the house of the gods (Phaedr. 248b). The Greeks themselves derived her name from τήνα ("set"), though it is certainly cognate with Vesta, and may mean the 'bright' or 'shining' fire (Skrr. sin.).

HEARTH-GODS (Roman).—The fire-place, hearth, or focas was originally the centre of the Roman dwelling-house, both in a literal and in a figurative sense, and was situated in the pos-
HEARTE, HEARTH-GODS (Roman)

terior portion of the atrium, which served generally as a parlour and a public room, and was so named because its roof was blackened by the smoke rising from the hearth-fire. In this chamber the inmates took their meals, sitting at long tables, as was the practice also in rural districts at a later period, and portions of the food were ceremoniously offered as oblations. In later times the scraps that fell to the floor were similarly disposed of, or were set in little pans (patellae) upon the hearth.

In the house, accordingly, the hearth was supplied in every respect the place of the altar, and the frequently recurring phrase ara focis embrases the whole sphere of sacra publica privatae.

The importance of the hearth as the religious centre of the house appears very prominently in the ceremonial of marriage. Thus the bridal torch was kindled at the hearth-fire of the bride's home, and in the ceremony of marriage the bridegroom entered with a torch lit at his own hearth, while, again, the young wife had to lay an as upon her husband's hearth as a sacrificial gift, thereby, so to speak, purchasing a share in the religious fellowship of her new home. As mistress of the house, it was her special task to keep the hearth clean, and to keep it with garlands at the Kalenda, Nonae, and Ides, and a rooster being sacrificed in her absence devoted upon the stewardess (nino) as her representative.

The fact that the hearth was the shrine of the household deities of ancient and modern writers, proceeding upon the assumed identity of these with the ancestral spirits, have sought to explain by the hypothesis that in primitive times the dead were interred within the house, just beside the hearth. We have, however, no evidence that this was ever the practice in Rome; the reference of Serv. Aug. v. 64, vi. 192, 'apud maiores... inaequina sacra' is non existent.

In the re-organisation of the household in ancient times, the hearth was the seat of the tutelary spirit (Genius) of the master of the house, and it was thus obviously a mere theory, which the laying open of the ancient cemeteries in the Forum and on the Esquiline has in no way confirmed.

The household deities worshipped at the hearth are called penetes. The term penetes is derived from penetrum, the store-room of the atrium and close to the hearth; it is contended that this chamber was regarded by the Penetes, the person in charge of the house, as the centre and source of the house. Among the Penetes the chief place is held by Vesta, who is simply a divine personification of the hearth-fire, and, in fact, her name is actually used metonymically as equivalent to focus or ignis. But, in addition to Vesta, all the deities regarded by a particular household as the special guardians of its fortunes were worshipped as Penetes; and it is further believed that PNG

name was always maintained at a later period that the worship of the Lares became incorporated with the domestical hearth-cult. The worship of the Lar familiaris, originally localised at the comitium (p. art. CROSS-ROADS (Rom.), vol. iv. p. 335 f.), was gradually—and in reality for the sake of the household slaves, as is shown by the cultus of the Lares—included among the household deities. Thus the cultus of the Lares—a place beside that of Vesta and the Penetes at the domestic hearth. Hence in Flaustrus' the treasure entrusted to the keeping of the Lar familiaris is buried 'in medio focis', and, later, people even spoke of the 'focus Larum', while the food that was formerly presented to the Penetes came at length to be offered to the Lares. In the re-organisation of the household in ancient times, the hearth was the seat of the tutelary spirit (Genius) of the master of the house, and it was thus obviously a mere theory, which the laying open of the ancient cemeteries in the Forum and on the Esquiline has in no way confirmed.

Just as in the private house the hearth supplied the place of the altar, so we occasionally find focus or focum, either in addition to, or as substitutes for, the altar, in the sacrificial ritual of the State religion. These were sometimes used as ara temporaire, i.e., altars for temporary occasions, some sort of a kitchen-altar. See also, a similar usage, in the ritual of the Christian church.
HECATE'S SUPPERS

HEBREWS.—See ISRAEL.

HECATE'S SUPPERS. — Hecate's suppers ( seizing Bed ny, or, as they were sometimes called, Brasura, or Brasura) were the offerings laid at the cross-roads every month for Hecate. Their purpose was to placate not only this dread goddess of the lower world, as we learn from Plutarch (Moralia, 700 A), the Ærōphoroi, i.e. the ghosts of those who for some reason cannot rest even in their tomb, are seeking to return to earth in search of vengeance. An army of these invisible and malevolent beings follows in the wake of its leader and queen as they roam at large through the midnight hours.

In reality, these offerings are a specific variation of the primitive cult of the dead. And to a certain extent this specific variation is due to the fact that the cross-roads are the meeting places where the Hecate with whom we have to do is a composite deity. She was a moon-goddess, and possibly even a goddess of the dead, who with Hecate's club readily taken place long before the Ærōphoroi (594 ff.) of Aristophanes, in which occurs the first surviving reference to our subject. Hecate's suppers were naturally deposited at the cross-roads, for the trip was the one pre-eminent day of the moon, still remembered for an indefinite time, and to an indefinite extent. Hence, when the scholiast quoted above said "on the eve of the Ærōphoroi," he doubtless had in mind the thirteenth of the month according to the ancient calendar. It seems certain that then, partly no doubt because 'three' and all its multiples are peculiarly hallowed to Hecate, that the sacrifice still clung to the thirteenth, despite the fact that, when the calendar was reformed, the original reason for selecting that date ceased to exist. It is possible, of course, that the rite was also performed on the actual appearance of the new moon as well as on the traditional thirteenth, but this cannot be proved on the basis of evidence now available. A reference in the Hecate of Diphilus and a passage from Philochorus—both quoted by Athenaeus, 646—show that on the eve also of the full moon (the 15th of the month Mounychion [cf. C. A. Loucky, Agatharchides, Königsberg, 1859, p. 1062]) Hecate was remembered at the cross-roads with a cake surrounded by lighted torches, and known as an Amphiakias. This striking prototype of our birthday cake was also a regular article of diet.

As is usually the case with offerings to the dead, the regular ἄγαλμα τρηπεῖν on the thirteenth of the month consisted of food. The specific articles of food as far as they are mentioned, were: (1) παταλή, a kind of bread.

3. Πιλ. T. I. 21, 11: Πιλ. Κρατισ. 16: 
of leaf or cake, the shape and ingredients of which are not clear; (2) the μαυς, or meat; (3) κάθαρα, or garlic; (4) the τρύγος, or mullet; (5) φύλακας, a sacrificial cake described by Herodotus as 'the kind which the priests eat; (6) eggs; (7) cheese; (8) possibly the βασίλιας, a kind of cake, for which Solon in Athenæus, ix. 645 B, gives the recipe.

Certainly some, perhaps all, of the articles in this ceremonial bill of fare were thought to possess some peculiar virtue or association commending them to Hecate and her attendants. Ancient and widespread, for example, is the belief that the cock is the herald of the sun, and that all vagrant ghosts must obey its summons and return to their place. Possibly this is one of the reasons why eggs are so regularly associated with the cult of the dead. In most cases, however, it is likely that the choice of a given article for a given sacrifice is the result, not the cause, of the properties and associations ascribed to it. The belief, for instance, that garlic was sovereign against vampires was probably the result, instead of the original reason for its use in this service. So, too, the evident fact that the τρύγος or mullet, was sacred to Hecate is sufficiently explained by religious conservatism. Various authorities quoted by Herodotus give reasons for it, but these were evidently second thoughts, and due to later theorizing.

However, this may be, the food thus offered was meant to be propitiation—to avert the φυλακας, the easily roused wrath of Hecate and the ghosts. Hence, if Roescher is correct, the title of Ecuelle given her by Callimachus really embodies the worshippers' fervent prayer on these occasions:

'With the regular ἐκτύρνω δῶρα just described above, Hecate was appeased at the house and household. All three were connected with the purificatory and expiatory sacrifices to Hecate that were performed at regular intervals in the house and household. They were, therefore, left at the cross-roads for Hecate, and, as was usually the case with offerings made to spirtes present and easily angered but inviable, the worshippers retired 

In its general sense καθαρὰ means garbage, trash, offal, or offal of any kind. In this connection, to the sacrifice in Ammon at Ammon (p. 76) and in Ammon (p. 76), καθαρὰ (καθαρὰ καὶ ἄνωθεν), as Didymus says in Herodotus, e.g. τὸ καθαρά means all those portions of the sacrifice for the house which were not actually used in the ceremonial. Such, for instance, would be the καθαρὰ (Athenæus, i. 49 E), the blood and water. Though merely καθαρὰ, they were sacred to Hecate, and were deposited at the cross-roads.

The καθαρὰ, on the other hand, appear to have been whatever was left of the sacrifices themselves after the ceremonial in and about the house had been completed. Among the articles probably belonging to this class are eggs, and especially the body of the dog used in the sacrifice. Dogs, as is well known, were very important in these ceremonies, and played a very important part in these ceremonial house-cleansings among both the Greeks and the Romans. Before they were sacrificed, for example, they appear to have been touched by every member of the family. This process, the χειροποιημένο, seems to indicate that on such occasions this oldest of the domestic animals acted as the φύλακας, the scavengo of the entire house.

Another important detail in this ritual, as to all similar rituals the world over, is evidently alluded to by Pliny (Hist. Nat. 30, 54), but carried only by the scholar of Hecateus, L. A. K. (Kirchhoff). This was the fumigation of the house. After this was done, the censor, which was always of baked clay, was deposited at the cross-roads. In other words, in this particular ceremony the καθαρὰ, the only thing surviving, was the censor itself, and it was therefore treated accordingly.

We have already noted how the censor was identified with the infernal house-cleansing, because of the scholar's own words: καθαρὰς τις οἰκίας, ἀργυροσκυλίας, purifying the house with a censor of baked clay. In another sense, of what was actually burned in the censor, the fumigation operation was too familiar to require it. A somewhat different interpretation of these words, however, has had its advocates. Three were burned, treated only by the scholar of Hecateus, L. A. K. (Kirchhoff). This was the fumigation of the house. After this was done, the censor, which was always of baked clay, was deposited at the cross-roads. In other words, in this particular ceremony the καθαρὰς, the only thing surviving, was the censor itself, and it was therefore treated accordingly.

was especially dreaded in the case of all offerings to dead men. For the priest himself, with the worshipper retired before the altar, he would have been afraid that the spirit would be angry if he appeared to be looking at them. Hecate was supposed to frequent the cross-roads, be guilty of passing over sacred ground, and to punish him with madness, or with some ailments. For all this he was supposed to be the primary cause. Indeed, a curious passage in Petronius, 134, shows that merely stepping accidentally upon the σαβάζαρα (purifying stone) of the cross-roads was considered dangerous. The superstitious man, says Theophrastus (Char. xvi.), 'if he ever observes any one feasting on the garlic at the cross-roads, will go away, pour water over his head, and, summoning the priests, bid them carry a squash or a puppy up to him for purification.'

In spite, however, of the supposed peril involved, as well as of the fact that they were proverbially foul and unpalatable, Hecate's suppers were frequently eaten by some one else. The most common motive, of course, was poverty. Our first reference to it is found in Aristophanes, Plutes, 594, where Penia claims that wealth always has the best of it. Chremyllus counters with the statement that 'Hecate can tell us whether it's better for the Cyclops or the Cyclopes to be poor or hungry. She says that well-to-do or rich people send her a supper every month; whereas poor people, which is the cross, has hardly been put down.' A truly Aristophanic argument! But it was taken literally by the scholastic, and hence apparently the quite impossible statement, still to be found occasionally in modern commentaries and handbooks, that Hecate's suppers were 'meals set out at the cross-roads every month by the rich for the benefit of the poor.' The Cynic philosophy of the cross-roads was considered dangerous and prohibitive, and Hecate's suppers, or pretended to have done so, and reference to the practice was evidently a literary commonplace especially characteristic of their writings. We should expect it of a school whose doctrine of a return to nature led them to scoff at all conventionalities—religious or otherwise—and to see the life and manners of the lowest stratum of society. Sometimes Hecate's suppers were taken merely in a spirit of bravado. Such was the case with the gang of Athenian 'Apostles' whom Demosthenes attacks in his speech against Conon (iv. 19).

Nevertheless, Hecate was deeply rooted in the hearts of the people. Of all the ancient cults none has exhibited a greater vitality. As late as the 11th cent. the Church was still trying to break up the practice of leaving offerings at the crossroads. Even now, not all have forgotten that the cross-roads are uncanny, and that dogs can see things invisible to human eyes. Hecate herself led the famous witch ride of the Middle Ages, while in Germany the Wild Huntsman, and in Touraine the heroic figure of Foulques Nerra, that great ancestor of the Plantagenets who still roams through the darkness with his immortal host, are a clear indication that Hecate and her goblin crew are not only disguised, but outworn.

Hedonism. —Hedonism (from Gr. ἡδονή, pleasure) properly denotes the creed or theory that pleasure is or should be the sole end and aim of human action or conduct, and that to

all good or well-being is ultimately reducible. The theory may be, for historical reasons, held in a variety of forms. In the first place, we must distinguish what is known as Psychological Hedonism (the theory that every man either always or normally seeks pleasure with a view to attainment of pleasure) from Ethical Hedonism (the doctrine that it is right and reasonable for men so to act and so to 'ought' to aim at securing for himself or for mankind the greatest possible sum of pleasure or balance of pleasures over pains). It is possible to be a psychological hedonist without adopting hedonism as an ethical maxim; indeed, as has frequently been urged, unqualified psychological hedonism leaves no room for ethical injunctions; for, if everybody always in fact acts as his own greatest pleasure, it is superficial and meaninglessness to tell him that he ought to do so. On the other hand, ethical hedonism may be held by persons who do not accept psychological hedonism; which, in truth, is now either abandoned by hedonistic moralists or maintained with drastic reservations.

1. Historically, ethical is older than psychological hedonism, and was first explicitly pronounced by Aristippus of Cyrene, a disciple of the Cynics and founder of the Cyrenaic school (see Cynics), who held that pleasure is the highest good, and that it should be one's aim to secure at every moment as much as possible. It is a simple and unassailed form of hedonism which is combated by the Platonio Socrates in Plato's Philebus. A more discriminating theory, formulated by Epicurus (who introduced the observation that all creatures, rational and irrational, aim at pleasure), is criticized and rejected by Aristotle (Eth. Nic. x. ii.). A generation later, the doctrine that pleasure is not the highest good but the mean, 'good for gods and men' was preached by Epicurus who, however, unlike the Cyrenaics, insisted (a) that pleasures of the mind and of friendship and intercourse are greater and of more value than bodily pleasures; and (b) that the perfection of pleasure and the most desirable state is 'freedom from pain and care' (ariefideia). This negative type or conception of pleasure, though never formally repudiated by the disciples of Epicurus, was, as their critics were not slow to remark, very far from being retained in practice as a standard of conduct by adherents of the School; nor was it easily reconciled with other sayings of the founder. The Roman poet Lucretius expounded the Epicurean philosophy with extraordinary earnestness and literary power; and it became very popular in the Greco-Roman world. But it naturally found no favour with the Christian Fathers or the Schoolmen. It was alien to the spirit of the New Testament (cf. ETHOS [Christian]).

2. In the 17th cent., hedonism was revived by Hobbes (p. 2.), who, identifying pleasure with desire, was apparently the first to combine the view that there is no good other than pleasure with the psychological position that men in fact always seek it. Locke (p. 2.), while adopting and developing the latter, i.e. the psychological tenet, rejected hedonism as an ethical method, and founded his standard of conduct in obedience to the commandments of God—an obedience motivated by prospect of 'the different state of perfect happiness or misery that attends all men after this life, and on their behaviour here.' (Essay, i. 21, § 60). A hundred years later, Paley expresses the same view in even more uncompromising terms: 'Private happiness is our motive, the Will of God our aim: (Phil. ii. ch. 3). In the 18th cent., the main opposition to the 'selfish' philosophy came from the school of Shaftesbury, Hutcheson, and Hume,
who asserted the naturalness and pleasure-bringing power of ‘sympathy.’ Here it may be well also to note that from the days of Plato and Aristotle onwards, society, by and with ‘pleasure’ as its object of pursuit, the somewhat vaguely related concept of ‘the profitable’ or ‘advantageous’ (τὸ ἀμφότερον, utile) had been recognized—often by English moralists under the name of ‘interest.’ But in a general way it signified deferred, or diffused, pleasure, had been taken for granted by many writers; otherwise it stood apart. 

A new chapter in the history of hedonism opens with Jeremy Bentham (1748-1832), the apostle of purely mundane hedonistic utilitarianism. Disdaining the dualistic multiplicity of means and denying all qualitative differences in pleasure, he furthermore blended in one panegyric the praises of ‘pleasure’ and ‘utility,’ and made it clear that the latter consists wholly in balance of the former after deduction of necessary ‘pains.’ But he at the same time universalised his hedonism by importing into it the non-hedonistic axiom, ‘everybody to count for one and nobody for more than one’ (see Utilitarianism). Since the days of Bentham, the doctrine and the axiom have frequently if it could hardly say, otherwise. Pleasure-seeking and equitable distribution are apt to pull contrary ways. If one tries to spread pleasure everywhere, the layer of delight becomes so thin that nobody is delighted. Practically, under hedonism, not everybody, but a certain fraction of the community, gains the pleasure. It may be one class, or ‘the classes,’ to the exclusion of the masses; or, in a democratic age, it may be numerous masterful individuals, or groups of individuals, who ‘like’ one another, to the exclusion of those who fail, or do not try to, ingratiate themselves with the dominant type. Hedonism, it is true, would seek to remedy or obviate this unsatisfactory result by providing for the multiplication of means and opportunities of pleasure. And in this undertaking the philosophers have the enthusiastic support of the unphilosophical populace, no enterprise being more dear to them than the discovery or invention of a new or improved source of pleasure. But, although pleasure is doubtless more widely distributed as a result of increased production, there is little or no evidence of its being more evenly distributed. As a matter of fact, Bentham’s successors have not concerned themselves greatly about the axiom of everybody. Rather have they, in their endeavours, by accepting and developing the doctrine of ‘sympathy,’ to magnify the values of social and group pleasure. Moreover, J. S. Mill (1806-73), by recognizing qualitative differences in pleasure, further ennobled the ethics of hedonism, but at the cost of its fundamental hypothesis; for, if some pleasures are higher, and therefore better, than others, there must be something good besides pleasure to constitute the difference. Mill was no psychological; and, while his eloquent advocacy of ‘utilitarianism’ did much to propagate a hedonistic view of ethics, his attempted inference of ethical from psychological hedonism has been often and effectively refuted. The psychology of hedonism founded an able and a thoroughly expounding exposition in A. Bain (p. 1871-1803), who held that pleasure or avoidance of pain is always the object of desire and the aim of action, excepting in so far as men are abnormally under the influence of a ‘fixed idea.’ This important exception virtually conceals all that is commonly urged by opponents of psychology.

Refutation of ethical hedonism is a larger matter. Nor is it practicable to summarize the arguments that have been advanced against it. They all rest ultimately on a conviction, of which it would appear) some men are, and others are not, conscious—that good, or ‘what ought to be,’ is something sui generis, and not the same as what is pleasurable to me or to anybody; or at least that the ethical value of what I like, or of what anybody or everybody likes, is to be determined by, and does not determine, what is good or right. The hedonist accounted for this belief, or sentiment of consciousness, an illusion. To the intuitionalist it is a fact, real and ultimate, and a disproof of hedonism.

Within the camp of the hedonists, egoism may be said to be now discredited—on paper, at all events. This already appears in H. Sidgwick’s Methods of Ethics (1874), in which Egoism, Utilitarianism (Universalistic Hedonism), and Intuitionism are severally examined and compared, an endeavour being made, in conclusion, to transcend the antithesis between the two last.

It would be out of place here to discuss the effects of the wide and increasing acceptance of hedonism as a philosophy of life. But it is permissible to remark that observation of those effects tends entirely to controvert the view, once prevalent, that the conflict of theories is mainly academic, and that there is practical value in the belief that no person is so good as to conduct is good and admirable. There is not and cannot be any such agreement. The victory of hedonism means a transmutation of all ethical judgments.

The incompatibility of hedonism with the biological principle of evolution is convincingly shown in W. Sorley’s Ethics of Naturalism (London, 1894).

Lecture 5—The Page and the Name. J. M. Schuller.

HEGEL. I. Life. Within Hegel’s dates (1770-1831) fell the most eventful epoch in modern history since the Reformation. In literature, philosophy, and politics, humanity was enriched and adorned with a galaxy of men of brilliant and dazzling geniws. While Hegel’s place amongst the men of this period, his own personal life was quite uneventful. He gave himself exclusively to the task of the philosopher—that of severe concentrated reflection and historical movements. The mental aloofness which this required left neither time nor place for practical participation in the changes that were occurring around him; and he never sought directly to influence the current of events. The rapid succession of political and social crises only interrupted the current of his own tenor of life. Rather, they have endeavoured, by accepting and developing the doctrine of ‘sympathy,’ to magnify the value of social and group pleasure. Moreover, J. S. Mill (1806-73), by recognizing qualitative differences in pleasure, further ennobled the ethics of hedonism, but at the cost of its fundamental hypothesis; for, if some pleasures are higher, and therefore better, than others, there must be something good besides pleasure to constitute the difference. Mill was no psychological; and, while his eloquent advocacy of ‘utilitarianism’ did much to propagate a hedonistic view of ethics, his attempted inference of ethical from psychological hedonism has been often and effectively refuted. The psychology of hedonism founded an able and a thoroughly expository exposition in A. Bain (p. 1871-1803), who held that pleasure or avoidance of pain is always the object of desire and the aim of action, excepting in so far as men are abnormally under the influence of a ‘fixed idea.’ This important exception virtually conceals all that is commonly urged by opponents of psychology.

Refutation of ethical hedonism is a larger matter. Nor is it practicable to summarize the arguments that have been advanced against it. They all rest ultimately on a conviction, of which it would appear) some men are, and others are not, conscious—that good, or ‘what ought to be,’ is something sui generis, and not the same as what is pleasurable to me or to anybody; or at least that the ethical value of what I like, or of what anybody or everybody likes, is to be determined by, and does not determine, what is good or right. The hedonist accounted for this belief, or sentiment of consciousness, an illusion. To the intuitionalist it is a fact, real and ultimate, and a disproof of hedonism.

Within the camp of the hedonists, egoism may be said to be now discredited—on paper, at all events. This already appears in H. Sidgwick’s Methods of Ethics (1874), in which Egoism, Utilitarianism (Universalistic Hedonism), and Intuitionism are severally examined and compared, an endeavour being made, in conclusion, to transcend the antithesis between the two last.

It would be out of place here to discuss the effects of the wide and increasing acceptance of hedonism as a philosophy of life. But it is permissible to remark that observation of those effects tends entirely to controvert the view, once prevalent, that the conflict of theories is mainly academic, and that there is practical value in the belief that no person is so good as to conduct is good and admirable. There is not and cannot be any such agreement. The victory of hedonism means a transmutation of all ethical judgments.

The incompatibility of hedonism with the biological principle of evolution is convincingly shown in W. Sorley’s Ethics of Naturalism (London, 1894).
tions, and left school with a sound classical training and considerable miscellaneous knowledge. His mind developed by the time his achievements were always the result of hard work and inexhaustible patience. To the end of his life the path from thought to expression, whether in speech or writing, was more or less blocked; his utterances were always awkward, and even his gestures were clumsy and angular. These peculiarities were not overcome with advance of years; on the contrary, the advance in his mental development seemed to increase the difficulty in finding the appropriate expression for his ideas.

At eighteen (1786), he entered the theological seminary at Tübingen as a ducal bursar, and here he remained till 1788. He graduated master of philosophy in 1790 with a scholastic dissertation 1 On the limits of human duties, assuming that the soul is immortal 2; and passed the examination for clerical orders in 1789 by an academic thesis on what seemed an insignificant topic in Church history —the calamities affecting the Church of Würtemberg. At Tübingen his abilities seem to have made no great impression on his teachers or on his fellow-students. He spent the next seven years as a private tutor, partly in Switzerland (1788–95), and partly at Frankfort (1797–1800). From the fragments of his early writings collected by his biographers it appears that from early youth there was little doubt that this was the formative period in his intellectual life. His tutorships left for him an avocation for his own work; he read widely, made himself master of the new philosophy, and through his friend Schelling came directly into touch with the leaders of the young faculty of which he had been a member. When the philosophy of the new philosophy ended, he emerged from obscurity with an unusually well-equipped intellect, re-entered academic life at Jena in October 1801 as lecturer, and on October 30 he received a position in the faculty of philosophy. After a brief adhesion to the views of Fichte, he came into line with the early philosophy of Schelling, with whom he edited the Journal für Philosophie (1802–03). He definitely broke away from Schelling about 1803 and took up his own independent position in his first work, the Phänomenologie des Geistes, which was given as a course of lectures to his students in 1806 and appeared in published form in 1807. He was appointed extraordinary professor in February 1806, and received his first and last salary of 100 thalers in July 1806. Hegel began to feel life at Jena University too narrow, and his eyes turned to Heidelberg. For a few years after 1806 he drifted from university circles. He took up the editorship of the Bamberger Zeitung in 1807 and remained there till 1808. In the autumn of 1806 he was appointed Rector of Nürnberg Gymnasium, where he remained till 1818. In the autumn of 1811 he married Marie von Tucher. While in Nürnberg he drew up for his pupils his first draft of the Encyclopædia of Philosophy, afterwards published as the Propädeutik; here, too, he composed and published his Logik, which occupied him from 1812 until 1816, when he moved to Heidelberg as Professor of Philosophy. In 1817 he appeared with the first edition of his Encyclopædia, which was published for the students attending his lectures. In December 1817, at the instigation of Solger, overtures were made to him to hold the chair of Education, Altenstein, which led to his migration to Berlin in Jan. 1818 to occupy the chair of Philosophy. Hegel was happily treated by the Prussian minister, who gave a salary of 2000 thalers and 1000 thalers for removal expenses, and anything further he might require to make him comfortable. He remained here till his death in 1831. The chair in Berlin was the summit of his academic career, and constituted him the acknowledged leader of philosophical thought in Germany. His work prospered, his influence with his students grew, and a spiritual force became predominant, and his circle of friends made life happy and complete.

He was appointed Rector of the University in 1830; otherwise the record of his life within the University is the record of the successive courses of lectures on the different parts of his system, as this gradually grew and took shape under his unremitting revision. He published Naturrecht und Staatswissenschaft im Grundrisse, otherwise called Philosophie des Rechts, in 1820, the second edition of the Encyclopädie in 1827, and the third edition in 1830. None of his other lectures in Berlin were published till after his death, when the courses on History, Religion, and Art were edited and produced by his pupils. His death took place on 14th Nov. 1831. He was seized with cholera in one of its most dangerous forms, and died very suddenly after a short illness. He was buried, at his own request, beside Fichte and close to the grave of Solger, his friend.

Throughout his life Hegel showed no outstanding distinction of personality of any kind. He never seems to have gone through any intense intellectual conflict, he had no period of storm and stress, and had no quarrel with persons, passions, or principles. He was a life without misfortune, without adventure, without a great friendship, without the elevation of a great love or the tyranny of a great ambition. Science was the whole of the energy of his mind. He had in an unusual degree that supreme intellectual detachment, combined with complete and intense concentration, which marks the philosopher pur sang. In private life he was sociable, and on terms of friendship with a few simple and genial people—a natural being without personal affectations, despising all pose, and with none of the self-consciousness which makes a man prey to the flattery of success or to the morbidness of failure. He was always reconciled to life as he found it, accepting without demur the institutions and even the fashions of his social environment, meeting the serious demands of the day with sober good sense, and the trivialities with good-humoured irony; a good citizen, a good patriot, a good churchman, a man of unbending rectitude and unwavering consistency of purpose.

2. The historical sources of Hegel's philosophy.

It is characteristic of most philosophers to support their own theory by assuming a hostile attitude towards their predecessors, more especially their immediate predecessors in the common task. Sometimes the hostility is open, sometimes veiled in indifferance; at times the attitude is critical, at other times neglectful or even grudging; but the more comprehensive the new system, the more does it usually claim acceptance at the expense of those who have gone before. This resistance to acknowledge intellectual ancestors seems to find its justification in the belief in independence, which may be necessary to maintain complete freedom of thought, and devotion to objective truth, but contrasts curiously with the trust in tradition and respect for the past as characteristic of religion and social life. It makes every philosopher an intellectual Melchizedek, and the company of philosophers a pure democracy contemptuous of forefathers and priests of Education, Altenstein, which led to his migration to Berlin in Jan. 1818 to occupy the chair of Philosophy. Hegel was happily treated by the Prussian minister, who gave a salary of 2000 thalers and 1000 thalers for removal expenses, and anything further he might require to make him comfortable. He remained here till his death in 1831. The chair in Berlin was the summit of his academic career, and constituted...
that all philosophers had a single purpose in view and were dealing with the same principle, and again that each expression of that principle, being in-
complete or one-sided, demanded and gave rise to a
further interpretation of its meaning. The different
systems were thus essentially connected in two
ways: on one hand, all were endeavouring to
unfold the meaning of a single object or 'idea,' as
Hegel called it; on the other hand, each successive
system was a progressive advance on its predecessor.
Each fresh attempt to grasp the fundamental 'idea'
required and made possible the speculative freedom
of each, in its detachment from his predecessors,
immediate and remote; the progressive evolution
of philosophical truth involved and ensured the inti-
mate unity between past and present
systems.

This conception of the history of philosophy
throws direct light on the sources of Hegel's own
philosophy. It is, indeed, the only assistance he
gives to those who wish to know what those sources
are. Hegel's development was almost entirely in-
ternal; he apparently made no attempt to work out
his own distinctly philosophical ideas which must have
occurred to him at the various stages of initiation.
If he did make any bridges over the various currents
of thought which he encountered on the way to his
system, he did not destroy them; but the chances are
that he waded across in silence and did not pause
for intellectual experiments. In his earliest philo-
osophical essays published in Das System der
metaphysischen Wissenschaften, or later by himself
and Schelling, his mind is already made up on
the main points at issue; and, when his first philo-
sophical treatise (the Phänomenologie des Geistes)
appeared in 1807, his system was already formed
and henceforth remained unchanged in principle
and method. The only indications we have of the
course of his ideas in the preparatory years are a
few isolated fragments and remarks on different
topics, political, religious, and philosophical, which
in part were first published in Rosenkranz's Life of
Hegel and which have recently been published in
complete form. From these scattered sources, taken
along with the conception of the history of phil-
osophy above described, we are able, however, to
specify some of the more important influences
which helped to determine the form of Hegel's
philosophy.

Hegel was a student of theology, and for some
time seriously contemplated a clerical career. This
of itself would have turned his mind to the study
of religion, but in any case the subject of religion
was one of absorbing interest throughout his whole
life. His mind was, so to say, constitutionally of
a deeply religious cast. This affected his attitude
towards philosophy from the first, and helped very
largely to shape the philosophical problem as he
understood it. There is no topic to which he so
constantly recurs as that of the intimate relation
of religion, especially the higher types of religion, to
philosophy; and in no part of his analysis of ideas
is he more happy than when he illustrates the com-

unity of thought between the two. The religious
aspect of experience was, then, one of the most
important factors determining the form and prin-
ciple of his philosophy.

(d) A second and hardly less important influence
was derived from his study of history, the history
of ideas, and the history of social and political
institutions. There seems little doubt that he
easily realized the form and content of speculative
thought and for the comprehension of its purpose
and position in the history of the human race,
he was thus qualified to grapple with a knowledge of philosophical problems and conceptions unrivalled and indeed unap-

proached by any of his contemporaries or pre-
decessors in 1807. It was his broad perspective and breadth of view in the construction
of his own system, and to some extent tended to
outstrip the limitations of the one-sidedness which
is the danger of abstract speculation, of all abstrac
tions, to the extent of giving a whole generation
from too exclusive concentration on the pressing
problems of the moment. It enabled him to see
whether a new form of philosophy was justifiably
in his own time, in having in view all that
had already been done, and, if so, what form that
philosophy should assume. It showed him the
vital relation between philosophy and general
history, and so revealed the inner connection of
philosophy and human life, in a way hardly
realized before and only imperfectly conveyed by
historians, and philosophies of human life as that
of his contemporary Herder in the Ideen zur
Geschichte der Menschheit (1784). Above all, it
led him 'back to Greece' with its wells of unde-
filed philosophy; and there he found an abiding
fount of inspiration, to which he constantly re-
turned and from which he drew a great part of what
was best and most valuable in his own philosophy.
If there is one element more than another in
Hegel's study of history which gave him a unique
place amongst his contemporaries and led him to the
philosophical aim of his life, it was his sense of
this contribution to philosophy, it is his intangible
knowledge at first hand of the mind and thought of
the Greeks. Just as from one point of view his phi-
losophical aim must be seen to be to humanize
himself, and at another, apparently conflicting attitudes of religion and philosophy, so from another point of view it may
also be described as the attempt to encompass in
Greek ideas in the mould of modern thought, and
reconcile the contrasted human ideals of Greek
civilization and of Western Europe in modern
times.

Another very important influence which guided
the direction of Hegel's philosophical development
was derived from the peculiar forces which were
at work in his own time, and which often arise from
the French Revolution, and in the sphere of letters
Romanticism. On its negative side we have
civilized society dissolved into its ultimate con-
stituents and rejecting its ancestral ideas and
organized institutions; on its positive side we
have the attempt made to carry out the purpose
declared to be the aim of human life under the guidance of individual
freedom. It was impossible for any man of
insight, endowed with a sympathetic appreciation of
the higher ideals of humanity, to remain unaffected
by such a highly electrified spiritual atmosphere.
Hegel as a son of his time was closely in touch
with and profoundly influenced by the forces which
were changing the features of modern civilization
and creating new worlds for old. His unique
contribution to the movement was derived from a
reflective understanding of its governing ideas, as
the result of which he sought to place it in its
proper setting within the drama of human history,
to correct its one-sided intensity, and to reveal it
as a phase of the general life of the human spirit.
Here once more the support of his family was of
assistance, and his knowledge of the philosophical
ideas of the past enabled him to grasp the inward-
ness of the thought of his own time in a way
impossible to his contemporaries. We now under-
stand the immediate historic influences.

(d) Finally, there can be no doubt that the Kantian
philosophy, with its succeeding development under the hands of Fichte and Schelling, was the immediate philosophical source of Hegel's own system. This was due partly perhaps to Hegel's conception of what development of philosophy consisted in; but much more to the fact that there was no escape from the influence of a scheme of thought which had been taken for granted as philosophically and metaphysically in the minds of his time, which in its principle was profoundly important and in its full significance was not understood, much less exhausted, by those who had as yet undertaken to expound it. It was thus natural and inevitable, if Hegel was to take his place amongst the philosophers of his time, that he should fall into line with the Kantian movement, and in the first instance make himself thoroughly acquainted with its principle, with the development of that principle at the hands of his immediate predecessors and contemporaries, and with the latent philosophical possibilities of the principle unrealised by its originator or by any of the exponents who had as yet adopted or adapted it.

Other influences there may have been in the final shaping of Hegel's system, but those enumerated seemed the most prominent and the most effective. All of them have to be borne in mind if we are to form any judgment as to the consistency of the sources of his philosophy; for it seems superficial and inaccurate to describe his system as 'Squaring Kant,' 'systematized Idealism,' or 'idealized Realism,' or again as a revised form of the philosophy of Schelling.

3. Hegel's view of philosophy.—Hegel differs from other philosophers in nothing more than the care which he bestowed on the consideration of the place of philosophy in the plan of human experience. In this he reminds us of Plato and Aristotle rather than of any modern thinker. Hence no statement of Hegel's system is satisfactory which does not at the outset explain his view of the object and method of philosophy. In a sense one might say that his conception of philosophy contains a kind of epitome of his whole system. He constantly recurs to the topic whenever a relevant opportunity arises, and he has no doubt as to what precisely he meant by philosophy.

The distinctive character of his conception of philosophy may conveniently be brought out, to begin with, in relation to Kant's theory of knowledge. On Kant's view, metaphysics was a failure and a futility. It failed in the sense that the knowledge it advanced was false, and by its very nature could not be verified by experience, and did not secure common assent even from those who cultivated it, and showed no signs of any progressive advance in the comprehension of the object or objects with which it professed to deal. It was futile in the sense that it was a mere formal manipulation of the most general concepts to abstract the connection of which was merely analytical and was secured by the purely logical principle of consistency or non-contradiction, the origin and validity of which were accepted without criticism or challenge, with the result that such a system of concepts, being in no way subjected to the only criterion of truth—agreement with experience—could not be regarded as either true or false, as anything more than an intellectual castle in the air without any serious claim to be called knowledge. The pretense of metaphysical knowledge stood in glaring contrast to ordinary scientific knowledge; and this would be admitted were it not for the apparently ineradicable instinct which induces reason ceaselessly to attempt to think and speak as if the knowledge of which it is in possession was complete and final. Kant therefore sets himself to examine the nature and conditions of true knowledge in order (1) to show the limits within which knowledge is valid and successful; (2) to account for both the failure and the apparent inevitability of the task of metaphysics. Kant's theory of knowledge in its scope and its outcome was controlled by the purpose which determined it: true knowledge, he maintained, was concerned only with experience which always involved the content of sensibility; metaphysics was the result of the operation of reason untrammelled by experience.

Hegel regarded Kant's whole undertaking as logically impossible from the start, for Kant's own theory is meaningless if his view of knowledge is correct. Kant's theory is itself a kind of knowledge; it is the knowledge which philosophy supplies but it finds no place or explanation in Kant's theory. It does not start from nor deal with experience in Kant's sense. But it is not permissible to have a standard of knowledge by which to judge metaphysics, without equally demanding a standard by reference to which the criticism of the validity of knowledge is itself made possible. The criticism of all knowledge implies a criterion, just as much as the criticism of a part of it. The philosophy of the limits of knowledge must in some way be unconditioned by those limits; and hence either such a philosophy is not knowledge, or else knowledge must have a meaning beyond that implied by such a philosophy, Kant as the guardian of the limits of knowledge overlooked the inevitable question, 'Quis custodiet ipsos custodes?' Logically, Hegel's criticism of Kant is unanswerable from Kant's point of view. There is only one way of determining what knowledge can or cannot do, and that is by following knowledge wherever it leads; as Hegel frequently remarked apropos of Kant's theory, we can learn to swim only by entering the water.

But it is clear that we cannot swim in any kind of water, and we must sometimes use a general idea of our own strength. Hegel rejects Kant's conception of knowledge, virtually because it is too restricted in scope, and because it does not give any explanation of that kind of knowledge involved in constructing his own theory, viz. philosophical knowledge. But Hegel, too, starts from a conception of knowledge, and also takes a certain type of knowledge as a standard by which to determine the value of other kinds of knowledge. His general conception of knowledge is wide enough to embrace all forms of knowledge; his standard type of knowledge is that by which all forms of knowledge must be interpreted, the ideal of all knowledge; and this is the idea of knowledge as realised and developed in philosophy. Thus he dismisses Kant's arbitrary limitation of knowledge to 'scientific' knowledge; he regards philosophical knowledge as a necessary and definite type of knowledge with a distinctive character of its own, but at the same time intimately related to all other forms of knowledge. Being that type by which all kinds of knowledge are interpreted, it must in some sense be a higher embodiment of the nature of knowledge than any other. But it cannot be obtained from an empirical examination of other types given in experience; it is not a mere aggregate of the other types, nor a generalisation from them. It has a unique function to perform, which must be capable of precise definition and preliminary to carrying out the task of philosophy: without this we shall not know how to proceed. And in so far as it requires justification, this must somehow be supplied by philosophy itself.

The essential elements in Hegel's conception of philosophy are determined by reference to (1) the object with which philosophy deals, (2) the medium in which it works, (3) the method by which it carries on its process to a final result. These factors are closely connected, but each is distinct from the other.
On Hegel's view the object of philosophy is described in general terms as the Whole, the Absolute, or God. This is reality without qualification, and hence it can only be described as what is simply, or what is not finite, not a part. The specific meaning assigned to this object varies with each philosophy, but it is always the realization principle with which all philosophies deal. Even when a philosophy denies that any definite meaning can be attached to such an object, it is understood to refer to this object which makes such a denial a contribution to philosophy. Whatever philosophy may or may not achieve, it has always been concerned with what is ultimate. This does not require demonstration; it is so much historical fact.

Again, the medium in which philosophy moves is that of the supreme achievement of thought—a notion. This has certain characteristics, negative and positive. Negatively, it is not derived from nor dependent on sensation or perception, and hence it is not a mere general concept; it is not a pure abstraction from universal and hence a notion has no rigidity of outline, empty of all specific content and applicable to any, and does not exclude all relations with other notions. Positively characterized, a notion operates freely and independently within itself and under its own conditions. It is the ultimate principle controlling and penetrating all thought wherever it appears, whether in sensation, perception, or abstract reflection; it is universal, but is a concrete universal, this, as it contains itself, the particular acknowledges the organic unity of universality and particularity; it is a single identity in and through difference, is, in fact, thought as an operative individual unity; and each notion directly refers to this object which itself intimately with other notions, so as to form an organically articulated system, a self-contained structure of notions.

Hegel believed by which philosophy proceeds is that of development of the notion. Development here does not mean development in time, but development in expression and coherence of the elements involved in the notion; it is a development in terms and for the purposes of complete thought. The notion is an operative individual unity, and thus is a process which can be realized with more or less completeness. The unity of the elements in the notion may be implicitly asserted or explicitly affirmed; it may be implicit or fully unfolded. The elements in the notion may be taken by themselves, and each may in turn be said to be the whole notion; but each inevitably calls for the other as soon as the one-sided affirmation is clearly made and seen, because nothing short of the whole notion can express its meaning, and its unity is indissoluble. One partial affirmation, therefore, gives rise to another, till the notion is fully unfolded and installed as an explicit unity of all its elements. The partial affirmation of the notion belongs only to the whole, an abstract affirmation; the complete explicit co-ordination of all the elements within the unity of the whole notion makes impossible any abstract isolation of elements, and so consists all one-sided affirmations; relatively to these abstract affirmations, the whole notion, as explicitly containing and co-ordinating all its elements, is concrete. From this point of view, the development of the notion is described by Hegel as a process of the notion from abstract to concrete. The notion itself determines these stages; it is these stages, and it is the process of removing the one-sidedness of each till the unity of the whole is completely realized. Looking at the process as a growth from a lower to a higher degree of articulation of the nature of the whole, it is spoken of as a process from 'potentiality' to 'actuality.' Looking at the notion as an individual concentration of the highest activity of mind, which is essentially considered, can only be described as what is simply, or what is not finite, not a part. The specific meaning assigned to this object varies with each philosophy, but it is always the realization principle with which all philosophies deal. Even when a philosophy denies that any definite meaning can be attached to such an object, it is understood to refer to this object which makes such a denial a contribution to philosophy. Whatever philosophy may or may not achieve, it has always been concerned with what is ultimate. This does not require demonstration; it is so much historical fact.

Again, the medium in which philosophy moves is that of the supreme achievement of thought—a notion. This has certain characteristics, negative and positive. Negatively, it is not derived from nor dependent on sensation or perception, and hence it is not a mere general concept; it is not a pure abstraction from universal and hence a notion has no rigidity of outline, empty of all specific content and applicable to any, and does not exclude all relations with other notions. Positively characterized, a notion operates freely and independently within itself and under its own conditions. It is the ultimate principle controlling and penetrating all thought wherever it appears, whether in sensation, perception, or abstract reflection; it is universal, but is a concrete universal, this, as it contains itself, the particular acknowledges the organic unity of universality and particularity; it is a single identity in and through difference, is, in fact, thought as an operative individual unity; and each notion directly refers to this object which itself intimately with other notions, so as to form an organically articulated system, a self-contained structure of notions.

Hegel believed by which philosophy proceeds is that of development of the notion. Development here does not mean development in time, but development in expression and coherence of the elements involved in the notion; it is a development in terms and for the purposes of complete thought. The notion is an operative individual unity, and thus is a process which can be realized with more or less completeness. The unity of the elements in the notion may be implicitly asserted or explicitly affirmed; it may be implicit or fully unfolded. The elements in the notion may be taken by themselves, and each may in turn be said to be the whole notion; but each inevitably calls for the other as soon as the one-sided affirmation is clearly made and seen, because nothing short of the whole notion can express its meaning, and its unity is indissoluble. One partial affirmation, therefore, gives rise to another, till the notion is fully unfolded and installed as an explicit unity of all its elements. The partial affirmation of the notion belongs only to the whole, an abstract affirmation; the complete explicit co-ordination of all the elements within the unity of the whole notion makes impossible any abstract isolation of elements, and so consists all one-sided affirmations; relatively to these abstract affirmations, the whole notion, as explicitly containing and co-ordinating all its elements, is concrete. From this point of view, the development of the notion is described by Hegel as a process of the notion from abstract to concrete. The notion itself determines these stages; it is these stages, and it is the process of removing the one-sidedness of each till the unity of the whole is completely realized. Looking at the process as a growth from a lower to a higher degree of articulation of the nature of the whole, it is spoken of as a process from 'potentiality' to 'actuality.' Looking at the notion as an individual concentration of the highest activity of mind, which is essentially considered, can only be described as what is simply, or what is not finite, not a part. The specific meaning assigned to this object varies with each philosophy, but it is always the realization principle with which all philosophies deal. Even when a philosophy denies that any definite meaning can be attached to such an object, it is understood to refer to this object which makes such a denial a contribution to philosophy. Whatever philosophy may or may not achieve, it has always been concerned with what is ultimate. This does not require demonstration; it is so much historical fact.

Again, the medium in which philosophy moves is that of the supreme achievement of thought—a notion. This has certain characteristics, negative and positive. Negatively, it is not derived from nor dependent on sensation or perception, and hence it is not a mere general concept; it is not a pure abstraction from universal and hence a notion has no rigidity of outline, empty of all specific content and applicable to any, and does not exclude all relations with other notions. Positively characterized, a notion operates freely and independently within itself and under its own conditions. It is the ultimate principle controlling and penetrating all thought wherever it appears, whether in sensation, perception, or abstract reflection; it is universal, but is a concrete universal, this, as it contains itself, the particular acknowledges the organic unity of universality and particularity; it is a single identity in and through difference, is, in fact, thought as an operative individual unity; and each notion directly refers to this object which itself intimately with other notions, so as to form an organically articulated system, a self-contained structure of notions.
in adopting the content which time offers and arranging it to meet the requirements of the logical development of the notion considered, or in regarding the temporal sequence of the content as in essence following the same cause as the logical sequence of the notion. An illustration of the former appears in the treatment of the various historical stages of freedom in human history; the course of the history of philosophy in Europe is an illustration of the latter.

Following this clue of the inseparable connexion of the notion with the principle of logical development, we can see how it comes about that in every part of Hegel's scheme of philosophy there are only two questions by which it is determined: What is the notion dealt with in the part in question, and how is the development of the content of that notion to be expressed in terms of the peculiar character of the notion in question?

Thus we have (1) the notion of philosophy itself as a factor in the life-history of the human experience of the individual mind. The development of this notion in and through the various forms of concrete human experience gives us the philosophical interpretation and vindication of the place of philosophy in experience. This part of the system of philosophy is worked out in the 'Phenomenology of Mind.'

(2) Philosophy, as a human effort to express the ultimate notion of the Absolute, is subject to the conditions of race, culture, and civilization in the midst of which it appears. The one notion is, as already said, dealt with all along, but it expresses itself in different ways in the various conditions just mentioned. It is thus one philosophy which works itself out under these conditions; the different expressions of this one philosophy constitute a variety of philosophical systems. These systems appear at different times, and necessarily make philosophy take on a historical character. They are not to be understood as the history of philosophy; and these systems are but forms of one philosophy, being the work of the one notion which animates them all. The logical development of the expressions of this one system through all its historical conditions constitutes what Hegel understands by the 'History of Philosophy.' The logical development here is inseparable from the direct historical sequence in which the different systems have appeared. The historical direction is the logical direction, because there is one notion of the Absolute which animates them all, and animating the various minds concerned; and the way in which its content actually appears is a historical development. Hegel's 'History of Philosophy' is not a mere narrative of theories succeeding one another in time, but an integral part of his own philosophy; it is a philosophical interpretation of the history of philosophical theories.

(3) The notion of the Absolute, which is the ultimate object of philosophy, has, like every other notion, its own moments or aspects, each of which is the Absolute, but is capable of distinction from the others, and capable of separate logical development. The very concreteness makes it necessary for philosophy to take it in detachments, so to say, in order exhaustively to express its content. But its single concrete reality cannot be broken up into aspects, for it remains in its concreteness as the all-comprehensive and supreme principle operating in each of its aspects, and containing all the results of the development of each in its definitest unity in its highest possible form. It contains the principle that gives rise to each of the preceding extremes. It is, therefore, a principle of universality, and also a principle of self-differentiation; but combining these two functions in one reality is that of mind or spirit, which, being essentially self-conscious, is at once a necessity in all its processes and the conscious source of endless
differences and distinctions within itself. It is
supremely an identity which maintains itself
through its differences and refers them to itself.
It is thus the realized embodiment of the concret-
ness of the notion, and the type of all such con-
creteness. The notion of the Absolute fully real-
ized, 'in and for itself,' is thus 'Mind,' and the
logical evolution of the notion as mind is the
Philosophy of mind.' This completely and ex-
hausts the notion of the Absolute; it contains all
and the whole of its content and the whole of
that notion, for mind is the source of universals,
and mind as the soul of an organized body sums
up in its organic embodiment the processes of
nature. In the logical evolution of mind, there-
fore, the philosophy of the Absolute comes full
circle; and the crowning stage in the develop-
ment of mind is the philosophy of the Absolute itself;
the final outcome and expression of Absolute Mind
is the truth of the Absolute revealed in and
through philosophy.

(7) Since the notion of the Absolute is embodied
with varying degrees of completeness throughout
all the system, any part may be taken by itself
and worked out into systematic form in exactly
the same way as a whole is developed. Each
part forms a realm by itself, and its detailed
contents can be logically evolved from it. Hegel
dealt with four parts or stages in the philosophy
of absolute mind, but he never brought it to
this very stage of one-part system that has
been mentioned—the 'Phenomenology of Mind,'
mind as creating 'experience.' The other three
are (a) mind as 'object,' mind as the source of social
and moral activity, (b) mind as expressing itself in
the realm of art, (c) mind as realized in the life
of religion. These are respectively worked out as
such in the content of the other stages of
philosophy, and are called: 'Philosophy of Law,'
'Aesthetic,' and 'Philosophy of Religion.' In each case exactly
the same plan is pursued: we have the notion of
'social mind' delineated and then logically en-
volved through all its forms and stages; and
similarly of art and religion.

Whether these minor systems are capable of
giving rise to still further systems, Hegel gives
no indication. He seems to make an independent
treatise on human history, though this is un-
doubtedly a subject which falls within the scope
of the logical development of objective mind, for
objective mind, society, is essentially a historical
reality. But the separate treatment of history,
apart from the treatise on the logical development
of social life, is of no real significance, and was
probably due to the exigencies of academic work.
Strictly speaking, the 'Philosophy of History'
occupies the same relation and position in the
philosophy of objective mind as the philosophical
treatment of the various historical aspects of art
and religion occupies in the 'Aesthetic' and 'Phil-
osophy of Religion.' The 'Philosophy of History'
must be regarded as a continuation of the 'Phil-
osophy of Law,' as the logical evolution of the
notion of freedom (which is the principle of ob-
jective mind) in the various historical forms
assumed by objective mind in the life of mankind.

Hegel's notion of the Absolute is essentially
an identity which maintains itself throughout
its various stages, and the Absolute is the
source of all universals. The philosophical
system is based on the notion of mind as the
source of the universe, and the Absolute Mind
is the truth of the Absolute. The philosophy
of the Absolute is the final outcome of the
logical evolution of mind, and it is through
philosophy that the essence of the Absolute
manifests itself. The absolute mind is the
source of all the parts of the system, such as
philosophy, law, aesthetics, and religion.

The philosophical system is an identity
which maintains itself throughout its various
stages, and the Absolute is the source of all
universals. The philosophical system is
based on the notion of mind as the
source of the universe, and the Absolute Mind
is the truth of the Absolute. The philosophy
of the Absolute is the final outcome of the
logical evolution of mind, and it is through
philosophy that the essence of the Absolute
manifests itself. The absolute mind is the
source of all the parts of the system, such as
philosophy, law, aesthetics, and religion.
at all, we can extract nothing out of it; at best we can only repeat it; and, if we seem to derive further principles from it, we have not, to begin with, it as an abstract, self-conscious mind. For it is by the use of this supreme function of mind, then, that we have to proceed when we employ self-conscious mind as the clue to interpret reality, from without to within. The highest and following the traditional usage of philosophers, calls 'reason.' Since in it the self always operates in a conscious way (it is the conscious unifying of differences), reason is essentially cognitive in character, but 'cognitive' only in the general sense of full awareness. Reason does not here mean simply reflect for accuracy, nor merely, but its function Hegel holds, it is both at once in an indivisible act. It can be called reflective when we consider the aspect of distinguishing and relating the elements involved; and intuitive when we consider the aspect of uniting these differences into a single whole. But these are, after all, aspects; the function is one and individual. Reason is therefore 'mediate' and 'immediate' in its operation, and whatever it operates holds this true. This means, however, that as a function it is self-complete, directing itself and determining itself by its own law or method of procedure: it is its own world and the law of its world. It is the realized limit of knowing. In other forms of knowledge, something is 'given' by the process of reflection. The limiting case of such a process is when the immediate and the mediating activity are merely aspects of a single operation. Such a limit is reason. But it is an actual limit, not an imaginary or 'ideal limit of knowledge,' but the limit of knowledge as a limit of knowing. And this is the way that reason is described as 'concrete' and not abstract. It is concrete, as the essential function of mind must be; and mind is, as already indicated, the very type and standard of what is concrete and individual.

But a further stage is required before we can make use of this notion of a function. So far as reason has been treated as a reason as a function. Now that function operates within a certain range and for an end. It is a function which operates in an individual way, grasps a whole in its singleness, as a unity in and through differences. The end is its product, the outcome and summary of its operation. In a sense this product may be described as the function itself, the function in its single completeness. The distinction between them, such as it is, consists in the product being regarded as the function brought to rest, while the function is the product in course of being brought about. This product Hegel calls a 'notion' (Begriff). A notion may be called the object of reason, but only if the connexion between reason and its object be considered as close as that between function and function just mentioned. A specific notion is one of the manifestations of its function; and, if we look at reason simply as the most general function of self-conscious mind, we can speak of reason itself as 'the notion' (der Begriff) par excellence. Hence we often find Hegel taking it as absolute by itself. In that sense, the operation of 'the notion' as when describing the function of reason. The notion is spoken of as 'concrete of itself,' and 'determining itself,' and as 'uniting its differences,' etc.—expressions which seem to create difficulty until we see that for Hegel 'the notion' is reason, in the sense just described. He does not mean that the notion, like an abstract shade of substantial self-conscious mind, works independently of the vital energy of mind; for the notion in his sense is not a shadowy ghost of mind at all. The notion is reason in the full plentitude of its power, and is distinct from it solely as function and end are distinguishable in the operation of reason. The notion is thus not 'endowed' with energy by reason, nor again is the notion the 'expression' of reason, if this implies that the expression is separable from the source or force from which it proceeds. And what is true of 'the notion' par excellence holds good of any notion in which reason is embodied.

This step is highly important for Hegel's view. For now it becomes possible to link his theory with the language in which philosophy from its reception has clothed its thoughts in detail. For philosophy has itself created and creates that language, because it is the function of grasping a unity with its differences. That language is used throughout by the activity of reason; and the results of its activity appear in the manifold 'categories' with which philosophy deals. Wherever we have a function of thought-unity in and through differences, there we have a category, and there we have the operation of reason. Hence we can treat a category as a specific realization of the 'notion' of reason, and can trace its source to the one supreme function of self-conscious mind. Hegel does not require to create the world reason out of his own mind, nor to dictate to experience the kind of number of categories which constitute reality. The work has been already done in the course of the history of philosophy, and he has but to put the results together; while experience alone can let us see what the categories are which constitute reality. The complicated culture of European life is, so to say; mixed with categories, some having names derived from one language, some with names derived from another. Again, he does not require to constantly appealing to the nature of reason to verify or justify his categories; he is sure that reason is present wherever this function of unity in and through difference is exercised and concentrated into the summary form of a category. And, finally, reason, while the supreme essential function of mind, must articulate itself into a plurality of categories, because mind is the absolutely concrete and definite due to the fact that it gathers up into itself the entire realm of finitude. It is, as already said, the standard of all individuality, and is the standard because it contains all that the other types of individuality contain, and more than is contained by any other category. The plurality of categories referred to, being all in the long run expressions of the one supreme activity of reason, are necessarily connected with one another through their common derivation from a single source. Together they form a system so organically connected that any one category involves all the others, and can be clearly interpreted only in the light of the whole system.
does not mean that the system defines or is independent of experience and reality; for the notions are the controlling principles of experience and reality. It is not merely unity within the notion, but the form in which this unity in difference reaches its highest expression is self-consciousness. In this form the distinction in question becomes a matter of fact, and the unity is the single self-functioning in and through both factors alike and at once; while, as already indicated, the essential nature of self-consciousness is the activity of reason. By this line of thought Hegel seeks, on the one hand, to avoid the dangers of subjective idealism to which his principle is liable, and into which certain of his immediate predecessors, notably Fichte, fell when developing the implications of Kant’s theory; and, on the other, to steer clear of the abstractness of the bare unity of subject and object as presented by Schelling, which possessed objectivity at the price of being inarticulate.

The argument by which he establishes this position is contained in the first half of the Phänomenologie des Geistes. Briefly stated, it consists in showing that, wherever subject and object stand in the relation which constitutes experience, the subject’s principle is that of thought. This is at once a function of the subject and the controlling centre of the reality of the object; and in both the subject is the sum of pure experience. This unity is not apparent, but is only implicit at the lower levels of experience, where subject and object seem more opposed than united, as, for example, in such states as that of sensation and perception. But analysis of these types of experience brings to light the underlying principle of unity. The very process of the experience from the experience to the higher forms is necessitated by the demand for the explicit in place of the implicit unity, and is at once the gradual evolution of the essential unity of subject and object and the growing awareness of the universality of thought which permeates the component factors constituting experience. We cannot say that the subject determines the object any more than that the object directs the activity of the subject; they are inseparable elements and develop pari passu. It follows that the process reaches its goal, and experience its truest type, when subject and object are transparent to each other, when the subject is aware of itself in its object, and the object reveals to the subject not only the actions of the subject, but the procedures of the subject. The distinction between the two is as real as ever, but the unity now contains them as factors of one conscious process. This stage is that of consciousness of self. From this point of view, so attained in the course of experience, the levels below this stage are now seen to be non-identical to the attainment of self-consciousness, but are themselves implicitly constituted by self-consciousness, which was operative in them from the first, and from which, in fact, by abstraction they obtained their place as forms of experience and as stages in the evolution of experience. Experience is thus constituted and permeated by self-consciousness; indeed its significance consists in its being the process of manifesting or evoking consciousness of self, in the subject’s becoming gradually aware of or finding itself in its object, and so coming to be ‘at home’ in its world.

In this way the principle of reason, which, as we saw, was taken to be the essential activity of self-consciousness, is not a mere system of mind from an abstract point of view, especially the one-sidedness of finite subjectivity, and is adequate to meet the mind’s demands for unity with its object, whatever the object may be. There is no need for distinction in the part of reason in dealing with the world; it
Hegel has but to 'let itself go,' and the whole domain of concrete individuality in all its manifold forms will straightway give up its essential meaning without reserve, and without the least part of the only secret worth knowing, the secret of the 'thing itself.' Reason is the open secret of the world, because it opens all secrets. It makes the idea safer of its own usage, because it finds its own likenesses in the face of the world.

The text-bound substance of the universe has no power within its capability of withstanding the course of man's knowledge; it must give way before him, and lay bare before his eyes, and for his enjoyment, its riches and its depths' (Hegel's Address to his Students in Berlin, 22nd Oct. 1818).

In the light of the foregoing we can see at once the central position which Hegel's logic holds in his theory. For logic, as he understands it, is the science of the notions which constitute the sole and only outcome of the activity of reason. The totality of all the notions is the totality of the constitutive principles of reality in all its forms of individualization; and the science of this totality must cover the whole of reality, finite and absolute.

And, since these notions so systematized exhaustively reveal all that reason can obtain in the way of complete knowledge, the science of logic is inevitably identical with reason.

If such a view is called 'Panlogism,' there can be no objection to the term as long as it is understood to imply no objection to the theory. Those who apply the term, however, often mean by it that there were some other way of comprehending the Absolute than that which reason affords. What others seek is, not to be true, but in terms of reason is not clear from their statements. There seems, on the face of it, no other way of being rational except by exercising reason as such, in the form of the absolute realm, it seems useless to object that the outcome of its work is only a system of notions. One may object to Hegel's way of rationalizing; but no one would have the right to say the Absolute must be intelligible in terms of reason, and also that the outcome of rational thinking is an illegitimate interpretation of reality. The only valid objection to 'Panlogism,' properly understood, is to insist that there is some other and better way than reason for approaching the Absolute.

But this objection is irrelevant to philosophical necessity, which, indeed, is the only alternative to rational interpretation. Some critics of Hegel's system frankly adopt this position. Their position is not inconsistent with Hegel's. But it involves the abandonment of the philosopher's task, as Hegel understands it.

But the most important objections can be urged against Hegel's scheme of notions than the accusation of 'Panlogism.' A few may be mentioned at the present stage. It may be readily granted that the function of reason is the supreme central operation of self-conscious mind, and that reason seeks to grasp the individual in its singleness. It is quite another matter to admit that any finite mind is capable of exercising this function with unfailing accuracy and success throughout the whole domain of reality. Hegel seems to proceed as if, having extracted the essence of mind, the essence could be left to itself and would straightway work with inevitable certainty and necessity wherever and whenever it might be needed. But this is to identify the finality of the function with finality in its exercise, the finality of a claim with finality of every assertion of the claim, the finality of a point of view with the finality of its vision. The two are evidently distinct in fact, at least in the case of every mind short of omniscience. The essence of reason is not extraneous except under the complex conditions and in the complex setting of a finite individuality; and these conditions are both obstacles to the perfectly free exercise of reason, and constant sources of failure or error throughout the whole activity of mind. To maintain anything else is to ignore the plain facts of human frailty which are found in every other phase of man's experience. If illusion and imperfection haunt the efforts of man to realize matters of everyday concern, it can hardly be expected that they will suddenly disappear when he undertakes the unique and immense task which strains the consummate powers of his mind to the uttermost. Hegel in describing the working out of the notions of reason frequently uses the expression that in the development of the operation of the notion the individual thinker has merely to 'look on' (ausschauen). But the individual cannot be regarded as merely a still mirror reflecting with infallible accuracy a process in which he does not actively participate. Even to 'look on' he must concentrate his vision, and to see correctly his sight must be clear and uninterred. This point need not be laboured here. When we examine Hegel's way of carrying out his ideal of rational thought, we find that he constantly starts from the conventional terms embodied in ordinary speech and science, takes their meanings as he finds them, and proceeds to invest them with the dignity of the notion. At times he appeals to etymology in an attempt to help out the operation of reason, and constant use of the varied applications and senses of a term to give vitality and movement to the notion. His procedure is, in these cases as an attempt to infuse the spirit of the notion into the terms of ordinary thought, in other cases as the sublimation of ordinary thought into the ethereal realm of the notion. Both cases are as in the hands of the pure mathematician, the ideas of measurable quantities of physical phenomena are volatilized into elements of a purely logical connexion.

Another criticism of considerable importance is that which challenges Hegel's attempt to identify the rational coherence of the whole realm of finite individuality with the universe of absolute truth, the whole truth as it is for the Absolute Mind. The former is the reasoned system of nature naturata; the latter is the reasoned system of natura naturans. It may be that the former is all we can know of the Absolute; but, so long as the distinction remains between the Absolute and its manifestations in the total realm of finitude, it cannot be all that the Absolute can know of itself.

To confound the two is to adopt the attitude of what may be called metaphysical positivism; and, whether positivism be scientific or metaphysical, it is open to the charge of affirming as an absolute truth what can never be more than a system of truth which is relative in every sense of the term.

If, on the other hand, the distinction between the Absolute and its appearances is insisted on, the rational system of finitude may indeed bear the image and superscription of the Absolute, but it must always be regarded as at best but an approximation to, never a substitute for, the final truth as the medium of exchange used by mortals in order to handle conveniently and profitably the wealth of absolute knowledge. Hegel never explicitly draws the distinction between the tenor of his argument is against admitting that the distinction is vital for philosophical thought; and he constantly claims that the system of truth revealed through the finite is the same truth and the whole truth for finite mind and Absolute Mind alike.

The third charge against Hegel's view is that, while, as we have seen, he approaches his position...
by the avenue of human individuality, he claims to have eliminated all traces of anthropomorphism from his system. The explanation such a claim is simple, but the justification of the claim is unwarranted. He finds his foothold in the reality of human individuality, and from this he extracts the essential principle of activity and movement; and reason — reason. He then takes this essence by itself, regards it as a self-contained agency working itself out by its own laws and conditions, and lets it loose, so to say, to accomplish its end, viz. the grasping of reality, in all forms, in terms of the constitutive nature of reason. The individuality from which it comes to be begotten is therefore, in a word, the individual only 'looks on' while it works. The function is hypostatized, and operates as if it were itself the concrete individual. Hence all the limitations, which in every other aspect qualify the nature of the human individual, are held to apply no longer to the function itself. The very success with which the function is exercised is unaffected by the conditions of human individuality; it always works correctly and without interference. Reason is in this way deanthropomorphized. But it seems plain that such a contention oversimplifies its mark. The essence of finite self-consciousness does not cease to be finite because it is the essence; an essence must, if it is really the essence, still be characterized by the limitations which denominate and permeate it as finite. Finite limitations are not an accident of finitude; they are of the essence of it. It is paradox to regard the essence of finitude as something other than a finite essence; and mere assumption to treat the essence of finitude as infinite in nature and function. If this assumption is correct, it is impossible to account for error; and the assumption gives place to presumption if it is maintained that the working out of the essence makes the system faultless, final, and unalterable. Moreover, the peculiarity of the concept of reality, in so far as it is an interpreting reality, is lost, if the essence is thus hypostatized. For reason is the same, whether it be realized in a tree or a tadpole or a philosopher. It is, however, not the peculiar significance of the essence in man's individuality which is the source of its value as a clue to the interpretation of reality: the peculiar nature of human individuality in all its concreteness cannot, therefore, be eliminated without endangering its importance as a clue. This means that the essence cannot be taken in abstraction from its source; if it is to be of value. But, if it is taken with all the qualities and qualifications of human individuality, the limitations of an anthropomorphic point of view must necessarily affect its whole operation and characterise the result obtained. In short, its value depends on its being anthropomorphic; the elimination of this point of view, however much we may gain in generality and abstraction, lessens the value of the result.

5. Hegel's method. — Equally important with the fundamental principle of the 'notion' in Hegel's system is his view of the nature of the method by which the system is constructed. The peculiar characteristic of all philosophical thinking lies, no doubt, in the consistent operation of a single method of procedure, and most of the great thinkers have recognized this. To Hegel, method was of the essence of system, not merely in the sense that the two were inseparable, but in the sense that the system was nothing but the successful operation of a method clearly conceived from the outset and consistently applied step by step throughout it. He maintains that the value of his own system stands or falls with its method, and not so much by the perfect accuracy in detail with which the system is formulated in the 'Logik' (Werke, iii. (1841)) he says: 'I cannot presume that the method . . . is incapable of being worked out with still greater completeness and precision in detail, but I do know that it is the only true method.'

In his first piece of constructive work (the Phänomenologie) he pointed out the fundamental necessity of having a carefully formed idea of the method by which philosophy achieves activity and movement; and the method he looked on the method as the soul of a philosophical system. His method, quite as much as its principle, differentiated his own position from that of his predecessors.

Hegel always insisted that the nature of the method was to be found by an analysis of the character of the notion. The method was not imposed externally on the notion, but was the vital nature of its process. No doubt the formal character of the method was suggested by certain aspects of the work of Kant and of Fichte; but it also was due to Plato. But the historical aspect is altogether subordinate to the specific meaning and procedure assigned by Hegel to his method.

Stated in general terms, the method is the way by which the notion, through its own activity as above described, gradually articulates and coherently connects into a single whole the component differences involved in its nature as a concrete function of self-conscious mind. A notion, being the essence of self-conscious mind, is a self-closed whole. Beyond that mark it is true whether we take supreme notion or any notion of a lower grade of significance. In its procedure, therefore, it is self-directed, and not externally determined. Its procedure is immanent and constitutive of its own activity. It unfolds itself because it is a function of a self.

But, again, a notion so completely permeates its own content that its component elements are its own differentiations, are its own expressions, or, as Hegel calls them, its own 'moments.' In each, therefore, we have its content and its process; and to the last specific form and the notion asserts itself in each in turn, as truly as it is the synthesized whole of all the parts. In some cases, e.g. the higher notions in the 'Logik,' the parts are themselves notions of a subordinate significance which again contain 'moments' within themselves. In the limiting cases, a notion, on the one hand, is a bare self-identity, and the attempts to assert itself in its content merely brings out the fact that it is incapable of differentiation and so has no content specifically to have and to proceed; and to the last specific form and the notion asserts itself in each in turn, as truly as it is the synthesized whole of all the parts. In some cases, e.g. the higher notions in the 'Logik,' the parts are themselves notions of a subordinate significance which again contain 'moments' within themselves. In the limiting cases, a notion, on the one hand, is a bare self-identity, and the attempts to assert itself in its content merely brings out the fact that it is incapable of differentiation and so has no content specifically to have and to proceed; and to the last specific form and the notion asserts itself in each in turn, as truly as it is the synthesized whole of all the parts. In some cases, e.g. the higher notions in the 'Logik,' the parts are themselves notions of a subordinate significance which again contain 'moments' within themselves. In the limiting cases, a notion, on the one hand, is a bare self-identity, and the attempts to assert itself in its content merely brings out the fact that it is incapable of differentiation and so has no content specifically to have and to proceed; and to the last specific form and the notion asserts itself in each in turn, as truly as it is the synthesized whole of all the parts.
same whether the reason be embodied in the finite human mind or in an absolute mind; and the connection of concept established is the same for both. But in the question of time does not enter into the nature of the process and is indifferent to the process, even if time be required to carry it out, as is obviously the case when process passes from one stage to another. In contradistinction from the process of time, this process of establishing connection between the moments of the notion may be described as a cognitive or logical process pure and simple. So far as time as such is concerned, it must itself be handled by the same logical process, if it is to have any influence in the process of the absolute notion, the notion of absolute individuality. 1

Action, then, aims at realizing all its content as controlled by its own unity. It seeks to affirm its differences separately and together as its own. Its differences are for it ultimate, otherwise it would really be a bare self-identity. The differences are thus, within the compass of a given notion, extreme opposites to one another: what the one is the other is not. Per se the differences are absolutely opposed; but being different within the same notion, they are for the notion only relative differences, no matter how strongly they appear opposed. It is only such differences that the notion is concerned with; not to have them is nothing. Or again, if that above all challenge the unity of reason, the singleness of self-consciousness. And, further, only in the case of contraries does difference constitute the opposition in which self-consciousness itself consists, the opposition of subject to object within the unity of the same self. As reason is the essence of subject, the domain of contradiction, and all things are for it within elements as opposite as subject and object. A notion, then, being concerned with differences which are thus ultimate for one another, there can be no question whether the opposites within a notion are per se contrary to the one to the other. And indeed it seems a matter of indifference whether we say that contrary opposites constitute a single notion or that a notion is a function of uniting contrary opposites; whether we start from the one or the other is of no importance for purposes of explaining a notion. A notion is called for wherever there is this contrary opposition, and a notion consists in the unity of such opposites for both unity and such differences constitute the individuality of a notion.

An illustration from the 'Philosophy of Law' will help to make this clear. The notion of property is that of will expressed in a more or less permanent outer form, in an object of nature over which, by some means or another, will has exercised its force and so embodied it. It means, therefore, identification of will with a natural object. A will is always a personal will, and property is therefore essentially personal property. The ultimate factors composing this notion are thus active personal will in relation to an external object, and passive external object in relation to a personal will. The first appears as ownership of a thing, the second as the use of a thing. Those differences per se are diametrically opposite to one another: ownership is not use, for the thing in being used up passes from the owner; left to themselves the opposition between them is indefinite. Yet they have such an opposition only because and in so far as they fall within the notion of property. But for this, these would be merely outside one another, and the question of opposition and compared with each other. The very fact of their opposition being a real and reciprocal opposition implies the singleness of the notion containing them; the singleness of the notion creates the contrariety existing between the different elements taken per se. In the unity of the notion the differences are, from the point of view of the concrete notion, relative: they are both elements of the same notion, and are related to each other as from one stage to another. In contradistinction from the process of time, this process of establishing connection between the moments of the notion may be described as a cognitive or logical process pure and simple. So far as time as such is concerned, it must itself be handled by the same logical process, if it is to have any influence in the process of the absolute notion, the notion of absolute individuality. 1

From this follows the important aspect of the process, on which Hegel constantly lays stress—the function of negation. In a sense this is the vitalizing power in the process, its driving force, so to say. Each difference is the contrary of the other, and is 'negative' of it. But this negative relation is not bare or 'infinite' negation, but specific negation, negation within a certain field, and negation in a certain definite direction. The 'use' of a thing is not simply 'not-ownership'; if so, it would have no quality in itself at all, and not to have qualities is equivalent to being in fact nothing. Or again, if that above all challenge the unity of reason, the singleness of self-consciousness; it might well be a fiction, for a notion is 'not-an-owner.' It is 'use' of a thing within the field of property; and 'use' is of a type that whatever within this field is involved in 'ownership' is not found in 'use.' An owner, e.g., has a will, a thing used cannot have a will; hence a slave is not, does slave, a personal will. So a thing as used can be alienated because it is an external object, a personal will as owner is not used and cannot be alienated. In short, the negative relation between the two elements is a negation with a specific content peculiar to each side of the opposition in question. And it is this definite and positive content which at once makes the negation possible, and constitutes the characteristic of the negative relation of the one to the other. Hence it is that, while in every notion the differences are negative of each other, the precise character of the negation and of its procedure varies with each notion.

Now, this positive content which makes the negative relation definite is derived from the notion itself, which is altogether positive. The notion affirms itself in each moment, and this makes the moment what it is. Moreover, the notion finds itself in each moment, and, so to say, endeavors to concentrate its entire meaning into each moment. For that reason each takes its stand with all the weight of the notion behind it, and in the name of the notion denies the right of the other to be itself, or even to be the notion. The negation is thus not a passive but an active relation, not a condition of quiescence but of conflict between the moments but this active opposition presupposes and requires a common basis, and that is found in the positive content which each possesses. The positive content which makes the moment definite in character is the source of the union between the opposing moments of the notion. Or, in other words, the conflict is not so much between the moments per se as between moments each of which claims to embody the one whole notion. The tension between the moments is a tension within the unity of the notion which is articulated in each. It is this tension which sets up the process of interrelating

1 It is treated as part of the 'Philosophy of Nature' (Naturphilosophie, §§ 297-299).
the moments in such a way as to break down the opposition and connect the one with the other, and establish an explicit union between them—a union which was implicit from the start and becomes articulate in the organic connexion of the moments. This process of interrelation is what Hegel calls thinking, or rationally unifying, 'contradiction.' To think, or contradict, he says, is the very nature of reason; true thinking can do nothing else, and has nothing else to do. By thinking 'contradiction,' he obviously does not mean thinking 'logical contradictions' in the formal sense; but thinking into a harmonious unity the real contrariety of moments in a notion which are negatively opposed to each other. Since this way of thinking is in the sense the core of the whole process, he rightly regards the procedure as the consciousness of contradiction and the removal of contradiction. The term usually employed to designate this process—dialectic—Hegel adopts from his predecessors, more especially Kant and Plato; though Hegel constantly points out that the dialectic method was imperfectly understood and imperfectly applied in every system but his own, and mainly because the nature of negation, on which the process turns, was not properly grasped.

When we ask how the opposite elements are brought into harmony, the answer is—by the very operation of the synthesis. This is characteristic of all thought and indeed of mind itself. These two operations are inseparable, and are inherent in the nature of reason. Starting from an implicit synthesis, we find by analysis the moments of the notion; we discover in the same way the positive content of each moment, and by continuing the thought far enough we attain to the essence of the whole, the nature of finitude, but inherent in it, and, in fact, the very reason of its connexion with infinitude, the presence of which, again, in the finite may be said to be the essence of the negative movement, the contradiction, in finitude as such. If the process were endless, if infinitude were an infinite progress or regress, there would be no final stage in which all contradiction is removed; there would be no removal of it: we should have infinite process in time, and not process in thought. Hence he names such a process the 'false' infinitude, 'false' because it is not true, because it is a restoration of the same original state of things, of truth, or indeed truth at all, meaningless and impossible.

How the 'higher unity' or 'higher truth' is arrived at, it is not difficult to see. We may best bring this out by recurring to the illustration previously referred to. The notion of property, we saw, is resolvable into the two ultimate factors of 'ownership' of a thing and the 'use' of the thing, these being opposed to each other. They are opposed because the ownership means the detention of the thing as the correlative of exercising a permanent or identical personal will in regard to the natural object, while the use of the thing means the deprivation of the thing; the existence of it, and hence the gradual giving of the hold of the personal will over it. In the former element the notion of property is expressed in terms of the nature of personal will, in the latter it is expressed in terms of the nature of a thing or natural object. Personal will provides the aspect of identity or universality in the situation, the thing provides the aspect of diversity or particularity. Simply opposed as these are, the analysis of the first, which is logically the prior element—since will must be exercised before a natural object can be the thing and enter into a self-conscious situation as property—brings out the second. For ownership to be effective, will must be repeatedly and continuously exercised over it, and the continuous exertion of will over a thing is precisely what is meant by 'using' it. But the continuous use of a thing means that, since the thing is particular and the will universal, the thing declares itself and ultimately the thing is exhaustible and therefore our hold over it is terminable. The termination of property is a thing that is thus involved in the very nature of property. In fact, the complete termination of property in a thing is the highest expression of what property means for a will. This termination may be brought about in two ways either by exhausting it so that it is no longer of
HEGEL.

of Hegel's system. It governs the process of evolving notions wherever they appear and whatever they be. The process of connecting all the content of the notion of the State, for example, is essentially the same as that of connecting the aspects of contract, or conscience, or a free constitution. And the process of connecting the constituents of the whole Absolute Individuality, is precisely the same as that required to connect the content of any part of the system—Religion, the State, or Nature. No doubt the method varies with the notions considered, but only in the sense that form varies with content, and yet is inseparable from content. Doubtless, again, Hegel may have been more successful in carrying out his method in the case of certain notions and certain departments of philosophy than in others. Sometimes he may have failed altogether, and even his analysis is obviously strained, artificial, and forced. But these are necessary incidents of the inevitable fallibility of genius, and must be so regarded. It seems a mistake to treat, as McTaggart does, the variations in success of Hegel's use of his method as so-called 'changes of method' in the system. Misapprehensions are not, as the assumption that alterations were deliberate either convicts Hegel of insincerity in the construction of his system, or regards him as working out his system with mechanical and infallible success.

In the light of the method as above explained there is no difficulty in accounting for the fact that the process of connecting the elements of a given notion is the same in character as that which connects the variety of notions involved in a given sphere of the system and the totality of notions required to unfold the content of the whole system. For, just as from the point of view of a given notion its elements are 'moments' in the realization of that notion, so any given notion, short of the notion of Absolute Individuality, is a 'moment' in a wider notion, and is thus a stage in the realization of a completer truth. Property, for example, is a notion with subordinate 'moments', but property itself is a moment in the realization of the notion of 'contract,' just as contract again is a moment which helps to unfold the complete content of 'abstract Right' as an expression of free personal will which is the basis of the notion of the State; and so throughout the whole system.

It is impossible to go into ground covering the operation of the dialectic throughout all the notions which emanate from reason in its interpretation or reconstruction of individuality in all its forms. To do this would require a re-statement of the whole system, and if given in outline would convey little concrete information. The whole value of the argument lies in the fact that it is given with the actual substance of reality; the vitality of the dialectic draws its energy from each concrete form of individuality in turn, and works with its content as the indwelling organizing agency. There is nothing formal in the procedure; the form of the method in fact takes on the colour and quality of the content. The principle that the notion of reason is the core of things being sought for all adopted, it is henceforward throughout the system accepted as the truth of things, and reality is simply asked, so to say, to render or meaning in terms of the notion and its method of procedure. The individual mind of the philosopher merely "looks on," as Hegel puts it, and records the result in the various spheres of thought which reality naturally, or rather according to historically accepted divisions, falls.

6. Hegel's view of ethics.—The ethical life in its most comprehensive sense is a particular aspect
of a more general reality, that of finite mind. It
is not the highest expression of finite mind, nor is
it the lowest level at which mind exists. It arises
at that stage in the process of mind’s activity
where, having, in its consciousness of itself as a
concrete reality, finite mind utters its substance
in an objective form. It presupposes the conscious
continuity of itself with nature, and freely commits
itself to the ends of the objective process of
nature, and finds nature supporting its own
purposes. It determines nature by its own ends;
it ‘acts,’ and does not in so doing feel any sense of
loss, but, on the contrary, feels enlarged and en-
riched. Similarly, it presupposes the conscious
continuity of finite mind with finite mind, the
identity of self with self, the acknowledgment of
self by other selves, and the open, concrete recog-
nition of intercommunion of self with other selves,
so that one self shares the life of another in definite
ways, and is expanded in so doing. It presupposes,
in short, the conscious universalisation of mind,
brought about and sustained through inter-sub-
jective intercourse which is carried on by all the
means at the disposal of the finite mind—desire, emotion,
end, etc. Of these forms of objectification—that
through conscious union with nature, and through
conscious connection of finite mind with finite
mind—the latter is infinitely the more important,
because of the more explicit and complete identity
of the component factors in the situation, and
because the first form is involved as a necessary,
contingent means to the complete attainment of the second.
Without ‘nature’ intercommunion of conscious
selves would be impossible; without other selves
mind would never rise above the limits and limita-
tions of ‘animated nature.’

When the resources of finite mind have been
evolved to this level where it finds and accepts
mind (finite mind) as its own object, an object
responding to the call of the subject and evoking
its potentialities, then mind is in a condition
where it is free and free interrelation of self and
self is possible; and in this interrelation consist
essentially the ethical process and the ethical life
of man. It thus forms a level of the life of mind
quite by itself. Complied with the previous
stages of mind, it may be justly spoken of as
‘objective’—explicitly universal and permanently
embodied finite mind; the previous stages by
contrast being spoken of as ‘subjective’ mind.
And further, because this level of mind is its own
creation and product, using nature, but not itself
the outcome of nature, it is self-constituted and
self-determined, and therefore free.

Thus the region of the life of mind where ethical
life exists is that of free objective finite mind.
This is the form of reality, the type of ‘notion,’
which has to be evolved by the science of ethics,
and its parts logically connected by its inherent
dialectic.

In the order of reality the whole comes before
the parts, the complete before the incomplete;
and in the whole we see most clearly the nature of
that individuality with which we are dealing. The
whole where finite mind is expanded and objectified
in its complete stage is historically the State.
This is the most concrete phase of objective mind;
this, in fact, is the concrete reality to which
the notion of objective mind primarily refers, and
which contains all other ways in which that notion
is expressed. But in the order of exposition we
must begin with the most elementary way in which
this notion of objective mind is embodied, the
simplest form in which the notion of free objectified
mind is expressed. The simplest and most abstract to the most complex
and concrete, essentially the same principle is
realised, but the fullness of its content, or its
‘realisation,’ varies in degree of ‘truth’ or ade-
quacy to the nature of the notion in question.

What this simplest phase of the notion can again
be found only by experience; but this means no
more than that, as a philosopher, observing the
nature of the notion considered, is in touch with
all the appearances of its reality.

The primary subordinate notions into which the concrete notion of mind is
resolved, are (a) the external relation of mind to will,
(b) through the inner life of each self-conscious
individual will being aware of itself as a self-
contained unit of objective mind, and, (c) finally,
through the free and unreserved intellectual
allusion of mind with mind, an intercommunion which
avails itself of both external and internal atitu-
des of will, but is a fuller realisation of the
objective mind than either. In each case we have
the same factors, mind conscious of itself through
explicit relation to other finite selves, and realizing
itself in this relationship. (a) is the sphere
of the legal moralising of will; the second, that
of inner moral sentiment, purpose, all that is
summed up in the term ‘moral conscience’; the
third is that in which moral will realizes the three
stages of the fulfillment of the same end, and are
only logically separable moments of that one end.

Thus, to sum up, the legal relations are imposible by themselves;
becoming so only when joined to others, and they alone, for the obvious reason that in them
the notion of mind is not fully realised. The inner
side of mind—what the individual is for himself—is
ignored in law, or considered only as relatively
subordinate, as having significance only in so far as
it throws light on ‘acts,’ on the external ex-
pressions of will which are alone the sphere of
interest of law properly understood. Yet the inner
side is of supreme importance to the individual,
and also of supreme importance to the complete
life of society. The legal relations of man with law
as a realization of mind, and is in any
case as necessary for the complete expression of
the mind’s nature. The fullness of intercommunion
of mind in mind demands that the powers of
response within the individual shall reflect and
correspond to the demands made upon it by others.
The third stage is equally necessary, and cannot
subsist apart from the two preceding; for the
complete intercommunion involved in social institu-
tions as is impossible and incomplete without legal
relations as it is without the inner adjustments of
the individual mind to the inner life of others.

Taking these primary elements in the con-
stitution of the complete notion of objective mind,
Hegel analyses them as successive stages, and
under the general designations of (1) abstract law,
(2) morality (Moralität), and (3) the social order
(Sittlichkeit). Each of these is a notion, a subor-
dinate notion in the whole, but a notion none the
less, because each has an individuality all its own,
is a unity in difference.

(1) The forms assumed by the external relation of
mind to mind constituting the sphere of law are
easily stated, and are more or less familiar in every
historical code of law. In the relations which may
be legally related and combined indirectly or directly,
positively and negatively. (i.) They are related externally
and in an indirect manner when some
external ‘natural’ object is the common centre of
their interest and of the activity of their separ-
ate wills; this is the sphere of property, essentially
an objective realization of mind and a relation of
one mind to another from the being concrete
and inseparable; it is primarily positive and
only in a secondary sense negative. (ii.) They
are directly related when two or more wills have
HEGEL

a mutual hold over each other as regards certain actions of their respective wills, and on certain explicit conditions mutually and freely arranged between the separate wills, retain their independence; a will cannot contract itself entirely away without self-contradiction and without contradicting the notion of a contract. It is a fuller realization of objective mind than property, because contract enters more deeply than property into the structure of the individual will; the very powers of a will, as such, stand on the basis of the contract. It is both positive and negative in explicit terms, for a contract explicitly limits as well as unites the contracting wills. (iii) The third form in which wills are related externally is primarily negative, and only in a secondary way positive. One will may, of itself and without the acknowledgment of another will, invade the domain of individuality of another, and to some extent cut off the activity of this will. The invading will may do so to any extent, even to the destruction of the existence of the invaded will, and may do so unconsciously or deliberately. The relation here is primarily negative, because one of the wills thwarts the other aside and does not admit its reality, while the other (invaded) will in its turn reacts on the first and denies the reality of the invading will as regards the specific action of the former. This form of the individual will is usually called 'evil,' 'criminal.' It is obviously an external relationship; still it is a relation, and a relation of an objective kind, for each act and expression will before the eyes of the other.

The above notions exhaust the possible external relations of wills to one another, and the last stage enters even more deeply into the substance of will than the former; for here the more capable will is really responsible for wrong-doing. For in wrong-doing the agent and the sufferer call upon the inmost claims and resources of their personality in order to assert and defend their respective positions; and the process of removing the wrong makes further demands on the concrete nature of their individuality in order to ratify and defend their respective positions; and the process of removing the wrong makes further demands on the concrete nature of their individuality in order to ratify and defend them.

It is probably because of this effect of the process of wrong-doing and of its removal that Hegel finds the logical connexion between 'law' and 'morality' at the point where wrong is righted. The logical transition seems indeed forced and artificial, as so many of his transitions from one fundamental notion to another can be shown to be; and certainly it is by no means so convincing as that between the successive stages of the analysis of law.

(3) Morality, or the inner side of realized mind, likewise has its various modes of expression. The analysis of morality is one of Hegel's richest and most illuminating interpretations of the moral life, even if we add that its value lies less in the framework of its logical order than in its insight into concrete moral experiences. An inner life is that in which the inner processes of his mind are brought into the service of an objective life with other individuals. It is not therefore a private preserve of individuality, within which he shews himself off from society; it can be so applied, no doubt, but when so applied it becomes the source of evil and not of good for the individual. The true conscious good of the individual is the subordination and regulation of the functions of his inner life in the interests of a systematic unity with his fellows. The conception of such a unity, consciously operating upon his own life, is the object of his project of life with his fellows, and is the process of realizing and reflecting in his inner life the objective system of social well-being with which he, as a special centre, is bound up. It covers such facts as intention, conscious purpose, happiness, duty, emotion, and, highest of all expressions of this attitude, the individual conscience with its responsibilities for good and for evil to the individual. The whole inner life of the individual is in this way a moral microcosm of the objective self-contained macrocosm of a historical society, and is distinguished on an account, indirectly as an embodiment of complete objective mind.

(3) The third stage of objective mind—the social order—covers all that we mean by the institutional aspect of the life of a society. Here we have the free, unreserved interaction of individual minds with individual doing in all its forms, 'civil' and 'criminal.' It is obviously an external relationship; still it is a relation, and a relation of an objective kind, for each act and expression will before the eyes of the other.
objective mind is the direct and conscious operation of a definitely realized collective unity of individual minds upon the individual components sharing in its life; a unity maintained through each, but more concrete than any; a unity secured on certain expressed formulized conditions and therefore implying a law, as implying the inner processes and well-being of its components, and therefore involving what the stage of 'morality' contains. It is logically higher in value than the preceding stage, and ethically higher in authority and significance. It is historically prior in existence to the component individuals, and prior therefore to both law and individual morality. In its earliest forms its mode of regulation is that of 'custom', and custom is at first the source of law and the ruler of conscience. In its highest forms the social order is a blend of custom and self-conscious regulation, the former acting as the conserving, quasi-unconscious method of procedure, the latter as the principle of criticism, initiative, and progress.

The institutional condition is capable of indefinite development, and there is, strictly speaking, no practical limit to the number of institutions. But historically and in principle some institutions are more rooted in the natural conditions of man, more lasting in character, and more universal in their purpose than others, and so more fundamental in structure. The objective mind. Such are the institutions of the family, the city, and the state, and these again are in the order of their ethical importance. The first is based on the natural organic fact of the family and the weaker spheres for interchange of particular minds in terms of natural affection, sympathy, and direct personal helpfulness; and has its larger ethical significance in the rest, are new institutions, and for the wider life of the whole community. The second rests on the natural need of varied organic sustenance; gives rise to and makes possible the complex interdependence of operating individuals each and all engaged in obtaining a livelihood, and finds its larger ethical significance in the organisation of economic relations in such a way as to give the free opportunity of self-expansion and all protection to each in the fulfilment of his function. The third rests on the need of forceful security from interference from without the community: of regulated security from interference between individuals and minor institutions within the society, and of concentrating the whole resources of objective mind in a single all-comprehensive dominating unity, which is capable of acting on every part and giving rounded completeness to the ethical life of its component individuals. The finitude of any given State is inseparable from it, and is a limitation as regards its capacity to exhaust the life of humanity as such. Each State is therefore one State amongst other States, all expressive of humanity. The ethical life is therefore a restricted area of reality, and not an exhaustive expression of the Absolute, or, for that matter, even of humanity, as embodied in all States, we pass from the ethical life proper to the drama of human history. This is inseparable from the course of the world in all its aspects. The treatment of States from this point of view is undertaken by the more comprehensive part of Hegel's system, the Philosophy of History, an interpretation of States as realizing in various degrees the idea of freedom of will embodied in each State.

7. Hegel's view of religion—Religion occupies a peculiar position in Hegel's philosophy. Philosophy as a whole and in its parts is determined by its object; it has always a definite form of individuality to deal with, as the inner life of the individual whole is the supreme object of philosophy; the evolution of its content is the systematic development of the Absolute idea, the reason-constituted essence of Absolute Spirit. The various divisions and subdivisions of the philosophical system, nature, finite mind, etc., are dealt with as specific individualisations of this ultimate reality; their content is evolved in detail as 'moments' of the supreme truth, and thus gives rise to the various parts of the absolute philosophy, the various philosophical sciences. Beyond these complete absolute science and the various subordinate sciences in that system, beyond reality as a whole and reality in its parts, there is nothing for philosophy to deal with. A philosophical science is the systematic evolution of the real in terms of its fundamental essence or notion; and the real is a whole of parts, a unity of diverse elements.

Now religion is the natural development of a sphere of reality: it is an attitude towards an object. The only form of object possible is either the Absolute or another human mind. As Hegel continually asserts, the object of the religious attitude is the Absolute in its unity, in its completeness, in its 'truth'. But this reality is also the person of God, and of speculative science; and speculation in Hegel's view is alone necessary and sufficient to give the complete truth about the Absolute. Here then lies an obvious difficulty, viz., that the Absolute in philosophy is not the same as the Absolute in religion. The letter, as well as the spirit, of Hegel's system is against such a view; the Absolute in philosophy is emphatically identified with God in religion, and in the highest religion there is not even the semblance of contrast. Nor are there two truths about the Absolute; the Absolute is the supreme truth and the supreme truth is one. Hegel's solution of the difficulty is found in drawing a distinction between the 'form' in which the Absolute is grasped in the case of religion and of philosophy, and the 'content' which they both deal with. The 'form' is different in the two cases, the 'content' is precisely the same. The same Absolute is present in both and in the same sense, viz. as Spirit, self-conscious and rational; and its mode of realization is the same, viz. it is 'conscious of itself' in the religious mind as well as in speculative philosophy. But the medium through which its realization is effected, the 'form' in which the 'content' is expressed, is in religion that of feeling, of sensuous intuition, and of significant sensuous symbolic general ideas, whereas in philosophy the 'form' is that of the notion and notion (as above explained, p. 572 ff.).

This solution, however, only raises a further difficulty. The notion, as we have seen, is the final form in which truth appears, and the notion alone is entirely adequate to convey absolute truth. Is the 'form' used by religion an approximation to the notion, or is it co-equal in value with it for the Absolute, as we pass beyond the State and consider the life of humanity as embodied in all States, we pass from the ethical life proper to the drama of human history. This is inseparable from the course of the world in all its aspects. The treatment of States from this point of view is undertaken by the more comprehensive part of Hegel's system, the Philosophy of History, an interpretation of States as realizing...
of self-conscious spirit; and that speculation is the
final stage and 'crown' of the life of spirit.

It is difficult to resist drawing an obvious inference. If it is possible, as Hegel maintains, to
come to a truth about the nature of the Absolute, which is the essence of the Absolute (self-conscious
reason), and thus perfectly adequate to the nature of the Absolute, it is as simple as the way
of error; if, on the other hand, religion is not the way of error, the claim of philosophy to express
the final truth about the Absolute is untenable, since the Absolute requires to express itself
in the sphere of feeling, intuition, and representative ideas, as well as through the notion.

On the former alternative, religion is in strictness unnecessary, and philosophy is all that God
requires to convey His truth to finite spirit; on the latter alternative, religion is necessary and
philosophy has no claim to priority of value over
religion, since the Absolute is its own standard of
value and one form of self-expression is as needful
as the other. Either philosophy fulfills a purpose
altogether different from religion, or else philosoph
y is not by itself the highest and completely
concrete expression of the Absolute.

The ambiguity involved in Hegel's position was
never more piquant to his followers, and led to diametrically opposite interpretations of the religious significance of his doctrine. Hegel was himself in some trouble to tell himself when he came to define the boundaries
of religion and philosophy. It is easy to see how the
difficulty arose. Hegel claims that it is possible
in virtue of the principle of his system to take up
a theocentric position, and to express not simply
what the finite spirit thinks of the Absolute Spirit,
but how the Absolute Spirit must itself think.
Thought, in the sense of the 'notion,' is absolute
thought, thought as it is for the Absolute. In
religion and pure speculation we have before us
what the Absolute Spirit in and for itself and
how it articulates itself. Religion is the 'self-
consciousness of God,' not simply how finite spirit
is conscious of God, but how the Absolute Spirit
is conscious of itself in finite spirit; the Absolute Spirit 'manifests itself' in man, and the manifestation
does not conceal but openly reveals its very
nature. The revelation of God to man in religion
and God's revelation of Himself to Himself in
finite spirit are one and the same revelation, much
in the same sense as Spinoza maintained that
the 'universal love of God' is the 'love of Himself'
and 'man's love of God.' Similarly, with the necessary change of 'form,' speculative
philosophy is the 'self-consciousness of the
Absolute Spirit,' the notion of Absolute Mind
articulating itself to itself and to finite mind at
the same time, since finite mind adds nothing and
does not, as Hegel says, 'look on,' but rather
'looks on' at the process of self-articulation. In
the result, therefore, the system of notions constituting
the substance of the Absolute Reason is the
thought of God, as He was or is in the beginning
'before the creation of nature and finite spirit.'

Self-manifestation in religion, self-articulation in
speculative science—both proceed from the same
Spirit: both are therefore necessary to it, as indeed
both are commonly considered inevitable in the
life-history of finite experience. How then can the
two be distinguished? More especially how can the
two be distinguished in terms of and by the
necessary of the 'notion,' so as to satisfy the
demands of a philosophy which lives and moves
with the times? How can the notion dialectically exhibit the necessity of two
separate self-revelations of the Absolute Spirit?

How can the notion justify by its own procedure an 'inferior' and less adequate expression of the
nature of the Absolute than that supplied by the
notion? How, in short, can the notion find a place
within its own form for a non-notional representation
of the absolute truth?

It is not surprising, when we view the matter
in the light of the above, that Hegel's efforts to
draw the line between religion and philosophy
should show considerable vacillation. They are
found at one time art treated as a part of religion,
at another time religion treated as separate from
art; at one time art and religion are distinguished
as regards their form of expression, at another the
forms adopted by art is used as a means to give
substantiality to the religious attitude. Again,
religion is regarded as independent of philosophy
and as a vitally necessary moment of expression;
at another time religion is treated as a prelude to
philosophical truth, yielding up its claims to be
truth when the higher point of view of philosophical
truth is reached; at one time religion is a phase of
philosophy, at another philosophy is a phase of
religion, since philosophy is 'also the service of
God'; at one point 'feeling,' 'intuition,' and
'symbolic representation' of God are cancelled
and superseded in the 'notion,' as indeed in a
sense they must be since they are lower levels
of conscious life; at another time they are treated
as individual forms embodying in themselves the notion like any other individual mode
of expression of reality, and so capable of dialectical
and dialectically developed in the terms of the
notion.

This uncertainty of treatment seems almost inevitable in a system which claims as philosophy to interpret the divine mind and also to give a
philosophical interpretation of a religious, or non-
philosophical, apprehension of the same reality,
which seeks to be a religious philosophy and yet
to find an independent place in its scheme for a
philosophical religion, which asserts that the 'Logic,'
or general ground-plan of the system, is 'theology,'
and at the same time tries to justify the claims
of historical theology. Religion was accepted as
a fact of history, and its nature had to be traced
to its source in the Absolute. In the religious
life, finite spirit claims to be in communion with
Absolute Spirit. Hegel's view of philosophy required
him to prove that such communion arises
from the necessary procedure of Absolute Spirit,
and that it was thus a stage in the evolution of
the Absolute Idea as expounded by philosophy.

Enough has perhaps been said to indicate that
whatever value attaches to Hegel's analysis of
religion, his attempt to fit religion into the
dialectical construction of his system cannot be
regarded as either successful or logically satis-
factory. However we interpret his position, it
appears unconvincing. On the face of the matter,
it seems as unaccountable that the Absolute
should adopt the confessedly inferior forms of 'form'
and 'symbolic ideas' to convey its truth to itself
as it is for finite spirit, when, so to say, it always
has in its grasp for the same purpose the perfect
medium of self-expression, the 'notion.' On the
other hand, the elimination of all personal qualities
in the logical coherence of the notion is a consum-
mation of the religious life which is attained at
the cost of the intimately personal communion
of finite spirit with Absolute Spirit, in which, as
Hegel asserts, religious experience is rooted; and,
if the choice has to be made at all there is little
doubt that the religious mind, even in the highest
form of religion, will not regard Logic as an
adequate substitute for Love. When, again, we
consider the endless variety in modes of expression
assumed by religious life in the course of the

1 This symbolic character of religious ideas is never trans-
scended; it is found in the highest or 'absolute religion' as
well as in the 'religion of nature.'
history of mankind, it seems nothing else than grotesque to treat all the creations of the religious attitude, from the phantoms of primitive fear to the aspirations of the saints, as expressions of the self-consciousness of God in the soul of man. Dialectical necessity of that kind does more than justice to the folly of man at the price of doing less than justice to the wisdom of God. In this history of religion, as in history generally, it may be true to insist that the 'Weltgeschichte ist das Weltgericht'; but a judgment of the world is not a justification of it. Setting aside, then, the difficulties presented by Hegel's attempt to build religion into the logical structure of his system, the success of his method in the field of religious experience is not seriously affected by his somewhat artificial association with the exigencies of his method. Religion in his view is a conscious relation of finite spirit to the Absolute as spirit, and from this fundamental principle everything else follows. The relation is double-sided, and is maintained through spiritual activity of both the terms involved. God as the supreme spiritual unity of man's world (nature and finite spirit) communes with man as spirit, and this communion takes the form essentially of 'manifestation,' 'revelation.' The activity of spirit is necessarily self-manifestation, manifestation to a self, and manifestation of a self. This manifestation constitutes the truth, the substance, the reality of religion. Being not merely truth about God, but truth of God, God as truth, this manifestation is at once God's consciousness of Himself in man, and man's consciousness of God in himself. The 'truth' is one and the same on both sides, and both are aware of the same truth. The peculiarity of the religious life just consists in this essential unity of man's spirit with God's spirit, a unity that defies separation. The imperturbable 'certainty' in the religious mind of its direct intimacy with Absolute Spirit is the psychological effect of this fundamental unity. This certainty is found in all religious experience, and is so complete that it can and does take the form of mere 'feeling,' as well as the form of thought. Its 'beliefs' are often a blend of feeling and idee, and its beliefs are always immediate to the religious consciousness.

In maintaining this attitude, however, man never confuses the position of God in the relation with that of man. God is the self-revealer, man is the recipient of the manifestation. Man does not create the relation to truth, revealed to him; he accepts it. His attitude is that of 'submission,' 'worship,' 'sincere recognition' 'expectancy'; God's attitude is that of the 'all-giving,' the 'all-wise,' the 'all-powerful,' the 'deliverer.' The immediacy of the communion never cancels the distinction of the terms related, finite spirit and Absolute Spirit. The relation, again, is that of the concrete human spirit to the Absolute. The union may be effected through any element of nature or finite spirit; and the manifestation may adopt as its vehicle of communication with man's spirit any level or function of conscious life, whether in the sphere of feeling, ideas or volition, theological or practical. These together make the nature of finite or finite spirit by which God is expressed, and the mode of consciousness life which constitutes the form of conscious communion with God—determine the different kinds of religious attitudes which can be assumed, of the different types of religions which historically appear. Thus God 'appears' in and is identified with the realm of sense, with objects and powers of nature and the supernatural, with the purposes of man's moral life, with the purposes that keep man and nature together, and with self-consciousness in its purest expression. Similarly God communicates with man's mind through pure feeling, through 'intuition,' through symbolic general ideas, through the 'notion' of reason. And, just as it is not the part of nature, or of man's life as a part, that is the objective reality for the religious mind, but the one Absolute Spirit as focused in the part, so the mere feeling or idea is not looked upon as conveying an impersonal systematic truth about God, but as the expression of a religious intuition with God, and indeed as a consciously imperfect medium of conscious communion, a symbolic language of human apprehension, a figurative human suggestion used to make vivid and personal the concrete consciousness of the Divine presence in man's soul. If the idea used is taken as literal systematic truth, it is not merely on critical analysis found to be untrue, but it loses its religious significance; it becomes an attempt at speculative impersonal interpretation, not a channel of spiritual personal communion. This can be illustrated from the ideas found in any religion, viz. the 'wrath' of God, God as 'Creator,' God as 'Father,' and even more abstract ideas, such as God as 'First Cause.'

In the religious life there is a constant process taking place in the soul of man by which the communion is effectively realized and sustained, an activity by which the union is kept up when interrupted. In contrast to the way in which God is presented to the soul, which Hegel describes in one passage as the 'theoretical' aspect of religion, the process of supporting the union and restoring an interrupted union is called the 'practical' aspect of religion. This practical aspect is the 'will'; it constitutes an inseparable element in every religion, and varies with each religion as the idea of God varies.

The foregoing is in brief Hegel's general notion of religion with the essential elements found in one form or another in every religion. It will be seen at once that this notion owes quite as much of its contents to psychological analysis of religious experience as to its logical development of Absolute Spirit. Still more close is the connexion between the history of religion and his 'notion' of religion, when we consider the further development of the argument in the 'Philosophy of Religion.' While no doubt Hegel intended to portray the logical evolution of the stages required to realize the above notion of religion in its completeness, the evolution owes as much to psychology and history as to logic; and it is not easy to say which is the most important. The notion of religion is realised; i.e., man is conscious in himself of the God to whom he is conscious in man, at all the levels at which finite consciousness exists—sense, understanding, reason, spirit. These are the four different stages in the fulfillment of the life of human consciousness, the connexion and evolution which constitute in part the 'Phenomenology of Mind.' The evolution of the notion of religion follows the course taken in the development of the stages of consciousness. Again, by what seems to the student of Hegel's system a piece of good fortune, but which is doubtless the background of Hegel's own thought, there is a historical type and form of religion corresponding to each of these stages in the morphological development of consciousness. This historical material is drawn from the history of mankind in general and the history of religions in particular. Each specific religion has its place determined in the historical sequence, and by the stage in the evolution of consciousness to which it corresponds and at which it is realized. Thus the evolution of consciousness mediates the connexion between ideas, religion, and the general history of religious experience in mankind. By this means Hegel's development of

---

1 This confusion is precisely the source of the 'conflict between science and religion,' or between philosophy and theology.
the notion of religion is at once a statement of the way in which the notion of religion is gradually evolved and exhaustively realised in finite spirit, and also a genetically constructed system of the history of the notion of religion in which it has appeared. In a word, his notion of religion is evolved in its coherences by giving a morphogenetic construction to the whole notion of religion in human history. It is 'logical' in the sense that the forms are arranged so as to show an ever-increasing advance in the notion from abstract to concrete; it is 'historical' in the sense that, while religions are extracted from human history because they typify in actual form and reveal to analysis the stages in this advance.

We have therefore in the working out of Hegel's 'Philosophy of Religion,' a plan adopted which is the same in principle as that followed in his 'History of Philosophy,' or again in his 'Philosophy of History.' Just as the 'History of Philosophy' may be described as philosophy itself 'taking its time,' or at least taking time for its unfolding, and history in general as human freedom 'in the making,' so we may describe the history of religion as the notion of religion working itself out under the conditions of time and human limitations. It is altogether in the spirit of Hegel's system to demonstrate the inseparable unity of notion and reality, to establish the notion as the essence of the real. In the case of religion the real can be put in the mould of history, and bound up with the course of time. Hence the evolution of the notion of religion must necessarily be the evolution of an historical philosophy.

We need not trace here in detail the analysis Hegel gives of the various historical religions. Suffice it to say that he finds the simplest forms of religion to be based on natural objects of sense as their media; the middle forms of religion are those of Greece and Rome; the highest or absolute form of religion to be Christianity. The outcome of his argument would thus seem to be the philosophical defence of the claim that Christianity amongst the peoples of Western Europe, the immediate result of which was to dictate certain conclusions regarding the form and matter of existing religions. But on the other hand, Hegel claims that to be a sound Lutheran is to be on the side of reason, and on the second hand had to maintain that all philosophy is in the long run a theodicy.

Heine was a quick boy, an energetic and appreciative lover of books, and he availed himself of opportunities for study which were given him by an uncle who was a studious physician and minor author.

From his early attempts at verse Heine was sent to the drudgery of a bank at Frankfurt. After a period of business life in Hamburg with his uncle Solomon Heine, an unsuccessful venture on his own account, and the disappointment of a rejected proposal to his cousin Auslese, he left Hamburg to study law at Bonn in 1819, his maintenance being provided by his rich uncle. Thence he moved to Göttingen, and then to Berlin, where his first volume of poems appeared in 1821. Hitherto he had paid little attention to law, being engrossed in German history, literature, and aesthetics, but under Ed. Gana he eagerly studied the history and theory of jurisprudence, and even began a treatise on the Constitutional Law of the Middle Ages. Here, also, he came under the influence of Hegel, and he was admitted into literary coteries which gave him opportunities of meeting the most eminent men of letters. He formed a friendship, which became very intimate and lasted all his life, with H. von Schlozer, possessed of an encyclopaedic knowledge of men and affairs, and well versed in literature and philosophy. After a period of ill-health, he returned to Göttingen in 1826 and resumed the study of law. In that year he took a walking tour through the Harz Mountains and wrote an attractive account of his journey, partly in verse and partly in prose. The journey included a brief visit to Goethe, which he describes in one of his letters to Moser.

In 1825, with the sole view of being promoted to legal office, Heine was baptized into the Christian Church, much to his regret in later years, for his action served only to render him suspect among Christians and Jews alike. Shortly afterwards he took his degree of Doctor of Laws, and in that year and the following Julius Campe published his Reisebilder (Travel Pictures) in two volumes, an autobiographical sketch called Ideen: Das Buch la Grand, and more poems. Heine now visited England (from April to August 1827), but formed only a poor impression of London. "Send a philosopher to London, but on your life not a poet," he wrote in his Englische Fragmente. On returning to Germany he found that his Reisebilder had created a very favourable impression, and that the official ban, placed on the books in Prussia and North Germany on account of his frequent pressence in treating current religious and political questions, had served as a valuable advertisement. He now confined his attention to journalistic work in Munich, and had great hopes of a pardon pending his importance from King Ludwig I., who was reorganizing Bavaria. Indeed, considering himself certain of his appointment, he left for a tour in Italy, which supplied materials for a further volume of Reisebilder, conceived after the same plan, or absence of plan, as the earlier volumes, but even more bold in criticism, directed against all conventions which he regarded as antagonistic to human liberty. He failed to obtain the professorship on which he had set his hopes, and the disappointments coincided with the news of his father's death.

Heine now engaged in literary work, but was interrupted in 1830 by the news of the July Revolution in Paris, which raised extravagant hopes. Heavily given expression to these hopes, and, when the effect of the Revolution in Germany proved disastrous to the Library, he was singled out and given the hint that he would be well advised to leave Germany. In May 1831 he arrived in Paris.

He received a generous allowance from his uncle, and his health greatly improved. He found himself admitted into circles of celebrities which included Mendelssohn, Chopin, Sainte-Beuve, and Michelet. He set before himself the aim of promoting greater sympathy and closer understanding between Germany and France, and wrote letters to several people, to a German poetical which gave a vivid description of the movements of thought in Paris. He attached himself for a time to the school of Saint-Simon, finding its 'Religion of Humanity' extremely congenial, and he dedicated to Enfantin, then head of the school, his essay, Zur Geschichte der Religion und Philosophie. In its German form it was mutilated by the censor, but it had previously appeared in the Revue des Deux Mondes under the title, 'De l'Allemagne depuis Luther.' Turning to literature, he critically described for the French people, in Die Romantische Schule, the origins and aims of German Romanticism. These works rank among his best contributions to literature, but they were not very successful when first published. Der Salon (which included Florentinische Nacht), in four volumes, the last of which appeared in 1840, possessed of ten sketches on a variety of topics of current interest, varying greatly in merit. In 1833, however, Heine's works had been banned in Germany and Austria by a decree of the German Parliament, along with all the productions of a group of writers referred to as "das junge Deutschland." The decree was afterwards repealed, but the works of these authors were subjected to a rigid censorship.

Some time after his arrival in Paris, Heine entered into intimate relations with a simple, illiterate shop-girl, who was never able to read a word of his writings. Legal marriage did not follow till some years had passed, and then only to secure a comfortable position for Mathilde Mirat if Heine should fall in a duel which followed his personal attack upon the deceased Ludwig Börne, which was resented by one of the latter's admirers. But Mathilde filled a large place in Heine's life, and in his last years was a most devoted and indispensable nurse. He secretly accepted a small pension from the French Government as one of those "who had compromised themselves in the cause of liberty." When the Government changed on the accession of Louis-Philippe and the pension being discontinued, the names of the beneficiaries under the secret funds were made public, Heine and his cousin Mathilde were openly charged him with bartering his patriotism for 4000 francs per annum. Further financial difficulties faced Heine, for his uncle Solomon died and his cousin Ludwig was given a small allowance of 4000 francs which his uncle had given him. Not long before, he had paid an extended visit to Hamburg, taking his wife with him, in order to persuade his uncle to continue the allowance to his wife after his death. This blow, mitigated though it was two years later by the renewal of the allowance, so excited him that a disease which had for some time threatened him came on apace. Paralysis soon gave him all the appearance of a dying man; and, though he lived for two years, his mind under the keen critical interest unimpaired, he endured intense agony as he lay on a pile of mattresses—his mattle-scree grave he called it—and needed all the soothing power of music. The loss of his savings by a bank-failure, his anxiety for his wife's future, and the difficulty of concealing his condition from his family, added to his eager spirit; his literary work maintained its virility, though it was necessarily less constant.
HEINE 589

He died on 16th Feb. 1856, and was buried silently in Montmartre.

The character of Heine defies analysis. Of himself he says: I am a Jew; I am a Christian; I am tragedy, I am comedy; a Greek, a Hebrew; an adherer of despotism in Napoleon, an admirer of communism in Proudhon, a Lycean, a Tонтist. His letters, as printed by his friends, are full of the sentiment of this unrepeatable variety. His Histoire et Gérard de Nerval extended this versatility by saying that he was 'at once cruel and tender, hard and per

We are here concerned with Heine not as a poet but as a cosmopolitan, who left a marked impression on the religious life and political practice of his age. As such, if we take Heine's own words seriously, he is, indeed, nearer to us than to the pure literary critic. He says: 'Poetry, however much I love her, was to me but a divine play, and not an industrial one, nor was I ever in the least bit industrious. I have never attached great value to a poet's fame, and whether my song be praised or blamed, it troubles me little. But a sword that will cut my coffee, or be a brave soldier in the war of the liberation of humanity (Pousset, Works, p. xiv).

Religious interests. — Kingley once referred to Heine as a 'bad man, a bad man, a bad man,' and Carlyle spoke of him as 'that poor blackguard Heine.' True, he hated priestcraft in all its shapes and forms, and he held in abhorrence 'State Religion, that monster born of the intrigue between temporal and spiritual power,' but he was the friend of all sincere religion. 'I may not be partial to anthropomorphism, but I believe in the God of God.' In his last will he humbly asks pardon of God and men for any offenses against good manners or morals in his writings. Despite all this there is something cynical in his allusions to the matter, it remains true that in his later days he became one of the most influential of a number of writers. He himself has something to say of this in his Preface to the second German edition of his 'Romance and Philosophy.' In his latest book, 'Romancero,' he explained the transformation which took place in his writings regarding religion. Since his publication of his religious works, many inquiries have been made as to the manner in which the true light dawned upon him. Prussians, thirsting after a miracle, have desired to know whether, like Staline on his way to Damascus, he had seen a light from heaven; or whether, like Batou, he had found the secret of the sea which suddenly opened its mouth and began to speak as a man. No, ye Prussians, ye Spaniards, ye Latins, ye Russians; ye have ever seen an an at least any four-footed one, which speaks as a man, though I have often met men who, whenever they opened their mouths, spoke as asses. In truth, it was neither a vision, nor a scrupulous revelation, nor a voice from heaven, nor any strange dream or other mystery that brought me into the way of salvation, and I owe my conversion simply to the reading of a book. A book! Yes, and it is an old, homely-looking book, modest as nature and natural as it is; a book which is a work of one day and a consummating book, like the sun sets, cools, like the bread that nourishes us: a book that seems to us as familiar and as full of kindly blessing as the old grandmother who reads daily in it with dear, trembling lips, and spectacles on her nose. And the book is called quite short—The Book, the Bible. Rightly do men also call it the Holy Scriptures; for he that has lost God can find Him again in this book, and towards him that has never known God it sends forth the breath of the Divine Word.'

In his Essay on Religion and Philosophy in Deutschland—the first edition of which appeared in French in 1853, when Heine was in the full vigour of early manhood—it is his aim to explain what Christianity is, how it became Roman Catholicism, how from this it became Protestantism, and how German Philosophy is the offspring of Protestantism. The Christian idea he takes to be the eternal conflict of the perverse Satan and the good Christ, of the body and the soul. He looks forward to a day in which happier and future generations, nurtured in a religion of joy, will smile with pity when thinking of their poor ancestors, whose lives were spent in melancholy self-mortalization. But he declares that Christianity has been a blessing for suffering humanity during eighteen centuries; 'it has been providential, divine, holy.'

'All that it has done in the interests of civilization, curbing the strong and strengthening the weak, binding together the nations through a common sympathy and a common tongue, and above all its apologists have urged in its praises—all this has been as nothing compared with that great consolation it has bestowed on man. Eternal praise is due to the symbol of that Suffering God, theaviour with the crown of thorns on the crucified Christ, whose blood was as a healing balm that flowed into the wounds of humanity... The whole system of symbols imposed on the art and life of the Middle Ages must awaken the admiration of poets in all times.'

He deals in an illuminating way with the real significance of the Reformation in Germany. It was not merely a war against Roman Catholicism, and its motive was essentially different from that of the conflict in France. In Germany the Reformation was a war begun by Spiritualism when it was perceived that Roman Catholicism possessed merely the title of authority and ruled only in name, whereas Sensualism, by means of a long-established fraud, was exercising actual sovereignty and ruled de facto. The retailers of indulgences were expelled, and a Puritanism uttered its protest. The flood of the senses swept over the land. In France, however, the conflict of the 17th and 18th centuries was opened by Sensualism 'when, though de facto sovereign, it beheld every act of its authority derided as illegitimate by a Spiritualism that existed only de jure.' In Germany the conflict took place in theological discussion; in France it proceeded in wanton jeers and merry satire.

This statement as to the Reformation in Germany applies only to the commencement of the conflict; for, when Spiritualism had made its breach in the edifice of the Church, Germany became the arena of combatants intoxicated with liberty. Heine's irony is often delicious and satirical. After declaring that, since the great progress of the natural sciences, miracles have ceased, he proceeds:

'Perhaps the new religion that God may henceforth establish on earth are to be based solely on reason, which indeed will be more much more reasonable. At least in the case of Saint-Brunoismontism, which is the greatest of all the religions of the last century that has occurred, with this exception, perhaps, that an old tailor's bill owing to Saint-Bruno himself was paid when the latter died after his death. Young grocers were abused at such supernatural testimonies, but the tailors began at once to believe.'

In the second part of his book, Heine deals with the philosophical revolution which, as the offspring of the religious revolution, is nothing else than the last consequences of Protestantism. 'In his first he has in his first part spoken of Spiritualism and Sensualism—regarded as the rival social systems—he now refers to Idealism and Materialism, taking account of the corresponding philosophical systems. He refers to his own religious convictions as embodying 'not indeed the dogmatism, but the spirit of Protestantism.'

The French edition amplifies this statement: 'Protestantism was for me more than a religion, it was a mission; and for fourteen years I have been figuring in its interests; but a secret predilection for the cause in which we have formerly fought and suffered always continued in me, and the present religious convictions are still animated by the spirit of Protestantism.'
greatest thinkers and best artists. Germany has outgrown Delam.; Pantheism is her open secret. Delam. is the religion for slaves, for children, for Germans, for women, for Kant’s & Hegel’s critics. **Pure Reason** is the sword that slew Delam. in Germany. But in the preface to the second German edition of Kant’s *Critique of Pure Reason* he exercises the inalienable right of openly acknowledging his error.” He confesses that everything in this book referring to the existence of God is as false as it is absurd.

“No, it is not true that the Critique of Reason, which has destroyed the arguments for the existence of God, familiar to mankind since the dawn of history, has opened an end of God Himself. . . . The fine-spun Berlin dialectic is its mere face. Resisting a dog from the street, it has not the power to kill a cat, much less a God.”

The **Romanticische Schule**, which also first appeared in French, contains many interesting passages more relevant to our interest in Heine than to that of the literary critic. Not denying that Christian-Catholic discipline, as a wholesome restraints, is right. But materialism, the Roman Empire, conferred benefits on Europe—

a hunger-cure he calls it—seems in it the origin of the widespread hypocrisy; men praised what had become but absence of aetiology. This philosophy had taught the renunciation of all worldly pleasures, branding as sin the most innocent gratification of the senses; Heine was now replaced by the vindication of our inalienable heritage, by the rehabilitation of the flesh. The book abounds in acute analyses of the relations between German literature and that of the Protestant and Protestantism on the other.

"Also! we must confess that Pantheism has often led men into incoherencies. They then reassures them: If everything is God, if everything is divine, then it is indifferent whether man occupies the minor or the great cosmic phenomenon, with folk-songs or the anatomy of apes, with real human beings or flowers. But that is just the mistake. Everything is not God, but God is everything. It is one thing to discern in the midst of all the things he tells himself in different degrees according to the varying strength of his own soul, which he then reveals himself in all things equally, as Wolfgang Goethe believed, who through such a belief became an indifferentist. But therenunciation of the highest interests of humanity, occupied himself with art, anatomy, theories of colour, botanical studies, and observations of the clouds. No, God is not in all things to a greater degree than in others. He lives in motion, in action, in time. His body is a weather page through the page of history, which is God's true book of record. (Heine’s *Press Writings*, ed. H. H. Ellis, 1896.)

The subject of Goethe's Faust (Der Doktor Faust: ein Tanaspoem) gives Heine an opportunity for attacking the gospel of his own earlier life—

"the rehabilitation of the flesh."

Knowledge, science, the comprehension of nature through reason, eventually gives us the enjoyment of truth, that is, Catholic Christianity, has so long defended us; we now recognize the truth that mankind is destined to an earthly as well as to a heavenly equality. The political brotherhood which philosophy inculcates is more benefic to us than the purely spiritual brotherhood, for which we are indebted to Christianity. . . . The German people had, for a long time, felt a profound sense of contentment for the Germans themselves are that learned Doctor Faust; they themselves are that spiritualists, who, having at last comprehended the inadequacies of the spiritual life alone, substitute the flesh in its rights. But still biased by the symbolism of Catholic poetry, in which God is pictured as a hero of the spirit, and the devil as that of the flesh, the rehabilitation of the flesh was characterized as an opponents with the devil. But sometimes there is a deep spiritualism of that profound self-being to each German person, and the spirit itself, comprehending the supremacy of spiritualism, becomes the champion of the rights of the flesh. This will be the subject of the next chapter.

**Political aims and influence.**—Heine's aims in his political journalism and in his personal influence are plainly expressed in his will: ‘La grande affaire de ma vie était de travailler à l’unité cordiale entre l’Allemagne et la France, et à déjouer les artifices de la démocratie, qui expulse deux peuples des concessions de la Révolution et des lois inégalitaires. The result at which he aimed was not the forced equality demanded in France and *Philosophie, Historique, et Reformation* (Die romantische Schule, ed. L. Lindel, v. 800.)

HEMACHANDRA.—HERACLITUS.

1. Life.—The well-credited facts of the life of Heracleitus are very few. He was the son of Blyson or Bloson, and was descended from the most aristocratic family of Ephesus. In his family the patriarchal kingship, which was traced back to Androclus the son of Codrus, continued in the priestly rank of the bat- lene; the office of priest to the Eleusinian Dionysus was also connected with it. The tradition that he persuaded the tyrant Melanodon to abdicate his rule, and returned a blank refusal to an invitation from Darisa, is doubtful. It is certain that he was dissatisfied with the democratic government in his native city, and that he violently attacked his countrymen which seems to depend on his traditional connection with Darisa. He is said to have lived to the age of sixty, and (famously) to have died by dropping of dryopie. His date is more certain ascertained from the fragments of his writings. For, on the one hand, he rejects the multiform learning of his Ionic countrymen, Pythagorean, Xenophanes, and Hecateus, who were all at the height of their influence when the 8th cent. was passing into the 7th; on the other hand, he says nothing of his bitterest opponent, Parmenides. Most modern scholars agree, as most modern scholars agree, clearly comments the antithetical method of Heracleitus in his verses (fr. 6, 8-9 [Vorsoch 134]) and the period of his chief influence is to be fixed somewhere about 480 B.C., it follows that the work of Heraclitus should be dated about 480 B.C. The obvious parody of the Heracitio philosophers (fr. 2 [Vorsoch 134]), is of no use as a clue to his date, as under the name of the latter were collected not only later forgeries, but also old Sicilian comedies of different periods.

2. Writings.—Heracleitus's work, of which 130 genuine fragments are preserved to us, is composed in the Ionic dialect, and is archaic, often poetic, in character. His aphoristic form is borrowed from the Gnomic writings which were widely circulated in the 5th cent. and century, composed partly in poetry and partly in prose (e.g. the sayings of the Seven Sages), gave pithy expression to their experience of life. In Heracleitus there is added, on the one side, an intense bitterness springing from his tone of mind and experience of life, and, on the other, an intentional obscenity taken over from the religious poetry (ecclesiastic and prophetic) of the 6th century. There is, lastly, a modern regard for rhetorical effect in the antithetic form of composition, which shows itself also in his contemporary Simonides, and was further developed in the writings of the Sophists. The division of his work into three books, treating of Nature, Politics, and Theology, either is due to later recensions, or is a posthumous head of his philosophy. In the time of Heracleitus books were neither divided into chapters nor possessed titles. His successors referred to his work, as they did to those of all the other ancient philosophers, under the title 'Concerning Nature.'

3. Philosophy.—Heracleitus is the profoundest thinker before Plato, and is a joint-founder with him of the Idealism which under the influence of Plato and Christianity has prevailed over earlier schools. It is to the profoundness of his thoughts that the misunderstanding of them is due, both in his own times and later, down to the present.
day. The positive character of 19th cent. thought especially has shown itself incapable of grasping the daring transcendence of his view of the Cosmos. But at the very beginning of his work (fr. 1), Heraclitus complains, with bitter dejection, that, in spite of his revelation, men make themselves insensible, both before and after Eucl. (fr. 98) — to the apprehension of a homogeneous, eternal, omnipotent, invincible, spiritual Power which with the swiftness and force of lightning rules the world, the inner world of man as the outer world of nature, from one end to the other. The philosopher's system has a 'husk' and a 'kernel.' In the 'husk' he conveys the kernel to the world, as men are wont to fashion it for themselves from their ephemeral experiences; he portrays the mutable, inconsistent, unconceivable, and childish world of change. He rejects the polytheism of his contemporaries, i.e. the conclusions of the Milesian physicists and mathematicians such as Thales, which were deepened and expanded by Xenophanes and Pythagoras: for they led to a knowledge of contradictory details, not to a homogeneous conception of the world.

The philosopher's business, therefore, is to demand, in place of the method of natural science and mathematics prevalent hitherto, a psychological one, proceeding not from without but from within, not from Nature but from men. In other words, he has this to say of himself (fr. 101) — "To all men it is given to know themselves, and to direct their thoughts accordingly" (fr. 119). Therefore the task of philosophy, as Socrates taught later, to obey the Delphic precept γνῶθι σεαυτόν. Both Socrates and Heraclitus turned away from the superficial interpretation of Nature represented by the Ionians. But, while ethical problems chiefly attracted Socrates, the more comprehensive mind of the Ephesian directed itself vigorously to metaphysics, to 'the Invisible,' which was, in his opinion, the kernel of his philosophy. 'Wisdom consists in one duty and only one—to understand the Intelligence (γνώσεως) which governs all things' (fr. 41). 'Of what profit to men is the knowledge of Nature?' The fairest Cosmos is merely a rubbish-heaped poured out at random (fr. 124). Time, which drives onward everything in ceaseless change, is 'like a child who plays at draughts and moves them hither and thither—a child's government' (fr. 53).

The philosopher's business, therefore, is to discern the Eternal. For 'the human mind (φύσει, i.e. that portion of intellectual being which falls to man's share) has no clear understanding or aims, but the Divine has' (fr. 78). As inasmuch as Heraclitus is the first thinker to grasp the idea of the transcendent, he is, before Parmenides, Anaxagoras, and Plato, the founder of Idealism in philosophy. He is himself conscious of the far-reaching importance of his discovery. For he makes the statement (which Positivists cannot understand) 'None of all those whose words I have heard attains to recognize that Wisdom is something separated (εὐχρηστὸν) from all!' (fr. 108).

What this Wisdom (ρόδινος) is he explains (fr. 32): 'One, the only Wisdom, does not wish, and yet again does wish, to be called by the name of Zeus' (fr. 32). The new concept may be called by the old and venerable divine name, provided the latter carries with it the idea of absolute mind in the Heraclitean sense. On the other hand, to think of the Homeric Zeus in this connexion is blasphemy against the divine nature. For, in consequence of the thoroughgoing religious reformation of the 6th cent., which is represented by the names Xenophanes, Pythagoras, Orphicism, the traditional conception of religion can no longer be maintained.

But, while poets like Pindar and Ἀσκελύπως, imbued with that spirit of reform, tacitly introduced the new conception of Zeus into the ancient popular legends, the philosophers like Xenophanes and Heraclitus set themselves dead against popular beliefs. Like the Colophonians, Heraclitus scornfully attacks the demonizing aspects of the Orphic teaching. He also attacks the pietism of the Mysteries which had sprung up luxuriantly in the 6th cent. The cult of Dionysus and of Demeter, with its ceremonial purification and coarse symbolism, is utterly repugnant to him (fr. 5, 14). It is, therefore, quite credible that, as reported (Pausan. i. 68, 34), he rejected his hereditary office of King-priest, or βασιλεύς, after his breach with the orthodox religion. He went even so far as to reject prayer altogether, as something childish—a step which no Greek philosopher after him was prepared to take. 'They pray to the images of the gods, as though they wished to converse with buildings; just because they are ignorant of the true being of the gods and supreme powers' (fr. 5).

All religious names and notions, which occur frequently in his work, are not to be interpreted in the popular religious sense, but as symbols of the higher idea of the divine nature, of which he is full. His eternal and universal God is not confined to temples or temple-rites, but is omnipresent. 'How can one escape from this, which lies around us down!' (fr. 16). His notion of God also is not split up, as in the Homeric Olympus, into countless individual deities. The Logos of the world, the Logos, must confess that all things form one unity' (fr. 50). This universal spirit 'unites conflicting opposites, just as one harmony is formed from discordant notes.' Here he expresses his monistic belief, in one of the figures familiar to the Pythagorean school. He speaks still more clearly in fr. 67: 'God is day and night, and summer and winter, and peace, and plenty, and want.'

On another occasion he seeks to render intelligible the universally operative energy of the divine Logos by a hylozoistic figure especially congenial to the science of his time. As Jeremiah had said a hundred years earlier (Jer 25. 1), 'I am my word as a fire,' saith the Lord; so the prophet of Ephesus proclaims (fr. 50): 'This system of the world (σύνεσις), the same for all, neither any of the gods nor any man has made, but it always was and is and shall be an ever-living fire, kindled in due measure, and in due measure extinguished.' This conception of 'the due measure' is essential for the interpretation of Heraclitus. The modern physical theory assumes that different forces (heat, electricity, magnetism, chemical force, etc.) are convertible into each other. They are all connected by the invariable law that exactly as much force of one kind (e.g. heat) disappears as force of another kind (e.g. electricity) comes on the scene. In a similar manner Heraclitus conceives of the cosmic force. Just as our modern physicists assume the ether as a common substratum whence forces proceed, so Heraclitus speaks of the divine cosmic fire which is always confined within the same limits. 'The sun will not overstep its bounds; for, if he does, the Erymnes, helpers of justice, will find him out' (fr. 94). And, although the sun is kindled one day anew (fr. 6), it lies in the Heraclitean sense. So also the changes of fire into water and earth always take place in fixed proportions. At first the ethereal vapour is condensed into sea-water, from which the solid earth is precipitated. This is 'the way down.' In the same proportion the transformations of the solid, liquid, and gaseous states proceed upwards. Earth dissolves into water at a time of deluge, water exhaled skyward as ethereal vapour.
Of course the periods occupied by these changes are not always alike. On the contrary, the great pendulum describes smaller and greater arcs. The revolutions of day and night, of months and years, of great cosmic periods between a general flood and a general congestion, vary in length, but not in point of proportion. Opposites must always be resolved into ‘the invisible’ (fr. 34).

All that men can see is the war between them. Thus with Heraclitus war is ‘the father of all things’ (fr. 53), and the one thing clear and worst taking into account is change. He never becomes tired of illustrating this popular way of conceiving the flux of things by ever fresh examples. ‘To him who enters the same river, other and still other waters flow’ (fr. 15). ‘One cannot twice descend into the same river’ (fr. 61). ‘Into the same city, men do not descend; we are, and we are not’ (fr. 49 A).

So, for later thinkers the uniform light of the Heraclitic system appears broken up into the brilliant colour-play of relativism, the prismatic ambiguity of a materialistic scepticism (Ἐξαιρέσις, fr. 51) which threatens to turn into nihilism. ‘Sea-water is very pure and very foul, for, when it is left to itself, it is pure; but men it is unfit to drink and deadly’ (fr. 61). Of course, in the empirical region of sense-perception everything is inconstant and variable; and even on the contrary in the realm of pure thought the Absolute is enthroned. ‘To God all things are beautiful and right and good; but men suppose that some are right and others wrong’ (fr. 105).

Thus Heraclitus comprehends, as exactly as his opponent Parmenides, who indeed only partially understood him, nowomena and phænomena, truth and illusion. But the fact with both is that the dull-witted world has comprehended their illusion better than their truth.

But so it fares with all prophets.

It is necessary, after the monistic doctrine of the Logos and its counterpart, terrestrial dualism, have been made clear as the kernel and husk of his system, to expound briefly how Heraclitus applies his theory, in its metaphysical and material aspects, to the doctrine of man’s constitution.

The human soul, with which the hitherto prevailing Ionian and Pythagorean philosophy had but little concerned itself, is of cardinal importance to the prophet of the Ἱδόρας. As first, indeed, it seems a very materialist view of the soul should be involved in the elemental changes of the twofold way upward and downward. ‘For the soul it is death to become water, and for water it is death to become earth. But from earth comes water; and from water, soul’ (fr. 36).

As might be expected, the same of human existence is identical with the physical fire-ether. As fire descends, the soul passes through the intermediate stage of water into earth, i.e. into flesh, and this way signifies joy and life. Conversely, when flesh again dissolves into water (hence the legend before mentioned of Heraclitus’s dropsey) and from there returns to the cosmic ether, death takes place. To souls it is joy or death to become wet’ (fr. 77 A). Thus, just as in the Orphic-Christian theory, soul and body are already conceived of as contraries, which stand in direct opposition to each other. ‘We live in the death of souls, and again they (σὰς souls) live in our death’ (fr. 77 B).

But neither in the macrocosm nor in our microcosm is a complete extinction of the primordial fire possible. In the living body also a spark of ethereal fire is preserved (Macrobr.; in Somm. Scip. l.14, ‘στιλλιτα αιστητικις εξειδικευμενος’; Forsch. 12 A, 15, p. 4). If this fire be extinguished, if under this circumstance the fire in the heart is kept, the wiser and the better is the man. ‘The dry beam is the wisest and best soul’ (fr. 118). Of course, this divine spark is identical in essence with the god who governs, illuminates, and warms the universe. For the soul rests on the deepest foundation of the Divine Logos. ‘The limits of the soul thou canst not discover, though thou shouldst traverse every way; so profoundly is it rooted in the Logos’ (fr. 44).

This identification of the spiritual and essential characteristic of man (to which the Greeks give the hardly translatable same name, the essence of Deity interpreted for us the fine saying of Heraclitus: ‘A man’s character is his demon’ (fr. 119)—a saying repeated by Democritus and Memander. Therefore it follows that man’s happiness cannot consist in sensual enjoyment. ‘Oxen are happy when they have peace to eat’ (fr. 4). ‘For the best men choose one thing above all else; immortal glory above transient things. But the blessed stuff themselves like cattle’ (fr. 20). ‘To the soul, on the contrary, belongs the self-multiplying Logos’ (fr. 116). The Logos, however, is not merely the special characteristic of man alone; it is at the same time the universal cosmic law, which energizes and controls everything. Therefore it is a duty to follow it. But although the Logos is common to all, the majority of people live as though they had an understanding of their own’ (fr. 20). It is dependent upon one divine law. For this rules as far as it wills, and suffices for all, and overcomes all’ (fr. 114).

Thus, not only physical but moral sciences also is closely connected with metaphysics. The divine law (as later among the Stoics) is identical with the conscience of the individual. Men who obey this inner law, however. To each man it is a matter of course for the aristocrat of Ephesus: ‘One is to me worth ten thousand, provided he be the best’ (fr. 49).

From these premises it is easy to understand the way in which Heraclitus undertakes to remodel the Greek belief in immortality. ‘Gods and men honour those who have fallen in war’ (fr. 24). This principle of the popular hero-worship he applies to his heroes, the heroes of the Logos. The body, as such, deserves no honour. ‘Corpses should be thrown away sooner than exorcists’ (fr. 36). But just in proportion to the degree of purity with which a man has guarded and intensified the inner flame in his life is the ferocity of the attack on him from the terrestrial sphere, and at the same time the greater is the prize beyond. This seems to be the meaning of the saying in fr. 25 which has been torn from its context: ‘Greater fates gain greater rewards, for man kindles a light in the night when he is dead’ (fr. 20).

To explain this better, we add a remark of G. F. Fechner, whose ‘panpsychism’ contains matter Heracleitian doctrine: ‘At the moment of death, when everlasting night seizes up the eye of man’s body, the dawn awakens in his spirit. Then the focal centre of the inner man will blaze out to a sun which will illuminate all that is spiritual in him, and at the same time, like an inner eye, look through things with unearthly clearness’ (Leben nach dem Tode, Leipzig, 1866, p. 43). So Heraclitus also appears to have conceived of the seen light which the spiritual man kindles for himself after the death of the body. ‘Thereafter, after death what they neither hope nor think’ (fr. 27). Thus, starting from an idea of Hesiod, he suggests a deliverance of elect heroes of the spirit from the night of death, who now, as he believes, lead a higher life as ‘watchers of the living and the dead’ (fr. 35). In this sense he could say, with antithetical point: ‘Immortals become mortals, and mortals immortals’ (fr. 82).
For there awaits the spirit of fire, which has fallen down from ethereal heights, and appears doomed to mortality in an earthly frame, an ascension after death. This doctrine reminds us of the prophetic utterances of Empedocles, and of the Stoic doctrine of continued existence for the virtuous. Of course, even these elect heavenly涅s an endless life is not allotted. For when, finally, all things pass into fire, and the 'Great Year' of 30 x 360 years has completed its revolution, a universal conflagration will usher in Doomsday. "For the fire which comes on all things will judge and condemn them" (fr. 60).

The doctrine of the 'last things' has been doubted, because, at the arrival of this dike evos, the constant interchange between the two poles of existence disappears. This is wrong; however, for this moment, when everything melts in the universal conflagration (i.e., when God ceases to work), is only the extreme point to which the cosmic pendulum swings on one side, to which, on the other side, the Deluge, or rather a universal torpor, corresponds. That a final amalgamation of the other two elements (earth and water) is not implied in the reports of his doctrine which we possess, and probably was not taught by Heraclitus himself, is shown by the fact that the form of the fire is conceived of as the normal and primitive one, so that the fire of the Cosmos, like the Prometheus, is linked on to the primordial principle.

"For in rotation the beginning and the end are common" (fr. 108).

For his influence.—Heraclitus, one of the most original writers and profoundest thinkers of antiquity, has had a powerful influence on all succeeding times, from Alcman and Parmenides, past the time of Democritus, Protagoras, Euripides, and the authors of the Corpus Hippocraticum, to the Stoics, whose popular version of his philosophy influenced the cultured Greek and Roman world. Especially important is the direct or indirect influence of Heraclitus on Philo, the Johannine Gospel, and the theology of the early Fathers (Clement of Alexandria and Hippolytus). Among the moderns, Hegel and Nietzsche in particular, the latter especially in the apocalyptic form of his writing, show the deep influence of the sage of Ephesus.

LITERATURE.—1. EDITIONS.—Heracliti Rhodii textus, by Rosenzweig, Oct. 1877 (the most complete collection of the Fragments); D. Diderot, Hermétique, les Cathédrales et les Magie (Cassel and Göttingen 1899, also Fragmente der Vorchristreiche [Greek and German], 1st ed.; Berlin, 1914, pp. 67-113 (ch. 12) (quotations are made from this collection).

H. DIELS.

HERDER.—1. Life and times.—The century of enlightenment, the century of Locke and Hume in England, of Voltaire and Rousseau in France, re-encased that turning of thought towards its own nature, that desertion of metaphysical subtleties, that development of empirical interest in human life, and enthusiastic discussion of the problems of society, which characterized the German Romanticists, whilst in England the current of thought lost itself in the stagnant backwaters of a theoretical scepticism, and in France transformed itself into the motive power of political agitation. In Germany it maintained its course with little distraction, refreshed by the influx of a new stream of influences. In the interests of individual culture, without application to social revolution, the philosophical principles of Kant, of Goethe, and Wolff were carried into the realms of psycho-

logy, epistemology, morality, political science, and even religion. But it was due to the assertion of the claims of the book that literature once more became a means of re-vitalized. Lessing (q.v.) and Herder were the heralds who announced these claims.

Johann Gottfried Herder was born at Mohrungen, East Prussia, on 28th Aug. 1744, the third child of humble parents. The father, who was sexton and master of a small school, was an earnest, strict, upright man of undoubted piety. Herder's paternal grandfather had been an immigrant from Silesia, a refugee from Roman Catholic rule, and it was no doubt from him that the boy derived his warm, imaginative spirit. As a boy, Herder was 'always grave and always alone'; he never enjoyed very good health, suffering to the end of his life from a listless in one eye. He became even more quiet and shy during his school-years under the severe old rector of the town school, and devoted himself to reading. After a miserable period in the house of a young pastor, Treese by name, who was blind to the boy's ability and unsympathetic towards his inclination for a clerical career—a period during which he became excessively reserved and subject to nervous depression—Herder succeeded in making his way to Königsberg. He welcomed an opportunity of studying medicine, which came in, and was able to get away from his cramped and wretched life as an amanuensis and message-boy to a man whom he loathed. After failing at a dissertation in the hospital, he abandoned medicine, and by means of the help of a few friends and his own earnings he was able to enter the University (1762) with a view to a clerical training. He had already written some poems, and one he had surreptitiously introduced into a parcel sent by Treese to a Königsberg publisher, who had recognised its merit and taken pains to discover the identity of its author.

Attending Kant's lectures, he was stimulated to critical inquiry and read widely; Plato, Hume, Leibniz, Diderot, and Rousseau he devoured with special care and enthusiasm. But a greater influence on his mind was the friendship of J. G. Hamann, who aroused in him a deep appreciation of poetry and early national literature. He contributed poems and reviews to the Königberger Zeitung. Then we find him at Riga, first as assistant-mastcr of a grammar school in Samland, and then as 'additional curate'; while he was there, in 1767, he published Fragmente über die neueren deutschen Literatur, which rapidly reached a wide and sympathetic public and attracted Lessing's attention. Various writings followed, but their advanced views on literary and artistic topics aroused a storm of opposition, and such opinions were rife as to his orthodoxy that he left Riga. Anxious to make certain experiments in social reform which were to be based on a reform of educational methods, he commenced a tour. With a view to investigating educational systems in different countries, he made his way to Holland and France, but his intention of visiting England and Italy was not carried out. In order to secure an independent position, he accepted a post as travelling tutor to the son of the Prince-Bishop of Lübeck, and abandoned his social work, though he was not in the course of his duties at Darmstadt, where he met Caroline Flachsland and became betrothed to her. In that year and the following, 1770-71, he was seconded at Streitsee and at Goethe, who was then revelling in the exuberance of early manhood. The friendship that sprang up between the two is of great importance for the history of the ideas of Lessing, Ferdinand von Goethe frequently acknowledged, in the most definite lan.
guage, that a great change passed over him during those days.

New views opened to my sight every day, nay, every hour. . . .

The more I saw, the more Herder had to give. . . .

But at times he was not the least aware of the end he carried out in after life. It was he who set me in the right way. No uncertainty of being 'Osian.'

Art.—Here again his thesis is the importance of natural character; Gothic art is shown to have its own peculiar merit and influence. His chief works in this category are Kritische Völker (1780), and Plastik (1778).

Language.—Herder was an eighteenth-century Max Müller, and to him is due the credit of founding the comparative study of language especially in regard to its nature and origin. His treatise, Über das Urwesen der Sprache (1779)—an argument directed against the theory that language was divinely communicated to man—demonstrates the inevitability of language, given the complex of powers we find in man.

In matters of fact this treatise, like several others which he wrote, is open to the charge of inaccuracy and crudeness, but the important feature is the consistent use of the comparative method of investigation. Herder's view is that 'language arose with the first spark of consciousness,' and, like every other production, gradually became more perfectly developed. Language is not the mere sound of words, for even in animals action is language. Language, indeed, relates us closely to the whole of sentient nature.

It seems that the last maternal touch from the modelling hand of Nature infused the following law into all, at their entrance into the world; 'Feel not for thyself alone, but let thy feeling resound.' As this last creative touch was the same to some species, the following law became a blessing: 'Let thy feeling resound in union with thine own species be heard with sympathy by one and all.'

Religion.—The comparative method of study was applied also to religion, and Herder wrote under the conviction that religion in its historical development has been closely related to man's wants and impulses. His studies in religion are found in his volumes entitled Vom Geist der abstrichen Poesie, Briefe über das Studium der Theologie, and Christliche Schriften. In the second of these works he laid down the principle that the Bible must be read 'in a human way,' as we should read the Greek historians and dramaticists, with constant effort to interpret its contents in relation to their temporal and local setting. He made bold attempts to occupy a middle position in regard to certain doctrinal questions, having for his reward only the hatred of the literalists and the suspicion of extreme rationalists. But he clearly distinguished religion from the realm of dogmatism into which his published opinions carried him.

Religion is that which binds our conscience; it is an inner certainty, incapable of mathematical demonstration; religion is the awareness of what we are as parts of the world, what we ought to be as men, and what we have to do. We arrive over opinions, but opinions are not religion, for there is but one religion, though it appears under many forms.

In Vom Geist der abstrichen Poesie, Herder investigates the earliest opinions of mankind concerning the Deity, Creation, Providence, etc. Among other things he exposes the absurdity of those who have represented religion as originally derived from the apprehensions and terrors of mankind.

Language is that which binds our conscience; it is an inner certainty, incapable of mathematical demonstration; religion is the awareness of what we are as parts of the world, what we ought to be as men, and what we have to do. We arrive over opinions, but opinions are not religion, for there is but one religion, though it appears under many forms.
and periods of the world, and why must this be derived only from anxiety and fear? Our existence, surely, is an act of benevolence and not a punishment, otherwise the love of life and the tender desire for its duration would be unaccountable. The Great Being, therefore, to whom we are indebted for it, and to whom we submit, must be considered as good. Daily experience must convince us of his benignity... At the same time, I am willing to admit that the religion of many ancient nations was mixed with painful feelings of apprehension and terror. This was the case with those who had their dwelling in rude climates, in dark caverns, amidst mountainous or mountainous areas, on barren shores of unvisited and tempestuous seas, or of such as were accustomed to frequent views of dismal objects, and of revolution accompanied by inhumane scenes of devastation and carnage.

The primitive religions, which Herder refused to attribute to the sentiment of fear, were based, he suggested, on the need for explanation; hence, for example, among the primitive peoples whose demon-worship is revealed in Genesis, from the observance of the works and beauties of Nature, from the sight of 'energy, wisdom, and self-renewed power of production and reproduction in all things' (seen in particular objects, however, and not connected in a general point of view) the inference was made that there existed 'separate and particular causes of particular objects, distinct creating spirits, of which each produced a particular effect and contributed, to its preservation with intelligence and care.' The higher, later religions Herder attributes to the persistence of deep-seated moral feeling. But his treatment of the history of religions derives its importance from its application to it of the genetic method of study rather than from his own data or conclusions.

Herder's sermons were only occasionally printed, but he frequently wrote to show that he possessed a manner 'straightforward, popular, and natural'—to borrow Schiller's description—and in his farewell sermon at Riga, where he had filled a church whenever he preached, he stated his own aims:

'Most of my own sermons, all my best, have been human. I have tried to show that our only happiness is to remain true to the foundations of our nature, and to follow no guide but reason and conscience. Humanity, therefore, in its widest circle, with all its noblest ideas of God, its self, and Nature, with all its feelings of brotherhood and sympathy, with all its charming duties, and high dispositions and capacities for happiness—humanity in this wide scope was always the main theme of my thoughts, instructions, and exhortations.'

(5) Human culture.—Herder went further still in the application of his central idea, so far indeed that, had it not been for essential differences in the general levels of culture and in the accuracy of observation, a short step on his part would have led him to the pinnacle later occupied by Darwin. We might, indeed, have spoken today of Herder as a forerunner of Darwin's. A volume has been written by Bärenbach under the significant title, Herder als Vorgänger Darwins. The Geist der Künstlichkeit applies the genetic method to the whole of human, bodily, and mental development. Whereas Kant had opposed to Nature an absolute free will, rational and independent, Herder placed human life in a natural setting; he history he regarded as a natural science, investigating and describing the human powers, impulses, and activities. His work is the foundation-stone of the modern study of primitive culture, which now receives support from the sciences of anthropology, archaeology, philology, and comparative psychology. It is simple in style and impartial in tone.

(c) The first part—the science of man's place in the universe—discusses the earth's position in the stellar system, its influence by the atmospheres, and the various forms of life produced on it. The motto of the whole is the unity of creation; and with ample illustration, in which the whole face of nature is seen as a part of the system, we are shown how closely we are bound by nature from our earliest hour to our possessions, our country, and its language and customs. Several passages are remarkably suggestive of nineteenth-century evolutionist theory.

'The less a nation is pressed upon, and the more truly it is obliged to abide by its simple and savage way of life, the more exactly does it appear to be the ground of a national feeling; for a nation, that would be displayed in early development' (bk. v. ch. 5). Never ever did the present form, 'millions of creatures were of necessity overwhelmed; what could maintain itself has remained, and has been standing now for thousands of years in the most harmonious order' (bk. iii. ch. 4).

Herder even makes a deduction which sounds essentially modern. He sees that advance in organization means a differentiation of parts in the organism. 'The higher we go, the more various and distinct do the parts become' (bk. iii. ch. 4). This principle, accepted to-day in its application to physiology, he applies even to society. He was gifted with a penetrating, imaginative insight that would undoubtedly have led him to the far-reaching hypothesis of evolution in the modern sense had the greater range of facts been accessible to him as it was to Darwin. But his emphasis was upon things as they have been, and necessarily have been, rather than upon things as they are, interpreted by the best moderns.
the flower of human life, the natural and complete development of man’s natural endowment.

2. Much hybridization work in plants was done during the earlier half of the 19th century. Among the workers of that time the names of Knight, Herbert, Willom and Cramer were especially prominent. But their efforts were not directed primarily to the discovery of laws of heredity. The problems of the nature of species, of their possible fixity or transmutability, were much in the air about this time, and it was in these problems that the efforts of this group of hybridizers were chiefly directed. Many interesting and curious facts were brought to light, but these were never followed up due to an event which seemed to solve the problem they had set out to investigate.

3. The publication of the Origin of Species in 1859. The views as to the interrelation of species there put forward by Darwin rapidly gained the support of the great majority of biologists. The problem of species appeared to have been solved, and the work of the hybridizers came to a sudden standstill. Heredity and variation were the corner-stones upon which Darwin erected his edifice. Yet Darwin himself deplored the prevailing ignorance both of the one phenomenon and of the other.

Harold E. B. Spight

HEREDITY.—Exact knowledge of the process by which one generation comes into being from another and of the relations between them is essentially a growth of the 19th century. A precise knowledge of heredity was not possible as long as it was regarded as something played by the sexes remained obscure. It was not until the 19th cent. that the nature of the sexual cells and of the process of fertilization was established beyond a doubt. The discovery of the ovum and the cell nucleus provided the student of heredity could build. The early history of heredity is the history of attempts made to unravel the nature of the sexual process, for the account of which the reader is referred to the art. SEX.

1. The experimental study of heredity may be said to have begun with Kölreuter, who published the results of his researches on the hybridization of plants in a series of papers between 1761 and 1768. In spite of the earlier discoveries of Camerarius, the experimental work of so-called as at this time still an open question, and Kölreuter’s experiments were designed chiefly to establish this theory. The cross of different species of plants which differed from one another in definite characters, and used the fact that the hybrids so produced resembled the pollen parent in some respect, was an argument for regarding both parents as making a definite contribution to their offspring. In this clearly succeeded, though it was not for some years that his contributions received proper recognition.
any known living unit. Like the latter, however, they were capable of multiplication through the normal process of growing and division. During this process the cells were distributed to the daughter-cells. Normally certain gemmules only were active in the cells of a given tissue, but under exceptional conditions other gemmules might be present in these cells, and on becoming excited lead the cell to take on other characters. Generally speaking, these abnormal gemmules would have been present in some ancestor, and would have remained latent for a variable, often a very great, number of generations. By means of this capacity for remaining latent on the part of the gemmule, Darwin sought to explain the phenomena of reversion and atavism.

The gemmules derived from some remote ancestors might remain dormant for many generations, until, under the influence of some stimulus, whether of a cross or otherwise, they were re-activated or of fresh activity, and the organism exhibited ancestral characteristics. The germ-cells Darwin supposed to contain representations of all the various gemmules corresponding to the different cells of an individual, while at the same time they might also contain gemmules derived from ancestors more or less remote. Further, in order to explain the inherited effects of use and disuse in which he firmly believed (cf. art. Environ-

ment), Darwin supposed that gemmules were capable of transportation from one cell to another. In this way the cells of the germ-plasm were continually receiving gemmules from the cells of the different tissues of the body. Stimuli, more especially those resulting from increased use and disuse, altered the character of the cell and the of its contained gemmules. Some of these were transported to the germ-cells, and so the altered character was transmitted to a further generation. Darwin supposed that the germ-cell was capable of exactly representing a certain set of gemmules, and that these germ-cells, when divided and dispersed, might carry conviction among biologists, who regarded the assumption of the transportation of gemmules as resting upon no firm basis of fact. Nevertheless, the idea of material particles for a basis of heredity was felt to be needed and was revived a few years later by de Vries (cf. below, p. 550). Meanwhile, however, the attention of naturalists was being diverted elsewhere. Darwin's great achievement in the promulgation of Natural Selection was not only a landmark in biological thought; it was a permanent one in the life of modern thought. Thenceforward the efforts of the biologist, whether botanist or zoologist, were devoted almost entirely to exploring the consequences of Darwin's doctrine of common descent which would explain the existing forms of animals and plants.

The study of morphology became the keynote of biological thought during the last third of the 19th century, and its students directed their efforts to the construction of elaborate schemes which should demonstrate the genetic relationship between the various groups into which the systematist had divided the existing forms of life (cf. art. Evolu-
tion). Experimental work upon the living organism practically ceased; and, where the phenomenon of heredity came up for discussion, it usually received the perfunctory treatment accorded to a subject in which there is little or nothing fresh to be discovered. In the days of the essayist, chief among whom was August Weismann. In his work on The Germ-Plasm (1892), Weismann elaborated a complicated system to explain the hereditary transmission of characters. He insisted upon the sharp distinction between germ-plasm, or reproductive tissue, and soma-plasm, or body tissues. He held that it had been considered by correspond-
cases the stimulus which acted upon the parental organism acted at the same time upon the germ-plasm contained in that organism, and that the cause of the corresponding change in the offspring was not the change in the parental organism, but a change in the constitution of the germ-plasm which occurred at the same time and under the same conditions as that in the parent.

This conception of the relation between germ-plasm and somatoplasm may be regarded as Weismann's most important contribution to the study of heredity. In the exceedingly elaborate theory which he put forward in The Germ-Plasm, Weismann attempted to formulate a theory of heredity which should be in accordance with recent discoveries on the minute structure of cells and their contained nuclei. He regarded the nucleus of the germ-cells as the bearer of hereditary characteristics, and more especially that portion of the nucleus which, from its reaction to certain dyes, is known as chromatin. The chromatin was held to be a heterogeneous substance composed of numerous minute entities, or groups of entities—the determinants. Upon the number and variety of the determinants depended the variety of the characteristics exhibited by the organism and which arise from the fusion of two sexual cells derived from two germ-plasmas. Moreover, it was supposed that the units of heredity in the germ-plasmas with different sets of determinants could bring about a state of affairs under which some form of natural selection within the cells decided whether certain determinants would be eliminated.

To follow Weismann's theory in detail would be hardly profitable. More modern work has demonstrated that his conception of a heterogeneous germ-plasm of independent determinants in the germ-plasm corresponding to characters in the developed organism probably approximates to the truth. Nevertheless, his theory lacked compulsion because it was not based upon the facts of heredity—the one class of facts upon which such a theory could have rested firmly.

6. To the essay period belongs one other work of some importance. In 1889, Hugo de Vries formulated his views in a work on Intracellular Pangenesis. He accepted Darwin's view that the individual hereditary qualities are dependent on individual material bearers in the living substance of cells, but he differed from Darwin in refusing to believe that these material bearers or pangens, could be transported in the blood stream about the body. According to de Vries, the nucleus of every cell in an individual contains the sum-total of the pangens found in that individual, but only some of them occur in the extra-nuclear protoplasm of the cell. The nature and properties of the cell, whether muscular, nervous, glandular, etc., were held to depend upon the nature and variety of the pangens which were to be found in the extra-nuclear protoplasm. This stimulating essay may be regarded as marking the close of a period in the study of heredity, for a few years were to elapse from its publication before a new light was suddenly flashed upon the whole subject, and heredity took its place among the experimental sciences.

7. While biologists and philosophers who were interested in these matters had been busy working new theories, an Austrian monk had turned aside and quietly experimented for himself. The results of his investigations were communicated to Gregor Mendel to a Natural History Society in Brünn, in the Proceedings of which they were published in 1865. In 1890, nearly twenty years after Mendel's death, his paper was discovered, and the remarkable nature of his achievement was rapidly appreciated. Mendel's success was largely due to the fact that he planned his experiments on lines different from those of any of his predecessors. Instead of making numbers of somewhat random and haphazard crosses the way they were studied by him, he concentrated his attention on certain characters in which allied varieties differed from one another, and persistently followed their distribution over a succession of generations. It was careful also in his selection of a plant with which to work, choosing the edible pea (Pisum sativum) on account of its hardness, its annual habit, its facility of self-fertilization, and the number of sharply differentiated characters found in it.

The nature of Mendel's discovery may best be explained by considering some of his own results. In one set of his experiments with the pea he chose length of internodes as the character with which to work. In some peas the internodes are long, and such plants reach an average height of 6 to 8 feet. In others, again, the internodes are short, and the plants average but 1 to 3 feet. Having obtained true breeding strains of each of these varieties, Mendel proceeded to cross them, and in this case it made no difference whether the tall was used as the pollen parent or vice versa. In either case the result was the same; only tall plants, at least as tall as the original tall parent resulted from the cross.1 The seeds of these plants, which are normally self-fertilized, were collected and sown in the following year. The generation so produced (F1) consisted of both tall and dwarfs, but no intermediates. Careful counts on larger numbers showed that the proportion of tall to dwarfs was 3:1. The dwarf character recurred in the F2 generation, but reappeared in a definite proportion in the F3 generation following. For this reason Mendel termed the dwarf character recessive and the tall dominant.

The experiment was continued into a further generation, the seeds of a number of F2 plants being sown in the following year to keep those from each individual entirely separate. The nature of the resulting F3 generation showed that all the seeds were true bred, but that the tall belonged to two classes, viz., those which bled true and those which gave tall and dwarfs in the ratio 3:1 (cf. Fig. 1), behaving like a pair of characters in each of those two classes that which threw dwarfs was to be twice as numerous as that which bred true.

Throughout these and further generations, Mendel encountered only three classes of plants in so far as the pair of differentiating characters, tallness and dwarfsness, were concerned, viz., (1) pure tall breeding true to tallness; (2) pure dwarf showing tallness and dwarfs in the ratio 3:1; (3) dwarfs which always breed true. Moreover, the relation worked out for this pair of characters was found to hold good for other colors and forms of the cowpea. Thus the yellow color and the ordinary form of the seed are dominant to green, round seed shape to wrinkled, tough, parchment-like pod to soft pod, etc.

By looking at the pea in this way it was possible to express much of the variety of forms under which they occur in terms of alternative characters, each pair of which taken separately followed the scheme of inheritance outlined above. Mendel not only provided the scheme; he also suggested the explanation. He supposed that the various characters shown by the pea existed in alternative pairs. This possibility could be either tall or dwarf; the seed could be either yellow or green; the flower could be either coloured or white; and so on. The characters belonging to such alternative pairs were mutually exclusive. Every pair of characters was represented by something in the germ-cells, but any given germ-cell could carry only the representative of either one or the other of the characters. To these representatives of the characters in the germ-cells it is now usual to apply the term factor. On Mendel's idea there was a factor corresponding to tallness, and another corresponding to dwarfsness, but a given germ-cell could carry only either the factor for tallness or 1. It is customary to denote the result of a first cross: F1 = first filial generation. Similarly the offspring from the F1 individuals form the F2 (second filial generation), the offspring of these last the F3 generation, and so on.
that for dwarfs—but not both. All the germ-cells of the pure tall carried the factor for tallness, and all the germ-cells of a dwarf carried that for dwarfness. The cross between the tall and the dwarf meant the union between a tall-bearing germ-cell, or gamete, and a dwarf-bearing gamete, so that the individual, or zygote, produced by the yoking together of these gametes contained both the factor for tallness and that for dwarfness.

Such a zygote, which is produced by the union of two unlike gametes, is termed a heterozygote, as distinguished from a homozygote, which is produced by the union of two like gametes. In the case of the pea the tall factor is completely dominant over the dwarf factor, and the heterozygous tall is in appearance indistinguishable from a homozygous tall. But the difference comes in when it forms its gametes. Its own cells must be supposed to contain both of the factors for tallness and dwarfness. But, as Mendel assumed that these cannot enter into the same gamete, a separation then occurs so that half the gametes contain the tall, and half the dwarf factor. In other words, a segregation of the factors occurs during the production of the gametes, and the gametes themselves are pure for either the one factor or the other (see fig. 3).

The F₁, heterozygous peas, therefore, is producing equal numbers of tall-bearing and of dwarf-bearing gametes, and this is true for both the male and the female gametes. Self-fertilization of the F₁ plant means the bringing together of two such series of gametes.

Let us suppose that the number of ova is 4, 2 of which are 'tall' and 2 'dwarf.' Any 'tall' ovum has an equal chance of being fertilized by a 'tall' or a 'dwarf' pollen-grain. Of the 2 'tall' ova, therefore, a will give rise to homozygous talls, and b to heterozygous talls. Again, any dwarf ovum has also an equal chance of being fertilized by a 'tall' or a 'dwarf' pollen-grain.

Of the 2 'tall' ova, therefore, a will give rise to homozygous talls, and b to homozygous dwarfs. Hence, on this hypothesis of the relation of characters and factors in plant and germ cell, the F₂ generation should consist of a homozygous tall, b heterozygous tall, and c dwarfs—proportions which Mendel found by actual experiment. The nature of the gametes given off by the F₁ plant may, as Mendel showed, be further tested by crossing such plants with the pure recessive. If the F₁ tall plants are producing equal numbers of 'tall' and 'dwarf' gametes, they ought, when crossed with dwarf plants, to give both tall and dwarfs in equal numbers, and of the tall so produced all should be true dwarfs. Here, again, the hypothesis was confirmed by the experimental results.

More recently these experiments of Mendel have been confirmed many times over, and it has been shown that the same scheme applies generally to animals as well as to plants.

8. One modification of Mendel's view was suggested a few years ago, and has since been generally accepted by students of this subject. This is the so-called 'Presence and Absence' hypothesis. Mendel had shown that the characters of his peas could be arranged in alternative pairs, and recent work has proved that this is general for the characters of both plants and animals. Of all the many cases now worked out there is none in which there is a clear reason for supposing the existence of series of three or more characters each of which is alternative to any other. This remarkable fact has led to a modification of Mendel's original view. According to Mendel, there is a factor for tallness and one for dwarfness, and the relation between them is such that it is impossible for them to enter the same gamete. According to the 'Presence and Absence' hypothesis, there is also a factor for tallness and one for dwarfness, but there is no reason why they should not enter into the same gamete. It is supposed that every pea at present known is homozygous for the factor for dwarfness, D, and that the difference between the dwarf and the tall is that the latter possesses an additional factor, T, in virtue of which it becomes tall. If the factor T is brought in by both the gametes which make a tall plant, the result is a homozygous tall; if only by one gamete, then a heterozygous tall results. The essential difference between the two views may perhaps be rendered more clear by the help of the accompanying diagrams (fig. 3).

alternative is due to the fact that a given factor can enter into relation with a gamete in two ways only—it may be present or it may be absent. Mendel's own results can be explained equally well on either hypothesis. It was only when more complicated cases came to be worked out, and more especially cases where several factors affected the same structure, that the difficulty of affording an explanation on his original view became evident.

go the only type of case considered is that in which the two original parents entering into the cross differ by a single character. Mendel, however, worked out instances in which several characters are concerned, and found the transmission of each character to be independent of any other, but always on the same scheme. For example, in the case where the characters round seed as opposed to wrinkled and yellow cotyledon as opposed to green were involved, a cross between a yellow round and a green wrinkled gave an F2 generation composed entirely of yellow rounds.

Self-fertilization of these plants resulted in the formation of four classes of seeds, viz., yellow round, yellow wrinkled, green round, and green wrinkled; and the relative proportions in which these four classes appeared were as 9:3:3:1. The experiments of one class to the other 3:1, and the ratios are to the wrinkled as 3:1 with the factor for yellowness and the factor for roundness each being transmitted according to the same scheme, but quite independently of one another. The analysis of such cases as these is perhaps rendered more simple by regarding it in the following way:

Let A stand for one of the two factors brought into the cross, and let B stand for the other, and let the cross be made be

of the Fl generation, but also the syngenic constitution of the various individuals. A point of some interest is that 4 individuals lying along the diagonal drawn from the left top to the right bottom corner are homozygous either for the presence or for the absence of both factors. In other words, of the four visible syngenic classes there will be a definite proportion in each containing neither. Since one of the plants is homozygous for both A and B, we may represent it as AABB, and all its gametes as AB. The other plant contains neither A nor B, and for convenience we will express such a condition as aabb, the small
HEREDITY

been worked out for various characters in plants and animals and shown to accord with the theoretical proportions in the F₁ generation, the number of forms which appear with it, and their numerical proportions form the first stage in the determination of the number of factors involved in a given instance. In the present experiment the aim was to find out the factors where the domesticated form possesses a character which is dominant over the wild form. The English pattern in the rabbit, the yellow coat colour in the mouse, and the rose comb of the turkey are all dominant to the condition found in the wild type. The gain of a new factor is a more difficult conception to form than the loss of one old one, but it is not improbable that it may eventually be expressed in terms of some rearrangement of the elements already present. But, in whatever way they may eventually be interpreted, there seems no reason to doubt that new dominant characters may arise from time to time.

21. One further complication sometimes occurring in cases where the factors are concerned may be mentioned here. We may have a pair of characters due to the presence or absence of a factor A, and it may be that neither character can show itself except in the presence of a second factor B.

As an example we may take a case relating to coat colour in some rodents. The wild grey or agouti coat colour in the mouse is dominant to black, and depends upon an additional factor A which is not found in the black mouse. Animals heterozygous for A, when mated together, will produce offspring of agouti and blacks in the ratio of 9:1. Now, albinos is recessive to colour, and coloured mice must be regarded as possessing a general colour factor B which is absent from the albinos. Then, since A and B are both factors for these two factors are mated together, the scheme of distribution of the factors A and B will be that already given in 4 of 16. Of the 16 possibilities there are 16 containing A and 4 without A—the expected ratio 9:1. But 6 of the 16 containing A lack the factor B, as also does one of those without A. Since they lack a factor which is necessary for the production of colour of any sort, these four mice will be albinos. Judging, therefore, by visible attributes, three classes of mice should appear from such a mating. One of the original white mice must be regarded as carrying the chromogen and the other the ferment; whether the gametes actually carry these substances is uncertain, but in any case they carry something which is capable of developing them.

22. Analysis of these cases, which are to be interpreted by the interaction of factors, has thrown an interesting light upon what was formerly the puzzling phenomenon of reversion or crossing over. Two white sweet peas may, on being crossed, give rise to plants which are practically identical with the wild purple as it grows to-day in Sicily. The offspring of a chocolate brown and a yellow rabbit may be all of the wild type by colour. In such cases each of the two parents lacked one or more from the sum-total of the factors which go to make up the wild form. Together, however, they can make up that sum-total with the consequence that reversion at once occurs. Reversion is due to the coming together again of factors which had become lost at some point or other in the history of the species. The study of reversion opens up interesting questions in connexion with the relation between domesticated forms and their wild prototypes. It is only in some cases of that nature that the wild type is supposed to have arisen through the loss of one or more factors. Such is the case with almost all the many colour varieties of the rabbit and the mouse. Such is the case with all the colour and structural varieties of the sweet pea. It is probable that the change originated somewhere in the cell-differentiation of the germ-cells. Asymmetrical divisions occurred such that some germ-cells obtained less than their full quota of factors, and from these germ-cells sprang the recessive varieties. The sequence of such new 'sports' or new kinds of plants which have been evoked in a given instance is often indicated by what we may term a rudimentary analysis of the constitution of living things.

There are, however, cases in which the same scheme of heredity holds good, but in which a fresh complication is introduced by the fact that the factors concerned may interact upon one another. The factors A and B may in conjunction produce an effect which is absent when only one or other alone is present. Instances of this have been shown to occur among plants where two strains of white, each breeding perfectly true to white, will nevertheless, when crossed, give rise only to plants with red flowers. The colour in such cases is due to the interaction of two things A and B, and colour can be produced only when they are simultaneously present in a plant. The crossing of the two whites brings together the two constituents necessary for the production of colour, and the F₁ plant is consequently coloured, being heterozygous for both A and B. Reference to fig. 4 shows that the F₁ generation from such a syngene should contain 9 individuals out of every 16 in which both A and B are present. The remaining 7 have either A or B alone or neither. Hence, from such coloured F₁ plants hypothesis would lead us to expect an F₂ generation consisting of coloured and white in the ratio 9:7. And this is what experiment has shown actually to occur. Moreover, chemical evidence quite independent of breeding tests is gradually accumulating, suggesting that in such cases as these we are dealing with two definite substances—a ferment, and a colourless chromogen which can give rise to colour when associated with one another. Out of the original white must be regarded as carrying the chromogen and the other the ferment; whether the gametes actually carry these substances is uncertain, but in any case they carry something which is capable of developing them.
is undisturbed, but the distribution is peculiar in that there is a great excess of rounds among the purples and a great excess of rounds among the reds. This, then, is the nature of the F2 generation when the cross is so made that both the female and male are brought into play by the same parent.

When, however, one of these factors is brought in by each parent the results are brought into play. When a red plant and a purple plant are crossed, the nature of the F2 generation is quite different. The reds are now almost all red and the purples all purple. One of the four classes of gametes are produced by such plants in greater numbers than the other two classes. In the special instance just considered the experimental numbers are in accordance with the view that the F2 plant made by bringing both factors from one side (B L x B L) produces the four kinds of gametes in the ratio 1 BL : 1 BL : 7 B L, whereas the F1 plant made by bringing both factors from one side (B L x B L) produces its four kinds of gametes in the ratio 1 BL : 1 BL : 7 B L : 1 BL. In the former case B is said to be 'coupled' with L, while in the latter case there is said to be repression between B and L. In both cases the two kinds of gametes representative of the original parents are produced in excess. Several other cases recently worked out in the sweet pea and other plants suggest that this coupling or repulsion is the natural way of the gametes be joined, the nature of which may be indicated by the following table.

</table>

In the table n is half the total number of gametes in the series. Thus, in the case just considered the number of gametes in the series is 7 BL : 1 BL : 7 BL : 7 BL is 16, and a half 8. The right-hand side of the table indicates the nature of the F2 generation arising from the cross. In the table n is represented as a power of 2 (i.e., 8, 32, 128, etc.). Where there is coupling in F2, the 3 forms of gametes A B and a b are (1) twice as numerous as A B and a b, where there is repulsion in F2, the reverse is the case. There is coupling or repulsion for the same pair of factors the value of a 2 for both the replication and coupling series is the same. Most of the cases hitherto discovered in plants may be regarded as belonging to one or other of the series shown in the table, and those already discovered are marked with an asterisk. It is not improbable that other series may exist, but not enough is yet known to justify any definite statement as to their exact nature. What is clear, however, is that, in the process of cell-division which leads to the formation of the gametes, factors may become linked together, or, in reverse, according as is the case, and cross is made, and that the resulting 'coupling' or 'repulsion' is part of the same orderly process.

Phenomena of apparently similar nature have been witnessed in a few instances among animals, and the results show that when they come to be fully worked out, these processes will be found to play an important part in heredity. More especially is this likely to be the case where we are concerned with characters which are, as a rule, peculiar to one or other sex, for it is not improbable that the so-called secondary sexual characters are linked in this way with a sex factor. For further discussion of these matters the reader is referred to the article Sex.

12. A phenomenon of some interest in this connection is exhibited by certain hermaphroditic plants. It has been known for many years that some strains of single flowers throw doubles as well as single, and that, as the doubles are sterile, the only way to get them is to breed from such singles. When crossed with ordinary pure breeding singles, these double-throwing singles give a different result, namely, that when the cross was made, i.e., whether the double-thower was used as the male or as the female parent. The F1 generation occurs at that stage in the formation of gametes which is termed the 'reduction division,' a phenomenon peculiar to the vast majority of plants and animals. The nucleus of the cells composing the tissues of animals is characterized by the presence of small bodies which stain deeply with certain dyes and are consequently termed chromosomes. It has been found that, as a rule, the number of chromosomes in any given species is constant or nearly so, though differing for different species. Were the gametes to contain the same number, the total number of chromosomes would be doubled each time two gametes fused to form a fresh generation. This is avoided by a complex process leading up to the 'reduction division,' by which the number of the chromosomes in the gametes is reduced to one half of that found in the nucleus of the body tissues. It is plausible to suppose that the segregation of factors occurs at this stage, though it cannot be said that the evidence in favour of this view is sufficiently strong to put other possibilities out of court. Indeed, there are certain classes of evidence which tell markedly against it, more especially the phenomena of coupling and repulsion, and the fact that in certain heterozygous plants the ovv and spermatomata may differ in the factors which they bear. It is not altogether impossible that in these matters there may be a difference between plants and animals, but at present the question must be left open.

13. At this point mention should be made of a phenomenon which may serve to complicate the process of genetic analysis. It has been assumed in the foregoing account that any given gamete of one sex is capable of being impregnated by gametes of the other sex, and of giving rise to a fresh individual. There is, however, some evidence to show that in certain cases fertilization may occur, but that some of the zygotes formed are incapable of developing very far.
In the mouse, yellow is dominant to the wild agouti colour, but heterozygous yellows when bred together produce yellow and agouti in the ratio 2:1 instead of the expected 3:1 ratio. On further breading these yellows it has been found that none of them were ever identical to the pure yellow. One of two things must therefore occur: either there is mutation between the pure yellow and a 'yellow' sperm, so that they refuse to unite; or else they unite to form a agouti which is incapable of development. On the former hypothesis there is not even the possibility of being fertilized by agouti spermatozoa: and, since there is an equal chance of an 'agouti' ovum being fertilized by a 'yellow' or an 'agouti' sperm, the expectation, on this hypothesis, of making yellows together would lead to the ratio 1:1, so that all the yellows would be heterozygous. But in many hundreds of mice bred the ratio of yellow to agouti is definitely 3:1. Hence it must be supposed that the 'yellow' sperm can unite with the 'yellow' ovum, but that the resulting agouti is incapable of developing, at any rate beyond a comparatively early embryological stage.

This peculiar case in the mouse has recently been paralleled by an interesting one in the snapdragon (Antirrhinum). A form is known with light green foliage which will not breed true when self-fertilized, but always produces light green and normal green plants in the ratio 3:1. Careful examination, however, showed that three different kinds of seedling made their appearance among the progeny of such plants, viz. normal green, light green, and white in the ratio 1:2:1. The white, however, being without chlorophyll, were incapable of development and perished almost as soon as they raised their heads above the ground. The green seedlings were of two sorts: a green and a white. The green seedlings, however, the resulting agouti, though capable of a certain amount of growth, were unable to attain any size, and in the absence of the chlorophyll upon which the plant depends for its nutrition. The case of the snapdragons, even more than the mouse, is instructive, as it shows that selection can only be based upon the results of crossed breeding, and that the results of selection in one generation will be perpetuated in subsequent generations only by continued selection — in other words, that the effect of this process is a cumulative one. On the other hand, it is well recognized that there is a danger of the plants being lost and the characters failing in the long run by chance crossing.

The opinion is held among many breeders that, in certain cases at any rate, a character may be improved greatly in a few years by careful selection. The aim of the breeder is to obtain some more profitable type of animal or plant, and his first step is to cross two strains possessing desirable qualities, and to select from the offspring those individuals possessing the desired qualities in a single strain. He then breeds the individuals resulting from the cross for several generations, and from them back with one or other of the parents, and from the mixed lot he obtained he picks out those he wants for subsequent breeding from. Having found a useful type, he goes on breeding from it until it breeds true, or becomes fixed. The result of this combined process is generally termed 'improvement through selection.' Translated into modern terms, it may be expressed by means of a cross, and subsequently establishing a homozygous strain of the combination required. Neither part of this process is by any means comparable with what the biologist understands by the term 'selection.' For him the word has been coloured by the invention of the term 'natural selection;' and, as natural selection is originally conceived of as the gradual accumulation of very small variations leading slowly to a change of type (cf. art. Evolution), so the term 'selection,' even when applied to alterations in the breeding of animals and plants, was more or less unconsciously assimilated to a similar process. Hence, when the breeder spoke of a given result having been achieved by selection, the biologist was often apt to put his own summary, and to attribute to the gradual accumulation of minute variations a result which was certainly not brought about in that way.

Nevertheless, it is true that, in certain cases at any rate, a character may be to some extent intensified through crossing, and subsequently choosing for further breeding such individuals as exhibit the character in the most marked degree; but, as has been pointed out, more especially by Nilsson-Ehle, such cases may also be interpreted in terms of factors.

Working with wheat, this observer showed that red colour in the grain is dominant to white. But in different families three distinct proportions of red and white may occur. The red may be in the white as 8:1, as 16:1, or as 64:1. The inference is that in the first case we are dealing with the presence or absence of one factor, in the second of two, and in the third of three factors. And since each of these factors produces what is apparently precisely the same effect singly, it is probable that we are concerned with a single factor in the case of the red grain.

In such cases, however, it is impossible to say to which of the factors a given grain belongs, unless it is possible also to say whether it belongs to one of the factors, or to both, or to all three. This is only possible if the two or three factors are distinguishable from one another by other characters, and it is not an uncommon thing to find that this is the case. In the case of red grain, for instance, the red grain may be distinguished from the white by its being hardy, or by the fact that it is more or less resistant to disease. In such cases, therefore, the red grain is not simply the result of the presence of a single factor, but is the result of the presence of two or three factors, each of which is distinguishable from the others by other characters.

The use of the term 'factor' in the sense in which it is used here is not to be understood as implying that the factors are necessarily the same as those which are involved in the case of red grain. It is simply a convenient term by which to describe the presence or absence of a particular character, and it is to be understood that the factors are those which are involved in the case of red grain.

possible to say. Fresh data may any day make
their appearance which will present the old pheno-
mena in a new light. For the present, however,
there is every reason to suppose that the properties
of animals and plants depend upon the presence or
absence of definite factors which in transmission
follow definite and ascertained laws. Moreover, the
does not. Its nature depends upon the nature of the
differences that were in the two gametes that went
to the making, and at the act of fertilization are
decided, once and for all, not only the attributes of
the creature that is subsequently to develop, but also
the nature and proportions of the gametes to which
it itself must eventually give rise. That the nature
of the environment influences the living thing is
beyond doubt. Better soil, more moisture, more
stimulating manure may sometimes affect the
alteration in the habit of a plant. Better hygiene and
education may largely influence the
nature of a human being. But to the supposition
that by such means a radical change can be brought
about in the living organism the facts of heredity
as we know them to-day certainly lend no counten-
ance. Within limits the organism is plastic, and
upon that plasticity allowance in the environment
may play, producing changes within those limits.
But there is no unequivocal evidence for supposing
that the change is at all essential, or that any
beneficial change brought about in the organism
through altered circumstances can in any way alter
the constitution of the germ-cells which that
organism contains. It is true that strong, healthy
plants generally produce better seed than those
which are poorly nourished. But this is because the
seed is really a larval form parasitic upon the
mother plant. The progeny of the plants from which
the seed develops, but not for some time part of the
environment of the de-
veloping seed; and it is in this capacity that the
better nourishment of the parent is apt to lead to
better formed and more vigorous seeds. Better
nutrition of the mother plant has not affected the
constitution of its gametes; it has only afforded
a better chance to the developing embryo in the
seed.

16. Another effect which must be carefully distin-
guished from that of heredity is that of tradition.
Where the young of animals live for some time
with their parents, they profit during early life by
their example. It is possible that in this way modifications in behaviour may be
gradually brought about, and the species become
ggradually adapted in certain respects to changed
conditions. Hocks will avoid a man with a gun,
though perhaps they have never been shot at.
So also it is said that the behaviour of many wild
animals differs according as they are in the
presence of a white or a brown man. But of all
animals the effect of tradition is strongest in man,
where the intelligence and means of communica-
tion are most highly developed, and the young
remain longest with their parents. Moreover,
man alone has devised methods of storing up his
experience. With each generation the store is
added to, revised, and improved; and each genera-
tion comes into the world endowed, through the
efforts of its forbears, with greater control over
the conditions under which it has to live. This is
sometimes spoken of as the "inheritance of nothing
from another." The expres-
sion is in some respects misleading, for it can-
not be too strongly emphasized that this passing
on of accumulated tradition has nothing whatever
to do with heredity in the strict biological sense.
What may or may not be inherited is the brain
capacity to take advantage of the accumulated
store of experience. Without such capacity the
store becomes of no account.

In discussing questions involving evolution and
progress in man, it is of the first importance to
distinguish the effects of tradition from those of
heredity proper. That heredity in man is of the
same nature as in other animals and plants there
is no reason to doubt. Mendelian inheritance in
its simplest form has already been demonstrated
for a number of a species. These, it is true, are
mostly of abnormal nature, because the student of
genetics is at present largely dependent on the
medical man for his data, and must deal with such
characters as have been adequately investigated,
whatever their nature. Among such characters
may be mentioned congenital catacar, brachy-
dactyls, tylosis palmna, and others, while of so-
called normal characters brown eye is dominant to
blue; and, in certain cases at any rate, red hair is
recessive to black. A peculiar feature in human
heredity would appear to be the large number of
characters showing sex-limited inheritance (cf. art.
676). Though for the present man is too im-
perfectly known to be of much service in the eluci-
dation of problems in heredity, there are yet two
cases in the species of the highest interest, because
the records in either sex have been demonstrated
centuries. One of these is the well-known Haps-
burg lip so characteristic of certain royal houses.
The eminence of those to whom it has come has assured a suc-
cession of portraits and documentary evidence, and
there is little doubt that this character has behaved
throughout as a simple Mendelian dominant over
the normal form. To-day, after many centuries, it is as well marked as ever in the House
of Spain. The other example is a case of night-
blindness near Montpellier, which began to affect
interest two centuries ago. For two centuries the
affected one to-day one of the most complete of human
degenerates; a pedigree numbering more than 2000
individuals and extending over ten generations.
During all this time the affection has behaved as
a simple dominant, and, like the Hapsburg lip, it
has persisted in its full intensity in spite of con-
ineral crossing with the normal type.

17. Heredity is a new science, and its students
are well aware of the magnitude of the labours in
front of them. Yet enough is clear to force upon
us the question whether our attitude towards
many social problems is in accordance with facts. Many
of those who to-day are anxious to reconstruct
society lay it down as self-evident that the whole
human body is no mere plastic thing which can be
moulded by treatment to give it this or that desired
character. Even from its earliest stages each em-
broyo is endowed, by the germ-cells that made it,
with a collection of factors which must inevitably
develop in a given way. Hygiene and education
are influences which can in some measure check the
operation of one factor or encourage the operation
of another. But that they can add a factor for a
good quality or take away the factor for an evil
one is utterly opposed to all that is known of the
facts of heredity. Men are in some measure what
circumstances have made them, but in far higher
degree they are what they were born. Moreover,
as regards parents, circummstances have nothing
in the inherent qualities of their offspring. Two
things there are that go to mould society, of which
the one is tradition that is handed on from one
generation to another, ever changing and gather-
ing up as the generations flow, while the other is
the genetic constitution of man—that collection of
factors given him at his making, differing from in-
HEREDITY (Ethics and Religion).

The purpose of this article is to select, from the great array of facts and considerations connected with heredity (of preceding art.), some which may prove of present importance to ethics and religion. Race penetrates the whole of life; it influences powerfully nations, families, individuals. It is a counterpoise or partial complement of that manifold environment whose influence was mainly regarded by Buckle and the great naturalistic historians. The known facts are not yet marshalled by a science which, though growing fast, is young; and recent more rapid increase of knowledge indicates that there is much more to know than we thought.

Sometimes it is certain that race is the most powerful force in history. At other times we are inclined to follow the writers who, like Bernard Shaw, think race an important and environment (climatc, political, social) all-controlling. Probably the relative importance of these factors varies in different parts of the field. There are races, like the Jewish, with a more subtle elasticity rather than a greater stiffness remain unchanged in all lands. There are countries, like North America, which bring many races to a common appearance. But all that environment effects is effected in and by the responding power of an inherited organism.

Moreover, ideas about heredity touch morals and religion at many points. The wide range of these ideas—many of them familiar through all ages—is not yet viewed as a whole, and misconceptions are mixed with traditional and pseudo, even with instructed and critical, opinion. The time, therefore, for definite conclusions has not yet come; but none the less some decided opinions and resolutions are possible and necessary. For the modern attention to heredity has produced a movement, and may produce results; and the results will be welcome or unwelcome to Christianity in so far as they foster or discourage responsibility, prudence, and unselfishness. But of these results the most important will be primarily in the sphere of thought, and will illustrate the truth that opinion may be more effective than material fact, and a change of ideals of greater consequences to a race than a change of blood.

In view of the vigour and merit of the new movement, some of us may be doubtful that a social system based upon the inherent nature of man would have greater stability and a better chance of surviving than one resting upon religious or ethical tradition alone; but, however, the basis of the whole that tradition sprang. The best type of social system is doubtless that combining the two, but the question of how far the one or the other is to predominate must be left for the future to decide. Before it can be settled, the inherent nature of man must be probed by deeper and more searching analysis. Cf., further, the following article.

R. C. Punnett.

(1) Distinctive elements in present thought. — We have learned to look at the social forms of individuals in a race to the changes of a race as such. Organisms change from age to age, and man as a species is changing; he can, it is alleged, control his own changes. The general principles of natural selection are valid for his case; the methods of Mendelian inquiry ought to yield significant results in his human life; the hopes of selective breeding should have a version about man and human society. The moral question about the science of heredity is, in fact, the question of the familiar tradition and the facts of the new science, and of the relation of the two. The question of the application of the relatively certain knowledge of the sequences of variation and the exclusion of useless steps? We can do better with our sheep than by a crude elimination. May we not do better with man than leave him to ‘chance’? This is the moral problem on the practical side. But behind it is a problem of knowledge. Does it lie in the fact that we know best what is worth while that man, improved or unimproved, should survive? Is the knowledge that races change a ground for humility and for hope? Or is it a warrant for self-reliance and a new ambition? And then, besides the social or political question, there is a question for the individual. Does our knowledge of the behaviour of race tend to rob a man of the conviction and the responsibilities of freedom? What scope is there for a fixed constitution for the action of that personal choice which on other grounds he has come to believe in?

(2) Causes of the present interest. — The existing interest in problems of heredity is (a) part of what at its highest is an interest in the ‘Reign of Law,’ and at its lowest an abandonment of the essential task of man in life and thought, in face of the mechanical conception of the universe. It is worth noting that all the interest of a materialistic sort exists in our society and side by side with a great development of psychical studies, a belief in new continuous influences other than blood, and a greatly extended conception of the powers of personality. In this ‘New Thought,’ the patent facts of heredity are accounted for by re-incarnation. All this speculation, so remote from naturalism, has not in any way been co-ordinated with the
thought movements called scientific in the biological sense.

(0) In the second place, the interest is due to recall from the exaggerated equalitarianism of the immediately preceding age. In that age, so practiced and so far were we to be made out of a variety of materials; and a sort of moral transformism expected the Ethiopian to change or not to need to change his skin. A just criticism of the quite imaginary superiority of some strains led to the conviction that all strains were alike in potentiality; and, when destroying a faction — the movement in religious and popular education thought has received its direction from the emphasis upon the subject in biology; and has been animated by the advances of biological knowledge and progress upon the environment; but, more frequently not very well understood. In illustration of the last sentence it may be remembered that some educated persons still believe that heredity means (exclusively) the direct inheritance of acquired characters—an occlusion denied by most biologists; or they set inherited qualities in contrast with innate ones; or when it is held exclusively that if among the children of men there were some who escaped the operation of the influences of descent. All cases of human life are cases of heredity. And we may take it as certain that, at least in regard to the body, men are not born with any but inherited properties and powers. What seems and is original in a human physique is the original result of mingling of inherited influences. Reference will be made again to the innumerable surprises of descent—the unlikelihood between children and parents; the remembrance of a remote ancestral type, recognized only in families of celebrity or enduring possessions; the incalculable appearance of genius in an ordinary stock—which are sometimes accepted as disproving the general truth of heredity. One of our interests is to escape from unbalanced studies, which exhibit the cases of the Huns or the case of the Jakes, to establish heredity as a sufficient explanation of human life; or reject it as unimportant on the evidence of genetically isolated genius and heroism—the prophetic art of Beethoven sprung of unmusical stock, the military power of men born of subject and unwary races. On the one hand, we must remember that what is uncalculated and uncalculable is not sufficiently important to be discounted. On the other, that, though race and circumstances are undoubtedly factors in the production of a person, it does not follow that they are the only factors concerned.

If it is impossible to deny the place of nature, it is unwise to deny the force of nurture because the tremendous power of nature is recognized. Well-bred must no doubt be well-bred, and the place in succession to worthy forbear. But the breeding requires a fit nature for its subject; and there must be many different forms of good training, to fit the many varieties of good race. Moreover, for training, there must be— as a factor growing in importance with advance—the consent and co-operation of the subject. The whole is the object, and according to the object, the means is the good. The whole is the subject, and according to the subject, the means is the good. But the breeding requires a fit nature for its subject; and there must be many different forms of good training, to fit the many varieties of good race. Moreover, for training, there must be— as a factor growing in importance with advance—the consent and co-operation of the subject. The whole is the object, and according to the object, the means is the good.

It must be remembered, besides, as correction, that distinctions originated by racial differences are maintained by other causes when the racial difference has ceased to act. A county, a district, gets character from the race that inhabits it. Other races entering the region take a varying share of the regional character. In England, for (we have not much certain knowledge), the ancient stock was first driven from the seaboard. The coast, and especially the East coast, was inhabited by Teutons—Saxons, Normans, Danes. At present there are dark-haired men of the older race in some coast-places. But they have acquired the social characteristics of the seafarers who once drove out their dark forefathers. Aristocracy still has some of the features of Norman society. The country gentleman still exhibits what is probably the Siberian type, and yet no blood-relationship is concerned here. The old Universities of Oxford and Cambridge—as has been shown or suggested by W. C. P. and D. Whetham—though now drawing almost equally from the same mixture of stocks, still exhibit divergent characteristics which in their origin may have been determined by the different races on which they respectively drew. General reflections of this sort are practically required before turning to some particular heads of discussion. The moral and religious problems will fall under the heads 'individual' and 'social'; and we must in each case consider the bearing both of speculative ethics and of moral religion on the one hand, and on the other of the statements and precepts of Christianity considered as based upon an accepted revelation of truth and duty. These divisions must be related to existing biological knowledge in general, to Mendelian work in particular, and to the proposals as well as the propositions of Eugenic Reform.

2. The individual. — With respect to the individual, it will be convenient to ask first what we may think of him in view of the general doctrine of heredity, and then to examine the facts, upon our provisional conclusion, of Mendelian work.

(1) General doctrine of heredity. — Of Original Sin (see Sin) it is impossible here to say more than that, whatever was the change or failure indicated by that doctrine, it was not an acquired character in the sense of biology. What is indicated is a fall, or failure to rise, in the relation between the spirit of man and God. The doctrine itself is not a gratuitous accusation of the race of man. It is the utterance of optimism under pressure of the experience of moral paralysis and temporal suffering. Its positive equivalent is the statement that we cannot measure either the dignity of man's origin or the splendour of his destiny by his present condition and his present individual character. A will better than the will he exhibits is the
origin of his being, and a virtue beyond his own present power is the end of his calling. It is not the Christian who declares the misery of man. What we want to assert is that the Christian interprets as the eclipse of a dignity which, through the moral effort made possible by Divine gift, man is invited to regain, whereupon the idea of racial determination is no more than a philosophical pseudo-scientific system for justifying one's own, or another's, inferiority. It is not now necessary to exhibit the influence of biological thought; and to inquire (a) what is its bearing for morals upon the question of the individual, his responsibilities, and his degrees of susceptibility; and (b) what is its bearing upon the control or influence of individuals in small or large groups, in the education of the child, the management of the family, the organizing of the nation, and so forth. Under both these heads it is desirable to distinguish between the general influence of the study of heredity and the particular influence on bearing of the Mendelian researches which constitute at present its most active and promising department.

Finally, turning to practice, we must ask what is the effect and what are the credentials of the eugenic proposals with which quite lately we have become more or less clearly familiar.

In speaking of the general effect or influence of biology, we refer not to the carefully acquired generalizations of Pearson, or Galton, or the writers in Biometrics, but to the strong general impression left by the studies on the minds of thinking men—that the qualities of a man are, in some sense, certainly fixed by inheritance. His ultimate character, we all admit, is a function of at least two variables, disposition and circumstance; but his disposition, it is contended, is the result of inheritance and is fixed at his birth. Moreover, at his birth it is the result of facts in his blood.

We may be safer in supposing that, while the physical frame, the diathesis in respect of disease and health, and so forth, are fixed by inheritance, the mental qualities and the personal temperament are excluded from the influence of blood. At any rate for our purpose we can content to allow—what certainly has not yet been proved—that though his whole complex organization a man is, in a certain sense, the result of natural inheritance. He is born what he is. Poets measure, but not less the man who cannot enjoy the poetry is born with that incapacity.

If we do not seek, then, to exclude from the range of hereditary influence any part of the complex constitution of man, or even any part where reason can be found for the freedom that is required for morals? May not a man conclude that, his character being fixed by inheritance, he has no responsibility for its improvement or for his actions? A doubt of the reality of responsibility on such grounds may have practical bad consequences for a man or for a generation after him; has passed away. It is certain that moral effort is gravely hindered in some men by the suspicion of its uselessness, and that thus—through the channel of an idea—more hindrance to improvement comes than from unfavourable inheritance. There are subjects in which a theoretical mistake when corrected leaves the life undamaged; for the apparent waste of time in unprofitable reflection is an essential part of the process of discovery. But, when the theoretical mistake refers to the very possibility of 'conduct' in the real sense, then the escape from error may leave a man with diminished power of self-control to correct an increased force of unfavourable habit. And the loss which may not appear in the man may become evident in the generation or the society.

It must be noted, however, that it is not only an abstract determinism that is unfavourable to moral effort. There is also its thoughtless elitarianism which, regarding moral events as uncaused and without result, pursues a bad course in the belief—if the great word may be used in such a connexion—that it may be retraced whenever the moral direction is altered. But when we allow this it must be said that the despondency and irresponsibility arising from the idea of racial determination are very real; and not less real in underdeterminism as a philosophic system is unfamiliar and unexamined. What can be said in answer to these impressions or suspicions?

(i.) First, there is an argument from ignorance (reduced in force, as will be presently pointed out by Mendelian research), which may be stated thus: The facts of heredity are grave enough. The drawbacks of evil inheritance are real. But, in the first place, the exact state of a man through inheritance is unknown. Older thinkers, relying principally upon the male line, and reckoning that as indicated by the patronymic, relying also upon knowledge of nearer ancestors alone, thought that the hereditary predisposition might be easily known. Fortis crescebit fortius et bonus. "Like father, like son." But the modern conception of the relationship—and it is a true one—recognizes the two parents as equally important, and knows that there are as many males in the female as in the male line. The patronymic stock, therefore, may or may not be important. To the excuse of the father's breeding and the success of his whole compatriotic background, "It runs in our family" ('Nec. E. W. vii. 6, 1148, 11), the answer would be, 'In which family?' The stock is almost infinitely mixed. The emergence of a given ancestral strain is inconceivable. The immediate forbears and the more remote are but collaterally related to the descendant. It is the stock, the germ, that matters. Little of importance can be learned by the study of father and mother alone. If you have bad qualities by inheritance from bad ancestors, you have many good ones in the same way; your great-great-grandfather, like almost every one's great-great-grandfather, was by modern standards intermate; but his wife was by modern standards a redhead and an ascetic. You cannot tell which influence is strongest in you; at any rate the result is mixed. And since you cannot tell that you have not the most favourable inheritance, is it your duty to act as if you had, and not to run the risk of degrading, under the cloak of a bad strain which you do not possess, fine qualities which may actually be better than any you can find for yourself in the freedom that is required for morals?

This argument from ignorance is at any rate inadequate to meet a reasoned determination. It does not touch the facts, whatever they are. But the argument is strong formally and practically. And, whatever the facts are, the duty indicated is plain. Fate may defeat the righteous man from without; it may defeat him in the very act of resistance. But his effort will still have been righteous; and if we turn for a moment to the language of positive religion, we must add that the 'judgment' upon the man will not be determined by his achievement measured on an external standard without regard to heredity, any more than by such achievement measured without regard to circumstances.

(ii.) But for may be actually necessary to the process of discovery. But, when the theoretic mistake refers to the very possibility of 'conduct' in the real sense, then the escape from error may leave a man with diminished power of self-control to correct an increased force of unfavourable habit. And the loss which may not appear in the man may become evident in the generation or the society.

It must be noted, however, that it is not only an abstract determinism that is unfavourable to moral effort. There is also its thoughtless elitarianism which, regarding moral events as uncaused and without result, pursues a bad course in the belief—if the great word may be used in such a connexion—that it may be retraced whenever the moral direction is altered. But when we allow this it must be said that the despondency and irresponsibility arising from the idea of racial determination are very real; and not less real in underdeterminism as a philosophic system is unfamiliar and unexamined. What can be said in answer to these impressions or suspicions?
facilities which without nurture remain not only hidden but incomplete. But nurture can only develop what is there; and it draws out one or more of a multitude of capacities. And, if this is true of the broad and definite capacities which are required by certain modes of life and livelihood, it is also true of the very numerous and subtle capacities which are required in the cultivation of virtuous or evil character. For character is not the same thing as temperament. Character is both defined and realized by the man in which a given external environment is managed in given circumstances. The vast excess of heritable qualities affords the field for such a choice. The relatively fixed external scene does not preclude a certain limited freedom of action, because the scene, though fixed, is greater than can be used or occupied by the life confronting it. Choice must be made for the scene; and it is often the case that internal constitution does not preclude a limited freedom of choice. For the possibilities are too numerous for realization. The potentialities cannot not all find room on the narrow scene of one lifetime. A man is capable of refinement and of bonhomie, of luxury and of self-denial. He cannot not in the same life principally exhibit good-nature and principally exhibit an excitable sensitiveness. He encourages one of the sets of qualities, and this partly by a direct fostering of them through thought and discussion, aided by ideals; and partly, and in a more important degree, by carrying out, on account of the same ideals, the actions which are the natural outcome of these qualities and which nourish and nourish, of a person to nourish the root. The results of training in armies and various professions of men drawn from a stock fairly evenly mixed show both by the contrast of the professional types attained and by relative uniformity within a profession that life is the result of the development by action of one or other set of qualities out of many such sets present in the subjects of training. The contrasted set of qualities, left without expression or result, is inoperative for the man, and is quite possibly pro tanto ascribable to the man, and it is apparent that the inheritance of acquired characters does not quite for certain apply to the specific case of starvation.

Again, besides the want of room—to use a figure—for all the inherited qualities in one life, there are some qualities that are mutually exclusive of one another. A man may be both extravagant and magisterially, both shal and boastful, both arrogant and servile, both rash and cowardly. But he cannot be both proud and humble, both predominantly devoted to self and predominantly of service to others. Many of these inheritances which are, in our view not moral, but the raw materials of morals, are in their own nature ambiguous, and can be turned to virtue or to vice. Such are tractability, caution, self-regard, the power of admiration. But even of these some are incompatible, in exercise and cultivation, with other qualities inherited by the same person. Life is the story not only of the management of circumstance but of the management also of these interior equipments. It is the abandonment of anti-imulsive management that constitutes moral failure. Moral failure is the failure to be moral.

Used at this point the language of positive religion, we may say that sinful action is not always action having any moral character in itself. Sleeping, eating, striking, speaking, are moral in themselves; and their wrong occurrence is the result of impulse only. Sin in such cases, and probably in all, consists in the declining of free and moral action and lapsing into the un-moral plane where action is the resultant of impulses.

A suggestion may be useful of some inheritances which are markedly disadvantageous, but which are best known as such precisely by those men who, having them, are overcoming them.

(a) The inheritance of qualities which are in themselves distinctly disadvantageous, such as the tendency to deceit or cowardice. These may be compensated, in a sense, in that they appear as qualities useful in the achievement of their purposes. There are some others which it is difficult to believe correlated with any compensative nature of qualities.

(b) The inheritance of qualities in themselves distinctly disadvantageous, in circumstances which render them practicable disadvantageous, for example, the inheritance of a courtier of an indolence to unpleasant contacts, which is useful to a person born in more primitive circumstances; the inheritance in humble life of what is roughly the aristocratic temperament—pride, haughtiness, the rapid concentration of attention, the expectation of swift obedience. A most practical moral disadvantage is the inheritance of warrior blood or of pleasure-seeking tendencies in persons born to dependence. It may be seen on a large scale in South Africa, where whole nations inheriting magnificent qualities for primitive war are born into an alleged civilization under which the warrior temper leads a man to the indignities of a gendarme; or a whole race, as at Thaba N'Chu, to disinheritance. The adventurous spirit which was once notably among white races was the squallid face of 'I.D.B.,' evasion of taxes, or aggravated assault.

(c) The inheritance in combination of qualities for all or some of which might, possibly, be valorous. This is probably the commonest cause, if we take the physiological calculus, of all our moral defects; the incorruptibility of impulsive, the incorruptibility of a generous impulse, of the parental impulse with the economic one. In fact, to take a large view, it might be said that the moral difficulties of a nation, or indeed of men as a race, the largest single part arises from the discordance between the inherited impulses which make us men and the inherited moral qualities which make some rich and others in consequence poor.

(d) Possibly also—and indeed experience seems to indicate it—there is in some cases a successive emergence in the course of one life-history of violently contrasted ancestral strains; so that, besides that conflict of impulses which at any one time occupies the conscience of the man, there may also be a succession of different types of prevailing impulses; and this results in the baffling of an acquired prudence, a destruction of what seemed a man's self-knowledge, and also in the disturbance of external conditions or social obligations which were fit for the earlier train of impulses, but unfit for the later.

Every one is familiar with the fact that what is undertaken in youth is not always easy to bear in old age, and that "tasks in hours of insight willld are only with extreme difficulty and many groans 'in days of gloom fulfilled.' But this does not adequately account for the difficulties which beset at least some individuals inheriting markedly diverse strains. A man who in youth and early manhood shares the prudent and industrious temperament of a Puritan ancestry seems to experience in middle life the sudden emergence of another set of relatives, hard-riding and money-scattering squires. It will be remembered, of course, in contrast with this, that such dislocated inherences may be practically very disadvantageous and act as a store of energy in societies which need explosions.

1 Most diamond-buying, a crime of white men in which the native labourer is an accomplice.
Unfavourable conditions may in some cases practically eliminate a quality by refusing it sufficient expression—as the root is starved by the competition of offshoots. Sometimes, viz. when the quality is very robust, the conditions appear rather to concentrate energies which might have been excluded that they should indicate their full exhibition. Thus, the influence of religious Puritanism spread so widely in the England of the 17th cent. as to cover with its sombre and austere habit of life much of the upspringing blood of another England, which, thus confined by the circumstances of what we now call the middle class, was released in the irresistible fervour of the New Model Army.

The circumstances which thus strikingly alter the practical effect of an unchanged heredity may be local, national, economic, ethical, religious; depending on fashion, station, vocation.

Sometimes it seems very probable that half the surprises of public life and of private encounter arise from the introduction of rare or exotic elements of race into the familiar lines of society—a Lamport in Parliament; a Carlyle in Chelsea; the French descendants of Henri iv. through Charles x. and the Whig aristocracy by the Cromwellian soldiers who are to this day boycotted as Catholic squires in Tipperary; Diersall the Castilian, living in an atmosphere of the lawyer-son of a literary man. A man inheriting qualities unfavourable to himself, in their combination, or their situation, nevertheless may, and often actually does, carefully avoid the occasions which give opportunity for their unfavourable effect; and they are weakened by the refusal of expression. And, though it would appear that he cannot hand down by inheritance the influence in them made secure, and the son inherits by blood not the gain but the heirloom—not his father's acquisitions but a share of his father's patrimony—yet the father can and does leave to his son even by blood greater general strength, and he may leave, besides, better surroundings, and better ideals; thus he sets about his own the influences of a good man's home.

With some of these, indeed with all, the struggle may be lifelong. For the Christian this is a foreseen difficulty, for he has been led to put no trust in 'the flesh' and to believe that high conduct must come not from the absence of difficulty there or from removing such difficulty, but in being delivered from the sphere of those influences. The consideration of these higher counsels does not belong to the present article. But it falls to us here to mention that the existence even of immeasurable difficulties in the blood ought not to daunt Christian thought any more than it defates, however much it harasses, the Christian life.

(5) Effect of Mendelian researches.—The effect of these upon ethics is not so great as it is supposed to be in some quarters, but the impression made is prodigious and the legitimate effect is very considerable. In speaking of the impression one must confess that it has sometimes been exaggerated in the common conception of biology as well as in the common conception of morals. In respect of biology, non-naturalists believe that naturalists have deserted Darwin in a body, and have found in Mendelism a new theory of the origin of species. The real fact is that naturalists still, on the whole, follow the line that Darwin traced, but at present are engaged not in reconstituting the past history of species but in observing the present behaviour of hybrids.

With regard to morals and sociology, it is supposed that Mendelism itself is a new method of procedure, promising better results than religious conceptions; or else that Mendelists have cleared up to a very large extent the facts of human inheritance. These opinions are not shared by biologists. But the impressions made, first by regular results capable of tabulation, and secondly by the exhibition of a process which is irreversible and of very great; and the actual acquisitions for anthropological thought are considerable. They can only be enumerated. (a) Mendelian research has reduced the force of the argument for practical freedom which was based on the fact of our ignorance—the argument in which we criticize the naive confidence of the naive despondency based upon the consideration of one line of ancestry alone, or upon the somatic life-history of immediate ancestors. This argument from ignorance retains great force, and it is certain that we have no such knowledge as can dissipate the obligation of effort for every individual. But the regular distribution through descent of such qualities as are Mendelian (that is, so unitary as to answer to the Mendelian analysis) certainly tends to a prospect of knowing one day much more of the order in which human qualities are reproduced in descent. Certain supposed laws of that reproduction had long been familiar. The repeated falsification of these laws tended to encourage those who held the opposite view. But when the assertion was observed again and again that ancestral features, and even a complete assemblage of such features, may appear at intervals which defied all calculation and disconcerted all expectation, the knowledge of the stock's history was not, as in ordinary private families, the appearance of total originality in the offspring—a strangeness of feature and temperament which was only quite gratuitously traced to a forgotten ancestor; and the phenomena of a mixed race in the offspring became associated in the mind. (b) Mendelism short steps to discovery (taken within a short span of variation within a species) give hope of advancement towards the finding of that law. To this extent the argument from ignorance, from the impossibility of discovering the facts loses force—an argument which was practically effective for moral encouragement. For that ignorance depended upon the proposal of a law to which the exceptions were too numerous and too obvious to be ignored. Mendelian work has shown that the distribution of the phenomena is more complex than was supposed, and this gives promise of discerning a regular sequence in appearances which were formerly the most evidently incausal.

In the interest aroused by the still recent rediscovery of Mendel the work of Weismann is partly forgotten. By his description of the continuous germ-plasm which is the foundation of his immediate forebears is an insufficient method for estimating the forces of heredity in an individual, those forebears being in Weismann's thought collateral relations, like the leaf on a twig next above the leaf under consideration. The widening of our outlook in this manner and the more complex sequences shown by Mendelian study give a fresh hope of discovering regular sequences in inheritance, and so lessen the appearance of physical originality in individual human lives. We have learned how a pure racial life may be the putting of a mixed race; how some features may be completely eliminated by breeding; and how original heterozygotes may arise from the interbreeding of two contrasted varieties.

(b) Secondly, and more particularly, Mendelian research has upset the doctrine of the average or proportional representation of ancestral qualities in the offspring. This is perhaps the most important difference for ethics. Under the guidance of
Galton looked for a quasi-mathematical representation of different stocks in a given descendant. A man whose great-grandmother was Swiss was eighth-part Swiss. We now know that the system of proportions within the individual does not hold that, given a Mendelian human character, it ought, whether as dominant or recessive, to reappear uncombined in a certain proportion of the descendants of which it forms part. This particular virtue could be conceived of as a Mendelian feature (which by reason of its complexity it cannot be), its non-appearance in a particular individual might be due to its recessive character. And, besides, we could no longer argue as confidently as before from the enormous excess of moral qualities inherited by every stock in the midst of families otherwise at a disadvantage psychologically, says with reference to the students of genetics:

"If you credit us with the power of being able to predict ... mentally defective, may we also credit with at least some portion of the fault its appearance of moral ability?"

The answer is in the negative. How perilous for practice may be such ill-founded expectation is illustrated when the same writer says:

"Surely segregation for life with kindly treatment must in the interests of posterity be the fate of all who both fall in life in the lower grade, and who have no redeeming qualities to compensate for such a defect."

In our present state of information such language is no doubt used by a thoughtful man only in irony or caution. But perhaps this is not enough.

The subject is very serious, very delicate, and very new to the public. And it is better to say simply and directly with Punnett:

"Except in very few cases, our knowledge of heredity is man is at present far too slight and too uncertain to base legislation upon."

Who foresees, and who would now foresee, with all the materials for judgment and with all the assistance of Mendelian observation, the emergence—to take no great or hereditary Voltaire, et alie, et alie, et alie masculins? To look at Homboun's best in the Leuvre is to recognize a mystery of phenomena which stands unexplained by the generalizations of science. Art, with its power to represent now and again a mixed effect of epoch, race, profession, and personality, corrects the narrow conception which rigidly and, within its sphere, usefully arises from the rigid attitude and selective contemplation of science.

By Mendelian work, then, the argument from ignorance and the argument from excess of equipment are alike reduced in force. But virtue and vice are not allelomorphs, and the moral agent is not the mental heredity. The qualities which are the raw material of morals are not unitary in the Mendelian sense. And, in spite of the reducing process which is exhibited in Mendelian observation, and which possibly corresponds to a certain stage in karyokinesis, every man finds in himself a large excess range of possibilities; so that, even if the moral morals are assimilated as such, the life history is the scene of an enforced exercise of a real selection, often carried out under the influence of ideals which found their first strength in people of another blood. Both blood and circumstance closely condition the moral effort, but they do not determine it. A man cannot choose whether he will be a Teuton or a Saxon. If he be born Arab, he cannot reach the excellence of the Celt, or the Celt him. But he can choose between being the best Arab he can be and the worst Arab he may be. A man cannot choose whether he will be educated at a Public School or not; but he can choose between doing there as well as he can or as badly as he dares.

Religionally, we should say that a man is called upon to make the best of inherited qualities as of circumstance. He can make the worst. To surrender to temptation is to decline to the name of the natural impulses so that behaviour becomes the resultant of their contest. The life of grace is a life in which the will declines to re-enter the sphere of necessity and is capable of an anti-impulsive effort. And, if we use the language of dogma, we must say that a man will be judged not according to his moral accomplishment, measured on an external scale but according to the degree of his fidelity under conditions moral and material, external and internal.

a. Society—From the case of the individual we turn to the case of influence exercised by man on man, by education, and government, in the family and larger groups. Here we shall discuss (1) the non-inheritance of acquired characters, and (2) enigmatic proposals.

(i) Non-inheritance of acquired characters.

At first sight it seems that our judgment must be greatly affected by belief in the inheritance or non-inheritance of acquired characters. Something is still said on behalf of their inheritance on a priori grounds. Popular thought and the thought of practical breeders still affirm this inheritance. But we have to take account here of the biological denial of such inheritance or of its occurrence in a sufficient number of cases to affect the course of variation. The importance of this difference of opinion is not so great as it may appear, for there is certainly another nexus of moral and mental inheritance besides that of the blood. Tradition and the current of ideals, religion, education, public opinion—in one word, institutions—form a link between man and man and between generation and generation, by means of which the moral ideals of one are inherited by another; and here, more securely than in the germ plane, we may except the analogy between memory and heredity which has been taught by Samuel Butler and by Dr. James Ward. Those ideals may find their best opportunities in a given race, but they also pass from race to race. Formed in one racial soil, they may be carried on in another.

The results of character in different races seem to show that, while race remains a factor of real importance, the divergencies of society in mental standing are to be accounted for in the main by the differences of culture. When the stock is fairly mixed, as in Britain, the results of a given culture appear to an external observation startlingly regular and uniform. It is only when viewed from within, by a member of the cultured class, that the differences of race within the class appear important.

The other bond, the bond of ideals, is the one in which the acquisitions of culture are passed on. The task of education is the same whether or not there be any such inheritance in the physiological sense. If improvement can be passed on by blood, then we must improve each generation as far as we can; and we must equally do this if every generation starts with a clean sheet, uninfused by the
HEREDITY (Ethics and Religion)

behaviour or the experience of ancestors. Welsmann has shown, even in the case of musical ability, that its capacity and not accomplishment which is handed on hereditarily.

The case for care in its outer sense remains unshaken—care for the progressive improvement of the environment, in such matters as food, water, air, housing, medicine; care for the elimination of disease; and finally for the increasing of liberty, greater justice, more equal opportunity, less unequal rewards. And here it may be remarked that in a relevant volume of The Functioner, exhibiting very fully the present condition of the study of tuberculosis, hardly anything is said of inheritance. Physicians, and indeed physiologists like Starling, assert that the future of the race depends mainly upon our care of the rising generation.

(2) Eugenios proposals—Two rival schemes are in existence for supplementing or even replacing the work which we may generalize under the names of education and influence.

(a) The first, which may be associated with the name of Archdall Reid, and which suggests affinities with the thought of Nietzsche, is that of giving free play to the forces of elimination so as to secure improvement by means anterior to those of natural selection. The consideration of this need not be expanded, for it is not at present prominent. All that need be said is that we have no security that the natural forces which have the tendency to diminish the force of pity within himself by lessening the action dictated by pity, is like inviting a breeder of racehorses to instruct himself in the art of cultivating the character of swiftness. It is an attempt to improve the horse of man at the cost of those elements of character, individual and social, for the sake of which alone it is worth while that the race of man should survive.

(b) In broad contrast with this is the movement of Eugenics which is animated by the desire to find some method more merciful than that of the dog-breeder, who said in explanation of his success: 'I breed a great many, and I kill a great many.' This Eugenics which has for its base the ideas that we have done our best with the existing human material; that the improvement of environment is no longer the highest path; that we cannot face the alternative of allowing the free play of any destructive forces; and that the line of improvement is to be found in getting better lives as the material for nurture—more of the best and less of the worst.

This movement is both educative and legislative, both restrictive and positive; and its different aspects engage the attention of different persons. From our point of view the merits of the movement differ in its different parts. Its educational work, supposing guidance can be relied upon, must be almost entirely good. But any efforts in the direction of legislation must be surrounded with peril. While education is safe and legislation at present dangerous, it must be remembered that even more directly militates against spontaneity, because the considerations involved come nearer to the heart of the matter. In a curious and intricate study of other forms of affection, von Hartmann shows that their action is not to be accounted for on mechanical or consciously rational grounds. They owe nothing to calculation of benefit, nothing to mechanical or physiological necessity. It seemed to von Hartmann that a cosmic reason, not apprehended by the personal mind, produced results which are in the true interests of the race and of the mass of justifiable because they are not at present free. They lack the self-control which freedom requires, and they are also open to the mischievous control of other persons. There is a strong case for their segregation, in safe judgment can be reached in defining their condition. But it is not certain that segregation must be by legal action. It would be best at the present stage to extend very largely the voluntary work, which is being done to the end of giving to persons, and to supplement it by public funds. And, if further steps must be taken, they must only be taken: (i.) not at the cost of a general extension in the community of suspicion and fear, especially in the more dependent classes; (ii.) not at the cost of human dignity as such; (iii.) not as an introduction to what are known as positive movements in the improvement of the race. If by a general improvement of the environment (in which we include a general rise in wages) a greater actual freedom was given to all classes, it is probable that in the majority of cases families would take due care of their own feeble-minded members. When the whole family is feeble-minded, a case for compulsion arises; and the legislation which met this case could be framed so that at least the case of criminal neglect by natural guardians. The weak point of the matter is in the fact that it is in effect a legislation providing for the poor to be controlled by the rich.

The point for calling a halt, even in cases concerning the dangerous or inconvenient parent, is reached when we come in sight of a lowering of public morals by action giving offence even to the ill-instructed conscience; and it is for the educational section of the Eugenic Movement to remedy this. When we turn to the positive reformer, the moral and practical difficulties which confront him are great. It is true that Eugenists would have to seek the cultivation of different kinds of excellence. A general or average improvement would destroy the work of society. If we have only sinewy men to drive the car, where shall we find the heavy man for navvy work? Different breeds would have to be formed along widely different lines of specialization. This would check the interchange of life; for, if there were free interchange, the enterprise would be defeated by 'panmixia.' We should impair still further the social unity of mankind which has for its base the idea that we have done our best with the existing human material; that the improvement of environment is no longer the highest path; that we cannot face the alternative of allowing the free play of any destructive forces, and that the line of improvement is to be found in getting better lives as the material for nurture—more of the best and less of the worst.

Pharmaceutical review of the general discussion of the present condition of the study of tuberculosis, hardly anything is said of inheritance. Physicians, and indeed physiologists like Starling, assert that the future of the race depends mainly upon our care of the rising generation.

(2) Eugenios proposals—Two rival schemes are in existence for supplementing or even replacing the work which we may generalize under the names of education and influence.

(a) The first, which may be associated with the name of Archdall Reid, and which suggests affinities with the thought of Nietzsche, is that of giving free play to the forces of elimination so as to secure improvement by means anterior to those of natural selection. The consideration of this need not be expanded, for it is not at present prominent. All that need be said is that we have no security that the natural forces which have the tendency to diminish the force of pity within himself by lessening the action dictated by pity, is like inviting a breeder of racehorses to instruct himself in the art of cultivating the character of swiftness. It is an attempt to improve the horse of man at the cost of those elements of character, individual and social, for the sake of which alone it is worth while that the race of man should survive.

(b) In broad contrast with this is the movement of Eugenics which is animated by the desire to find some method more merciful than that of the dog-breeder, who said in explanation of his success: 'I breed a great many, and I kill a great many.' This Eugenics which has for its base the idea that we have done our best with the existing human material; that the improvement of environment is no longer the highest path; that we cannot face the alternative of allowing the free play of any destructive forces; and that the line of improvement is to be found in getting better lives as the material for nurture—more of the best and less of the worst.

This movement is both educative and legislative, both restrictive and positive; and its different aspects engage the attention of different persons. From our point of view the merits of the movement differ in its different parts. Its educational work, supposing guidance can be relied upon, must be almost entirely good. But any efforts in the direction of legislation must be surrounded with peril. While education is safe and legislation at present dangerous, it must be remembered that the educators and the moderates give the opportunity of influence to the legislative and extremer elements of the movement. It is unsafe to suppose that this movement, because of its academic character, is practically unimportant. All revolutions are prepared in studies, and carried out by minorities.

Majorities always suffer.

In order to reach the more difficult consideration which is part of our subject, the case of the feeble-minded may be briefly dismissed. The control of the ready and permanently feeble-minded is morally
individuals. Whether this speculation be true or not, there can be no doubt that the moral and religious element is involved in anything which necessarily replaces uncalculating affection by calculations extraneous to the personal attraction. It may conceivably be necessary, that the method should be adaptable to many cases it must carry this loss. And the interest of true progress seems to be in securing the good—supposing provision to be certainly recognized and securely aimed at—by means which reduce as little as possible the spontaneous element.

Such means are found when definite encourage- ments and prohibitions are discarded, and we have instead some system that puts on good unions a small, hardly perceptible, but constantly repeated, premium. Is not such a system found precisely in a good social code which requires in all the cultivation of what is best; not avowedly for the sake of offspring, but for the sake of social life itself in its general aspect? In modifying the other environment in its truest sense—better ideals, more liberty, more self-respect, more respect for every citizen—that secures more surely even those special ends to which economists recall us! And is not a particular part of this really good society, and the part that most surely reacts upon parenthood, the institution of marriage itself? Where marriage is rampant, late, and inextricably hindered by human prejudices of caste, fashion, display, there it is least likely to be real. Where the true nature of marriage is well taught and firmly believed in, where the rule of marriage is faithfully obeyed, there, in constantly increasing effect, it tends powerfully to set a premium upon the best lives.

For, in the men's by its way has the freedom of the man's garland by its worth, giving an advantage in the competition of races and nations to the mono- gamous. Christian marriage, if only it were entirely true to its definition, would give this advantage in a much higher measure. The business of exchange, in the proportion in which it is true to its definition, steadily produces a society of men marked by industry, honesty, mutual considera- tion. Christian marriage, true to its definition, requires high degrees of self-government, respect for others, and respect for the other marriages, industry, sacrifice for offspring. And the qualities thus fostered are in point of fact found to be correlated, on the whole and in the long run, not only with moral excellence of all sorts, but with the other human qualities coveted, including intellectual excellence.

For Christians, in this connexion as in all others, the task undoubtedly is to guard the ideal view of life against every advance of materialistic con- ceptions, and to preserve in activity the spiritual forces of their existence. They must, in every instance, and in every sense, be bad sense, mechanical. But the difficulty is to determine what conceptions are most truly spiritual. 'The pig which makes the sty—we abandon our own peculiar quest, in which has actually been found all former real advances. But such a statement cannot pass, as it stands, among Christians who are pledged, by the doctrine of the Incarnation, to the faith that it is the busi- ness of the spiritual forces, with respect to the material conditions. Whether it be a Bill, as it was in the same year relating to the Education of Defective Children. A careful study of the measures shows that it is impossible in such an article as this
to express a reasoned judgment on their general effect. Controversy upon them has already begun, and will secure as it proceeds an examination of the thoroughly possible details of the proposed laws in concrete cases. On the one hand, urgency is pressed by those who are convinced of the danger to the race of leading defective persons in families; and although sure that large powers of detention will always be prudently used. On the other hand, men not well acquainted with the facts point to the danger of including under the compulsory powers children who are merely backward; and Sir James Crichton-Browne, one of the Visitors in Lunacy, says: 'The tendency seems to be at present most marked, in England as well as in America, to concentrate attention far too exclusively on heredity as the cause of degeneracy, and to look to segregation too hopefully as the one sure means of its prevention.'

The opinion of Dr. Auden, the School Medical Officer for Birmingham, is also worthy of attention, especially in view of what Sir J. Crichton-Browne calls 'almost a scare' on the subject of feeblemindedness. Dr. Auden says that of 159 children presented to him as mentally deficient, 64.5 per cent were made so for the sake of education and the ordinary schools; and adds: 'In view of the social disabilities likely to accrue to a child under this Act (sic), it is of the utmost importance to determine whether the intellectual retardation is temporary and he speaks of the difficulty of diagnosis (Report for 1918 to the Birmingham Education Committee, pp. 54-71).

In conclusion, while it is with hesitation that Christians may oppose reforms which have much of good in their motive, they must present a direct and unhesitating resistance, even at the cost (could it be proved) of grave delays in physical improvement and immense national expense and suffering, to all methods which can be justly described as cramps on the children of freedom, which has become natural to Christians, or as inconsistent with the method of salvation we have received to believe—a method which seeks good not by the forcible elimination of evil, but by the long road of a sacrifice in which the Highest is involved.

1 The first of these two measures (the Mental Deficiency Bill) has become an Act; and the operation of the Law as now provisionally defined is expected with very great confidence and approval.
saving truth. In the long struggle to preserve the distinctive character of the Christian faith the emphasis fell on doctrine, and it became necessary to establish that which had been taught by the apostles, through a duly accredited channel of the tradition. The claim of Apostolic succession in the episcopate and the creed were the outcome. When Constantine granted imperial favor, the Church, which was the bitterest of the contendents in the contest was vastly increased. Heresy became criminal. In the reign of Theodosius II. (382) it was made a capital offence. The effect is seen to this day in the common dread of the epithet even among Protestants.

II. SCENE OF THE HISTORY OF HERESY.—I. Its rise in Apostolic times. Almost from the very beginning of the Christian faith divergences of belief arose. These were more serious than the temporary partyism that sprang from attachment to favourite leaders (1Co 1-2). They represent real differences in the point of view from which the new faith was apprehended. Some of the ancient writers place Jewish sects and Greek schools among Christian heresies. This error points to the fact that the dangers of division arose mainly from influences emanating from these two quarters. Many of the early sects found it difficultly if not impossible to detach themselves from their inherited Judaism, while Greco-Roman culture naturally clung to the ideas connected with those religious aspirations which had found fulfilment in the Jewish message. Thus, while Judaisms threatened to absorb Christianity and obliterate its distinctive features by combining with it its legal and ceremonial forms and by interpreting its ethical and religious spirit in the terms of an abstract monotheism, the Greek spirit threatened to engulf the faith in a speculative philosophy. From the outset Jesus Himself was the theme of central interest. The conservative, unprogressive Jewish believers would have made Him a mere man; the speculative Greek philosophers would have made Him a cosmic force, and thus to introduce a cultus with secret mystic rites and their associated moral results of asceticism or licentiousness. Naturally, there was also the denial of the early Christian eschatology, especially the physical resurrection. The struggle with this movement called forth a considerable portion of the NT writings. There appears to have been no organization holding these views. Like the later Gnosticism, of which this was the beginning in Christianity, it represents merely a tendency. The Nicene Fathers are not the only party named in the NT. They are charged with anti-Judaism and loose morals. A guess of later writers traces them to the descom Nicolas at Antioch. It is evident that before the end of the 1st cent. the speculative movement that threatened the great Nicene controversies had already begun.

2. Heresies of the Nicene Age.—I. ANTINOEAN HERESY.—(a) Gnosticism.—The greater part of the Christian bittermen in the 2nd and 3rd centuries arose out of the effort to preserve the early Christian traditions in the face of philosophic and fantastic attempts to combine them with Greek speculation and Oriental mythology. The long lists of heresies given by the Church writers represent in many instances only variants of a common type. The term 'Gnostic may be allowed to stand for the whole movement that threatened the unity of the Church. For Gnosticism is not the name of a separate body of people or system of doctrines, but rather a trend of thought and practice. Attempted classifications of the phenomena of Gnosticism are unsatisfactory. They are too variegated and complex. Syncretism in religion was a characteristic of the times. The advent of the Christian faith gave fresh inspiration to the hope of attaining to a final and perfect knowledge of all being. Christianity came as a 'light (pistis); it must be elevated into knowledge (gnosis). The prevailing Neoplatonism of Alexandria, shot through with Oriental imagery, was the instrument for the accomplishment of this task. See, further, art. GNOSTICISM.

(b) Origenism.—By way of reaction a Christian Gnosticism appeared. Its centre was the catechetical school at Alexandria, founded by St. Papias. Here Philo the Jew had taught his Christian successors how to marry Hebraic tradition to Platonic philosophy by means of allegorism; and Clement, by a series of speculations supported by the fiction of a secret Apostolic tradition, and Origen, in a systematic way, built up a body of great importance and realism. Gnosticism of a type that mostly passed for Christian. It was able to do so by maintaining the appearance of preserving the Scriptures, the common traditions, and the Rule of Faith. We are here concerned only with those features of Origenic speculation on account of which he was later regarded as a heretic. First, in his attempt to identify the Logos with the Son of God without compromising the unity and supremacy of God or denying the reality of the incarnation, he postulated the real general, in eternity, of the Son from the essence of the Father. While this set the Son within the Godhead, it subordinated Him to the Father. From the standpoint of a later, more cosmic doctrine than Gnosticism, this was heresy. Second, in accordance with his scheme of the origin of all things from the highest being and its return thither, he seemed to affirm the ultimate restoration of all, even of devils, to God. This too became heresy. Inasmuch, however, as Origen's speculations became the source of the later doctrines of the Trinity and the two natures of Christ, we can say that the Gnostic heresy reproduced in Origen prepared the way for orthodoxy. See, further, art. ORIGEN.

1. See H. de Vrieze, En De Heretieken, 2d ed. (1901), ch. 2, on Heretics. These were the only party named in the NT. They are charged with anti-Judaism and loose morals. A guess of later writers traces them to the descom Nicolas at Antioch. It is evident that before the end of the 1st cent. the speculative movement that threatened the great Nicene controversies had already begun.

2. Heresies of the Nicene Age.—I. ANTINOEAN HERESY.—(a) Gnosticism.—The greater part of the Christian bittermen in the 2nd and 3rd centuries arose out of the effort to preserve the early Christian traditions in the face of philosophic and fantastic attempts to combine them with Greek speculation and Oriental mythology. The long lists of heresies given by the Church writers represent in many instances only variants of a common type. The term 'Gnostic may be allowed to stand for the whole movement that threatened the unity of the Church. For Gnosticism is not the name of a separate body of people or system of doctrines, but rather a trend of thought and practice. Attempted classifications of the phenomena of Gnosticism are unsatisfactory. They are too variegated and complex. Syncretism in religion was a characteristic of the times. The advent of the Christian faith gave fresh inspiration to the hope of attaining to a final and perfect knowledge of all being. Christianity came as a 'light (pistis); it must be elevated into knowledge (gnosis). The prevailing Neoplatonism of Alexandria, shot through with Oriental imagery, was the instrument for the accomplishment of this task. See, further, art. GNOSTICISM.

(b) Origenism.—By way of reaction a Christian Gnosticism appeared. Its centre was the catechetical school at Alexandria, founded by St. Papias. Here Philo the Jew had taught his Christian successors how to marry Hebraic tradition to Platonic philosophy by means of allegorism; and Clement, by a series of speculations supported by the fiction of a secret Apostolic tradition, and Origen, in a systematic way, built up a body of great importance and realism. Gnosticism of a type that mostly passed for Christian. It was able to do so by maintaining the appearance of preserving the Scriptures, the common traditions, and the Rule of Faith. We are here concerned only with those features of Origenic speculation on account of which he was later regarded as a heretic. First, in his attempt to identify the Logos with the Son of God without compromising the unity and supremacy of God or denying the reality of the sonship, he postulated the real general, in eternity, of the Son from the essence of the Father. While this set the Son within the Godhead, it subordinated Him to the Father. From the standpoint of a later, more cosmic doctrine than Gnosticism, this was heresy. Second, in accordance with his scheme of the origin of all things from the highest being and its return thither, he seemed to affirm the ultimate restoration of all, even of devils, to God. This too became heresy. Inasmuch, however, as Origen's speculations became the source of the later doctrines of the Trinity and the two natures of Christ, we can say that the Gnostic heresy reproduced in Origen prepared the way for orthodoxy. See, further, art. ORIGEN.

1. See the works of Justin, Irenaeus, Hippolytus, and Tertullian above referred to; also H. de Vrieze, En De Heretieken, 2d ed. (1901), ch. 2, on Heretics. These were the only party named in the NT. They are charged with anti-Judaism and loose morals. A guess of later writers traces them to the descom Nicolas at Antioch. It is evident that before the end of the 1st cent. the speculative movement that threatened the great Nicene controversies had already begun.

The long lists of heresies given by the Church writers represent in many instances only variants of a common type. The term 'Gnostic may be allowed to stand for the whole movement that threatened the unity of the Church. For Gnosticism is not the name of a separate body of people or system of doctrines, but rather a trend of thought and practice. Attempted classifications of the phenomena of Gnosticism are unsatisfactory. They are too variegated and complex. Syncretism in religion was a characteristic of the times. The advent of the Christian faith gave fresh inspiration to the hope of attaining to a final and perfect knowledge of all being. Christianity came as a 'light (pistis); it must be elevated into knowledge (gnosis). The prevailing Neoplatonism of Alexandria, shot through with Oriental imagery, was the instrument for the accomplishment of this task. See, further, art. GNOSTICISM.

(b) Origenism.—By way of reaction a Christian Gnosticism appeared. Its centre was the catechetical school at Alexandria, founded by St. Papias. Here Philo the Jew had taught his Christian successors how to marry Hebraic tradition to Platonic philosophy by means of allegorism; and Clement, by a series of speculations supported by the fiction of a secret Apostolic tradition, and Origen, in a systematic way, built up a body of great importance and realism. Gnosticism of a type that mostly passed for Christian. It was able to do so by maintaining the appearance of preserving the Scriptures, the common traditions, and the Rule of Faith. We are here concerned only with those features of Origenic speculation on account of which he was later regarded as a heretic. First, in his attempt to identify the Logos with the Son of God without compromising the unity and supremacy of God or denying the reality of the sonship, he postulated the real general, in eternity, of the Son from the essence of the Father. While this set the Son within the Godhead, it subordinated Him to the Father. From the standpoint of a later, more cosmic doctrine than Gnosticism, this was heresy. Second, in accordance with his scheme of the origin of all things from the highest being and its return thither, he seemed to affirm the ultimate restoration of all, even of devils, to God. This too became heresy. Inasmuch, however, as Origen's speculations became the source of the later doctrines of the Trinity and the two natures of Christ, we can say that the Gnostic heresy reproduced in Origen prepared the way for orthodoxy. See, further, art. ORIGEN.
HERESY (Christian)

(e) Marcionism.—A powerful reaction against the prevailing tendency of speculation was headed by a merchant named Marcion, who came from Pontus to Rome about A.D. 140 and propagated his anti-Jewish, apparently Pauline, ascetic form of Christianity, with such success that there sprang up hundreds of churches which maintained his views. "Knowing that the Gospel was the revelation of the God of grace in Christ—the good God in contrast with the Jewish God of righteousness and vengeance—and of the Pauline antithesis of law and grace to the end, he denied that Jahweh could be identified with the God of love who suddenly revealed Himself when Jesus came to Capernaum. Life in the world created by the Jewish God was evil, and the true Christian life was the ascetic. Marriage was forbidden in his churches. In accordance with these views he framed a canon of Christian Scriptures that included, along with only ten genuinely Pauline Epistles, Luke's Gospel and Acts with the Jewish portions expurgated. Marcion's identification of Jesus with the good God gave an impulse to orthodoxy to place Him on an equality with God, and his canon of new scriptures gave an impulse to the delimitation of a true canon. Marcionism was in effect repulsed because of its two Gods and its rejection of the OT, but its moral vigour was great enough to perpetuate its churches in Italy, Egypt, Palestine, Arabia, Syria, and elsewhere, for a long time. See, further, art. MARCIANISM.

(d) Monarchianism.—Other reactions against speculation took the form of a return towards the simple early Christian view of Jesus and a rationalistic Judaism. As time passed, it was powerfully supported by the critical-historical method, and elsewhere, for a long time. See, further, art. MARCIANISM.

(e) Montanism.—The Kataklysthetic, or Montanist, heresy, which is the second principal reaction against the speculative tendency, got its name from Montanus, a Christian prophet of Phrygia. This man sought (A.D. 156) to combine the Phrygian tendency to freency and ecstasy with the mystical age, anti-Judaistic, anti-Jewish, and anti-Jewish morality of the early Church, and, at the same time, to announce the fulfillment of the promises of the Paraclete (in himself, it was charged), the Immanuel of Christ's return, and the near establishment of the Kingdom at Pepusa in Phrygia. All they received the Spirit were to be prophets; they were 'perfect,' able henceforth to live sinlessly, and would follow the ascetic life. Marriage was forbidden. Yet, recognizing the impracticability of his ideals for some, he allowed a lower grade who acknowledged two grades of sin—mortal and venial.

Montanism (q.v.) was doubtless highly moral and spiritual in aim. It sought to correct the prevailing laxity by denying a second person, and the prevalent formalism by substituting for ecclesiastical or episcopal authority the authority of immediate inspiration. Tertullian, late in life, to Montanism is an evidence of its great moral power. The movement made great headway, and only after long controversy, lasting into the fifth century, did it remain in opposition to the speculative, allegorizing school of Alexandria. Monarchianism and Montanism are the principal forms of this reaction. Monarchianism was contrasted with and rejected by the Church, in no small degree, by saying that in the intellectual and moral interest of guarding the monothetic government of the universe prevailed over that emotional-religious interest of guaranteeing the finality and perfection of salvation which became the motive of Catholic theology. Hence they fell apart in the minds of Saint Jerome. Monarchianism (q.v.) emphasized the reality of the events of His human life (though at times tending to Docetism), yet sought to preserve the highest place assigned to Him by faith, without yielding to the prevailing tendency to polytheism. Its Christology was either Adoptionist, that is: Jesus was a man elevated to Divine sonship for His obedience; or pneumatic, i.e., Jesus Christ was more than a mere man in that He was indwelt by the pre-existent Divine Spirit and thereby enabled to save. The former perpetuated Ebionism, while the latter tended toward the prevalent speculative trend. The so-called Alogi of Asia Minor, appearing about 170, is the principal form of the later Adoptionists. They opposed Montanism, were interested in Jesus' human life, repudiated the Logos speculation, and, possibly for this reason, rejected the Johannine authorship of the Fourth Gospel which they ascribed to the Gnostic Cerinthus. Paul of Samosata represented a high type of Adoptionist at a later date. See, further, art. ADOPTIONISM.

The Montanist doctrine is contained in two directions: according as it excluded Christ from participation in Deity or not—the modalistic and the dynamicist Christology. The death of Christ was a great difficulty for both. The Dynamicists were forced to separate Him from God in His death, while the Modalists identified Him with God, and received from Tertullian the nickname of Parapastasists. See, further, art. MONARCHIANISM and SAPEREULLAISM.

(f) Paulinism.—Paul of Samosata, bp. of Antioch and high dignitary at the court of Zenobia, Queen of Palmyra, combined Adoptionism and Origenism with an anti-metaphysical view of the relation of Christ to God. Christ, born of a virgin, and inspired by the impersonal Logos, bore a personal, moral relation to God. The perfect unity of His will with God's in His earthly life of obedience became indissoluble. At the Resurrection He was raised to eternal Divine dignity. Though Paul was condemned at a synod at Antioch in 268 or 269, his views, upheld by time for Lucian the martyr (who recanted), never died out. In Persia were numerous in Persia and Armenia. Immigrants from Armenia carried his doctrines into Thrace and Bulgaria, who under the name of Paulicians (q.v.) became a root of the great medieval revolt against the Roman Church. In Spain during the 6th centuries, their views produced a tremendous controversy, in which the famous Alcinn took part. There is reason to believe that sects holding their doctrines persisted to the Reformation. 'The Key of Truth,' discovered in recent times among the Armenians at Thrace, is a typical example of the evangelical character mixed with asceticism.

HERESY (Christian)

(g) Manichaeism.—It is said that a certain Mesopotamian named Mani, a traveller in many lands, reached the Persian capital in the year 246 and forthwith began the propaganda of a new faith. His success was so great that he won the royal favour; but through the opposition of the Magi he lost it in the reign of a later king, and was crucified. His doctrine was so deeply rooted to perish, and spread rapidly. They won many followers in Italy and N. Africa (the great Augustine was for a time one of them), and ultimately developed, through the Cathari of France, Spain, and neighbouring lands, a powerful anti-Roman religious organization in alliance with a culture that promised for a time to anticipate the Renaissance and the Reformation.

At first sight, Manichaeism appears as revived Gnosticism. It united to a Christian terminology a combination of Jewish, Babylonian, Zend-Avestan, and Buddhist religious beliefs and cosmological speculations. It recognized two grades of adherents—auditors, and elect or perfect. It offered a cosmic cosmogony, a theory of cosmic redemption, and a dualistic morality. In the last particular it went further than Neo-Platonism, since it affirmed the reality and sternness of evil matter. The two principles were polar in effect and temper. The two kingdoms of Light and Darkness, ruled respectively by Satan and God, include all things and persons. In Manichaeism, the material man (not the earthly human being) to resist Satan, but he is defeated. Though rescued by God and the angels, he has lost meanwhile some particles of light. By the mixture of these with the darkness of the present evil world comes into being. The demons now create man (proper), seeking thereby to impress and preserve a portion of the light. But God provided a means of redemption by creating a system of heavenly bodies—sun, moon, and stars—to attract the particles of light and become reservoirs of it till the redemption is complete. Jesus—not the historical—and the elect assist men.

The process goes on even after death (purgatory). At the end of the world the unredeemed souls fall to the prince of darkness.

The moral earnestness underlying this imposing philosophy, its strict asceticism—marriage, lust, impure talk, animal food, and physical violence were equally forbidden—and a simple culture were attractive to many noble souls. It was weakened by a doctrine of indulgences. The influence of Manichaeism is probably found in the Essenes, the Enthusiasts, Bogomils (q.v.), Beghards, etc., of medieval times. See, further, art. MANICHÆISM.

II. NICENE AND POST-NICENE HERESY.—(a) Ariasmonism.—The long battle between Monarchianism, the Athanostochene historico-critical school of interpretation, and rationalism, on the one side, and Catholicism, with its realistic view of salvation, its allegorical interpretation, and its metaphysical of deity, on the other side, came to a head in the bitter conflict between the Arians and Athanasians at the Council of Nicaea (325). The prize to be won was not only the vindication of an interpretation of Christianity, but the Imperial support. Arius gave his name to the defeated party. Athanasius (q.v.) became the apostle of the Council's decision.

The immediate occasion of the conflict was the affirmation, by Bp. Alexander of Alexandria, that the pre-existent Son of God had a separate hypostasis (ὑποστάσεις), and that the sonship was by the very nature of God, and not by His will. Arius, one of his presbyters, controverted this position, and urged that it segregated the essence (σωφρονία) of the Father alone, and generated the essence of the Son, since He was truly son. This is to say that He was like all other persons, and not non-existent by the creative will of the Father, and in order to the creation of the world. There was a time when He was not. He was God—but by inspiration; or, better, God the Logos. Christ had a human body, but the place of the human soul was taken by the Logos. The issue was whether the Son was homoousios (ὁμοούσιος) or of the same nature) with the Father. A compromise term (homoiousios =of similar nature), offered by the mediating Eusebians, having been rejected, and the support of Constantine having been secured, the Council anathematized Arianism as heresy. The Council went so far as to posit in the Godhead three hypostases—Father, Son, and Holy Spirit. Christ was thus definitely transferred from the side of man to the side of God.

The controversy was not hereby settled. Not only did victory obtain for a time to the two parties strive for the political mastery, not only did the Arian view reappear in the violent controversies that rent the Eastern Church for three centuries and left it a divided body (325-431?) but Ariusianism, carried to the nations of the Goths by Ulfilas, became the faith of many German tribes. Under the Gothic rule in Italy is became the dominant faith there, and its final political overthrow in Europe was accomplished only by the Papal alliance with the Franks and the conquest of the non-Catholics. Even so, it was not extinguished, but has had its defenders down to modern times in England.

The decision at Nicaea, so far from settling the Arian controversy, provoked fresh controversy, and raised up new bodies of heretics. The numerous deniers of the homoousios, under the leadership of such men as Alciatus, Asterius, and Eunomius, bore the general name of Arianists. But the most noted was Apollinaris, bp. of Laodicea.

(b) Apollinarism.—At first a defender of the Nicene doctrine, Apollinaris began to recede from the common use by the Athanostochines of the term Thotakos ('Mother of God') to describe Mary, and also from the danger of poisoning in Christ two persons, a human person and a Divine. Attracted by the suggestions of Gregory of Nazianzus, that the human and Divine were mingled, and of Gregory of Nyssa, that the human lost its distinctive qualities by absorption in the Divine, he sought to escape the dualism of person and will by affirming that in Christ the Logos took the place of the rational soul or spirit, and that His animal soul and body were alone human. This implicit denial of the metaphysical redemp
tion was condemned at an Alexandrian synod in 362, and more formally at the first Council of Constantinople in 381. See, further, art. APOLLINARISM.

(c) Nesterianism.—The vindication of Christ's perfect manhood by the Athanostochines theologians, such as Diodorus of Tarsus, Theodore of Mopopeia, and the great Theodoret, aroused Nestorius, bp. of Constantinople (410-428), to broach the
HERESY (Christian)

against the growing Mariolatry. He contended that, since there could be no transfer of human attributes to the Logos, the Divine and human, the Church was not formed by the Bishop of Rome, affirmed the opposite view, and was supported by the Council of Ephesus (431), which formally anathematized his opponent. The Nestorian school at Edessa was broken up and the party scattered. It found an asylum in Persia, whence it spread into India, China, Tartary, and Arabia. It still continues in Kurdistan, and a branch was found on the Malabar coast. Its ritual is simpler than that of the Greek or Roman Churches, and its organisation less secession. See, further, art. NESTORIANISM.

(d) Monophysitism and Monothelitism.—Cyril's opposition to Nestorianism was carried so far by the monk Eunomius as to say that the two natures became one at the Incarnation, that Mary was in this full sense the Mother of God, and that Christ's body was not consubstantial with man. Another bishop of Caesarea, also Eunomius, and Pelagius, formed the school of Pelagianism. The Council of Chalcedon, which settled the dispute by adopting the formula of two natures in one person, was attended by many bishops, but did not satisfy the Patriarch of Constantinople and some of the Eastern bishops. The Council was attended by the Emperor Zeno, who through the influence of Pelagius, and the efforts of the Patriarch of Constantinople, was persuaded that the doctrine of Monophysitism was the true doctrine of the Church. The Council was attended by a number of bishops, who, in the 5th century, the separation became permanent. Monophysite Churches were formed in Armenia, Syria, Egypt, and Abyssinia. The monophysite doctrine of the Church, and the persecution and division, and the schism, which the Chinese were left to the Papal Church, and the heretics finally overthrown—though not finally, for the Reformation revived the movement in many respects and gave it permanence. It seems clear, though proof is wanting, that it must have been quietly spreading among the common people and portions of the priesthood for a long time before the hierarchy, preoccupied with the politics of the Church, awoke to the danger.

The causes of medieval heresy are fairly traceable. The older heresies had not been obliterated; Ari, Panlucian, and Manichean doctrines had not been carried into Europe. The early non-sacerdotal type of faith had lingered. The schools of Charlemagne and the schools of the monks had stimulated the European mind to a very active interest in scientific knowledge, and universities were coming into existence. The great revival of religion that marked the growth of monasticism, the system of the Cluny type permeated the life of the common people increasingly, and the growing certainty of the possession of the Church as the means of salvation was not dependent on priestly sacraments and was fostered by the reading of the Scriptures, now becoming accessible in the vernacular, set the individual in a position of relative independence. Moreover, the Crusades, which grew out of that very revival, ultimately revolutionized economic and social conditions in Europe, shook the feudal system, emancipated mind and body from servitude, bore in the influence of Saracen learning by way of Spain, the Adriatic, and the Danube, and at the same time put the Greek and Latin classics in the hands of students, and thereby broke for many the spell of the Church's authority.

Passing by individual heresies, such as the Predestination of Gottschalk (9th cent.), Berengarius' opposition to Transubstantiation (11th cent.), and the scepticism of Abelard (12th cent.), we may group those heresies that promote the formation of religious communities as follows: (1) Speculative anti-papism, Philadelphia, 1887; F. van Limborch, Historia Inquisitionis, et subquietae Liber Semiteriferum Inquisitorum Thesaurum, Amsterdam, 1899.
It was the Catharist rival ecclesiastical and ceremonial system that especially drew the anathemas of the Church. To them the Roman system seemed to be of the essence of the Church. For the Catholic priesthood they substituted the 'perfect' in four grades—bishop, ilius major, ilius minor, and deacon. Ordination was by the bishop. In place of the seven sacraments there were four others: the consolamentum, for adults only, consisting of a ceremonial laying on of hands through which the Spirit was given. Thereby, the subject was 'converted.' This was for the 'perfect,' and its validity depended on the purity of the administrator. By an arrangement known as covenant the credit union postponed the consolamentum till near death. On receiving it, the endura had to be sustained—a smothering or stabbing that might produce death. In the ceremony named sanctification or credencia, kneeling, received the blessing of the 'perfect.' They observed the blessing of bread at the daily meal, but denied transubstantiation. They practised ordination, but refused an oath. Their lives were blameless, and they were indomitable in enduring persecution. They managed to exist until the 14th century. See, further, art. ALBIGENSES.

(b) The Bogomils ('Friends of God') were a sect among the Slavs of Thrace and adjoining lands, also of Panetic origin, and in its ceremonial system like the Catharist, but less developed. They held a view of the Trinity similar to the Sabellian, repudiated image-worship, used a baptism as an initiatory ceremony, but spiritualized the Supper, rejected parts of the OT, and employed allegorical interpretation. The Emperor Alexius Commences (1081-1118) secured, by a treacherous profession of conversion, a knowledge of their practices and their haunts, and then massacred them. They survived for some time in the region of Philippopolis. See, further, art. BOGOMILS.

(c) The Amauricians were the followers of Amalric, a professor of the University of Paris, who was condemned for heresy in 1204. They held a speculative view of the world's history, dividing it into three stages: the incarnation of God in Abraham, the incarnation of God in Mary, and, finally, the age of the Spirit beginning with the incarnation of God in the Amauricians. External ordinances were then to be annulled. The resurrection, heaven, and hell were spiritualized. The Bogards and Bogucans were purely brotherhoods of men and women (said to have been first instituted by a priest named Begnê, who gave themselves to prayer and ministry to the needy. They never intended to separate from the Church, but represent the growing spirit of lay piety. They gravitated towards pantheism. They flourished in the 13th cent. in many parts, especially in the Netherlands. The Brethren of the Free Spirit (q.v.) were similar, and became numerous a little later, lasting into the 16th century.

ii. HERESIES OF MYSTICISM AND ENTHUSIASM.

—the Church from the 10th cent. onwards, the degradation of ecclesiastical religion and morals, the apparently hopeless brutality of the times, and the long and bloody wars of the Crusades, with the inevitable economic and social confusion that followed, produced a wide-spread feeling of hopelessness, which took the form of a longing for retirement from the world, on the one hand, and an expectation of the immediate end of the present order of things, on the other. The former led to the cultivation of mystic piety and a rapid increase of monastic orders, while the latter issued in the formation of sects which cherished millenarian expectations and cultivated the gift of prophecy.

Individualism, which is the root of heresy, is of
the essence of these tendencies. Either, if widespread, would threaten existing political and ecclesiastical organizations. The Church was able to find a place for Usurpation within the established order—and, indeed, the impossibility of a universal adoption of the mystic habit favoured the dependence of the masses on the Church—but the combination of the National Evangelicals, especially through radicalism rendered it uncontrollable and demanded its suppression.

The mystics remained in the Church; and Bernard, the great mystic of Clairvaux, was one of the bitterest foes of the heretics. Nevertheless, the great German mystics—Eckart († 1327), John Tauler († 1361), his pupil, Henry Suso († 1366), John Ruysbroeck († 1384), and Thomas à Kempis († 1471)—undeniably laid the foundation of much of that successful outburst of heresy which we call Protestantism (cf. Mysticism (Christian)).

Among the 'Enthusiasts' bodies two are especially worthy of mention, the Joachimites and the Spiritual Franciscans. The first were the followers of Joachim of Floris (1145-1202), a Sicilian, who developed an anti-Papal apocalypticism which greatly stimulated the production of this type of literature, and disseminated chivalry among the common people. He viewed the history of the world as divided into three periods—the epoch of the Father reaching to Christ, the epoch of the Son reaching to Christ, and the epoch of the Spirit thence to follow. The overthrow of the Catholic Church and the Empire was soon to come and the new age to begin. These revolutionary ideas appealed powerfully to the restless spirit of the times, and remained unextinguished at the Reformation. They revived in the teaching of Thomas Münzer, Melchior Hoffman, and Nicholas Storch; they were represented in a wing of the powerful Anabaptist movement, and helped to produce the Peasants' War and the Thirty Years' War.

The so-called Spiritual Franciscans appear in the middle of the 13th cent. as a protest against the Papal secularization of the Franciscan order of monks. The influence of Joachim is seen in the 'Everlasting Gospel' which was edited by Gherardo, a professor of the University of Paris, and conside as Joachim's prophecy, with annotations and additions. They are strongly anti-Papal. Gherardo was imprisoned, and the Spirituals were severely persecuted through the Inquisition. There is no doubt that the doctrine of the Spiritualists, and their circulation among the common people. It was thus at the first a layman's propaganda, but with no thought of a separation from the Catholic Church. Ere long these advocates of Bible-reading found themselves opposed by the Church officials; and, when two Popes (Alexander III. [1179] and Lucius III. [1183]) in succession refused their petition for the right to teach and preach, and even excommunicated them, they were driven into opposition. Their zeal smouldered all obstacles, and their messengers were soon found in the whole of Central and Western Europe.

They adopted the ideal of poverty, at that time regarded as the chief mark of religiousness, and became known for a time as the 'Poor Men of Lyon.' Their spread into Italy brought them into contact with the more radical body of the 'Poor

Peter 1 was formerly a priest. His active career lasted from 1104 to 1124. Henry 1 was a monk, coming later (1116–48). The former was burnt to death; the latter died of dysentery, but seems to have escaped. Their work consisted of an attempt to restore the democratic simplicity and pure morality of primitive Christianity by reiterating the teaching of the New Testament. They laid small stress on the OT. Their great opponent, Peter the Venerable, charged them with opposing the baptism of infants, the credence of holy temples, veneration of crosses, transubstantiation, and offerings and prayers for the dead. On the positive side this means emphasis on personal faith, spirituality, a rational view of the world, simplicity, immediacy of human relation with God, and the all-importance of the present life for final destiny.

Contemporary 2 with them was Tanchelo, who led (1115–49) a similar movement in the Rhein province, and Eudo de Stell († 1147) of Brittany. Their work was more limited in extent. Extremely important was the reform instituted by Arnold 3 of Brescia. He fought the secularization of the Church, and sought to simplify and purify the lives of the clergy and the monks, to separate them from secular concerns, and to make them dependent on popular contributions. After a career of great success he was handed over by the Emperor Barbarossa to Pope Alexander III. and burned at Rome. The Arnoldists and the Humiliati, or 'Poor Men' of Lombardy, 4 strong anti-sacerdotalists, were to some extent in his line of work. We find them as late as the 16th century.

The Waldensians.—The Waldensians 5 were the most influential of the medieval heretical bodies, and have received the most attention from students of history. There is some uncertainty as to the origin of the name. Advocates of a very early, perhaps Apostolic, source of the movement derive it from the character of the country region (Vena, Vallée, Val) of the Alps where they first appear; they are often connected with the reformatory work of Claude, bp. of Turin 6 (9th cent.); but it is altogether probable that the name arose from the work of Peter Waldo. He was a wealthy Lyons merchant, who came under the influence of the deep religious movement that affected France in the 12th cent., and, stimulated by the familiarity with the NT among dissenters, devoted his wealth to the procuring of tracts and theScriptures into the Hymnus and their circulation among the common people. It was thus at the first a layman's propaganda, but with no thought of a separation from the Catholic Church. Ere long these advocates of Bible-reading found themselves opposed by the Church officials; and, when two Popes (Alexander III. [1179] and Lucius III. [1183]) in succession refused their petition for the right to teach and preach, and even excommunicated them, they were driven into opposition. Their zeal smouldered all obstacles, and their messengers were soon found in the whole of Central and Western Europe.

They adopted the ideal of poverty, at that time regarded as the chief mark of religiousness, and became known for a time as the 'Poor Men of Lyon.' Their spread into Italy brought them into contact with the more radical body of the 'Poor

Men of Lombardy,' with whom they were able to come to partial agreement (1217). In that country there were similar bodies known as Runcorians3 (from John Runcus). The Waldensians of France, held for a time to the Catholic view of the saving value of Baptism and the Supper, and believed in transubstantiation; but, as their cause prospered and greater opposition was met with, they receded in order to create a religious body, which the common people were becoming contemptuous of a dissolute clergy and in sympathy with a simpler form of religious life than was that of the Papacy, was established. At this time, the newly founded English church was controlled by John Wycliff (q.v.), professor at Oxford University, who began a series of sharp attacks upon the Papal claims until he developed a view which regarded the Pope as the Antichrist foretold in the Apocalypse, advocated a kind of Presbyterial system of government for the Church, and repudiated the monastic orders. He sought to instruct the people by extensive writing in Latin and English, by translating the Bible into English (1380), and by sending out his "poor priests" (cf. the Waldenses) two by two throughout the land, circulating his Bible and preaching. The sentiment of the country, the upward movement of the English peasantry at the time, and the access to the work- ing men's gilds obtained by his preachers gave wide success to the propaganda. Doubtless at this time there was laid the foundation of English Protestantism, especially in the attack on the political authorities of Edward the weak Richard II. left him without support. He was driven from Oxford and retired to the parish of Lutterworth in Yorkshire, where he died in 1384.

While Wycliff's realism kept him in the Catholic Church, it also led him to a rigid predestinationism in theology which annulled the Church's pre-emptive in salvation. This led to the doctrine of a justification by faith, though it was never elaborated by him as excluding the necessity of good works. He held to baptismal regeneration, but did not exclude unbaptized infants from salvation. He rejected transubstantiation, and in the closing years of life apparently rejected purgatory.1 The Council of Constance in 1429 pronounced him a heretic, and had his body exhumed and burned, and the ashes thrown into the Severn.

Wycliffism blended with the work of the Lollards from the Continent and passed into English life as a permanent influence. It became an element in the great struggle between the Church and the state for social betterment. During the reign of the House of Lancaster, the Church was able to persuade the authorities to suppress it. The first English Act of Parliament (de Combrando Heretic) sentencing heretics to death by burning was passed in 1401, and the death of a priest, William Sature, for heresy was followed by the burning of many others. During the Wars of the Roses the religious movement was mostly overlooked, but it worked silently until it broke out again in the Reformation.

iv. CHURCHLY EVANGELICAL HERESIES.—Deeply influenced by the heresies just described are those which grew out of the recognition of the Church's corruptions and the imperative need of a moral and religious reform, but, through a realism in philosophy or an inability to admit a non-churchly Christianity, stress on separation. The chief instances are the Wyclifan reform in England and the Hussite in Bohemia. Both of these, and all that were so styled, clung to the root of their vigour to the national spirit which had grown up in those countries in opposition to Papal claims or to alien authorities. Of these the Wyclifan reform is the earlier, and to some extent also the source of the Hussite, but the latter more deeply stirred the ecclesiastical world.

(a) Hussitism.3 The old English national feeling, subjected for a time to the Norman power, revived, and by a blending of the interests of the yeomanry and the nobility was able to assert itself powerfully against both King and Pope in the times of Magna Charta. Quarrels with the Pope over rights in Scotland, taxation of the clergy by royal authority, anger at the dominant influence of the French kings over the Pope were at Avignon, the war with France, and the enactment of the statutes of Provost and Protomonsignor to prevent the Popes from deriving a revenue from England—all these tended to sharpen the antipathy to the Papacy. The reforming work of Robert

1 Lees. i. 96.
3 Vaughan, ii. 309; Leecher, ii. 504.
Stizy, both the learned and the masses became roused to the demand for a national-religious form. The University of Prague became the stronghold of opposition to the Papacy. Large numbers of English students were there. John Hus and Jerome of Prague had imbued Wyclif's ideas. When, as a result of disputes, the German emperor, who was acting against Prussia, issued in 1410, the Wyldic-Bohemian influence became supreme. John Hus (q.e.) became rector in 1408, and, with the aid of Jerome and the support of King Wenceslas, attacked the Roman clergy. After the failure of other attempts to suppress the revolt, the Pope proclaimed a crusade against Bohemia. Hus was excommunicated in 1413 and cited to appear before the Council of Constance. Notwithstanding that he came under the safe-conduct of the Emperor Sigismund, he was imprisoned, and, after some months, was burned for heresy in July 1415. Shortly after Jerome suffered the same death. Hus followed Wyclif in his doctrine of predestination, and the view of Christ's sole headship of the Church, but he was less thorough, and held to transubstantiation. His nationalism was the chief cause of his execution. After the death of the Bohemian and the idea of popular rule, people were roused to fury against priestcraft. Under John Ziska and Nicholas of Hussinor they led as leaders they assembled on Mount Tabor (whence the name Taborites), and manifested their democratic spirit by claiming the communion for the people in the cup (whence the name Calixtites, from calix) as well as in the bread. Military success, at first, was followed later by a division into two parties—the Calixtines, who sought to remain in the Roman Church while claiming the cup for the laity; and the Taborites, who followed the Waldenses in their hostility to the Roman Church. The latter founded a theocracy and gravitated to Millenarianism, but after a long struggle they were conquered in 1433. Machiavelli, who had been associated with the Evangelicals of a peaceable, somewhat Pietist, type known as the Bohemian Brethren, Unitas Fratrum, and by other names. These attached themselves to the Reformation. They became, with a similar body of Moravians, known to history as the Moravian Brethren (q.e.), and through them have persisted to the present day.

The story of medieval heresy shows that the heretics were repressed but not destroyed. The Protestant Reformation sprang largely out of these movements, of the people of dissent, and yet natural and inevitable fruit. The positions of the various Protestant bodies, including the Anabaptists, show the degrees in which the 'heretical' spirit found access to European spiritual life.

The story of Christian heresy properly closes with the Reformation. From the Catholic point of view, Protestantism is identical with heresy. And correctly so; for Protestantism stands for the prerogative of the individual. This is the root of all 'heresy.' But the absurdity of designating the whole of the most powerful portion of Christendom heretics in a derogatory sense is too evident to need proof. It is true that from the point of view of the Protestant confessional Churches, as well as of the Catholic Church, the Anabaptists (q.e.) were heretics, and were so treated. Yet they, like the schismatic dissenters, were simply radical Protestants. It is true, also, that from time to time individual thinkers who have disputed the Protestant creeds have been adjudged heretics by the Church. This was true of John Calvin, but in this there is no thought that the so-called heretic has been excluded from salvation and the fellowship of the invisible Church. The charge of heresy is rapidly becoming meaningless.

HERESY (Jewish).—The conception of heresy has always been vague in the Synagogue; for freedom of thought, though often denied by fanatics, has always been current, characterized by Judaism. Conduct, moreover, is easier to observe and judge than opinion; and, though, under stress of pressing controversies, attempts were made to define the opinions as to the observance and sharing the communal rights, it may be said that for long periods conformity to practice, both ritual and moral, would be held to cover a good deal of ecclesiasticity in theory. In recent times there has been so great a modification and relaxation in conduct on ritual matters that the tendency is growing to judge of a person's character from tests of faith. But, as there exists no central or even local authority to apply or enforce such tests, the question is decided by public opinion rather than by expert or traditional law. A Jew is always apt to move spasmodically; it soon becomes accustomed to theories which, when first enunciated, it abhors; and in the result the Synagogue may be said to be free, on the one hand, from rigidity, and, on the other, destitute of clarity as to the ideas on which a charge of heresy could be based.

Historically considered, the problem of heresy in Judaism may be said to have been for the most part dependent on contemporary exigencies. When certain fundamental dogmas or practices were being assailed, or new principles were imposed upon the Jews, for some reason, the problem of orthodoxy or heterodoxy was raised. The Jewish schismatics, in the days of the Zadokites, were distinguished for their anti-Rabbinic sentiment; the Qumran sects of the Dead Sea, for their rejection of traditional Judaism, and the Christian Gnostics, with whom the Jewish Gnostics were identified, for their rejection of the traditional practices of the Synagogue. The problem of heresy has thus been one of ecclesiastical freedom, and the answer to it has been the effort to establish a standard by which the faith of a Jew could be determined.

GEORGE CROSS.
could freely hurl at each other charges of heresy and threats of banishment. The efficacy of the charge would be determined only after considerable discussion, and the practical good sense of the Synagogue generally prevailed to soften asperities and so enlarge the place of the tent as to find room for all, if not with cordiality, at least without churchliness.

The earlier period it is characteristic that the Synagogue never naturalized the word 'heresy.' It readily admitted, to denote 'heretic,' the Greek word Epicurus (ὁ ἕρητικός, e.g. Maim. Abod. li. 14); but, though Josephus freely employs apšērē, he uses it to mean 'secret' or 'party,' and applies it equally to the Pharisees, Sadducees, and Essenes. It was a term of contempt. It was the phrase in use that determined the selection of the commonest Hebrew word for 'heresy,' ἑφθαθή. The Heb. word ἑφθαθή (72) signifies in Biblical Hebrew 'kind' or 'species'; the LXX renders ἑφθαθή by ἔσοδος in Gn 11.4.

The latter word is applied by Josephus (Ant. XIII. x. 6) to the Sadducees (ὁ ἔσοδος ἑφθαθής ἄριστος). Further, in Christian-Palestinian Aramaic, ἑφθαθή corresponds to ἑφθαθή (cf. Schürer, Targ. 5th March 1899, and Bacher, BJ. xxxvii. [1899] 40). This equivalence may have led to the predominance of the word ἑφθαθή for 'heretic' in general. Just as the word 'people' (κόσμος) came to mean 'non-Jew,' so ἑφθαθή came to signify 'heretic.' If Bacher's view be accepted, the ἐσοφαί was originally the Sadducees (regarded to the Pharisee standpoint).

There has been much controversy as to the connotation of the term in the Gnostic and Christian contexts. The general tenor of the opinion is in favour of the conclusion that, whereas the term ἑφθαθή sometimes refers to those records to sectarians in general, and to the Gnostics in particular, yet it often describes specifically the Judeo-Christians (for particular as to the controversy, see M. Friedländer, who, in his Der vorchristliche jüdische Gnostizismus [Gottingen, 1873], maintains that under the term ἑφθαθή the Jewish Christians are at all events included).

One thing is quite certain: the ἑφθαθή was one who was, or who professed to be, a Jew; the Synagogue's concern was to deal with its own adherents, not to assail those who belonged to other religious systems. The liturgical paragraph in the Eighteen Benedictions refers not to Gentiles, but to Jews by birth (for the latter ceased to be a menace to the unity of the Synagogue, the formula was modified to apply to other varieties of sectarians within the Synagogue. Probably this is true of all religions. Christian law does not seem to have treated the Jew as a heretic; the inquisition, for instance, applied its tests of heresy rather to those who, after accepting Christianity, were suspected of relapse to Judaism. So, too, in England, the Jews in the medieval period were not subject to the heresy laws, though a Christian converted to Judaism was so subject (cf. F. W. Maitland, Roman Canon Law in the Church of Eng., London, 1898, p. 183; E. S. G. Henriquez, The Jews and the Eng. Law, Oxford, 1908, p. 66). No doubt a Jew who publicly assailed the dogmas of the Church was liable to the laws against blasphemy (such a charge is recorded in the Talmud against Judaeus). In all events, the Synagogue's concern was to keep back on Gentile Christianity; it merely tried to eliminate from its midst the Judeo-Christians who, in the language of Jerome (Ep. 88 ad August.), claiming to be both Jews and Christians, were neither.

Besides the two terms Epicureans and ἑφθαθή, the Rabbis made use of the word 'denier.' This was the word ἐφθαθή, 'denier.' The full expression is 'denier of the root,' i.e. of the fundamental principles and prevail to soften asperities and so enlarge the place of the tent as to find room for all, if not with cordiality, at least without churchliness.

They would say one who professed to be a Jew, but whose beliefs were not in line with Jewish tradition (Megillah, 13a). The term ἐφθαθή is vaguely applied. Sometimes the Rabbis ascribed sin to the lack of belief in the fundamentals. Thus Adam's sin was preceded by his denial of the root principle, the belief in God's omnipresence (Sanh. 36b). Cain, again, before he slew his brother, reached the state of mind which he asserted that 'there is no judgment, no judge, no reward, no punishment' (Targ. Jer. on Gn 4; cf. Schnechter, Studies in Judaism, 1st series, London, 1896, p. 191). There is, however, no mention of the earlier sources of these various terms for 'heresy.'

The locus classicus is the Mish. Sanh. x. 1 to which, it is remarked, the Tosafists Sanh. xii. adds further details. In the quoted Mishna certain classes are pronounced beyond the pale of future bliss: 'These have no part in the world to come;' he who asserts that there is no resurrection of the dead, that the Law was not from heaven, and the Epicurean. R. Aqiba says: also he who reads in outside books, and he who applies incantations to wounds. Aha. Sanh. says; also he who prunes the Name as it is written.' Some texts make the first clause run: 'he who denies that the Law was not from heaven. The same R. Aqiba says: 'he who reads in outside books, and he who applies incantations to wounds. Aha. Sanh. says; also he who prounces the Name as it is written.' Some texts make the first clause run: 'he who denies that the Law was not from heaven, and the Epicurean.

The phrase 'outside books' has been variously interpreted to mean extra-canonical, Judeo-Christian, or, in general, heretical books. Epicureans is not defined, but in later centuries it became a term generally applied to a sceptic or unbeliever, especially where the scepticism or unbelief was associated with a frivolous attitude towards the problems of religion.

In the 12th cent., Maimonides attempted to summarize the Talmudic statement as to the terms ἑφθαθή, Epicureans, and ἑφθαθή more closely. There are five classes, he says (Code, 'Laws on Repentance,' iii. 7-8), included under ἑφθαθή: (1) he who denies God, (2) he who asserts that the world is subject to more than one power, (3) he who ascribes corporeality to God, (4) he who denies that God was the first Creator, and (5) he who worships a star as a mediator, as well as God. The Epicureans includes three classes: (1) he who denies prophecy, (2) he who disputes the inspiration of Moses, and (3) he who denies that God regards the doings of men (cf. Jos. Ant. bk. x. at the end). The ἐφθαθή also consists of three types: (1) he who denies the complete verbal inspiration of the Torah, (2) he who denies the tradition, and (3) he who asserts (this would point to both Christian and Muhammadan polemics) that the Law has been superseded by a new dispensation. In addition, Maimonides specifies others as not belonging to the three categories just defined. In all cases, Maimonides refers to Jews who joined the various categories; for, as he plainly asserts (on the basis of the Tosafists, loc. cit.), 'the pious of the nations of the world have a share in the world to come.' It is only Jewish sectarians who are excluded by him. For 'heretic,' them Maimonides expresses himself elsewhere (in his Commentary on the Mishna on Sanh. x. 1) with uncompromising vigour. He formulated thirteen articles of faith as fundamentals (these are given in detail above, vol. iv. p. 246, where Hirschfeld points out that Maimonides had in his mind certain theories and heresies of his own
HERMESIANISM.

Hermes was the chief exponent of a movement for the Catholic Church by pure intellectualism, adopting the ideas of Kant, which passed over Germany during the first half of the 19th century. His system (Hermesianism) had a great vogue for a time, and was condemned at Rome, and is now almost forgotten.

1. Life of Hermes. — Georg Hermes (Hermannsmann) was born in 1775 at Speyer in Westphalia, of Catholic parents. In 1788 he went to the Gymnasium of Ratisbon (under Franscis- can), and soon became first in the school. In 1791 he entered the philosophical faculty at the University of Munich. Here he studied Kant and Fichte, and for a short time wavered in his faith. He then devoted himself to the study of philosophy and natural science in order to show the inadequacy of the philosophical principles of Kant and Fichte. In 1796 he joined the Theological Faculty, gaining a free voice at the bishop's seminary. In 1798 he accepted a post as teacher in a Gymnasium at Munich. He was ordained priest in 1799. He now devoted himself to the study of philosophy and natural science in order to show the inadequacy of the philosophical principles of Kant and Fichte. In 1799 he carried out his system of philosophy, and published his chief work, "Untersuchungen über die zu der Wahrheit des Christentums."

2. System. — The fundamental ideas of Hermes are: (1) an adaptation of Kant (and Fichte) to Catholic dogmas, (2) a purely intellectual or rational basis for faith, and (3) a pure rationalism, which is a consequence of the former two.

In the Talmud, Td 30 a., there is a passage which states that "the Israelites... always suspected their teacher." This passage is often cited as evidence of the infidelity of the Israelites. The idea is that the teacher is not to be trusted, and that the community should make its own decisions. This is the basis of the "Hermesian principle."
everything, even faith, till we can establish an intellectually convincing reason for it. These questions now occur: (1) Is there any truth? (2) Is there a God, and of what nature is He? (3) Is a supernatural revelation possible, and under what conditions? Truth may be either necessary (angsthaft); this certitude he calls Führwahrhaft or freely accepted (frei angenommen; this is Führwahrhaft). Necessary certitude may be from sense-impressions (Förstärkungen)—unsafe; or from reasoning (Verstandeswissen)—also unsafe, because it leads to a process in infinitum; or from immediate necessity—this last is safe.

"We find, when we seem to know something necessarily, that our consciousness is not only that we know, but also that the known thing exists. This consciousness occurs without our voluntary control; it is the result of necessary conviction, not a freely accepted one." (Buchholz, 1841).

Freely accepted certitude arrives at the same end. The practical reason tells us that we cannot obey the highest moral obligation of which we are conscious (which is the preservation of our own human dignity—the reina Darstellung und Erhaltung der Ketzerraetinwand): without only all means to that end which are at our disposal. Among these means is the use of the experience of others. So practical reason would command us to accept this experience, to admit the facts of history, even if the reason still had doubts. Hence both sources of certitude (Führwahrhaft and Führwahrhaft) bring us to the same result. From the acceptance of both truth of faith, we notice that of the historical basis of Christianity. He denies that the existence of God can be sufficiently based on necessary truths. Only the Hebrae seeks to establish it by theoretic reason. It is necessarily, not freely, accepted truth. He proposes the cosmological argument for God very well; he rejects the ontological, physical, and moral arguments, also that from universal consent.

In explaining the errors of which Hermes was accused, we are not by the difficulty that his followers found in pronouncing that these are errors, deny that he held them. The Sermen declare that what was condemned at Rome was not Hermes' teaching, but a libellous caricature of it. He himself always protested that his system did not touch any point of the Catholic faith. This he accepted entirely, in the usual sense, as does every other Catholic. Hermes held on to his philosophical basis on which the faith may be accepted. However, it may be with the points urged against him by his opponents, the errors which brought about his condemnation, but the reason is his philosophy is not a positive dogma, but the whole question was forgotten. Only here and there an old disciple of the once great man was faithful to his teaching, almost in secret, remaining (like the Jansenists in France after the Revolution) as a relic of a bygone age. Auchterfeld and Braun were recalcitrant for a long time. Either the powerlessness of their cause, which made it harmless, or a dim memory of Hermes' ancient fame made their bishop treat them very leniently. The worst that ever happened to them was suspension from public office, with leave to say Low Mass; this was removed when they offered a declaration of general adherence to Papal decrees.

HERMES TRISMEGISTUS.

The name of Hermes Trismegistus stands, like that of Homer, for a whole literature. But this literature is philosophical and religious, not poetical. It presents a curious phase of human thought emanating from Egypt, and might roughly be described as "Plato according to the Egyptians." Only roughly, indeed, for the matter is far more complex than this. Take Plato, the Stoics, Philo, Catholic Christianity, Gnosticism, Neo-Platonism, and Neo-Pythagoreanism, mix them up well together, in a strongly flavoured of ancient Egypt, and the result of the brew will be something like Hermes Trismegistus as we have him.

1. The assumed author.—Plato in two passages (Phileb. 18 B; Phaedr. 274 C) mentions an Egyptian god or divine man, named Thoth, to whom were attributed many inventions—arithmetical, algebraic, geometrical, astronomical, draughts, diceing, but especially the alphabet and writing—which Thamus, the then King of Thebes, is said to have condemned as being destructive to the memory, instead of an aid thereto, according to Cicero (de Nat. Deor. iii. 56), the fifth Mercury, who was the slayer of Argus, was obliged to account to Zeus for the books Hermes wrote when he gave laws and letters to the Egyptians. 'Him the Egyptians called Thoth, and the first month of the year among them (September) is called by his name.' Here we find the equation Hermes = Thoth. Lactantius (Dei Inst. i. 6) quotes this passage of Cicero, and goes on to say that this same person founded Hermopolis, and was worshipped by the Isatis, and, though a man, was so honoured for his learning that he received the name of Trismegistus, adding in another place (de 1sa Dei, 11) that Hermes Trismegistus was far older, not only than Plato, but also than Pythagoras and the famous Seven Sages. Lactantius thus accepts the antiquity of Hermes, which makes for his purpose, with the same scepticism as Tertullian accepts the antediluvian authorship of the Book of Enoch, which must, it would appear, have formed part of the library of Noah in the Ark.

Among early modern scholars there was the same readiness to accept Hermes at his own valuation. Vergilius puts him before Moses; Patavius makes him an elder contemporary of that legislator; Flumen Candalla is inclined to put him back as far as the time of Abraham. Isaac Casaubon, Isaac Voss, and the great Fabricius stand out as exceptions to this general credulity. Fabricius begins by intimating his own opinion that the books which went under the name of Hermes were not earlier than Homer, not to speak of Moses; and ends by acquiescing in the judgment of 'certain most learned men,' who put them down as the work of a Jew or of some half-Platonic, half-Christian author about the beginning of the 2nd cent. A.D.

One of the first results of examining these works themselves is to make us deny the equation Hermes = Thoth. Hermes is represented as the father of Tat, who appears to be the same as Thoth or Thot. In the Asclepius (ch. 37), Hermes is made to claim that he is the grandson of the god Hermes, who was worshipped at Hermopolis. Hence this person has been called 'the younger Hermes.' Similarly the person instructing is declared to be the grandson of the inventor of medicine. On the other hand, the Hermes of the 'Holy Book' (Stob. Ecl. i. 298) is himself one of the greatest of dieticians, in the 6th century.
two and forty, thirty-six of which, containing the whole philosophy of the Egyptians, are learnt by the before-mentioned persons, and the remaining six by the shrine-bearers. These six are medical, and have to do with the bodily constitution, diseases, organs, medicines, epistemology, and gymnastics.

These books of Hermes, which were connected with the religion of the Egyptians, have been mentioned here in order to be excluded. Such books would hardly reconcile purely Egyptian in both language and thought, whereas the books which have come down to us under the name of Hermes—these, at all events, which we are about to consider—are Greek in language and mainly indebted to Plato for their thought. Tamburchi, indeed, states that the works of Hermes were translated into Greek in the 6th or 7th century by Diocles, a translator of the Library of Alexandria, by Nicolaus van Ravesteyn, Amsterdam, 1665. It was translated into Latin by Lebrunus, Paris, 1697; another by J. M. E. van der Keer, Antwerp, 1697; and a recent one by Louis Niépce, Paris, 1863. The work was translated into Danish, from the Latin of Patroclus, by J. G. T. Schmidt, Copenhagen, 1787; afterwards, by Niels Krus, Copenhagen, 1806. In English we have had, firstly, The Divine Poenastrum of Hermes Trismegistus, translated into English by Everard, London, 1660; professedly from the Arabic—a work which has been reprinted in many countries, and is after this title in Latin, Theological and Philosophical Works of Hermes Trismegistus, Christianization, by J. D. Chambers, Edinburgh, 1688; thirdly, the large work, entitled Three Great Hermes, by G. B. S. Heath, London, 1802.

The first Greek ed. of the Poenastrum was that of Adriano Turresini, Paris, 1554. This contains a preface in Greek by Apollonios & Sophares; also a minor work of Hermes, called Oepris peregrinorum philosophorum, etc. (also Sophares, De nominum et divinarum rerum philosophia), and the Lat. tr. of Poenastrum. The next edition was that of D. Francisci Fussini Columbus, both Greek and Latin, Bordeaux, 1774. The editor in his preface acknowledges obligations to Joseph Scaliger, who was then a young man.

The remainder of Hermes, consisting of fragments, formed part of a great work by Francisci Patricii de Aetnaeis (Latin version) (Francisco Patrizii), entitled Nove de universi philosophia, which was published at Ferrara in 1551 and at Venice in 1556. Patrizii changed the title of the piece in the Poenastrum, with a view to improving the sequence of thought. The edition of Emmanuel Celsus appeared, according to Gervinus, in the same year, and was reprinted at Cologne in 1600. It is Gairdner's text of Hermes is accompanied with what Patrizii call 'disciples,' a vast and foolish commentary. After this there was no edition of the Poenastrum until that of Gustavus Parisi, in 1624, which, as the editor remarks, was brought out at a time when the study of ancient philosophy was on the increase, and the interest in establishing, on the one hand, the vast antiquity of Egyptian history, and, on the other, the tendering works for which that antiquity was claimed to be the source of. Next in importance to the Poenastrum is the Aedepsis, which exists only in a Latin tr. attributed to Apuleius. It may be read in the Thirteenth edition of that author by Paul Thomas, Leipzig, 1806. This dialogue was designedly excluded by Fussini from his edition of Hermes, on the ground that the work of a divine philosopher had here been tampered with by an impious pagan. The Aedepsis in its Latin form was known to St. Augustine, who, in his De Civitate D(om)ni (De Deo n. c. 226), has long quotations from it which are verbally exact. St. Augustine does not say that this translation is the work of Apuleius, though he has occasion to mention that writer in the immediate context, which may have suggested the idea. The Aedepsis bears the face of it unmistakable marks of being a translation from a Greek original. A few fragments of the original have been preserved to us by Lactantius, which show that the Aedepsis is identical, so far at least as these fragments go, with the treatise mentioned under the name of Ἀδεψις ἡ Δεκατριά.4

Besides the fragments of Hermes preserved by Lactantius, there are others given by Cyril in his writings against Julian (A.D. 438), and written in Suidas, including a remarkable passage on the Trinity—which is nowhere else to be found. But by far the most important contribution to our knowledge of Hermes is that made by Stobaeus, whose own date is uncertain, but who quotes no less than six poems or fragments under the following names:—

1. We get this number by reckoning the hieroglyphic books as 10, the magical as 20, the medical as 6, and the religious as 30.
2. The following are the passages in Lactantius bearing on Hermes Trismegistus: Div. Inst. i. 9, ii. 10, 14, iv. 6, 7, 9, 10, 18, 19, xiii. 5; and in Epist. I., vi. 9; and in Legat. ii. 11; Asidae, In effect, 61, p. 876 f.; in D. Ant. "Regnum Philosophorum," etc. vii. cap. de Philo, lib. 11, cap. 33. See also De origine, 61, p. 876 f.; in D. Ant. "Regnum Philosophorum," etc. vii. cap. de Philo, lib. 11, cap. 33.
3. The following are the passages from Stobaeus, in his Anthologia Graeca, vol. ii. cap. 5, 24; and in De origine, 61, p. 876 f.; in D. Ant. "Regnum Philosophorum," etc. vii. cap. de Philo, lib. 11, cap. 33. See also De origine, 61, p. 876 f.; in D. Ant. "Regnum Philosophorum," etc. vii. cap. de Philo, lib. 11, cap. 33.($ aedepsis = 30)
4. We get this number by reckoning the hieroglyphic books as 10, the magical as 20, the medical as 6, and the religious as 30.
5. The following are the passages in Lactantius bearing on Hermes Trismegistus: Div. Inst. i. 9, ii. 10, 14, iv. 6, 7, 9, 10, 18, 19, xiii. 5; and in Epist. I., vi. 9; and in Legat. ii. 11; Asidae, In effect, 61, p. 876 f.; in D. Ant. "Regnum Philosophorum," etc. vii. cap. de Philo, lib. 11, cap. 33. See also De origine, 61, p. 876 f.; in D. Ant. "Regnum Philosophorum," etc. vii. cap. de Philo, lib. 11, cap. 33. See also De origine, 61, p. 876 f.; in D. Ant. "Regnum Philosophorum," etc. vii. cap. de Philo, lib. 11, cap. 33.
Hermes Trismegistus

The passage is really prophetic, must have been written at a time when the Galilean had already conquered.

The complaint that the most holy land, which was once the seat of shrines and temples, will be full of dead men's sepulchres is accepted by St. Augustine as directed against Christianity, and as being an allusion to the martyrs' memorials (De Civ. Dei, viii. 29 ad f.). But, if Christianity is thus in the 3rd century to be regarded as a Foemen, the passage must have been written before the Edict of Milan in A.D. 313. Now the Poemander (ix. 1) refers to the thief's hope, which appears to be the same as the Asclepius, and therefore the Poemander must have been written at least a little later. But Lactantius was familiar with the works of Hermes, and his death is put not later than A.D. 320. It seems, therefore, reasonable to conclude that these works were composed between A.D. 313 and 330.

That the author or authors were Egyptian does not require proof. That is evident from the respect shown to the Egyptian religion, and from the naive national vanity which, not content with making Egypt the temple of the whole universe (A.D. 34), confers true intelligence on its inhabitants (Stob. Eclog. i. 990). The acquaintance displayed with Greek philosophy is no argument against this. Philo was an Egyptian, and in Cicero's time remained a devout Jew. Despite the many points of resemblance in theHermetic literature to Christianity, there is no sign of love for that religion.

It is Hermes who is the guide of human kind; it is Hermes who teaches the way of salvation. In fact, the Apocryphon of James, in the Hermetic literature, is addressed to Judas for the honour of supplying the world with a religion, just as Samaria did in the Great Declaration of Simon of Gitta, who has been confused with Simon Magus.

3. Doctrines.—The doctrines of Hermes are so many and so various as to make us doubt whether they all emanate from the same mind, notwithstanding the family likeness which they bear to the works. But we must not be too rigorous in our demand for consistency. Such a contradiction as that God makes all things and yet does not make evil (Pse. ix. 7, 8) is so familiar to ourselves as not to call for comment in Hermes. But there are others which court attention. We are repeatedly told that a certain word is the mystic name of God (Pse. viii. 2, ix. 8, x. 14), and yet we read that it is the name of the savior (Pse. iv. 4). This, it may be said, is a matter of comparison. But here at all events is a direct contradiction. In Pse. i. 4 we have the words: οὐ καί τώ ὁμοιότητα εἰς αὐτόν; in x. 18, δὲ καί τών σώματα τὰ ὁμοίως καί ἀνθρώπους ἔχουσα. Again, the statement in x. 19, that it is not lawful for a human soul to pass into that of an irrational animal, is irreconcilable with that in x. 8, that, if a human soul continues to be evil, it retraces the way by which it had ascended from reptiles. Nor yet does the asceptical principle that one must hate one's body if one would love oneself (iv. 6) seem to consort very well with the denunciation of celibacy and the glorification of parentage (II. 17).

The resemblance of the Hermetic teaching to Christianity is no more than skin-deep. There is, indeed, much talk about the Son of God. But then, who is the Son of God? Sometimes he is Logos, as proceeding from Nous (Pse. i. 6). Again, he is Man (i. 12), not man as we know him, but a sonian Man, which is considered the Way, who takes after the Nous that begat him in being bi-sexual, though it is hard to understand how there can be sex in Nous. Yet again, the Son of God is the sensitive or the eye (ix. 8), as the sensitive or the eye of Plato (31 B, 92 B). The Sun is not actually called by Hermes the Son of God, but he is called 'a second God' (A.D. 29; cf. Plut. Deip. 517 B). Instead
of comparing the Hermetic writings with Christian, but it is only by being not able to describe them as pagans Gnosticism, or Gnostic mixed Christianity.

If we were asked what are the views of Hermes as to the condition of evil, we are told that this is of none of Greek God. But, then, this is identified with θός δαιμόν (Poem, vi. 4), so that we can pass to the equation God = goodness; θός δαιμόν ἀλλατικά διὰ τὸν αἰτό (vi. 1). But, further, θός δαιμόν is identified with θός δαιμόν (x. 3), which builds us a bridge to another definition: 'The essence of God is to engender and make all things' (v. 9), in agreement with which we are told in another place that 'His one glory is to make all things, and this is, as it were, the body of God, to wit, making' (v. 7).

But, again, we are told that to will and to do are one with God (Accl. 8), which enables us to pass on to another definition: 'The essence of God is to will all things to be' (Poem. x. 3). This, then, is how Hermes at his highest would have us think of God, as an ever-operative good will, bringing all things into being. Goodness is the only positive attribute of God.

'God is not mind (nous), but the causes of these being mind; he is not spirit, but the causes of these being spirit; he is not light, but the causes of these being light' (Poem. viii. 14).

Hermes even hesitates to predicate being of God, since He is something behind and beyond being (ii. 5, vi. 4, xii. 1; cf. Plat. Resp. 508 B).
thought. At the time of the Persian campaign under Xerxes, Halicarnassus, with the islands of Cos, Naxos, and Calydon, formed a small tributary State, ruled by a queen named Artemisia, of whom Herodotus tells us in high spirits to the Macedonian court, and died at Pella (Suid. a.e. Πελλας and Εὐρ υστος). As a matter of fact, we cannot say when and where he died. All that we can ascertain from his own pages is that he returned from Thrace to Athens, and that the latter city was his home till the outbreak of the Peloponnesian War (A. K. B. H.), "Über die Abfahrt aus dem herodotischen Geschichtswerke," in A.D.W., 1888, p. 16 ff. His travels in Asia and Egypt, and the composition of his History, fall in the interval between his return from Thrace (c. 440) and his death (c. 425).

2. Travels. — The narrative of Herodotus is compiled to a considerable extent with what he had learned in the course of his travels, upon which he may have started when comparatively young. Just as he explored Samos, so he may, with that island, also the city of his birth, as a centre, have become familiar with the adjacent districts, and, in course of time, with the Agean Islands and the coast of Asia Minor. We know for certain that he visited the helmeted places on the mainland of Greece, as, e.g., Thermopylae (vii. 198 f.) and Platea (ix. 29, 49 f.). He sought information from the priests at Delphi (ii. 52), and in Delphi he heard a rumour about the fall of the city of Croesus to the Persians, and he borrowed from being plundered by the Persians (viii. 59); here, too, he was shown the numerous and magnificent votive gates. He also visited Athens (v. 51 f., vii. 67), and gained a knowledge of both Greek and Lydian history as read by the Delphic priest. In Sparta he made investigations regarding the earlier history of the city, and then proceeded to the Spartan expedition against Samos, and inspected the mines of the city (vi. 47). He seems to have visited the Macedonian court, as appears repeatedly in the royal family, and supports its claim to be of Hellenic descent (v. 29). He then made his way towards the Black Sea through the Hellespont, the Propontis, and the Bosporus, gaining some knowledge of the more important cities on the route (iv. 14). Proceeding by way of Istris (li. 33), he reached Oinias, visiting the fertile island (iv. 30 f.), and making the immediate neighbourhood (iv. 59 f., 81), and gathering information regarding the formidable peoples of Scythia. The Sea of Azov (iv. 85), the Crimea (iv. 93), Colchis (ii. 104), and—on the south coast of the Euxine—the city of Themiscyra (iv. 96) are also known to him. He likewise made a journey to Sardis, probably from Ephesus (ii. 145), and describes from his own observation the mountains of Alysses in the former city (i. 98). His account of the royal road between Sardis and Susa, on the other hand, is not based upon personal knowledge (v. 99). Susa and Babylon were probably visited by way of Syria. He writes of Babylon in considerable detail (i. 178 f.), and his having been in Susa is shown by the narrative (vi. 118) regarding Ardericus; but his description of the royal castle of Agbatas, the capital of Media, makes it evident that he had not been there (i. 98).

In his visit to Egypt. Herodotus travelled from Canopus to Elephantine, and then back again to Pelusium. It is a very singular fact that he should say nothing of the great temple of Memphis, which he refers only incidentally to the temple of Amen at Thebes (ii. 42, 143). Whether he passed from Egypt to Syria could not be determined, but at all events he describes the route from Eadytos (Gaza) by way
of Lake Sperone as one who had traversed it (iii. 5). He must also have visited Cyrene, for he speaks of its capital from personal observation (li. 161), and gives an apt description of the terrain-like configuration of the country (iv. 190). It was there probably that he obtained his information regarding the Libyans and the interior of Africa. But his account of the region between Egypt and the Greater Syrtis are more to the point than what he says of those living further to the west. He may have gained a knowledge of Southern Italy and Sicily while in Thuri. He writes also of the Etruscans, the Ligurians, and the Venetians, but makes no mention of Rome or the Latins.

There has been much discussion as to the period of his life in which Herodotus undertook these journeys. But a slight consideration of the facts will show that he could not well have travelled in Persian territory before the opposing parties came to terms. This was brought about by the so-called Chosorean alliance. In fact, at that time, however, the interest of Herodotus was fixed upon Thuri, and it was only after he had left the colony and returned to Athens that he was in a position to begin his extensive pilgrimage. Nor, again, could he have travelled in Egypt before the conclusion of peace. Athens, however, sent still further assistance to Amyclae in 480 B.C. But it is clear from Herodotus' account of Egypt that the days of commotions and conflicts were long past. For those reasons Meyer would assign the longer journeys to the years between 460 and 450 B.C. (Forschungen, I, 151 f.; in II, 163, more definitely, 460-450 B.C.).

3. His sources.—On these numerous and extensive journeys, Herodotus was constantly adding to his store of knowledge. From the most likely persons, the ambassadors of the Persian king, and the priests of Egypt, he sought information regarding the history of their several countries. In many parts he found interpreters (Φηνομενοι) who acted as an intermediaries between Greeks and non-Greeks. The numerous 'tales' which he incorporates in his work were derived from professional story-tellers (Λεγομενοι), who were to be found plentifully in Greek-speaking lands; such are, e.g., the stories of the marriage of Agarista (vi. 135 ff.), of the fortunes of the Cypselid dynasty (iii. 46 ff., v. 62), of Creusa, and of Ales and Areteus as related by Hyginus.

To the principles on which he judged what he heard he refers in two passages as follows: i. 123, ἔμειναι δὲ σεβαστοὶ φήναι τοῖς ἔργοις τῆς τῆς λέγοντος ἡμῶν, ἐμφανίζει τὸ μισθὸν τῆς λόγου; vi. 152, ἐπιστολὴν, για τὴν στηθήναν ἐβλήμα. But he also availed himself of documents, precisely as do others of the plays of the present day. Herodotus twice makes reference to Herakles of Miletus—the most eminent of the logographers—as his authority (i. 145, vi. 157). In other passages he challenges his statements, especially as regards geography, though without naming him; or else he simply reproduces his narratives (Diels, 'Herodot u. Hekataios', Homer, xxvil. (1887); Meyer, Forschungen, I, 183 ff.). Of his indebtedness to other logographers we have no clear proof; it would probably be confined to a few dates and memoranda, insomuch as such sources, though not unknown, contained little but legendary history. The story of Democedes (iii. 129 ff.) is probably based upon a written narrative. In the account of the Persian expedition undertaken by the Elymians (Herodotus, ii. 211 f.) recognises a documentary original in the section extending from the masting of the army and its departure from Caelum to its arrival in Tharsis, but admits that Herodotus has here made many additions from his own knowledge. With the list of peoples given in this section are closely connected the Cilicians, Eij, and the Saks, the account of the royal road from Sardis to Susa (v. 621 ff.) and they are presumably all derived from the same source.

4. Accuracy of his history.—That Herodotus delivered lectures on history may be inferred from references in his own pages (i. 193, iii. 80, vi. 43), and also from Thuc. i. 51 f. Plutarch (de Herodoti ⇒Malysigas, xxvi.) says that, according to Dий, he received ten talents as a remuneration from the Athenian State, and later writers assert that this was given as a honorarium for a public recitation of his History. Meyer (Forschungen, I, 200 f., ii. 229), however, is of the opinion that the pension which was granted him in recognition of his eminent services on behalf of Athens. Certainly he composed his work with the one object of giving prominence to what Athens had accomplished for Greece; and he did this, moreover, at a time when that city's policy was exposed to the severest criticism. He wrote at the beginning of the decisive conflict between Athens and Sparta. Only a knowledge of the past could furnish the criterion for a true judgment of the present. At the same time the writer's verdicts and descriptions are coloured by the conditions of his own day. Thus, the conduct of Theseus and Corinth at the time of the Persian war is set in a very different light; that of Themestocles and Argus is palliated; Sparta is treated with a touch of irony; the Alcmeonidi are, for Pericles' sake, exonerated from censure. It is in all respects the Athenian point of view that finds expression in his account of the wars, and yet it would be wrong to charge him with intentional misrepresentation. He regarded it as his duty to relate what was reported to him (vi. 183). His impression of the actors in the drama he seeks to exhibit in their speeches and actions. But these, on the contrary, often lend a touch of irony to this man of the world; and, of discussing the best type of government. In military matters he does not speak as an expert, but, without any real comprehension of them, he simply reproduces popular tradition.

Hence his incredible figures, the purely imaginary character of which was first demonstrated by H. Deller (Die Perserkriege u. die Burgunderkriege, Berlin, 1897).

It has been frequently asserted that Herodotus did not carry his work to its intended conclusion, but there is nothing to show that this was the case. His purpose was to write the history of the Persian wars, and these ended with the battle of Mycale and the capture of Sestus in 479 B.C. The aggressive war of the Greeks against the Persians began in 478 B.C., and are not to be reckoned among the Maked. He certainly begins somewhat further back; he depicts the conflicts between Greeks and Barbarians; and within these bounds he finds it possible to incorporate the abundant results of his own inquiries and researches (iv. 30, τωρισμοὶ γὰρ τῶν ἐν τοῖς ἄλλοις τα ἐφώτην ἄρητα). It is unnecessary to suppose that he had published these results in previous books, and tradition does not lend the slightest support to the idea. The only separate work of which he speaks is the projected Ἀρισταρχα λέγει (i. 184); but this was almost certainly never written.

5. His 'Weltschauung.'—Herodotus knows nothing of historical criticism, nor does he think of tracing out the ultimate causes from which historical phenomena spring. He proposes simply to relate what he saw and heard, and to do so with a mind clear of preconceptions. But he regards as true only what he has learned from experience or witnessed with his own eyes. Thus he refuses to believe in the Hyperboreans (π. v.), as there is no credible evidence for their existence; if they did exist, there was at least a minute description (iv. 30). Similarly, he will not accept the report that the Phoenicians in their circumnavigation of Africa had seen the sun upon their right hand (iv. 48). He rejects the idea that there is a race of men with but one eye (iii. 116), though he speaks else-
where of the one-eyed Arimaspi without offering as a task (Hdt. vi. 37); he repudiates the hypothesis of an ocean flowing all round the world, saying that the name was invented by Homer or some other poet (Hdt. ii. 23, iv. 8, 36), and he utters a stern reproof regarding the river Eridanus and the Cassteride Islands (Hdt. i. 115).

He surveys the affairs of the world and the institutions of mankind with an impartial eye, though he adheres to many traditional errors and misconceptions. He does not take it ill that men should regard their own customs and practices as the best, and says that none but a madman would make sport of foreign usages (Hdt. iii. 38). But experience had also taught him that the destinies of men are influenced by a supernatural power. The gods exist, and they in some degree intervene in the affairs alike of individuals and of nations. It was the Divine wrath that pursued the sons of Sperthias and Bullis to the death, so that the crime of slaying heralds should be duly expiated (Hdt. vii. 157). It was Demeter herself who, at the battle of Platea, prevented the fleeing Persians from taking refuge in her sacred grove, thus punishing them for their having burned her sanctuary in Eleusis (ix. 66).

'For great crimes great penalties are inflicted by the gods' (Hdt. ii. 120). But, even where there is no crime as such, the gods may bring disaster on men (ὑπὲρ Καρκανίδος γεγονέναι κακὸς (I. 8). The higher powers keep jealous watch over man to make him profoundly afraid of himself, and bring him lower evil if he either does not fear them (Hdt. vi. 106). Xenophon was impelled by a vision of the night to make war upon the Greeks, even against his will, and was thus driven to destruction (Hdt. ii. 13). Amasis fears the envy of the gods (Hdt. iii. 40). And not in dreams only, but also by oracles, do the gods manifest their utterable designs. As the oracle of Apollo declared (Hdt. ii. 20), Dio Chrys. (or 91), he had offended his fifth ancestor (I. 91). It was decreed by the oracle that the whole of Attica should fall into the hands of the Persians (Hdt. viii. 53). The gods are lord of all; even the worst deeds must undergo the severest afflictions, and thus no one should be called happy till he is dead, and death is better than life. This interpretation of life is precisely what we find in Sophocles; a profound and sincere pietist animates both the historian and the poet (cf. H. Fohl, "Tragische Kunst bei Herodot, Borna-Leipzig, 1914").

With philosophy as such Herodotus had no direct concern. He refers to the philosophers only so far as their ideas fall within the circle of ordinary knowledge. Thus he mentions the Orphic-Pythagorean doctrine of metempsychosis merely because that belief is met with among other peoples, and he traces it to Egypt. He refers to the eclipse predicted by Thales, and to the gnomon and Anaximander's map of the world. He mentions and discusses the various theories regarding the inundation of the Nile. Further, in his pages we may recognize the influence of the critics which directed against the popular religion by Xenophanes and Heraclides. His conception of history likewise is rationalistic, though not always to the point; here he follows his forerunner Hecataeus. Faith and criticism commingled in him ('mélange de scepticisme et de foi') (Hauvette, "Herodote, historien des guerres médiques, Paris, 1894, p. 353").

6. His dialect.—Herodotus wrote his History in the Ionic dialect, the prevailing literary language of his time. The knowledge of this particular type of Greek was also spread, not by oral tradition, but by means of books, and spurious forms were introduced into his text by the copyists. This 'Hyperionism' made its effects felt to a remarkable extent, and has been fostered by modern editors. The inscriptions and the poet's performance furnish us with the authentic forms. The older literature relating to this question is given in R. Meller, "Die Monogrammen des Herodot, Leipzig, 1893, p. 771 f.; cf. also H. W. Smyth, "The Sounds and Inflections of the Greek Dialectes: Ionic, Oxford, 1894; O. Hoffmann, "Die griech. Dialektes", ' Der ionische Dialekt,' Göttingen, 1886; A. Fritsch, in "Verhandlungen der deutschen Philologen u. Schulmänner in Bremen, Leipzig, 1900, p. 188 ff.

HEROES AND HERO-GODS (General and primitive).—In dealing with generally, one must distinguish between a man-a or ancestor-cult arising out of beliefs in ghosts and spirits and the worship which in course of time may come to be offered to the personage, of semi-divine and other mythic, it is with the latter that the present article is concerned, and not with mythology as such.

The term 'hero' is usually applied to one who stands out from among ordinary mortals by his superior quality or qualities, conspicuous bravery or sustained power of endurance being the distinguishing features. But there is a large class of persons in oral tradition and literature who stand out from their fellows by reason of their inventiveness, or moral or intellectual qualities, by the introduction of new cults, and, above all, by what they have done to improve the various conditions of human existence—these are usually spoken of as 'culture-heroes.' Amongst the renowned dead there are a good number of traditions from the men who are recognized as mere mortals to those of such transcendent powers that they may be classed as demi-gods or gods; indeed, it is often impossible to say where the possession of true godship begins. Literary records, however, have been so thoroughly worked over in many cases that a more precise definition is impossible. A hero is nearly always regarded as the spirit of a dead man. His origin may be unknown; his mortal birth may be recorded; or he may have had an unguessed origin, possibly as a son of a virgin, or of partly divine and partly human parentage; or, again, he may be the son of supernatural parents; but in all cases he is supposed to have lived as a mortal amongst mortals and died as they do.

The belief in the continuity of life may be taken as universal, death being merely an episode between two phases of continuous existence. Under normal conditions the individual possesses the same character after as before death; and, since most persons are friendly to their kinmen and willing to help them, so spirits, though theoretically resident in a land of their own, are ready to assist those who have not passed through the intermediate state of death. The practice of appeasing, especially when danger is imminent, to the spirits or ghosts of men is very widely spread among various peoples. This practice may take the form of an invocation or of a prayer, or simple rites may be performed, generally at stated times; thus an incipient worship may be performed which could readily pass into a definite cult. At what stage this process is interrupted depends largely upon the social and religious institutions of the people in question; and the extent to which the recognition of heroes attains may vary from time to time, as is shown by the progressive vulgarisation of hero-cults by the Ancient Greeks. The hero-cult of Ancient Greece resembles that of the Semitic and of the dead, and was quite distinct from that of the later Olympians. A blending of the two is seen in the case of Heraclius:...
said by some to have instituted the shrine that makes coco-nuts abundant (u sago). A great cult of coco-nuts, the natives did not come from New Guinea, whether he returned after visiting the western and eastern islands of Torres Straits; he instructed the aboriginal people in language, stocked the several reefs with the much-prized cone shell, and notably introduced plants useful to man. He was a very amatory person, and valuable economic plants sprung up as the result of his amours—one of the many examples of the close association in the mind of savage peoples of the sexual act with agricultural fertility. In the islands he was generally called Sido, but there appears to have been some confusion between Sido and Soido. Sido, as Landman informs us (*Postskrft til Ed. Westernscentes*, p. 60), was a great and highly paid priest in his lifetime, though he became a mischievous character during his wanderings after death. He was the first death, which was also a murder, and all men must die and follow the route of his wanderings; eventually he seems to have become the chief of the after-world. Soido is essentially an agricultural hero.

Certain death-ceremonies were introduced from the neighbouring mainland of New Guinea into some of the islands by two culture-heroes, Naga and Waiai, the relative importance of whom differed according to the island from which the information was obtained. Naga knew how to make masks and headdresses in the form of animals, and instructed men in singing and dancing and in everything relating to the sacred or ceremonial ground; he is stated to have lived on Nagog, Waiai, who, according to one legend, lived on Mabulai, stole a famous fish-mask from Naga. Waiai was represented by a rude and imperfect wooden image which was lodged in a square house on the neighbouring islet of Widal. Only old men had anything to do with the shrine, and whenever the house was rebuilt they held a special death- or spirit-dance, *sava marma*, which was also danced by them after the usual death-dance. This was held on the first day after the death, or other death, of the chief of the tribe, the great funeral ceremony or death-dance, during which the people thought about what Waiai did. We are told that Naga went to Uga, one of the eastern islands, where he taught the people how to perform the death-dance, and that Waiai went to the Murray Islands. According to the Murray Islanders, Waiai (as they call Waiai) introduced the *sava marma* and other death-dances. In Waiai, the smallest of the three Murray Islands, Waiai was represented by a turtle-shell image of a man, which rested against the rafts of a model of the platform of a canoe. No women were allowed to see these sacred objects, which were kept in a cave. There was an annual pilgrimage of all the men of Mer and Dukum, the other two islands, to the shrine; the men and novitiates were segregated on one side of the island, and the women and children on the other, this being the occasion for an elaborate initiation ceremony. The essential cult of Waiai on Waiai, so far as our information goes, was of an erotic character.

Kwoiam, the warrior hero of Mabulai, who fought natives of various islands, and even successfully and single-handed attacked a village in New Guinea, is said to have been the brother of Waiai and his sister's son. This family-group constituted what may be termed the 'social unit' of a matrilineal community, the father being so unimportant that his name has not been handed down. Kwoiam is said to have had the shoehoned skate for his totem (*auvog*), which, amongst other circumstances, points to the Kwoiam cult as consisting of a long list but containing a turtle-shell model representing respectively a hammerheaded shark and a crocodile, and under each of these was a stone in which the spirit, the so-called *auvog*, resided, and to them were attached human skulls and jaws. Outside the enclosure which screened the shrine from profane gaze were two heaps of shells, woiam made two crescentic objects of turtle-shell, which biased with light when they were worn at night, and which he nourished with the savour of cooked fish. These objects were called *auvog* (presumably because the totem shark was called *auvog* by the natives; some people call them), and they became the insignia of the two phratries into which the totem clans of Mabulai were divided, and each totem shrine was known as the *auvog* shrine. Connected with the cult of Kwoiam were two heaps of shells, called navel of the *auvog*, which were constructed to show that the two *auvog* emblems originated there; and, when it was deemed necessary to fortify the latter, they were placed upon their respective navel-shrines. The cult of Kwoiam was associated with warriors, and when attacking an enemy the warriors formed in two columns, each of which was led by a headman who wore the Kwoiam emblem to which he was entitled. The moral value of the *auvog* in war must have been very great, and the natives themselves recognized the fact; as one man said: *Suppose we have not got an *auvog*, how can we fight? It is recorded on one occasion the victorious Mabulai men refused to continue fighting the Moa men on account of the temporary absence of the two *auvog* emblems associated with Kwoiam, but these were less potent than those of Mabulai, because Kwoiam belongs to Mabulai and not to Moa.* The *auvog* had a weapon which was considered to be a weapon in the eyes of the enemy. The Moa had a weapon which was considered to be a weapon in the eyes of the enemy. The Moa had a weapon which was considered to be a weapon in the eyes of the enemy. The Moa had a weapon which was considered to be a weapon in the eyes of the enemy. The Moa had a weapon which was considered to be a weapon in the eyes of the enemy. The Moa had a weapon which was considered to be a weapon in the eyes of the enemy.
HEROES AND HERO-GODS (General and Primitive) 635

shrines were so sacred that no uninitiated persons might visit them, nor did they know what they contained; they were aware of the existence of Sigai and Malana, but they did not know that the former was a hammer-headed shark and the latter a crocodile; this mystery was too sacred to be imparted to the common herd. When the heroes or deities were addressed, it was always by their human names, and not by their animal or totem names. Warriors would be enabled to go immune whither they liked if they sang certain songs at the shrines. They prayed as follows: 'O Augud Sigai and Augud Malana, both of you close the eyes of these men so that they cannot see us. There was also a naval-shrine of Sigai on Tutu (Yam and Tutu were inhabited at different seasons by the same people). Before going to fight, the men stood around it, or around it on Yam, and thrust their bows and arrows into it so that they might not miss their aim; and during the fight they called upon the names of the heroes.

Judging from the human face-mask decorated with human skulls from Aurid, which almost certainly represents Kuliska, we may surmise that there was a cult of that hero there, which was preserved in this way. So far as the Murray Islands are concerned, it appears that Bomai, who was often spoken of as Malai, was comprised as a sogo, i.e. something sacred; he was represented by a human face-mask, with a beard of human jaw-bones. Later, Malu arrived with a fleet of canoes from various western islands in search of Bomai. Malu also became a sogo, and was represented by a mask in the form of a hammer-headed shark. The foreigners exhibited certain dances in order to please Bomai and then returned home. The Bomai-Malu cult predominated in the Murray Islands over all other cults, and the sacred men in connection with it attained a considerable power, which they often used for their private ends. This cult elaborated and prolonged initiation ceremonies, and appears to have been a secret society or religious fraternity, which took upon itself disciplinary functions; indeed, it was very similar to some of the secret societies that are found in Melanesia.

In the western and central islands are not particularly fertile, so the natives spend a good deal of their time in fishing, and there is considerable intercourse between the various island groups due to trade or warfare. Here the hero-cults developed into war-cults. The isolated Murray Islands are fertile, and the people are much given to horticulture; thus there was little inducement for the hero-cult to develop into a war-cult, and it concerned itself more with the social life of the people, and the three temporary sacred men were on the way to become priests.

Totemism was still in force in the western and central islands at the time of the arrival of the hero-cults, but it had probably already disappeared in the Murray Islands. Everywhere, but perhaps more particularly in the eastern islands, there were numerous small family or local rituals, most of which were concerned with improving the food supply. A religion then appeared which replaced in the west the indefinite communal association of a totem with its clan by a definite personal relation with a supernatural being that was associated with trade, being carried from island to island. These cults also provided both the Western and the Eastern Islanders with a synthesis which had hitherto been lacking, as the men could now meet as members of a common brotherhood, and a feeling of intense pride in new cults was engendered. An interesting parallel to these hero-cults of Torres Straits occurs in Fiji. The people of Viti-Levu are divided into two groups, the Kai Veina and the Kai Rukuruku, which trace their descent from Veinaia and Rukuruku, who drifted across the big ocean and taught the people the cult associated with the large stone enclosures, sangi. Veinaia arrived first, and where he landed the turmeric plant sprang up near the heroes. They were addressed, it was always by their human names, and not by their animal or totem names. Warriors would be enabled to go immune whither they liked if they sang certain songs at the shrines. They prayed as follows: 'O Augud Sigai and Augud Malan, both of you close the eyes of these men so that they cannot see us.' There was also a naval-shrine of Sigai on Tutu (Yam and Tutu were inhabited at different seasons by the same people). Before going to fight, the men stood around it, or around it on Yam, and thrust their bows and arrows into it so that they might not miss their aim; and during the fight they called upon the names of the heroes.

The great mythological personages of southern Melanesia are Qat of the Banks Group, Tagaro of the New Hebrides, and certain of their brothers. Qat, who had a mother but no father, is usually regarded as a spirit (such) that never was a man, though in some places he is said to have been a great man of old times. Codrington (Melanesians, p. 158) says:

'Tis impossible to take Qat very seriously or to allow him divine rank.... When he is said to create, he is adding only to the furniture of the world in which he was born.'

It is related of him that he made men, pigs, trees, rocks, as the fancy took him, and also night. He was always ready to play tricks on his envious brothers, but not in malice. He disappeared by his canoe (in which was his wife, brothers, and all living creatures) being washed out to sea in a deluge. At the legendary home of Qat, 'there is still the stump of a tree which Qat cut down for his canoe; men who are cutting a canoe make sacrifices at this stump, throwing down money there that their canoe may be swift and strong and never wrecked' (p. 162). The people of the Banks Islands, which may be called a prayer, is strictly an invocation of the dead. The Banks Islanders have no belief that living persons are properly made only to the dead; yet the spirits, e.g. Qat and Marahu [skull sparrow, a friend of his] are addressed in the same way' (p. 165).

They were prayed to for success, riches, safety when at sea, and other blessings. In the New Hebrides Tagaro takes the place of Qat. In the Banks Islands and northern New Hebrides there is an institution called Qat, into which a rigorous secret initiation is necessary in order to become a warrior. It is a very elaborate and difficult dance in which the performers wear lofty hats or masks. Codrington says that 'the name Qat refers to the hats and not to the rest' (p. 86), and he goes on to say: 'It is to any connexion between the dance and the spirit. It is evident that there is yet a great deal to learn about Qat and Tagaro, and what has been said above probably holds good for various mythical personages in Melanesia. Qat (Tagaro) apparently represents a human ghost in process of being sublimated into a pure spirit.

The case of the Polynesian cosmic hero, Miti, is a good example of the difficulty with which a hero can become an actual and worshipped deity. The Miti legends, in a complete or fragmentary form, are found all over Polynesia and in parts of Melanesia and Micronesia; they are undoubtedly of remote antiquity, and certainly date back to the prehistoric Polynesians; indeed, several hints of Hindu influence have been detected in them. Miti is generally spoken of as being one of the four brothers who descended from the same name. There is much diversity of opinion as to his ancestry, though it is generally stated that his parents were supernatural beings. Although he lived a thoroughly human life, he was possessed of supernatural power in addition to an inventive mind and a very tricky
HEROES AND HERO-GODS (General and Primitive)

and mischievous disposition. He was 'the fisherman who pulls up islands,' and he improved fishing and rendered fish-hooks and fish-spears more efficacious by adding barbs. According to different Polynesian legends, Maui raised the sky, which till then had not been separated from the earth, and thus rendered the earth habitable for his race of fellow-men. He was also 'the enemaker of the sun,' permitting him to pursue his course only on the condition that he went more slowly in order to increase the length of the day. Maui, by the aid of his cunning and magical powers, gave fire to mankind, and some legends make him the fire-teacher as well as the fire-finder, as he taught men how to make fire by the friction of two sticks. In seeking immortality for man, Maui lost his life. There is a native saying: 'If Maui had not died, he could have restored life all who had gone before him, and thus succeeded in destroying death.' 'Maui's death by his ancestors the Night fifty ends his solar career' (Taylor, F.C.I. 246).

Westervelt, from whom some of the following information has been borrowed, remarks: 'It is a little curious that around the Polynesians, there is so little record of temples and priests and altars. He lived too far back for prietest customs. His story is the rude, menial view of the days when of church and civil government there was none, and worship of the gods was practically unknown (Legends of Maui, p. 113). In consequence, the Māori, says J. Taylor, 'thought himself one of the greatest and most powerful, and sought the dark corners of the forest in order to find fishing' (Te Iha o Maui, p. 132). The religious life was worship of the gods, and except by the exigencies of war and the family, it was Maori, and yet even he does not appear to have achieved it.

Yates points out that 'Tangaroa and Maui are found blending in Polynesia even to the point of identity. It is neither easy nor safe to fix to definite origin the Proto-Si shapes of South Sea mythology, but on the whole the native myths are apt to embody cosmic ideas and the idea of the Sun preponderates in Maui, so the ideas of the Hunga in Tangaroa' (op. cit. ii. 246).

The Polynesian Creator is called Kanaroa in Hawaii, Tauros in Tahiti, Tangaroa in Mangæa and New Zealand, Tangalo in Samoa and Tonga. In Tahiti some maintained that 'Tauros was only a man who was deified after death' (Ellis, Polyn. Researches, i. 325), though by others he was spoken of as the progenitor of the other gods. Tangaroa was not a very important personage in Mangæa, for he had only one mame, or altar, and that was almost neglected, the only offering ever presented being the first fruits of newly planted and coconuts (Gill, Myths and Songs, p. 19). He can be linked up with Tagaro of the New Hebrides and with Sai of the Samoan Islands, whose brothers were known as the Wai-Tangaroa the Fool, etc. It would be tedious to detail the various heroic fijgers that appear in the legendary lore of Oceania, but the samples selected will suffice to indicate their general character, which finds parallels all the world over.

The majority of tales about heroes belong to those classed as myths, since their object is essentially etiological. The residu'e are more correctly termed legends, being narratives of what is believed to have happened, though these hero-tales in many cases may be regarded myths. It has often been stated that mythology is the source neither of religion nor of morality, but of science, philosophy, poetry and history. The tale or myth about a hero may serve to explain natural phenomena, may be in itself an interesting and amusing narrative, may inculcate social observances or illustrate the danger of neglecting them, may stimulate the listener to high endeavour, or may evoke the feeling of mystery and awe. All this may be accomplished without the hero being worshipped; it is no worship accorded to the culture-heroes—often 'transformers' and even tricksters—of the North American Indians, more especially those of the north-west coast, which fact may well be due to the absence of any mana-

cult and to the existence of the belief in mana. It is probably very rare for all the myths of a given people to be borrowed along with other cultural elements at various times. With the myth comes the hero, and, whatever he was in his place of origin, he speedily becomes native to his new home. Wherever certain incidents took place are pointed out, and many rocks or other natural objects testify to the truth of the tale, nor does it matter though these should be reduplicated in various localities. The vitality of the myth depends less upon its explanatory significance than upon the personality of the hero, but the development of a cult of the hero would seem to depend upon the socio-religious condition of the recipients.

From an examination of the evidence from Torres Straits, it would seem that, though several men of olden time may fairly be termed culture-heroes, yet no practical notice is taken of them—another illustration of the remark that a prophet has no honour in his own country. Those who have attained such recognition are Kwoiam the Australian, Wastait and Bomai and his companions, who came from New Guinea. For what came their may we assume that they were honoured? The answer here seems to be that it was the introduction of a new religious cult that reacted socially. The introduction of te had a direct influence on the social customs and the ceremony. The ideas of the deities, the ceremonies and the sacrifices were all transferred. The religious feelings of the recipients. The valorous deeds and evident supernatural power of the Australian ber."
HEROES AND HERO-GODS (American).—

1. Extent and distribution.—Primitive America is, in a sense, the land poor excellence of heroes and hero-gods. Among the most characteristic myths and legends are those which deal with the birth, growth from infancy to manhood, expiation, and achievements of such more or less divine or wonderful personages. Nor is the role of hero-god confined to man or superman alone, for the whole animal world, in its most remarkable diversities of kinds and of species, finds representatives also in the numerous diversities and semi-divinities on record—in the mythologies, national legends, etc., of the American Indian tribes from Alaska to Tierra del Fuego, and over the broad expanse of the double continent from the Pacific to the Atlantic Ocean. D. G. Brinton, the first ethnologist to devote to a special monograph, says, in his American Hero-Myths (p. 27):

"The native tribes of this Continent had many myths, and among them there was one which was so prominent, and recur often with such strangely similar features in localities widely scattered, that it has for years attracted my attention, and I have been led to present it as it occurs among several nations far removed from each other in time and culture. This myth is that of the national hero, their mythical civiliser and trainer of the young, as some one who, as the supreme deity, the creator of the world. It is the fundamental myth of a very large number of American tribes, and on its reception and interpretation depends the correct understanding of most of their mythology and religious life."

George Catlin, thus on the same subject (1837, p. 278):

"Probably every Indian tribe, north and south, had its early achievements, and the story of its hero or teacher of all early teachings, from the ten-thousand and Manabozho of the Red Iroquois and Algonquin to the Quetzalcoatl, the Bodica, and the Viracocha of the more cultivated Aztecs, Mayas, and Quichuas of the mild southland.

The range of the culture-hero and hero-god among the American Indians is very great:

'Among the living tribes of the north this hero is hardly more than an expert magician, frequently degraded to the level of a common trickster, who, after ridiculing the world of giants and supernatural beings and teaching them a few temp arts, retires to the upper world to rest and smoke until such urgent necessity again requires his presence below. Under other southern skies the myth takes more poetic form, and the hero becomes the deliverer and teacher of children, a very Christ, worthy of all love and reverence, who gathers together the wandering nomads and leads them to the highest civilization, where he instructs them in agriculture, house-building, and the art of government, regulates authority, and introduces a peaceful order of life. Then at last his work is well accomplished, he bids farewell to his sorrowing subjects, and goes away to the distant land of sunshine.' (94.)

Such a figure, e.g., was the Mexican Quetzalcoatl, the God of History, the destroyer of their native culture, thinking that he was their hero returning. Elsewhere in primitive America the white man (but very briefly, since his acts soon betrayed him) has been thought a returning hero or divinity. With these ancient hero-gods of theirs some of the Indian peoples were prone to identify the Christ of the European religions.

The culture-hero idea is often more typically American than that of deity. After pointing out that 'gods are a conception that does not flourish among the primitive American, and that it is the subject of this sketch or 'Types of Indian Culture in California,' A. L. Kroeber says (p. 91):

"The Indian place for the deity is the culture-hero. The god comes by the introduction of character he can be differentiated, and the interaction of distinct deities makes god many as the myths are many. Where he occurs in several personages in one mythology, these are only repetitions of one another. In North and South America he is the same. Now he is a benefactor and teacher; now more noisome, entertaining, obscene, and ridiculous. Rarely does a Indian vary these qualities from episode to episode in the same mythology. But he is always the same, and he is always alone in his world. He makes the world or remakes it from existing earth brought him by an assistant animal; he does not create it. He changes the society of the species to suit his own, and he always the same, and he always stands alone in his world. He makes the world or remakes it from existing earth brought him by an assistant animal; he does not create it. He changes the society of the species to suit his own, and he is the one and the only possible character of American mythology; he is the Indian himself in his nakedness.

Of course, there are exceptions to this general statement, but Kroeber remarks that 'even those specific cases that are exceptions usually rest on a wider basis that conforms with the conditions here described' (p. 92).

2. Human heroes.—The child as hero and hero-god among the American Indians has already been touched upon (see art. CHILDREN [American], vol. iii, p. 626). Many valuable information concerning human heroes in the mythology of the N. American Indians will be found in Lowie's monograph on 'The Tent-Theme' (J.A.F.L. xxii. [1906] 97-145), where the conclusion is reached that 'a majority of North American test-tales have human heroes and a human setting' (p. 132). He remarks further (p. 134):

"So far as the tales related of sun and moon are concerned, far-reaching similarities distinguishing them as a group from human folk-tales cannot be detected. Solon, the hero of the sun is a human being named after, or somehow identified with, sun and moon." Again (p. 183): 'The test-heroes, in their fundamental ideas, the imposition of a difficult or dangerous task and a human or supernatural trial of strength, is evidently derived from human experience.

Among the test-themes noted by Lowie in N. American Indian tales are the following: Flight to the sky, mapping-door, tests by cruel relatives spine-seat, wedge test, capture of animals, fights with animals, striking trees, waggis dances, sweat-house, fire ordeal, trials of strength, trip to the under world, pushing hero down a precipice, attempt to drive hero away, tests by fire, ice, and water, and tests by clan, fish, etc., hero sent to get berries in winter and errands, imitation of boar, killing monsters, etc.

Lowie discusses briefly, under the head of heroes, these types:

Western ('transformer') myths, myths of the Californian Maidu, 'lodge-boy' and 'thrown-away' cycle (Plains Indians, etc.), Pueblo twin myths, rabbit-cycle (Ponca, Menominial), blood-clip cycle (Blackfeet, Pawnee, Dakotas, Gros Ventres), star-boy (Crow, Pawnee, Dakotas, Arapaho, Kliow, Gros Vincent, Blackfeet).

Details concerning some of these heroes will be found in Denslow's Blackfoot Lodge Tales (1900) and Pawnee Hero Stories and Folk-Tales (1889)."
HEROES AND HERO-GODS (American)

by Radin (see art. ESKIMOS, vol. v. p. 303), who assigns a larger rôle to animal actors in Eskimo legends. Bogoras, who has made a comparative study of the folk-life of north-eastern Asia and that of north-western America, informs us (Amer. Anthropol., new ser., iv. [1902] 606) that 'the general character of the Chukheie and Eskimo tales is quite alike, and the same ideas are to be found on both sides of the Bering Sea are about the same.' Hero-children and human heroes are common in both. The prevalence of human heroes in the folk-tales of the South American Indians (see art. CHILDREN [American]) will doubtless appear when we know more about this rather neglected field of primitive mythology, and the characters interpreted as personifications of sun and moon are revealed in their true nature, as has been the case with so many other myths and figures in the mythology of the northern continent.

3. Typical heroes and culture-heroes. — The Aztec Quetzalcoatl, the Mayan Itzamna, the Chibchan Bochica, and the Quechuan Viracocha have been discussed at considerable length by Brinton in his American Mythology (1878); the Myths of the New World, etc., and by more recent authorities. They are fairly comparable with some of the great culture-heroes of the Old World. The deeds that they accomplished include the cleaning up of the monster-ridden world, the establishment of society and human civilization—all things, from the earth fit for man to making mankind fit for the new earth. As in the Old World, so in the New, their memory is connected alike with the Paradise that once was and with that which is again to come. Besides such great figures as these there are scores of others less majestic and less attractive.

Concerning the culture-heroes or some of the tribes of the north-west Pacific coast, F. Boas says (Indianscbe Sagen, p. 389):

'What gives the traveller (or wanderer) tale its character, in its wild, unpredictable, and even the wonderful, is the element of wonder, mystery, and romance.' Either the Golias of the Chinook, the Quita of the Coast Salish, the Quottow of the Comox, the two Travellers of the Nootka, the K'ing' Ing of the Neweats play, in connection with their culture-mission, such tricks as do the Raven in British Columbia, the Gosecap of the Mmakie, the Nanaboozhoo of the Ojibwa, the Nap of the Blackfeet, the Coyote of the tribes of the southern Rocky Mountains, or the 'Bokman' of the northern Athapascans.

Such tricks are not entirely lacking, but are transferred to different animals or other beings, such as the Bluejay among the Nootka, the Squaw and the Raven among the Coast Salish, Comox, and Neweats, as Kwootah, the Min, and the Raven among the Nootka. The Saveau have not made so sharp a distinction, and, therefore, the influence of the separation is not so clear among the Fraser River tribes as among the other coast peoples. The tradition is clearest among the Coast Salish and the Nootka. The Coast Salish of Puget Sound have sounds like names we had of the place, which also had to do with the world.

Boas has also discussed the question of the hero and the transformer in his Introduction to Teit's Traditions of the Thompson River Indians of Brit. Col. (Mem. Amer. Folk-Lore Soc., vi. [1898] 1-12).

The general character of the hero-myth of the Californian aborigines is briefly sketched by A. L. Kroeber in his article on 'The Religion of the Indians of California.' The primary feature of the mythology of the Indians of the north-western part of the State is 'a very deeply impressed conception of the world, and its inhabitants, race, who, by first living the life and performing the actions of mankind, were the producers of all human institutions and arts as well as of some of the phenomena of nature'; while the most important of the myths dealing with culture heroes more or less trickster types familiar from so many other parts of North America' (p. 345). In central California, where these ideas are apparently in a truer position of the world, man, of mankind, and of its institutions, the creator seldom has 'tricky exploits or defeats' attributed to him — such things belong to an anthropological secondary creature, usually the Coyote. In the northern half of the central area, however, the creator is generally anthropomorphic; if not, he is merged into one personage with the more or less tricky Coyote. In some California tribes the long origin-myth of a thoroughly south-western and Pueblo character. The mythology of the southern part of California resembles that of the south-west region on both sides of the Bering Sea in its prevalence of the culture-hero and trickster over the creator.' The Maidu of northern central California furnish us with Kodooyane (Earth-Namer, or Earth-Maker), a trickster and inventor of all things; also Ooiitono, 'a supernaturally born destroyer, conqueror, and avenger.' The northern Wintun conception of Olekia 'shows a developed and a lofty conception of a creator, while among the southern Wintun there is little antithesis between creator and Coyote in the creation myth.' In the mythology of the Shasta, Coyote is both creator and trickster, although the myths of the south-western area is not so great. The Klamath (or Lutuam) K'muukameth, or Old Man, is 'not the same as the Maidu Wintun, Yuki, and Wishoek; he is deceitful, with the character of the typical culture-hero trickster.' In many things, indeed, he suggests the Algongian Manabozho.

The Ojibwa Nanibozho or Nanaboozhoo, the Misissaga Nanaboozhoo or Waniboozh, the Sauteux Ojibwa Nanaboozhoo or Nanabouch, the Ottawa Nanaboozhoo, the Mesquiqs Nanaboozho, and the Nipissing Nanaboozho, all correspond to the Cree Wiskitskebok, and more or less, to the Blackfoot Napli or Napiu, the M'mac Gosecap, etc. The stories of the deeds and exploits of this hero-god, who figures in the creation-myth and the deluge-legends of these Indians, who taught them many of the arts and institutions of the world, were received as well as helped them, have been correlated and discussed by Chamberlain (JAF, iv. [1891] 193-213). The most detailed account of some of the deeds of this Algongian culture-hero is given in W. J. Hoffman's article and monograph on the Menomini Indians (14 RBEW, pt. i. pp. 3-328). The culture-hero of the Sas and Foxes (also Algongian) is Wissak. A contest with the manitous appears in the story of Wissak recorded by Jones (Fon Texts, pp. 336-379), which includes the flood legend.

'The theme of the following story is the struggle of the culture-hero to subdue the manitous and make the world ready for the people who were to come after. It is the sacred myth of the Foxes; and with the Sauks it is the myth on which rests the midwinter, a religious society which preserves the most sacred forms of religious worship. It is in two parts: first, the struggle of the culture-hero with the manitous, in which the death of his brother, the flood, and the defeat of the manitous are the leading events; second, the pacification of the culture-hero by the manitous, and the restoration of peace, preliminary to settling the world in order for a home of the people' (p. 336).

This subjugation of the manitous is also one of the labours of Manabozho or Nanaboozhoo among the Ojibwa, etc. The culture-hero myth of the Sas and Foxes has been recorded by H. W. Beebe (L. xiv. [1901] 225-239). After preparing the earth for mankind and driving off the manitous, who had sought to destroy him, Wissak proceeded as follows (p. 237):

'Wissak then created the people, making the first man and the first woman out of clay, that was as red as the redder blood (hence the Indian name of the Foxes, Mawka, Red-Feather). And he made them after the race of his mother. He taught them the true position of the world, man, of mankind, and of its institutions, the creator seldom has 'tricky exploits or defeats' attributed to him — such things belong to an anthropological secondary creature, usually the Coyote. In the

Then he left the people, going away to live in
the north, but promising to return one day to take them to their new home in the west, where they were to dwell for ever with their kindred who had gone before them. Wiasaká was always described as being ever youthful. The culture-myth relates in detail 'the divinity's benevolent acts toward men, his teaching the people the way to live, and his protection of them of a home after death in the spirit world.'

In his "Peo Texts" (1907) Jones published (pp. 259-279) a number of stories of the culture-hero Wiasaká, concerning whom he observes (p. 264): "The stories to follow are typical of that mass of narrative in which the culture-hero moves, now as a boojum doing tricks to others and having them done to him, and now as a benefactor and as an allegorical character. Sometimes he is prehensile and whispering, like a spied child, and scoots to stoop most degrading for the accomplishment of an end; and again he rivets attention as being always represented as dwelling with his grandmother, whom he calls "The Old One." In one instance only is Wiasaká referred to as having wife or children. In some of his difficulties his grandmother comes to his aid. He comes to grief often in trying a trick on his grandmother, e.g., skunk or duck); he accepts challenges, and thereby becomes a victim of his own foolishness.

The culture-hero of the Micmac and closely related Algonkian Indians of Maine, New Brunswick, and Nova Scotia, Charles G. Leland says, in his "Myths of the New World," that "there was an appalling giant in his conquests with huge monsters and other creatures, and the only circle he is the most benevolent of gentle heroes, and has his oft-repeated little standard jokes. Yet he never, like the Mananau-Flawatha of the Chippewa, becomes silly, over-fond of little jokes, and proves to be quite a creditable giant, even as Thor went fishing in hero fun with the frost god, but never low on character.

He informs us further (p. 12) that 'Glooscap is always a gentleman."

"The "Wissakah" Texts," Publ. Amer. Ethol. Soc. li. (1906) xi says of one of his Indian informants, who is 'theoretically a Methodist, but in mind-content to all intents and purposes an unadulterated Indian, that 'he implicitly believes in the truth of all the myths he narrated, no matter how poetically or ribald they might seem. Coyote he considers as worthy of the highest respect, despite the ridicules and lascivious side of his character; and with him he is strongly inclined to identify the Christ of the whites, for both he and Coyote lived many generations ago, and appeared in different forms to tell the old stories.

Other culture-heroes are recorded from the various American Indian tribes, besides the "transformers" of the North Pacific coast region treated in The Master of the Bear, in his "Indianische Sagens" (1896), and in the mythological data of the Jeeb Expedition, published by the American Museum of Natural History (New York) and besides the cycle of animal and bird heroes and semi-heroes of the Pacific slope, such as Raven, Blue-Jay, Coyote, and Mink. The following may be mentioned: Elamath Kuskamot; the "Old Man" of many western tribes of North America; the Eddiges Irawamps; the Mandan Hunkotukuncha; the Arizona Mishapa; the Cherokee West; the Chayennes Vinbik; the Tarascan Curcutberia; the Cuumb American Kubulan and Veta; the Mero Aruma; the Guayro Abanaw; the Topulon Cauesug and Main Moun; the Paretel Uamis; the Guayacan Karazas; the Buhair Kukatu; the Alkupi Ebal; the Arawak Ramn; the Guarani Tarco; the last of the tribes of the Uaupes; the Guaranian Abayu.

Some brief details concerning many of the South American heroes and culture-heroes will be found in Thure Thure's "Die Mythen und Legenden der siedenamerikanischen Ureler" (Berlin, 1905).

4. Culture-hero, clown, deceiver. In an article on 'The Hero-God of the Algonkins as a Cheer and a Lascivious Spirit and Algonkian Antiquarian' in 1885 and then again in his "Essays of an Americanist" (1890, pp. 120-124), D. G. Brinton called attention to the curious fact of the attribution to certain culture-heroes of the Algonkian Indians of the characteristics of trickery, deceit, lying, and clownishness of various sorts. This was illustrated from the name of the culture-hero of the Micmac, Glooscap, which is called "whistle with words," 'word-breaker,' 'deceiver,' and a similar meaning was said to attach to the Cree Wiesakok, the analogue of Glooscap with this western Algonkian tribe. Speaking of Michabo, to whom innumerable tricks are attributed, Brinton says ("Essays of an Americanist," p. 123): 'Michabo does not conquer his enemies by brute force, nor by superior strength, but by craft and ruses, by transforming himself into unexpected shapes, by cunning and strategy. He thus comes to be represented as the arch-deceiver; but in a good sense, as his enemies on whom he practises these wiles are also those of the human race, and he exercises his powers with a benevolent intention.

'Thus it comes to pass that this highest divinity of these nations, their chief god and culture-hero, bears in familiar narrative the surprising titles: 'the liar,' 'the cheat,' and 'the deceiver.'"

In The Myths of the New World, however, Brinton gives this other view of the matter, as follows (p. 194):

"In many of the tales which the whites have preserved of Michabo he seems half a wizard, half a simpleton. He is full of pranks and wiles, but often as a loss for a meal of victuals; over-licking to try his magic arts on great hearts and men meeting ludicrous failures therein; envious of the powers of others, and constantly striving to outdo them in what they do best; in short, little more than a malicious butt for the author's amusement in practical jokes, and abusing his superhuman powers for selfish and ignoble ends."

But this is a low, modern, and corrupt version of the character of Michabo, born of the bad influence of, and ancient one than the language and acts of our favour and the Apostles in the cause, Mystery Plays of the Middle Ages do to those recorded by the Spaniards."

That some of the Indians under Christian influence may have turned to ridicule their old gods is quite possible. J. A. Coone (Les Algonqns, Montréal, 1886, p. 'Wissakak,' p. 443), e.g., says: 'The word Wissakak is now employed only derivatively by Christian peoples. With them, Wissakak, like Naskapi, is about synonymous with monkey (vigne) in a figurative sense. Thus, it is said of anybody who indies what he is: 'He is a Wissakak.'"

J. D. Prince, in his introduction to Kukokap, The Master, says concerning Kukokap (Glooscap), the culture-hero of the Micmac, Passamaquoddi, and Penobscot (p. 33): Kukokap is a god-man of truly Indian type who undoubtedly respects the principles of good, and particularly good nature, as opposed to his twin brother Malcon the Wolf, who may be called the Abrimken of the Wabanaki, although this is almost too dignified a term."

He remarks further (p. 54): The tendency of Kukokap, in spite of his name, was essentially benevolent. Oddly enough, Kukokap is called "the liar," from a stem Wissk, "lies," as "a man, person, one who stands." . . . This appellation, uncomplimentary as it sounds, is not an evil word, for the Indians. Kukokap is called "the deceiver" not because he deceives or injures man, but because he is not "true" to his own nature. He is thus an enemy to the enemy's enemy, or, as it is called in the Indian, the last hope of the earth, the highest possible virtue to the early American mind."

This explanation is much the same as one put forward by Brinton; but, even if it did explain (it hardly does so satisfactorily) the name of the culture-hero, in his capacity of 'deceiver,' it fails to account for the clownish actions, ridiculous escapades, and mean and despicable things attributed to him. Nor does it take fully into account the rather numerous occasions on which he is completely outwitted, e.g., in the contest with the baby, with certain animals, and even with trees.

Clark Wissler, in his 'Myth of the Blackfoot Indians' (pp. 6-12), discusses the character of the culture-hero of these Indians and his relations to the other figures in their mythology. Of Old Man, or Napiw* (the Napi of various other writers), we are informed (p. 9):

"That the Blackfoot formerly had a well-defined creation-myth, in which the Old Man took the initiative in producing and transforming the world, is indicated by several writers. Those noted give more or less in detail a running account of the peopling of the earth and the instruction of mankind in the art of living. While these incidents do not occur in detail..."
in the Old Man myths recorded in this paper, they are occasionally implied. Such origins are not present often associated to the Old Man without the formality of a myth.

It will be noted that the greater part of the tales collected by the writer takes place rather generally incidents in the Old Man's career. No ritualistic or ceremonial practices are found associated with these narratives, though it may have been otherwise with the past. On the other hand, connected with them are a large number of origins for many aspects of material culture, such as the buffalo-dance, the making of weapons, methods of dressing skins, etc. A considerable number of places and topographical features are associated with his adventures; as Old Man's River, Tongue Peak River, Old Man's Gambling-Place, Old Man's Riding-Place, Rolling-Bones Creek, etc. In fact there seems a tendency to give all of his adventures a definite location in Alberta."

Wissler says further (p. 9): "For several decades at least, the Blackfoot have considered the Old Man as an evil character, in most respects trivial, who long ago passed on to other countries. Whenever the writer asked the question "What was the Old Man?" the usual reply was: "No, he had no enough confidence in him to make excited." In the daily conversation his name is often used as a synonym for immorality. However, it is not implied that he is regarded as an evil spirit. His name is especially associated with things obscene, and pertaining to sexual immorality. I have heard the Piegan say that Brand-sk-

must be trying to be like the Old Man; he cannot be trusted with women.""

It is quite probable that here, as with other Indian tribes, the culture-hero has suffered from the same disposition seen among civilized peoples of the present day to attribute actions of a certain character to a specific figure. Wissler, therefore, seems quite justified in his statement (p. 10):

"We have occasionally noted a tendency to assign modern obscene anecdotes to this character, and it may well be that many of the tales long attributed to him have been accommodated by some responsible person to his connection. The unfortunate human tendency to perceive clearly in such anecdotes seems sufficient to account for their survival and accumulation long after belief in and respect for the Old Man as a creator, teacher, and benefactor."

Taking everything into consideration, Wissler inclines to the opinion that certain Old Man myths are survivals from a much larger group constituting the ancient basic beliefs of the Blackfoot, and that there has been a disintegration of the creative and cultural origin myths concerning Old Man. Today the Blackfoot make Napi (the Old Man) and Natos (the Sun) different characters, the former secondary. According to Wissler, the Blackfoot and the Crow 'culture-heroes' are closer together than the Blackfoot and those of the Arapaho and Gros Ventre. Those of the Blackfoot, Crow, and Arapaho seem all, however, to be 'entirely human,' with no traces of any animal qualities. Wissler, in his opinion, gives the Blackfoot a much space to Old Man and the myths about him (pp. 357-348). He says concerning his character (p. 357 f.):

"The character of Old Man, as revealed, even in the more serious of the myths, is a strange composite of opposing traits. He is a creator, wise in word and deed, and of benevolence and malignancy. He associated intimately with the people, and was much conversed with them and understood their thoughts and language, and he understood him. Although believed to be the creator of all things, and as having omnipotent power, he was often helpless and in trouble and compelled to seek the aid of his animal friends. His was, in fact, like an animal's intelligence in a way which, strange to say, were exerted in conjunction with his supernatural power."

The power of Old Man was 'uncontrolled by reason, and wanton in its exercises,' and he was a 'deceiver and a trickery, and his name was a synonym among the Blackfeet, at least in later years, for mischievous and immoral adventure' (p. 338). Of some of the Old Man myths, McClintock remarks (p. 357) that they 'are samples of Indian humour, told as we tell fairy tales and using Old Man for their central figure.'

Many of the myths recorded by the writer are not commonly known among the southern Piegans of Montana have been published by G. O. Uhlenbeck in the "Journal of American Folk-Lore" and "Journal of American Folkslore" (1912). Uhlenbeck's style Napi (or Nago) 'trickster-hawk' was.

Robert H. Lowie, who was among the Chippewyan Indians (of Athapaskan stock) about Lake Atha-

bases in 1936, reports ('Chippewyan Tales,' 1912, p. 173) that 'the Wiskakotch myths were becoming part and parcel of Chippewyan folklore.' He remarks further: "While the Cree name of the hero was the only one used by any informant, and even the name of the Chippewyan, and partly Cree extraction) was used to have no Chippewyan origin of myths for many aspects of material culture, such as the buffalo dance, the making of weapons, methods of dressing skins, etc. A considerable number of places and topographical features are associated with his adventures; as Old Man's River, Tongue Peak River, Old Man's Gambling Place, Old Man's Riding Place, Rolling-Stones Creek, etc. In fact there seems a tendency to give all of his adventures a definite location in Alberta."

The Wiskakotch myths obtained from the Chippewyan Indians are given on pp. 186-200, and are of the Wiskakotch was traveling time. This passing over of an Algolian cycle of myths into the mythological 'Creek' of the Athapaskan Chippewyan came important fact in comparative folklore; it suggests the possibility of similar occurrences elsewhere in primitive America.

The correspondents of the Algolian Nanaboozhou and similar characters in the mythological 'Creek' of the Athapaskan Chippewyan came important fact in comparative folklore; it suggests the possibility of similar occurrences elsewhere in primitive America.

HEROES AND HERO-GODS (American)

defined as 'the culture-hero and friend of mankind. The predominance of the elder brother characterizes many other Indian myths.

The twin-hero-striks of the Zuñi are Ahalyuta and Mátásiláma, spoken of as elder and younger brothers, and 'accounted immortal twin yonths of small size. Their deeds are detailed by Cushion in his Zuñi Folk-Tales (1891). They are also styled 'the twin gods of war,' and are looked upon as the 'right-hand' and 'left-hand' beings of the sun. As Cushion found 'the myth of the miraculous twins and war leaders among the Uinta Utes of the Shoshonean stock in north-eastern Utah (JAFPL xiv.), a characteristic of the Zuñi people, the twin myth is the Bakairi story of Keri and Kame; the former, wiser and more powerful than the latter, is, according to K. von den Steinen (Die Kabieth-Sprache, Leipzig, 1892), the chief hero in the legends of these Indians. The names now borne by these heroes are those of the sun and moon, and, curiously enough, it is the weaker, and not the stronger one, who has the name of the sun. Among North American twins, brother-pairs, etc., may be mentioned the following:

- The Two Brothers of British Columbia;
- The Two Brothers of the Dena (Alaskanian);
- The Twin brothers of the Yavapai and the Tohono O'odham (Apachean);
- The two sons of the Sun (among the Poncas and various tribes of the Iroquois).

From Mexico and Central America may be cited:

- Quetzalcoatl and his three brothers, among the Aztecs (the Huexotzinco); and the Maya; among the Celestes (of the Group of Cofan Rain.)

From South America the following:

- Amalacua and Yocil among the Tamoacans of Venezuela;
- Tamoacans and Artukas among the Brazilian Tupis; Karu and Raira among the Mundurucus; Tiri and Karu among the Yurucuara; the two sons of Huanac among the Chocarana Pucacocha and Vicrama among the Yunkas; Apoalequiu and Figurene among the Guaraníes; and Keri and Kame among the Chontalas.

The legends concerning these heroes embody a great variety of incidents—so-operation, opposition, etc.

6. Re-incarnations of the hero-gods. In the literature relating to the conflict of the Indian peoples with the white man, the Mexican monarchs, the 'Ghost-Dance' religions, etc., we meet with references to beliefs in the return of the ancient divinities and culture-heroes, to the return of the white invaders, other, and restoring the land to the red man, in all its pristine beauty and fertility. This is sometimes a feature of the 'new religions' of the American Indian, as advocated by Chamberlain (Jews, Relig. Psychol., Vi. [1915]-46). Among the Ojibwas, e.g., the 'prophet' Tenakwatawa (a Shawnee settler-born of 'a new religion,' in 1805—1812) came to be looked upon as an incarnation of Manabosko. The revolt of the Mexican Zapotecs in 1850 was led by an Indian priest, who declared himself to be an incarnation of Quetzalcoatl.

After the departure of the culture-hero, some Indians, according to the legends of not a few tribes, succeeded in making their way to his far-off abode. Laaland (Algonq. Leg., 1865) records (pp. 94—108) two Miamic tales of the men who went to Glooscap for gifts, and Jones (Fox Texts, pp. 332—337) gives the Fox Tales of how 'The Red-Hearts went to where Wiss-ká-wá was.' Upon this story he remarks (p. 332):

'This narrative is but another version of a familiar story known to other Algonchina tribes. It is the account of the visit of four men to the culture-hero at his distant home, and of how each obtained what he asked for. The visit itself, the root, with the right places where the culture-hero had departed from this world, it is not stated in the text, but the place of the home is at the frozen north.'

In the Miamic story the departed Glooscap is represented as dwelling in a land of magic and of beauty.

7. Interpretation of heroes and hero-gods. Both in his Myths of the New World and his Essays on Americanism, and in other writings as well, Brinton sought to interpret the heroes of the American aborigines as personifications of light, dawn, etc., calling to his aid, not infrequently, Max Müller's 'disease of language' theory. The Algonchina Michabou, the 'Great Rabbit,' was a light-god, because of the relationship of waboo (i.e., 'white one'), the term for rabbit, and wábbo (also 'white', 'the word for dawn'; and Manabosko was disposed of in a similar manner.

The Iroquoian Ioseha, Atseo, Quetzalcoatl, Mayan Itzamna, Chibchuan Boochko, Peruvian Rupacoco, and many other figures, he made out to be essentially the same. The often-occurring contest of two brothers or of the twins, e.g., the Iroquoian Ioseha and Tonawasko, the Algonchina Manabosko and Chokamipok, he explained as the contest of light and darkness. The culture-hero, as was sung of Itzamna, 'son of the morning, or born in the east.' To cite Brinton's own words (Amer. Hero-Myths, p. 29):

'The most important of all things to life is Light. The primitive savage felt, and, personifying it, he made Light the beginning of the whole. Light is the beginning of the world. Light comes before the sun, gives it forth, creates it, as it were. Here, the Light-God is not the Sun-God, but his Antecedent and Creator.'

This is somewhat different from the solar and lunar theories of hero-heroes revived in recent years, in particular by Piéron and shared also by Ehrenreich, in his monograph on general mythology (p. 233), where he identifies 'culture-heroes' with the sun, the moon, and Venus; in his special treatment of South American myths (Myth. und Leg. der südamer. Ureinw. 1900, p. 24), he says of the so-called culture-heroes 'that they all bear more or less the character of sun or moon beings.'

As noted above, the unsatisfactory character of the naturalistic theory for the explanation of American hero-heroes and hero-myths has been pointed out by Lowie, who emphasizes their interpretation on grounds of human experience. Not more successful than the solarists and the lunarists are the Frendian school of psychology, with their strict dependence upon sex and sex mores. One outgrowth of Frendianism in this field is Otto Rank's Der Mythos von der Geburt des Helios (Leipzig, 1900). Wundt's conception of the hero as a projection of human wishes and hopes may perhaps hold without either the solar-lunar basis of Proboenius-Ehrenreich or the more pathological substrata of the Frendian school. Here, as else-
HEROES AND HERO-GODS (Babylonian)

—The amount of material furnished by the native traditions, Bab., and the Greek writers on and deal with Bab. mythology indicates that the literature treating of this subject was exceedingly extensive. Moreover, not only are the narratives which have been handed down attractive and entertaining; they also reveal to us the opinions of the more cultured Babylonians concerning the origin of created things, the relationship of the gods to the world, Akkad. and the religious beliefs, to say nothing of the fancies and the inventive power of their minds; and the stories of their hero-gods are, in certain cases, not without a historical value.

I. BABYLONIAN HEROES MENTIONED BY BEREUS.—1. Aloros and five of his successors.—After having conquered Amurana, the best and the Greek writers on the god Anu, another one called Odakon (cf. Sumer. Utuk, a name of the sun-god), or Apophis, arose from the sea. The British Museum, tablet K. 643, shows a four-armed man dur-]{\text{1}}{\text{an-ki}}' king of Sippur,... beloved of Anu, Bel, and Es,...... whom Sama and Addu (Haddad) had placed on a golden throne.' He was a diviner, versed in all sacred things, and the perfection of his person served as a model for all who aspired to the priesthood after him.

3. Annunna, Opetes, and Xisthmas.—The eighth ruler was Annunna of Larana, who ruled for 10 sari (36,000 years), but of this personage nothing more is known. The ninth, however, was of much greater note, being none other than Otieras (a scribe's error for Opaties, the U(m)boru-Tutu of the Flood-legends). The Gr. text describes him as being of Larana, but the Flood-story in the Legend of Gilgamesh seems to make him a native of Sirius, pok, now Fars, in the Euphrates. He ruled for 8 sari (28,800 years), and was succeeded by his son, Bishithur or Xisthmas (Hasia-other, Hesperaeother, Hesperus of Homer, Hesperus, the Farsian, wise'). This is simply a title which was given to Bab. heroes, and the patriarchal name seems to have been the designation for the god Anu, or the name of the god of the sea of the same name (the land discovered by Messner). Xisthmas ruled 19 sari (64,800 years). He probably passed for the greatest of all the mythical kings of Babylonia.

The most important, however, was probably the legend of 'Es and Atar-basis' (a variant form of Atra-hasis). Unfortunately the mutilation of the text renders the sequence and bearing of the events which it records exceedingly doubtful. A series of years up to 7 are mentioned in which distressing things occurred among the people (cf. On the life, parents and offspring being unnatural towards and malicious of each other. There was scarcity of water and corn, and children were not brought forth. Owing to this, Atar-basis appealed to the god Enlil, and the latter Anu, his abode and, however, took no notice, and the cries of the tormented people rose on high, troubling the god Enlil; so various sicknesses were sent among them, silenced their complaints. This apparently gave Atar-basis opportunity for a fresh appeal, and the god this time answered, but the text is too mutilated for the sense to be gathered.

In the considerable gap which occurs at this point, it is not improbable that the intention of the god to send a flood upon the earth is announced. If so, the Pierpont Morgan fragment (Scheil, 27 xx. [1897]) probably gives the text. Though exceedingly mutilated, there appears to be a conversation between Es and the patriarch, whom the former seems to advise to ask (the other deities), 'Why wilt thou kill the people?' Whether the Hilprecht fragment (see Assy. xx. [1898–1902] 354 E) belongs to the Musurus Centaurs (cf. 5 A-mas, 'luminaries of heaven, possibly the sun), or Annoctus, half man and half fish, from the Persian Gulf. The fifth mound was Magulares (Metaurus), also of Pantibilia, who reigned for 18 sari (64,800 years). The sixth reign was that of Deos or Damos, the shepherd of Pantibilia, who reigned for 20 years; see below, IV, 5, 'Tammus.' In his time four composite beings, Evedamis (Sumerian En-es-dugga), Eunamancis

(?) Sumeria, En-es-ganu), Enubalus, and Amentes, arose from the Persian Gulf.

2. Euedoreschus.—With the seventh name we have a clearer historical personage, Euedoreschus (En-es-de-er-si, possibly 'the lord of the word binding heavens and earth'), also of Pantibilia. The hero's relation is to his time another hero called Odakon (cf. Sumer. Utuk, a name of the sun-god), or Apophis, arose from the sea. The British Museum, tablet K. 643, shows a four-armed man dur-an-ki' king of Sippur,.... beloved of Anu, Bel, and Es,...... whom Sama and Addu (Haddad) had placed on a golden throne.' He was a diviner, versed in all sacred things, and the perfection of his person served as a model for all who aspired to the priesthood after him.

3. Annunna, Opetes, and Xisthmas.—The eighth ruler was Annunna of Larana, who ruled for 10 sari (36,000 years), but of this personage nothing more is known. The ninth, however, was of much greater note, being none other than Otieras (a scribe's error for Opaties, the U(m)boru-Tutu of the Flood-legends). The text describes him as being of Larana, but the Flood-story in the Legend of Gilgamesh seems to make him a native of Sirius, now Fars, in the Euphrates. He ruled for 8 sari (28,800 years), and was succeeded by his son, Bishithur or Xisthmas (Hasia-other, Hesperaeother, Hesperus of Homer, Hesperus, the Farsian, wise'). This is simply a title which was given to Bab. heroes, and the patriarchal name seems to have been the designation for the god Anu, or the name of the god of the sea of the same name (the land discovered by Messner). Xisthmas ruled 19 sari (64,800 years). He probably passed for the greatest of all the mythical kings of Babylonia.

The most important, however, was probably the legend of 'Es and Atar-basis' (a variant form of Atra-hasis). Unfortunately the mutilation of the text renders the sequence and bearing of the events which it records exceedingly doubtful. A series of years up to 7 are mentioned in which distressing things occurred among the people (cf. On the life, parents and offspring being unnatural towards and malicious of each other. There was scarcity of water and corn, and children were not brought forth. Owing to this, Atar-basis appealed to the god Enlil, and the latter Anu, his abode and, however, took no notice, and the cries of the tormented people rose on high, troubling the god Enlil; so various sicknesses were sent among them, silenced their complaints. This apparently gave Atar-basis opportunity for a fresh appeal, and the god this time answered, but the text is too mutilated for the sense to be gathered.

In the considerable gap which occurs at this point, it is not improbable that the intention of the god to send a flood upon the earth is announced. If so, the Pierpont Morgan fragment (Scheil, 27 xx. [1897]) probably gives the text. Though exceedingly mutilated, there appears to be a conversation between Es and the patriarch, whom the former seems to advise to ask (the other deities), 'Why wilt thou kill the people?' Whether the Hilprecht fragment (see Assy. xx. [1898–1902] 354 E) belongs to the Musurus Centaurs (cf. 5 A-mas, 'luminaries of heaven, possibly the sun), or Annoctus, half man and half fish, from the Persian Gulf. The fifth mound was Magulares (Metaurus), also of Pantibilia, who reigned for 18 sari (64,800 years). The sixth reign was that of Deos or Damos, the shepherd of Pantibilia, who reigned for 20 years; see below, IV, 5, 'Tammus.' In his time four composite beings, Evedamis (Sumerian En-es-dugga), Eunamancis

(7) Sumeria, En-es-ganu), Enubalus, and Amentes, arose from the Persian Gulf.
From this point onwards the text is wanting until the last column of the large British Museum tablet (K. 3809-3804), which refers to 14 pieces of clay, out of which seven beautiful males and females were created by the god of generation Mami (Sutu a1, 'the lady of the gods,' also called Aruru, the creatoress). These lumps of clay would correspond with the hero of the Flood and his wife, who were thrown behind them in the legend of Deucalion's flood (E.E. iv. 554). Concerning the death of Atra-hasis nothing is known.

Such was the hero-king of Babylon until after the great Deluge; and, notwithstanding the fact that the Babylonians believed in their historicity, there is no doubt that they are wholly mythical—though historical personages of later date may have been transferred into that remote past which the Babylonians pictured to themselves so clearly. It is doubtful whether the first kings after the Flood can be looked upon as more historical, but it is to be noted that the successor of Xisuthrus or Atra-hasis—Evakhu, Evakho, Euxaia, or Enkhuwa, who reigned for 4 years (2000 years)—is identified by Synclus with Nembrod (Nimrod), and the latter, if really Mudach (IV. 2 below), was the first great Bab. hero-knight of the kingdom, whose name is Babel, etc. (Gn 10). He is said to have succeeded by his son Khomaselus, who reigned 4 years (2000 years). He is said to have founded the city of Eš, of which he became king, perhaps on account of his vineyards and press of being there. The length of his reign is given as 100 years. As in the case of Sargon of Agadé afterwards, events of his reign are quoted in the omen-tablets.

II. THE BABYLONIAN HERO-KINGS MENTIONED IN THE NATIVE INSCRIPTIONS. — 1. Gilgameš.—Gilgameš was, in all probability, the first important hero after Merodach, and may be the Khomaselus who succeeded Merodach. The full form of his name seems to have been Gipil-gam-k, and his capital was Ereh (Uruk suwari), 'Ereh of the eminences'; he was called king of the kingdom, whose name is Eš-babbanu, the sage Enki-du (En-baان), who dwelt in the wilds among the beasts of the earth. Enticed to Ereh, Kūmū-Bel, the mother of Gilgameš, tells her son that it is time for him to be his companion, and he accepts him at once. Gilgameš and Enki-du go together on an expedition to the land of the Abzu, where they cut off. Later, the renown which Gilgameš acquired attracted the attention of Utar, the goddess of Ereh, who wished to espouse him. Notwithstanding her divinity, he had a very low opinion of her morality, and rejected her advances with reproaches. Angered, Utar complained to her parents Anu and Anatu, and a divine bull was sent down to overawe the hero and avenge the goddess. Undismayed, Gilgameš and Enki-du killed the animal, over whose remains Utar and her maids lamented. Probably owing to Utar's hostility, Gilgameš was smitten with an incurable malady, and he also had the misfortune to lose his friend Enki-du. In despair, Gilgameš roamed about the world seeking a friend to restore him, and to find relief for himself. Many were the people whom he met, and the wonders which he saw, and he arrived at last, accompanied by Ut-napišti (Xisuthrus or Atra-hasis [see above]), the Bab. Noah, had been translated, there to dwell for ever after the Flood. After an account of the calamity (E.E. iv. 559-551) and Ut-napišti's explanation that he had retained immortality as a reward for his faithfulness, certain ceremonies are performed which restore the hero to health. Later, when on his way back, he finds and loses a plant which would have given him the life and youth which he sought. Bewailing his loss, he reaches Ereh, and takes measures for the restoration of his wealth. The exceedingly imperfect 12th tablet details the raising of his old companion, Enki-du, who describes to him the state of the good and the wicked after death. The last days and death of Gilgameš are not referred to. (For other details, see E.E. ii. 515.)

As handed down, the legend of Gilgameš appears as the life-history of a great and energetic ruler. H. C. Rawlinson, however, thought that the 11th tablet of the series, with the story of the Flood, corresponded with the 11th zodiacal sign, Aquarius; and the creation of Enki-du in the likeness of the hero might be held emblematic of the constellation of the Twins. In its present condition, however, the story does not lend itself to satisfactory analysis, at least from the spiritual point of view.

Whether the infant Gilgameš, son of Sebekkhor, thrown from a tower, and caught by an eagle (Allian, de Nat. Anim. x. 21), refers to Gilgameš or Gibil-gameš is at present uncertain.

2. Asag-Bau.—Though a woman, this ruler seems to have been looked upon as the hero of fame. According to the chronological list published by Schell (CAH, 1911; Exeg. xxi.), she had been a serious rival of Sargon of Agadé. She is said to have founded the city of Kis, of which she became queen, perhaps on account of her vineyards and press of being there. The length of her reign is given as 100 years. As in the case of Sargon of Agadé afterwards, events of her reign are quoted in the omen-tablets.

3. Sargon of Agadé.—This ruler, whose name in Bab. is Sarru-kīn, was the great royal hero after Gilgameš. His autobiographical legend states that his mother was a priestess or devotee (of some deity), and that he knew not his father (who had possibly visited his mother without making himself known to her). After the child had been brought forth in a secret place at Arupatu on the Euphrates, his mother placed him in a little basket that made water-tight with bitumen, and set him afloat on the river. Carried by the stream to Akhi the libation-priest, he became his adopted son. How he attained royal rank is not stated, but he had a long and renowned reign. The omen from his reign state that he crossed the Eastern sea, and conquered those of the West. Besieged, during a revolt, in his capital Agadé, notwithstanding his advancing years he made a sortie, and defeated his foes. After this he subjugated Suhurtu, and made the boundaries of Agadé equal with those of Babylon. He probably died in consequence of the anxieties due to a famine.

4. Naram-Sin.—This was a ruler hardly less renowned than his father, Sargon. He conquered all the regions around the State of Agadé—Arpakan, Suhurtu, Media, Elam, Tihan (Anatol., and the W. coast of the Persian Gulf), Mānan, and Malušu, capturing, in all, 17 kings, with 90,000 troops. Unfortunately, less than a sixth of the inscription dealing with his reign is preserved.

5. The historical and deified hero-kings. — Though the exploits of Asag-Bau, Sarra-kīn, and Naram-Sin may be largely legendary, those of the preceding kings, Gilgameš, Lilit, Utar, Āku (or Arab-Sin), Rūm-Sin, Išlam, Dagan of Isin, and the apparently non-deified Neushadherānu, are well within the range of history. Colophon-dates and contemporary inscriptions show that they carried on campaigns, performed ceremonies, and worked for the welfare of their people by digging irrigation-channels,
administering justice, and building temples. The records of heroic deeds on their part are, it is true, wanting, but a fragment, whose colophon contains the name of Dungi, gives an account of one of his pious works, implying that such were preferable to deeds of prowess on the battle-field. Libi-itšar, too, although 'his weapon prevailed greatly,' enjoyed much renown because he set up some monument 'for the admiration of multitudes of people,' and his sacrifices and prayers seem to have been acceptable to Enlil, the old patron-deity of Nippur.

In the case of Nebuchadrezzar I. (c. 1120 B.C.), the historian compares him with a lion and with the god of the land of Sumer, and with lions with men's heads. Finding his country wanting in prosperity, he prayed to Merodach for Babylon and his temple E-sagila; and success against Palestine (Amurrum) and Elam were promised—success which, as we know from the historical inscriptions, was realized. The glory of his nameakes of later date, surrounded the Great, is known to all. Had the Babylonian nation continued its career as an independent State, there is little doubt that the two Nebuchadrezzars would have figured with equal renown among its great heroes.

III. OTHER LEGENDS OF HEROES FROM THE NATIVE RECORDS.—1. Adapa.—This hero is described as having possessed all the wisdom of Ann, the god of the heavens, as well as the fire, sun, and stars, in whose city, Eridu, he dwelt. He bore the title of nasratimmu, which seems to indicate one who had the protection and distribution of sacred food. He was also a fisherman of that city, which in his time lay on the shores of the Persian Gulf.

While he was sailing out one day, the south wind came and sank his vessel, and Adapa found himself in 'the house of the fish.' He threatened to break the wings of the wind, and this was forthcoming accomplished. For a week the south wind continued to blow, to the annoyance of the god Ann, who summoned the wind and Adapa before him. Ascending to the heaven of Ann, Adapa saw there the god's door Tammus and Gil gid, two deities who had disappeared from the earth. Adapa explained to Ann why he had broken the south wind's wings, and these two deities, speaking for him, appeased the wrath of Ann, who, however, was displeased with Ea for having thus caused to be revealed 'the heart of heaven and earth' to a man. The food of life was now offered to Adapa, but he refused it, explaining that he was acting in accordance with the instructions of Ea. He had apparently declined to eat it, having under the impression that it was the food of death. Seemingly as a compensation for the loss, rule over the people of the earth was conferred upon him; and it may be supposed that, like Atra-hasis, he attained immortality in the end at the hands of his own god, Ea. It has been suggested that Adapa is the Alaparos of Berosus, written for Alaparos; but the r would, in that case, seem to be intrusive.

2. Etana and the Eagle.—This legend is also exceedingly imperfect. At a time when there was no man who lived near royalty, and apparently not even the insignia of royalty, itar, seeking a ruler, had come upon Etana, whose wife expected a child, destined by the gods to govern the earth. The bird, however, forsook her, and Etana bought a remedy for this delay—the divine 'herb of bearing,' which it was thought that the eagle would be of use in obtaining. This bird, unfortunately, continued a dreadful snake, and, having descended to carry out this intention, had his wings broken by the enraged reptile. The eagle having been in so sad a state, Etana, clinging to its body, attempted to reach the throne of Ištar, who is elsewhere called 'the mother of those who bring forth.' That giddy height, however, they seem not to have attained, as Etana refused to be carried so far, and they descended to earth again. How the legend ends is uncertain, but the attempt may have been successfully repeated, or the coveted herby may have been acquired in another manner.

3. Other legends.—Numerous other legends existed, but in many cases the titles (first lines) are all that remain. Among these are 'The legend of En-men šu-nuna,' (probably Amennon [see above, i. 1]), the fourth pre-historic hero-king), by Enlil-baš-kudurrus son of Išu-meme; and 'the legend of Si-da,' by Sinašu the ancient (apparently an autobiography). 'The legend of Liddu, the sage,' of which fragments are extant, is rather a philosophical work, treating of the miseries and the disappointments of life, than the story of a hero.

IV. BABYLONIAN HERO-GODS.—1. Enlil and Ninlil.—The story of these deities is contained in a bilingual composition of unusual beauty. Enlil and Ninlil are described as the youthful hero and handmaid of Dur-an and Nippur (identified with the Calneh of Gn 10:19), and dwelt there, as well as in Dur-Šarrukin, 'the date palm fortress,' with its holy river, its food-store, well of sweet water, and holy water. Therein Ninlil had the comfort of her mother Kiel-azaga, and the protecting god Dur-an. Ninlil made the water flow. After a gap, the text seems to speak of the ceremonial entrance of Enlil and Ninlil into Nippur, when unclean or undesirable things were to be sent forth. In their approach, Enlil calls to the gate-keeper announcing the lady Ninlil's coming, and admonishing him not to reveal her (Ninlil's) abode. Repeating his call, Enlil says:

'Man of the great gate, man of the lock—
Man of the bolt, man of the holy lock—
Thy lady Ninlil cometh—
Thy lady Ninlil cometh—
Let none woo her, let none kiss her—
Ninlil so bright, so shining.'

From a kind of catch-line, it would seem that Enlil entered the city to pronounce certain decisions, but the second tablet, which would give the sequel, is wanting. For details of this deity, see EZE II. 319; also 6 and 7 below.

2. Merodach.—Though not the oldest of the deities of the Bab. pantheon, Merodach is the most important from the present standpoint, on account of his probable title. The full form of his name was Amuraduk, 'the steed of day,' i.e. the sun in his growing strength. It is noteworthy that one of his names was 'the right of the god (? of day),' and the character by which this is represented was read as Amari, compared with the Egyptian Osiris. (In cuneiform, as in Egyptian, it is composed of the signs for 'city' and 'eye.') He was also one of the gods designated by the character for 'king,' in Sumer, probably Layal, and in Sem. Bab. Surss and the above-named Mr-er. Concerning Merodach's earthly kingship we know nothing, but the royal title may refer either to that or to his heavenly office. In consequence of the hostility of Timat (cf. EZE II. 129), the gods decided to destroy her and her brood, but none of them had the courage to attack so terrible an adversary, and Priests, and Etana bought a remedy for this delay—the divine 'herb of bearing,' which it was thought that the eagle would be of use in obtaining. This bird, unfortunately, continued a dreadful snake, and, having descended to carry out this intention, had his wings broken by the enraged reptile. The eagle having been in so sad a state, Etana, clinging to its body, attempted to

1 Ct. Ennun (Babylonian).
Other legends concerning Merodach are lost, but one of them, beginning, "When Merodach was in Sumur and Akkad, may have referred to his earthly existence. A record of Merodach, the glorious lord, who was placed over the heavens," by Gimm-Mula. For Merodach in his divine character, see ERE II. 311.

4. The myth of Ura.—In this we have the legend of a seemingly purely divine hero, without any suspicion of a human origin such as attached to Merodach and Tammuz. Ura (or Ira) seems to have been so called as 'the perfect one' (gishba) [630]. But the epithet with which the name is written is that for servant, perfection of service (to the gods, or to the unworthy). In the inscriptions, Ura appears as one of the forms of Ninurta, the god of war, famine, plague, and destructive things in general.

The legend, Ura, the god of heaven, gives Ura seven evil spirits to support him when prompted to 'kill the dark-heads' (mankind), and smite down the beast of the field. In a daze, he overthrew the king of the gods, Merodach, himself. The destruction wrought in Bab. cities is referred to—that at Babylon, which caused Merodach to utter 'an unloosable curse'; and at Erech, whose goddess, Istar, was moved to wrath. Ura justifies himself, and shows his impartiality by stating that he has not spared Dér, his own city. Secure in his own justice, Ura speaks of further punishments which he intends to inflict, and 1-stm promises to follow in his footsteps, whereas Ura is pleased, and finds his words 'as sweet oil.' It is thought they were not given, to spare even the king of the gods, Merodach, himself. In any case, civil war was to ravage the seacoast, Mesopotamia, Elam, the Kassites, the Quittu, and the Lulubites; land would not spare land, or house house, or brother brother, but they would kill each other, until the Akkadian came and overthrew them all. I-dum turned, however, first against Sarrac (the Amorites), destroying the mountain of the land and its vegetation. Ura was also engaged in this work; and, when he rested, all the gods bowed down to him. He then explained to them that he had destroyed mankind on account of former sin, and he seems to ask why he should make a difference between the just and the unjust more than the others. He would favour those who glorified him and sang his praises.

5. Nergal and Ereš-ki-gal.—These deities were the king and queen of the gods, and were also the lord and lady of the land. The legend relates that the gods made a feast; but, as Ereš-ki-gal was not allowed to attend the feast, a messenger was sent to seize her portion. This she did, and all the gods except Nergal stood up when the messenger entered. This enraged Ereš-ki-gal, who sent and demanded that the deity who had thus failed in politeness should be delivered up to her. Nergal tried to escape his doom by hiding behind the other gods, but was discovered, and sent down to Hades with fourteen companions.

Leaving these last to guard the fourteen gates of Hades, he entered, seized Ereš-ki-gal, and dragged her from her throne to cut off her head. Begging for mercy, she offered to be his wife and was accepted. Kissing her, and wiping away her tears, Nergal granted whatever she had asked of him for months past.

6. Enlil, Tīpuk, and the Labbu.—Here we have a legend which seems to supply something similar to the stories of combat with dragons in the Middle Ages. The people of the old Babylonia (sighed and complained on account of a giant serpent (mud-gala) which plagued them, and which Enlil had designed in the heavens. Its length was 60 leagues, and it had members in proportion. Who, it was asked, would kill this creature, and save and rule over the wide land? Apparently the god Tīpuk (Ninap as god of instruction) volunteered, and was ordered to go. The imperfection of the record leaves us in doubt whether it was he or another deity who accomplished the dragon's overthrow; but this was done by holding up before the creature the seal of life, and its blood flowed (from a wound) for 3 years, 3 months, 1 day and 10½ hours [3]. Brony regards the Labbu as typifying the sea—seem very probable (cf. ERE II. 315).

7. Zô the storm-bird, and the Tablets of Fate.—Though told at some length, this legend needs but few words. A deity had a dream, so that he saw 'with his eyes' the Tablets of Fate, and, coveting Enlil's power, decided to take possession of them, and mount his throne, and rule the Iipis (gods of the heavens). Taking advantage of the moment when Enlil was performing his daily ablutions preparatory to mounting his throne, Zô seized them, and flew to the top of the mountain. Enlil being thus rendered powerless, Anu, the god of the heavens, addressed himself to the gods and goddesses, asking them to get them back. All, however—Anu's son Addu (Hasad), his daughter Istar, Bara, Istar's child, and others—seem to make excuses, and are ordered not to go. After this Nin-igi-zanga (Za as god of deep wisdom) speaks to Anu, and it seems possible that he volunteered, but after this the text is wanting.

The narrative is possibly continued in what seems to be another version, known as 'The out-writing of Zô.' In this (a bilingual document) Ingul-banda (Zô as the fighting-cook) goes forth to the distant mountain of Za, 'to catch the bird Zô what was right.' He would allow Za's wife and son to sit down to their meal, and, with the aid of the wise woman Siris (wine), prepare an intoxicating drink. The text here is wanting, but in all probability the result was successful. Who it was who rose from Za's nest, and made an unknown place in the mountain his refuge, is uncertain.

The possible meanings of the legends.—Notwithstanding the simplicity of these legends of heroes and hero-gods, there is apparently in each of them some hidden teaching, concerning either the early kings of Babylonia, or the gods whom they worshipped, or the dealings of those gods with men—kings, heroes, or the people in general; and in some cases it is clear that attempts were made to reconcile the seeming hardships, meted out to the innocent and the guilty alike, with the existence of the beneficent deities whom the Babylonians worshipped. There seems also the desire to reconcile the different beliefs which prevailed from time to time in Babylonia—the discard- ing of Enlil in favour of the milder rule of Ea, and that, again, for the divine direction of 'the fortunate Merodach.' In these cases, the older deities (their names are practically records of the supremacy, at the time of their greatest influence, of the cities of which they were the chief patrons)
seem to have been classed, by the majority of the population, with those who, like Nergal, the plague-god, or Adad (Hadad) the storm-god, brought disaster upon men. Thus it comes that Enkil, 'lord of the air,' leads the gods who wish to destroy mankind by means of a flood, and forms the Levi, or, so it is said, the Hoya, under him like vassals, the really malignant deities, like Ura (Nergal), or the demon of the south wind, destroy mankind by means of the powers of Nature, and Eresh-kigal (Pemphigus) exacts the presence of Tammuz in the under world, producing winter and its sterility.

HEROES AND HERO-GODS (Chinese).—As might be expected in the case of a people with so long an existence, the Chinese nation has produced many persons who, on account of their pre-eminent qualities in their capacity of king, may rightly be called his heroes, and whose names are preserved in its national tradition and history. Moreover, local tradition and the system of local records have preserved the fame of many other heroes, though not attaining to the rank of national heroes, have a restricted celebrity. As tradition and history there supply the Deities who the Chinese easily allow their transformation into gods.

The famous names in ancient Chinese history belong to the semi-mythical period, have been revered by the whole nation under its successive dynasties, and through all its political vicissitudes. Such names are to-day still appealed to, and must be to some extent a living force both in public and in private life. To Hwang Ti, whose reign is dated 2697 B.C., is attributed much of the beginning of Chinese polity, and for this reason it was proposed to date the Republic from his era. Yao (2595 B.C.) and Shun (2554 B.C.), virtuous monarchs of antiquity, are professed by the President of the Republic as his ideals; and in the sphere of private life a popular tract exhorts one to behave as if he beheld Yao in the cottage and Shun on the wall. These examples of heroes and gods are taken from the most ancient times, and the long course of Chinese history supplies the names of many others which, being sufficiently well known to be appealed to habitually, may be called heroic. The fame of some of these has been preserved by the salt of some pithy saying, as, in the case of Yang Ch'ien (A.D. 124), famous for his integrity, who refused a secret bribe, saying, 'Heaven knows it, Earth knows it, you know it, I know it, how can you say that none will know it?' Others have a vigour in proverbial allusion, such as Chang Chang (85 B.C.), who, on the eve of unmerited disgrace and dismissal, being seized at by an enemy as 'Prefect for but five days,' summarily vindicated his rapidly expiring authority on the spot by the plainest of his adages: 'The sequestering phrase survives as a classical allusion to unslacking fulfilment of office. Others, again, find a place in one of those numerical categories under which the Chinese are fond of grouping men and things worthy of note, e.g. 'the Three Good Men of the Yin dynasty' (1130 B.C.), or 'the Four Sages' (Shun, Ya, Chow Kang, and Confucius). In addition to those thus commemorated in national history and literature, there are the more numerous worthies peculiar to each locality. Many of these worthies, whether of a general or of a merely local fame, remain exemplars only.

But in accordance with what is called, perhaps not quite accurately, the animistic strain in the religious conceptions of the Chinese, it may be said that they all either become objects of worship, and take rank therefore as gods. Of those who have already attained divine honour, some have been raised to the same rank as the Supreme, or have become objects of worship in the case of others, their divine rank has been conferred or recognised by Imperial decree. Thus, the reputed inventors of some of the fundamental arts of Chinese civilisation, and an infinite number of writing, the empress Si Ling She, of silk-worm rearing, Ki, of husbandry are deified. The being everywhere worshipped as Genius of the Soil figures in history as one of the ministers of Hwang Ti. The fourth of the ministers of the same emperor has been 'metamorphosed into one of the controlling spirits of the under world and regarded as god of fire' (W. P. Mayer, Chinese Reader's Manual, no. 87). A skilled mechanician has become the god of carpenters. The case of Kuan-u well illustrates the way in which a hero becomes a god. A warrior of the era of the Three Kingdoms, famous for fidelity to his chief and for martial prowess, he was finally captured and beheaded by his enemies (A.D. 215). His name may rightly be called his hero, and his name has preserved the fame of many other heroes, though not attaining to the rank of national heroes, have a restricted celebrity. As tradition and history there supply the Deities who the Chinese easily allow their transformation into gods.

To Hwang Ti, whose reign is dated 2697 B.C., is attributed much of the beginning of Chinese polity, and for this reason it was proposed to date the Republic from his era. Yao (2595 B.C.) and Shun (2554 B.C.), virtuous monarchs of antiquity, are professed by the President of the Republic as his ideals; and in the sphere of private life a popular tract exhorts one to behave as if he beheld Yao in the cottage and Shun on the wall. In addition to those thus commemorated in national history and literature, there are the more numerous worthies peculiar to each locality. Many of these worthies, whether of a general or of a merely local fame, remain exemplars only.
HEROES AND HERO-GODS (Egyptian).— From Herodotus ii. 50 (rapallwv óv de uphros wv Ím xwrakodn) it might be inferred that the worship of heroes was unknown among the Egyptians. Yet later works show that they worshipped Sheerakas (ii. 42) and Penwak (i. 11) as if it is true, can here apply only to Khonsun and Min respectively, i.e. to gods in the proper sense of the term. In the latter, there was in Egypt a city which was actually designated 'The City of Heroes' (Hwrw wvd). The Egyptian monuments likewise show that the religion of the country had recognised a place for the worship of personages who, as being defined men, must be designated heroes or hero-gods. Hence, if we are not to regard Herodotus as in conflict with himself and with facts, his words are not to be taken to mean only that there was among the Egyptians no such cult of heroes as corresponded exactly with that found in Greece. In point of fact, the Egyptian deities who may be styled hero-gods do not, like the Greek heroes, occupy a position intermediate between gods and men. They are not demi-gods, but have human characteristics. In the New Kingdom they are personages who, as being defined men, must be regarded as heroes or hero-gods. Hence, if we are not to regard Herodotus as in conflict with himself and with facts, his words are not to be taken to mean only that there was among the Egyptians no such cult of heroes as corresponded exactly with that found in Greece. In point of fact, the Egyptian deities who may be styled hero-gods do not, like the Greek heroes, occupy a position intermediate between gods and men. They are not demi-gods, but have human characteristics. In the New Kingdom they are personages who, as being defined men, must be regarded as heroes or hero-gods.

Before these heroes became gods, however, they too passed through a stage of semi-divine worship, which, as in the case of the Greek heroes, was associated with their tombs, and which may have developed from the ordinary cult of the dead to something in the nature of ancestor-worship. According to Egyptian beliefs, the 'spirits' of the dead stood midway between the gods and the king and queen (Hood Papyrus, published by G. Maspero, in Études égyptiennes, ii., Paris, 1868). Manetho, in one particular instance where he refers to the practice of ancestor-worship, calls them xéwv Ím xwrakodn (see below, i. 2). The Egyptians themselves, referring to the same practice, sometimes speak of these ancestral spirits as gods, just as they often apply the term 'god' to the semi-divine king. The line of demarcation between a real god and a defined human spirit is thus far from clear.

As regards the heroes of the Greeks and other peoples, the question often arises whether the hero-gods worshipped by the people were originally men who had been promoted to divine honours by reason of their achievements, or were at first real deities to whom a human form and human experiences came to be ascribed; or, finally, whether they are literary creations who, in the way of literary fancy, found a footing in popular belief. But no such question can arise in the case of the Egyptian hero-gods, except perhaps in a single instance (II. 28). For, on the one hand, they are invested with human activities and regarded as kings who ruled upon earth in the far distant past (e.g., the sun-god Re, i.e. 'sun', the earth-god Geb, i.e. 'earth', the hawk-shaped Horus, and his adversary, the animal-shaped Seth—both originally local gods), in other respects so lacking in human traits that their divine nature cannot be doubted for a moment. Then, on the other hand, the Egyptian deities who may be called heroes or hero-gods are without exception deified men, a number of whom lived in the times, as of history, and of whose earthly existence we in some cases possess authentic indications.

It is to be noted that the deification of human beings in ancient Egypt was of two kinds, viz. (1) general deification, which all who occupied a certain position in life, or suffered a particular fate, shared in an equal degree—at least, as it were, and independently of any action on their own part, much in the same way as the fallen warriors of the Teutons were all admitted to Valhalla; and (2) individual deification, which was attained only by individuals of special eminence. The latter class comprises those who, as akin in character to the heroes of Greek mythology, are the genuine hero-gods, who were always also Egyptian kings as if they had been real gods; the former is composed of the semi-divine beings from whom proceeded the hero-gods.

I. GENERAL DEIFICATION.—x. It is a well-known fact that the Egyptians, from the earliest traceable period of their history, believed their kings to be embodied inhippopotamuses, in the form of hippopotamuses, in the form of

[Further text not visible due to the limitation of the provided image]
HEROES AND HERO-GODS (Egyptian)

queens, after death was performed simply by 'servants of a genius' (ήμ-κέρτ), i.e. priests of the dead, and in a house of a genius (άσ-κέρτ), i.e. chapels of the dead.

It is nevertheless probable that the ancient kings of Egypt were not honoured with divine worship in their lifetime at least we have no evidence of such worship. When the reigning monarch appointed one of his courtiers as a άμ-κέρτ, i.e. 'servant of a god', at his pyramid (J. H. Breasted, Ancient Records of Egypt, Chicago, 1906-07, 1. § 307), this did not imply that the person so honoured was to act in that capacity during the king's life; on the contrary, the office, with its duties, honours, and emoluments, was conferred upon him—and probably also upon his descendants—in anticipation of the king's death, i.e. for the time when the latter should be worshipped as a departed spirit. The first of the Egyptian kings to have divine honours paid to them while still alive and in conjunction with their ancestors were the Hellenistic kings of the Ptolemaic period.

2. In Heliopolis, which in the pre-historic age was for a time the capital of the whole country, a special group of ancestor-worship seems to have been accorded to the names of the contemporary (pre-historic) kings. They were worshipped there as 'souls of Heliopolis'. Similarly, 'souls of Hierakonpolis' and 'souls of Buto' were worshipped in these cities, the respective capitals of the two states into which Egypt was eventually divided prior to the foundation of the historical centralized State under Menes ('the union of the two lands'). As these predecessors of Menes had, in particular, worshipped the god Horus, the latter two companies of spirits were known also as the 'servants of Horus'. Moreover, they are variously designated, according to the connexion, as 'kings', 'spirits', or 'gods'. In Manetho they are called τεκτάνες of the two states. The 'souls of Buto' were treated, like gods, as members of the human and animal family, exactly like the local fetish deities of the Egyptians; the souls of Hierakonpolis have the head of a jackal, those of Buto that of a hawk, and the dead king is always portrayed as a jackal in the Ptolemaic time when jackals were still kept as pets in the palaces, and in the cities.

3. After the fall of the Old Kingdom (c. 2400 B.C.), the identity of the dead with Osiris, which had been customary in the case of kings, was gradually extended to others—first of all to members of the royal family, then to the feudal nobility (who at the same time also arrogated to themselves other privileges of royalty), and finally to all human beings without distinction of rank. The logical result of this should have been that in the realm of the dead there existed rules only, and no subjects. But in point of fact the attribute Osiris seems very soon to have lost its original force. The deceased N, who is called 'Osiris N', was in no sense identical with the god Osiris, who continues as before to be king in the realm of the dead, and therefore rules over the 'Osiris N' also. The dead who are so designated worship Osiris, justify themselves before his judgment-seat, etc.

4. A special apotheosis seems in later times to have been accorded to those who were drowned in the Nile, probably because, according to the legend, Osiris had suffered a like fate. Those who died in this way were regarded as having been peculiarly distinguished by the gods, and were styled 'glorified' (άγαύνος), a term which at an earlier period appears to have been applied more generally to all the blessed dead (cf. βασιλικά). According to Herod. ii. 50, the bodies of the drowned were entombed with peculiar pomp (cf. Griffith, in Zeitschr. f.oug. Sprachw. xlv. [1909-10] 132).

5. That a cult of the deified high priest of Heliopolis and Memphis existed at Pithyus in Ptolemaic times is evidenced by a number of papyri (Griffith, Catalogue of the Demotic Papyri in the J. Rylands Library, Manchester, 1908, ill. 133, n. 9).

II. INDIVIDUAL DIGNIFICATION—II. Deified kings and queens.—(1) The earliest instance of this may have been Osiris. This deity, so highly honoured in later times, was in some remote stage of his career already considered as it would seem, a hero in whose person the ideas of the unity of the Egyptian people came to be embodied: hence the myth of the dismemberment of his body and the distribution of the parts among the Egyptian names. He was regarded as having been a good and noble monarch, who was treacherously murdered by his brother Seth, and whose name as Osiris, which he assumed under a purely human fashion, with certain symbols of royalty which pertain to him alone among the gods—the Upper Egyptian diadem adorned with two ostrich feathers, as also the aorpa feathers, and the crook, the primitive emblems of soverengy. It is possible, however, that these symbols may have been transferred to him from an ancient local deity with whom he was subsequently identified (see below). In the earlier religious literature of the 'Pyramid Texts' Osiris very seldom plays an active part like the other gods. The theme of interest is, nearly everywhere in these texts, found in his experiences, his death, and his resurrection. What had happened to him would happen also to the deceased king, who is, in fact, generally identified with him.

The suffering Osiris, thus conceived of as purely human, was in the same time little a god of vegetation or of the dead as was Christ, with whom he has many points of resemblance. He, too, founded a consecration as a religious and ethical stamp, which forms a most decided contrast to the numerous Egyptian local cults based on fetishism, as well as to the Nature-religions indigenous to Egypt from primitive times (worship of the sun, the sky, the Nile), and which in the course of centuries gradually extended its range, to some extent with a conscious rejection of other forms of religion (the mysteries, communal life).
The earliest triumphs of his cult must certainly go back to a very remote past. Even while Heliopolis was the capital of a united Egypt, and when the Heliopolitan theology instituted the great divine emnem of Heliopolis, he not only found a place in that group as one of the representatives of the primeval gods, the great cosmic deities (sun, air, sky, earth) and his national god came into the southern kingdom of Upper Egypt, which had been overthrown by the kings of Lower Egypt, and was now subject to it—but he actually became the centre of the whole artificial system. He was the son of the divine pair, Heaven and Earth. Horus again, who, as the national deity of the dominant lorddom of Lower Egypt, represented the present, and therefore remained outside the emnem, became the son of Osiris. Seth, the god of the Upper Egyptian kingdoms, now the last member of the emnem, was branded as the slayer of Osiris, and the arch-villain who had been guilty of dismembering the kingdom. These three local deities, Horus and Seth, were originally of a purely fetichistic character, and had at first no more to do with the hero Osiris than had the cosmic deities who had come to be recognized as his parents. Thus the Heliopolitan theology was even then completely under the influence of the Osirian faith.

Osiris seems to have become the god of the dead (Khmunet, 'the chief of the Westerners') and the god of Abydos only in the historic era, and probably in consequence of the deceased king's identification with him and of the fact that the tombs of the earliest historical kings (1st and 2nd dynasties) were situated at Abydos, the necropolis of This, their capital. It thus came about that this god was also identified in Abydos, and was found among the ancient royal tombs there. The function of the god of the dead and the designation 'chief of the Westerners' would have been transferred to Harsheb by the people of Lower Egypt.

If originally Osiris had no connexion with Abydos, he would seem to have had as little with his other sanctuary, situated in the Delta, and subsequently named Busiris ('Houses of Osiris') after him. Here, too, he either superseded or absorbed an older local god, the 'lord of the dead' depicted as an idol in the form of a falcon. It was presumably from this deity, who was in the earlier religious literature is called 'the chief of the Eastern nomes' (of the Delta), and may perhaps have been the god of a small kingdom comprising these nomes, that Osiris acquired the symbols of sovereignty by which his images were distinguished in later times.

In Memphis, likewise, Osiris seems to have been identified with the fetish worshipped there,² the magnificent Ded-pillar, as also with Ptah and Sokar, only after the Old Kingdom was at an end. The violent death which, according to the legend, he met with in the waters of the Nile brought him into close relations with the sacred river itself. Like the Memphite Ptah, Osiris now came to be identified with him, and the idea of his resurrection fitted in with the annual inundation. His life and death were interpreted as referring to the growth and decay of Nature. He thus eventually became the god of vegetation, from whose corpse the corn was supposed to spring.

(5) King Sesostris III. (1867-1850 B.C.), who completed the subjugation of Northern Nubia begun by his predecessors, and protected this new province of the Egyptian kingdom by the erection of fortresses, had already come to share in a district in the time of the New Kingdom, and, along with the ancient Nubian deity Dn-fm, was worshipped under his sacred name of Khu-enuw-re², which denotes his relation to the sun-god Re² (the Re-name). Thutmoseis III. (1501-1447 B.C.), who, in similar fashion, completed the conquest of Nubia begun by his own predecessors, erected in that country temples, and instituted sacrifices and festivals, for the deified Sesostris.

The latter was thus thus thus and altogether like a god, but he is portrayed and designated as an Egyptian king, exactly as in his lifetime.

See Hitzig, Untersuchungen mit dem Namen Osiris, 210 ff., and Hermann, Die Geschichte des Nubiens, 14, 150 ff., 153 ff.; see also the works of the last century on the subject.

(3) King Amenemmes III. (1849-1801 B.C.), the builder of the so-called Labyrinth near Hawara, at the entrance to the Fayyum, became subsequently a tutelary deity of that oasis, for the economic development of which he is regarded (following Herodotus)² must have done good service. Under his Re-name of Le-ns-ri³ (Amenemmes), in his abbreviated form Ma³-re³ (Amenmes, Amenem, Amenemô), or, with the addition of 'Pharaoh,' the later Egyptian term for king, as Me-namô, Amenô, he is frequently mentioned in monuments of the Greek-Roman period from the Fayyum, and especially in the vicinity of his pyramid and his mausoleum (the Labyrinth). He is there depicted in the stereotyped form of the god, except that his head is that of an Egyptian king and bears the royal head-band.

(4) Menes (c. 3300 B.C.), the deified founder of the Egyptian centralised State of historical times, is believed by Wilcken to be identical with the similarly named deity Menô or Mentô, who is frequently mentioned in Greek papyri from the village of Tehnis in the Fayyum (Mitteleich, Grundzüge u. Geschichte der Dynastieher deersyn-

(5) King Amenophis I. (c. 1551-1535 B.C.), son of that King Amenophis who expelled the Hyksos and founded the New Kingdom, was regarded, from c. 1300 B.C., as a guardian deity of the Theban necropolis. In that capacity he is often portrayed in tombs and coffins of this period—mostly in the form of a reigning king, but in other representations (the concluding scenes) as a king in the crook and flail, as borne by Osiris. In his honour was observed the festival of Pa-amun-bôt (the festival of Ammonophis), from which the month of Phamenoth derived its name.

(6) Amenophis III. (c. 1415-1380 B.C.), whose reign seems to mark the zenith of Egypt's position as a world-power, instituted in his own honour a divine cult in the temple of Soleb, in Nubia, built by himself, his name here being 'Neb-ra-re², the lord of Nubia,' or 'N. the great god.' In the sculptures which adorn the walls of this sanctuary, the god is depicted as being worshipped by the king himself, and is called by him 'his living image upon earth.' In the inscription the king dedicates the temple to the god, and speaks of himself as being beloved by the latter. In short, Amenophis treats his deified self in every way as an independent divinity. The god is represented as a king wearing the royal head-band, but as having around his ears the twisted ram's horns peculiar to Amun in Nubia and in the oasis of Ammon (Siva), and upon his head a small crest.

¹ About 1000 years before the dawn of the historical era, at the time of the birth of the Hyksos, the Egyptian calendar was introduced (1448 B.C.).
² Heaven and Earth were formerly believed to be the parents of the sun-god Re², but Re² is now at the head of the emnem and their grandparents.

² Heaven and Earth were formerly believed to be the parents of the sun-god Re², but Re² is now at the head of the emnem and their grandparents.
HEROES AND HERO-GODS (Egyptian)

(modius) bearing the moon's crescent and disk, as worn by the ancient lunar deities, Thoth of Shmam and Khonsen of Thebes. He thus comes before us as a fusion of Amun and Khonsen.

Cl. Lepsius, III. 85-87; Breasted, Ancient Records, II. p. 895 ff.

In the Greco-Roman period, the king who thus divided his identity and was identified with Memnon, the legendary king of Ethiopia who came to help the Trojans. His colossal statues in Western Thebes, which bore the name 'Ne- 

ma'-rā', lord of lords' (Lepsius, III. 142, 144; Burton, Recueil Hieroglyphique, Cairo, 1825-30, p. 30), are the famous colossi of Memnon, one of which, after being overthrown by an earthquake in 27 B.C., used to give forth a resounding note at sunrise, until it was restored in the reign of Septimius Severus (Lechmere, 'Le Statuie vocale 

de Memnon', in M.A.J.S. x. (1885) 243). An association with the Memnon of Greek mythology can be traced back to the Ptolemaic period, and is, therefore, of earlier date than its property of emitting sounds. In Greek documents of the middle of the 2nd cent. B.C. the name rā Mēmā-ra is used of the locality called in Egyptian Djēmō, the modern Médinet Habu, in which, situated not only the sepulchral temple of Ammonia III. with the two colossi in front of it, but also a great palace belonging to him.

It is evident, from various guigypoeuses, that the identification of Ammonia III. with the Greek Memnon is based upon his rā-name, Neb-ma'-rā', which in that age was apparently abbreviated to Mēmō, and denoted the 'Intercussions, i. 61, n. 1; ii. 6, n. 2). In the Babylonian letters from el-Amarna, dating from the king's own lifetime, his name is rendered by Ninmursa or Mimnurra, and its con-

niscation may, therefore, have been something like Nemmāra or Memmāra. It is thus not inconceivable that the Greek mythical figure of the Egyptian or Ethiopian Memnon, whose name is not unlike the form just given, was in reality the final residuum of Egypt's three centuries' supremacy in the Eastern Mediterranean, which, as has been indicated, culminated in the reign of Ammonia III. Moreover, it is precisely the names of this king and his consort that are met with repeatedly on objects of Egyptian origin found at Byblos and in Rhodos.

Among the Semitic peoples, again—all unless the evidence is at fault—the memory of this monarch would seem to have survived in the traditions regarding Nimrod, the mighty hunter of Cushi (i.e. Nubia); and, as a matter of fact, Ammonia III. in his memorial scarabs, which, like commemorative coins, were designed to keep in remembrance the important events of his reign, has recorded not only the expansion of his kingdom from Cari in Nubia to Naharin on the Euphrates, but also his prowess as a hunter of lions and wild oxen (Breasted, op. cit. ii. p. 860 ff.).

(7) A deified king of unknown name is found in the 'Pharaoh of Sinai' (i.e. the Island of Buge), wor-

shiped in the Greco-Roman temples of the Island of Phile. In the temple sculptures he is represented as an Egyptian king with the so-called war-helmet of his head. In a Greek inscription from the Island of Sehel he is called Horus-ērē, 'the god of Buge,' and is identified with Hermes (Setha, in Zeitschr. für dgypt. Sprache, xlvii. (1910) 186).

2. Deified individuals not of royal rank.—(1) It- 

m-bōtep ('It-is-bētēp'), chief architect to Thothmes of the 11th Dynasty (c. 2500 B.C.), the king who built the temple of Sakkara, the oldest edifice of brick stone in Egypt, is said to have discovered the art of building with that material, but was renowned in later times also as a physician, an astrologer, and the author of wise writings. In the period of the New Kingdom, i.e. after 1650 B.C. (one instance found in Thebes under Amenophis III.), it was the custom with writers, in beginning their work, to make a libation from their water-

bowl in honour of It-m-bōtep as their patron (Scharer, in Zeitschr. für dgypt. Sprache, xxxvi. (1898) 147; Gardiner, fl. 130 (1905) 146). By this time, therefore, he seems to have become a kind of demi-god, and to have lost his human character.

Afterwards, in the Persian period (from 525 B.C.), he became a god in the full sense, was actually concerned with healing, and was subsequently identified by the Greeks with Asklepios. His cult was attached to his tomb, which, according to Egyptian usage, was situated beside the Pyramid of his patron; and here stood the Asklepieion often referred to in Greek poetry from Saqqara. To this new hero-god, as being originally a Memphite deity, was assigned a divine father in Ptah (Hephaestus), in place of his actual father, Ra-nofer, who is known to us from a genealogy dating from the beginning of the Persian period. His mother, Khene-djübelt, and his wife, Rospet-

nopret, were also raised to divine rank, and are often found in association with him. Their names and titles clearly reveal their human origin.

In the numerous statuettes of this god which have come down to us, and which were, no doubt, dedicated to his temple mainly by persons restored to, or in search of, health, he is figured as a 

whole human, as a learned man sitting on a chair and reading a book (A. Erman, Ägyptisch-Religion, Berlin, 1905, p. 174). He is generally represented with figures on the temple walls which, while still giving him a human form, show him in the attire and with the bearing of the gods, but these figures date only from the Greco-Roman period. In that age we frequently meet with his cult also in Upper Egypt, as, e.g., in Thebes and Esna, as well as in Philae, where Ptolemy Epiphanes erected a small temple in his honour.

Even after his apotheosis It-m-bōtep frequently receives, in addition to the epithet 'Son of Ptah' expressive of his divine origin, his erstwhile human titles, 'reciting priest, expert in affairs,' etc., but only in cases where the reference is to his achievements as a man in the remote past. It is worthy of note that here he is also designated as 'Ibis,' i.e. as the sacred bird of the god Thoth, who was believed to have the form of that bird—a designation which re-appears in connexion with the deified individuals discussed below (pp. 2 and 3). It would thus seem that the sages of the past who were subsequently exalted to divine honours were thought of as incarnations of the god Thoth, somewhat in the same way as was indicated in I. 2, above.

Cl. Setha, 'Inhotep der Asklepieion der Ausger' (Unter-

suchungen, ii. (1902) 68 ff.)
(2) A counterpart to this deified sage of old is met with in the Temple of Amun, which dates from the 26th dynasty, when the god of wisdom, who appears to have been worshipped there under the designation of 'Horus, Theos of the Firmament' (Thoth, the god of wisdom), who was thus identified with the god of wisdom, and hence also designated as 'the Ibis'. This would seem to be the same person as the Ibis who is mentioned above (II. 1 (6)). We possess several original monuments of him, as, e.g., a portrait-stone which represents him as an old man of eighty years, and the inscriptions on which contain moral apotropaic words (Catal, general du Musée du Caire, 1896, p. 128). Leopold, Statuta et Edicta, 1896, 43, 19, where a second bears an autobiographical inscription (Breasted, op. cit. ii. § 913 ff.). A third statue, four metres in height, from the temple of Amun, and now in the museum of Cairo, likewise contains an ostensibly autobiographical record, which, however, presupposes his deification, and speaks of him in exactly the same terms as the temple inscriptions of Amenophis II. This monument, to judge from its style and orthography, comes earlier than the Greek-Roman period, and it bears, as a Greek dedication to the name of the Emperor Augustus (BTAJ XIX. 1897). 13.

(3) Amenophis II is also frequently mentioned in the monuments of his royal master. Manetho, who wrote his history of Egypt in the reign of Ptolemy Philadelphus, refers to him, under the name of Amun-Seti-Rhakhat, as the king of the Amomites (i.e. the son of Apis), as a wise counsellor of a king called Amenophis. It is clear, from what Manetho says of him, that Amenophis had not yet been deified in his own person, but was regarded in his being as a god all date from the reign of Amenhotep IV. (Amenhotep, xiv. 1896, 127). Ptolemy Euergetes I. in all probability was in that reign that he first became a god. With this accord the fact that, in contrast to I-msetep, he is still portrayed, in the temple sculptures, as a man, and not as a god, must be regarded as a typical human fashion: he still wears the garb of his time, and his bearing is only in part that usually assigned to the gods. Moreover, though, like I-msetep, he is still a man, he is named the son of his father, in addition to his human mother—named '—a divine mother in the form of the goddess of the snake-goddess of the Ophite (ibid., xvi. 168), and the name of his father, Apis, was interpreted as indicating the sacred bull Apis, yet Amenophis still retains his human titles.

As we meet with the cult of Amenophis II only in temples of Western Thebes, it would be most improbable to associate with his tomb, which, according to the custom of his time, would be situated in the Theban necropolis and nowhere else. The sepulchral chapel attached to his tomb is referred to in a protective ordinance which survives in a later inscription, executed probably some four hundred years after the death of Amenophis II, (Möller, in SBA, 1910, p. 925 ff.), and witnesses to the long survival of his cult as a departed spirit. Amenophis II, I-msetep, also in being a healing god. 'I expel all disease from thy body'—so he speaks to the king, offering sacrifice to him (Leopold, xvi. i. 1899), i. 139 ff. (Catal, general du Musée du Caire, 1896, 1900; J. G. Milne, Greek Inscriptions, Oxford, 1895, p. 37). He is also said to have composed with the scribes, and in fact a number of the sayings attributed to the Seven Wise Men of Greece were ascribed to him (Wickson, in Aegyptiaca, 1897, p. 142 ff.). Cf. Sethe, in Aegyptiaca, 1897.

(4) Ptolemy Euergetes II, in whose reign, as has been said, the deification of the sage Amenophis II, the son of Apis, seems to have taken place, erected in Medinet Habu, in Western Thebes, a small temple in honour of Thoth, the god of wisdom, who appears to have been worshipped there under the designation of 'Thoth, Theos of the Firmament' (Thoth, the god of wisdom), who was thus identified with the god of wisdom, and hence also designated as 'the Ibis'. This would seem to be the same person as the Ibis who is mentioned above (II. 1 (6)). We possess several original monuments of him, as, e.g., a portrait-stone which represents him as an old man of eighty years, and the inscriptions on which contain moral apotropaic words (Breasted, op. cit. ii. § 913 ff.). A third statue, four metres in height, from the temple of Amun, and now in the museum of Cairo, likewise contains an ostensibly autobiographical record, which, however, presupposes his deification, and speaks of him in exactly the same terms as the temple inscriptions of Amenophis II. This monument, to judge from its style and orthography, comes earlier than the Greek-Roman period, and it bears, as a Greek dedication to the name of the Emperor Augustus (BTAJ XIX. 1897). 13.

(5) Another deified man of the later era (after 900 B.C.) must—if we are to judge from the name—he was recognized in the god Poteus or Peta-wishe (i.e. Egypt. Petes-wishe, the possessor of the crocodile), who is said to have been the god of Memphis, named Socho gave'). In Pliny (HN xxxvi. 64) he is erroneously identified with the king who built the Labyrinth. This hero-god was depicted as a crocodile, like Suchos, and ascribed the ownership of the Fayyum, from whom he took his name. Here perhaps we have a parallel to the designation of the deified sages as 'Ibis,' the sacred bird of Thoth (see 1-3 above).

(6) In the temple of Denderah in Lower Nubia, built in the reign of Augustus, there were worshipped, among others, two brothers named Poteus and Peta-wishe, the deified sons of a certain Kwp or their name seems to point to the later period. In addition to the usual designations of the dead, 'Ostis' and 'justified', the titles 'the epithet 'glorified' (bdeis), or 'glorified in the necropolis,' and for this reason Griffith conjectures that they had died by drowning. Peta-wishe sometimes receives the title 'the maker of death' (the make of death) and denoi) or 'the chief (chief) before his own name, and, accordingly, as a human title. The two brothers are portrayed in human form, but in their bearing and garb altogether in a human fashion.

Cf. Griffith, in Aegyptiaca, xvi. (1900-10) 184; A. M. Blackman, The Temple of Denderah (Late Temple Immortal of Isis, Dublin, 1911, ibid.)

(7) Finally, the two hero-gods just mentioned, who may possibly have owed their apotheosis to a death by drowning, would find a parallel in the story of Antinoos, the celebrated favourite of the Emperor Hadrian. While accompanying the Emperor on his Egyptian journey, he is said to have thrown himself into the Nile in order that he might by his own death save his patron from imminent peril. On the spot where this took place Hadrian founded a Roman city, which he called Antinoopolis, and in which he in all likelihood instituted a cult in honour of the youth, as a city-hero, or, as the saying went, of the 'heavenly'—as in the proper name Cernaves (Thoth, the chief of th). This story is told by Strabo (iv. 214), and in 1026 (O498 5664 1026) would compare with it.
HEROES AND HERO-GODS (Greek and Roman).—The belief in heroes plays a very important part in the development of Greek religion, and to an extent which literature, taken by itself, has not yet measured. The conception of a hero arose from the prevalence of ancestor-worship, when the spirit of the dead man was canonized by his descendants. Remembering the identification of demons with the spirits of the departed (see DEMONS AND SPIRITS [Greek]), we shall not be surprised to find that demons and heroes are sometimes treated as indistinguishable (e.g. Plat. Apol. 27 D). But, when a distinction was drawn between them, demons, though inferior to gods, were, in their turn, regarded as superior to heroes (Plut. de Raf. Oct. 19, p. 416 B). This classification, which is the product of later reflection, may be traced ultimately to the verses of Hesiod, who makes the demons the representatives of the Golden Age (Op. 123), but regards the Age of the Heroes as immediately prior to his own (5. 159 ff.). These are they, he adds, who fought before the gates of Thebes, and crossed the sea to bring back fair-haired Helen from Troy; and after death they dwell free from care in the islands of the Blessed beside the stream of Ocean. The heroes were definitely understood by Hesiod to have been men of renown, who lived in the age celebrated by epic poetry, and whose exploits had been immortalized as the achievements of a semi-divine race (Hom. Hymn. ii. 23 ; Hom. Hymn. xxiii. 18 f. ; Simonid. fr. 38). Though there is thus one point of view from which demons are preferred to heroes, it is equally true that the demonic being is a more primitive conception; and that the hero, with his clearly-marked personality and more intimate relations with his worshippers, is the product of a more advanced stage in religious thought. Further, demon is the wider term: every hero might be described as a demon, but not all demons were heroes. Although the derivation of the word is uncertain, it is generally assumed that it was originally an adjective bearing some such meaning as 'strong' or 'noble' (Hesych. s.v.), so that it may have been an honorable title intended to distinguish the souls of those among the departed whose protection and favour it was desired to secure.

The old view that hero-worship arose from a weakening of the belief in gods can no longer be maintained in the light of recent research (Roehle, Psyche, 145 ff.). The ritual facts, as will presently be shown, are decisive against it, and the transition of thought which it assumes is by no means characteristic of the tendency of an early society. E.g. Manetho (Conc. ad Ptole. III, 11) conceded that old divinities might be re-fashioned and assimilated to gods, but that it was not possible to prove that heroes were ever derived immediately from a god. The heroes in their original form, as ghosts of ancestors, were neither demi-gods, if that term is used to describe living warriors, nor demons, who have never been incar- nated in human body. It is more difficult to account for the fact that hero-worship, which can be shown to have flourished in the 7th cent. B.C. or even earlier, can be hardly any influence on the practice of Hellenic society. Somehow or other, old beliefs in the power of the dead, which were temporarily obs- cured during the flourishing period of epic poetry, sprang anew into life and dominated popular thought in the Graeco-Roman world, without the classical era. Or it may be that, as the political system which supported the courts of the feudal chieftains fell away and decayed, the voice of the commoner, whose primitive superstition had remained unchanged, became articulate in later literature.

There are many facts which attest the connexion of heroes with human society and with the ghosts of ancestors. The central heath of the house, under which the hero was buried (cf. Plat. Phoc. 37), and near to which a precinct was re- served for him, was an object of special veneration in family-worship (cf. art. HIAERTH [Greek]). Or an image of the hero might be set up close to the house-door (Callim. Epig. 26), in order to protect the inmates against the approach of their enemies. At every family meal the second libation was poured out in honour of the heroes (Pint. Qu. Rom. 25, p. 270 A), and to them belonged all the broken fare which fell from the table (Arist. fr. 180 R.). In regard to the hero in death, Athenians (427 B.C.) states that dead kinmen are actually the recipients, and it is not to be doubted that the pouring of the wine on the ground was for the benefit of the family ancestors.

Heroes were kept in remembrance by their graves, as may be seen from the case of the shrine erected in honour of Polyphemus on the shore of the Thracian Chersonese, which, though plundered by the order of Xerxes (Herod. ix. 118), was still an object of veneration in the time of Philostratus (Her. iii. 1 f.). The grave itself was a mound of earth (χώρα) situated within a sacred enclosure (θυρεός, or, more strictly, σχῆς [Poll. i. 6]). Over the mound a small chapel (εἴδεμ) was raised, the precinct was planted with trees, and its limits were marked by a stone wall (βάσαρυς [Paus. ii. 42. 8]). The most distinctive feature of the locality was the cavity (θησεῖον) communicating with the interior of the grave, into which the blood of the victim was poured or other offerings were cast. Thus, the tomb of the hero actually served as an altar (βαυάδω) for his worshippers, and might be so described (Eur. Hid. 547, with the present writer's note). Strictly, however, since no elevation was essential, a circular hollow in the ground (ερείσσα) was sufficient, and the appropriate receptacle for offerings to heroes. The sacrificial terms applied to hero-worship belong also to chthonic worship in general (for εἰρέσσα, as distinguished from δεσμός, see Herod. ii. 44), and the ritual was the same: the victims—generally black bulls or rams—were slaughtered so that the blood from their throats fell into the hollow of the altar, to be drunk by the ghost (αλβακελλή) ; their heads were pressed downwards so that they looked towards the earth (ερείσσα, as explained by schol. Hom. ii. 430); none of the flesh was eaten, but the whole of it was consumed by fire; or—since the employment of an animal victim was by no means universal—when firstfruits of all kinds were offered to them, none of the gifts must be touched subsequently by the human worshippers. There is the same sinlessness of touch, and the gifts offered to heroes were often made by night or towards evening (Pind. Ist. i. 33; Ap. Rhod. i. 887); in the custom of beheading the ground (Soph. Fas. 460), or of slaying the victim (Pind. Ibid. 453); and in the annual recurrence of the cere- mony to commemorate the hero's death. The institution of formal games over the dead hero was a common custom (e.g. Paus. viii. 4, 5), and it is generally supposed that such was the
HEROES AND HERO-GODS (Greek and Roman) 615

origin of the four great pan-Hellenic festivals, which were afterwards brought into connexion with the cult of an Olympian god.

See Robbe, 145; Eitrem, in Pauly-Wissowa, vili. 1126. An attempt has recently been made by F. M. Cornford, in J. E. Harrison's Themis, II. 4., to explain the goddesses of originally and independently New Year processions (pp. 264 f.). He has appealed to the general argument of the anthropologists that the hero is a later concept. This view was correspondingly with the general argument of the anthropologists that the hero is a later concept. This view was correspondingly

A remarkable feature in the worship of a hero is that he was supposed to appear in the form of a man. So Cycon was maintained that the snake, and Erichthonius at Athens (Paus. i. 26. 1, i. 24. 7).

Vergil describes the arrival of an enormous snake when Neasos was celebrating the anniversary of his former's death below the general cult.' At his tomb (Zeus, x. 84 E). The supernational man in Theophrastus (Char. 16), if he saw a snake in the house, at once erected a small chapel on the spot. The snake was also frequently depicted in the class of reliefs known as the Dead-Feast type, in which the hero is represented as partaking of a meal (Souls, Gr. Vind. 37). In his Life of Cleomenes (39), says that, after Cleomenes had been put to death by Ptolemy and his body impaled, a snake came on to his head; and certain learned men explained the occurrence by propounding the theory that snakes are produced within a human corpse by the thickening of the juices of the married. The explanation, which is also given in a speech of Pythagoras recorded in Ov. Met. xvi. 388, is perhaps due to the rationalizing tendency of popular opinion at a time when the superstition had ceased to be credible. Although the association of the snake with death and the grave appears to be free from doubt, it has, nevertheless, recently been maintained that the snake, attribute of a hero points to his origin as a fertility-daimon, and symbolizes the resurrection of life in the new year (J. E. Harrison, Themis, 271, 310).

The cult of the hero in the primitive Panhellenia cuminates in the worship of a hero as the representative of the family. He is no longer one of a class in which all the members are equally entitled to veneration. There has arisen a belief that, in accordance with the measure of their contributions, distinguished men are to be held in esteem after death, and that in virtue of their mysterious influence they can exercise a wide range of power over their former haunts. Thus, one who has become famous as a ruler or a warrior is selected by his immediate successors. If he has been of supreme position as eponymous founder of the clan (μητρικής). In this sense Cercopes may be said to give his name to the Cercopes, the rivals of the Eteobatides, Aclus to the Eacles, and so forth. It may be true that some of these name-givers never had any individual existence, but that their names were projected, so to speak, in order to express the unity of a clan-group (J. E. Harrison, op. cit. 267). But, however the actual particular facts may have come to pass historically—and it is unlikely that the development was uniform in every group—the conception of the hero in the classical age figured him as the remote forefather to whom the members of the clan were historically related. The widespread belief that gods and men were of the same race led to the further conclusion that the most glorious of mankind must have been of divine origin; the eponymous heroes of the clans were the sons of the gods. There is thus a difference not only of degree but of kind between the class of heroes and their mortal descendants; the progress of the religious system results in the transformation of the supernatural beings capable of recruitment from the ranks either of gods or of men (Eitrem, 1129).

The relationship of the hero to the gods must now be examined in detail. It frequently happens that the chapel or grave of a hero is in the temple of one of the great gods. Saron lay in the temple of the Sarmonic Artemis (Paus. ii. 30. 7), Iphigenia in that of the same goddess at Brauron (Eur. Iph. Taur. 1426). Telmessus was buried under the altar of Apollo at Telmessus (Clem. Alex. Protr. ii. 45), Strymon in the temple of Athene Pallene (Eur. Herod. 1025), and Euryleas and the prison of the Helene at Argos (Herod. i. 31). The list might be very largely increased; but, in order to appreciate its significance, we must rule out any suggestion that the shrines of these local worshipers were superimposed on the existing sanctuaries of the Olympian gods. We should rather infer that hero-worship was a survival from an earlier system of religion, which preceded the establishment of the greater cults.

There are other indications which point to a conflict between the representation of an older and a later system. Apollo drove out Hycactinus at Tarentum (Polyb. viii. 30. 2); Artemis came to terms with Calliste in Arcadia (Paus. viii. 30. 8); and Aphrodite was identified at Naxos (Plut. Thea. 20). Sometimes the supernumerary hero assumed the functions of founder of the new cult, or of minister and sage to the new gods. Thus we read that Aristeeus built an altar to Zeus Iakinos in Coos (Ap. Rhod. ii. 592); and hence the numerous stories of a god welcomed by a mortal, who was held in high repute, and to whom certain names are given on that account, as when Dionysus was welcomed by Icarus and Pegasus. Sometimes the god took over the honours instituted for a hero, as when Zeus succeeded to the funeral games at Neaestos as a memorial to Archermous (Arg. to Pind. Nem.), or when the Rhodian celebration dedicated to Telephorus was transferred to Helos (schol. Pind. Ol. vii. 146). Sometimes, again, the Olympian has entirely effaced the reputation of the hero, whose name has been forgotten: Pausanias (i. 3. 4) mentions that there was a temple dedicated to certain unknown gods and heroes, and also that an altar which was inscribed to an anonymous hero was known by antiquarians to belong to Andronoe. Whenever the hero has been subordinated to the god, but the recollection of his former eminence has not entirely passed away, a preliminary offering made to the hero precedes the celebration of the chief sacrifice. In this way Pelops was honoured at Olympia (schol. Pind. Ol. i. 149), and Sceous at the festival of Apollo Agyieus at Tages (Pana. ii. 34. 3). When Pycasus is addressed as a hero in the old ritual chant of Ellis (Pest. Lyr. Gr. iii. 665)—the earliest example of the cult title—an explanation is drawn from his recent association in amours with the daughter of Cadmus. The growth of legendary stories about the gods, or the introduction of their names into the genealogical tables of princely families, accounts for the pre-eminence of the Dioscuri and Helen, of Aeselinus and Heraclus, of Theseus and Amphiarious. Another view has recently been advocated: that the conception of an Olympian god is always later than that of the
HEROES AND HERO-GODS (Greek and Roman)

...the advent of the fully-developed forces of the greater gods. The usual result was that they lost their identity, and survived only as epithets attached to the names of later gods. Thus, for example, when the Ares of Olympia (Ares, the god of war) and the Zeus of Athens (Zeus) were combined to form the god of war, the new god was called Ares, who was thought to have been born on Mount Cithaeron near Thebes.

Concerning the worship of these deities, it is said that they were worshipped in temples or shrines dedicated to them. It is also said that they were worshipped in public places, such as markets and crossroads. The worship of these deities was often connected with certain festivals or ceremonies, such as the Olympic Games or the Panathenaia.

There are several stories about the origin of the gods and heroes. One common story is that the gods were born of the union of a mortal and a god. This is the case of Zeus, who was born of a mortal woman, Danae, and a god, Poseidon. Another common story is that the gods were born of a union between a mortal and a Titan, a semi-divine being. This is the case of Heracles, who was born of a mortal father and a Titan mother.

The study of the gods and heroes is important for understanding the religious beliefs and practices of ancient Greece. It is also important for understanding the values and ideals of ancient Greek society, as these deities were often associated with certain virtues or vices.

...the importance of religious silence, and corresponded to the Doric hero Euphemus, who, however, is known solely from the inscriptions. The name Euphemus is also found in the name of the Argo, the ship on which Theseus sailed, and in the name of the god Euphemios, who was worshiped in the island of Euphemia in the Aegean Sea.
HEROES AND HERO-GODS (Greek and Roman) 655

36. 1.—(8) Health in time of sickness was especially
invoked from Machaon and Podalirius, the sons
of Asclepius, and others of his descendants
such as Polemocrates, who healed in Thyreatis
(Paus. ii. 24. 3) and elsewhere, and Helen is said
to have cured a young priest. His a beautiful
woman (Herod. vi. 61).—(9) The function of divina-
tion was regularly exercised. All over Greece
were oracular shrines, where the tutelary hero
foretold the future, and imparted his advice to the
inquirer by means of a dream. The most famous
was perhaps that of Trophonius at Lebades in
Boeotia, the procedure at which is described in
detail by Pausanias; but many more are noted by
the compilers of the list. We may select as representa-
tive the sanctuaries of Alcmene near to Thebes on the road leading to
Thebes, of Heliodorus at Thasius near Leontia,
and of the seer Amnis—the father of the three
Elagoboups—(Delos (Rohde, 176)).

The ritual of incubation, the tachmythis, the
help corresponded with the measure of their revenge if slighted.
They might bring defeat, as they did to the
Periers in punishment of their impiety (Herod.
vii. 16), or destroy their enemies, as when
Actaeon in anger ravaged the land of Oreosmos,
and when Thesmespun punished the
Thasians for flinging his statue into the sea, be-
cause it had fallen on one of his enemies and killed
him (ib. vi. 11. 6 ff.).

The hero Anagryos executed a terrible revenge upon an old man who had put
Longinus' wife, and killed herself; the father blinded his son and
begged him in a vault. Finally, the old man
haunted himself, and the woman threw herself into a
well (Suid. s.v. 'Anagryos). No wonder that
men dreaded to come into the presence of such
beastly spirits, that they passed by their sanctuaries
in fearful silence (Alciph. iii. 69), and
averted their eyes lest they should encounter their
spirits (schol. Aristoph. Ave. 1483). To the
vulgata the heroes seemed more disposed to injure
than to help; but it is a hyperbole when they are
described as responsible for all the sufferings of
mankind (Babr. 63).

The belief in heroes and their worship can be
shown to have been firmly established in Greece
from the 7th cent. B.C. onwards, so long as the
framework of the ancient Greek civilisation con-
tinued to persist. The ordinance of Draco com-
manding the Athenians to worship gods or heroes
in accordance with inherited tradition (Porphyry.
dc. Abst. iv. 22) proves that in his days hero-worship
was no innovation; and its permanence is shown by
the regular incorporation of the names of heroes
with the gods in the oaths taken upon solemn occa-
sions (Dinarch. i. 64). The reforms of Cleisthenes
recognised the importance of the heroic ancestor;
whose presidency was exercised by the sphere of
the clan to the artificial units of tribe and deme.
The hero, as local demon, had sometimes merged
his identity in the name of the settlement, as may
be observed from Protesilaus to Mars, Corinthus,
and Corinthus. In other conditions he was re-
garded as the leader and founder of the newly-
established State, as was Danaus at Argos, Battus
at Cyrene, and Timoleon at Rhodes. It was a
natural consequence in historical times that the
personage to whom a new society owed its origin
or its prosperity should be advanced to the rank
of a mythical chieftain. Thus we find the
cult of Miltiades established in the Thracian
Ceressos; and in the same neighbourhood at
Amphipolis, where a festival had been founded in
honour of Hagnon as a savior, the citizens after-
wards transferred their veneration to Brasidas by
ancreating his tomb and investing him with the
annual honours of games and sacrifices (Thuc. v. 11).

Other military and political services were recog-
nised in the same way: the cult of Leonidas
survived at Sparta until the age of the Antonines
(Paus. iii. 16. 1), and Herakles, at Athens, received
honourous at Athens (Pollux, viii. 91).

But political merit did not stand alone in earning
this posthumous honour. Cleomeides of Astypalae
and Euboeas of Dyme were canonised as Olympian
victors (Paus. vi. 9, 3, vi. 3. 4); Bia of Priene for
his wisdom (Diog. Lecr. i. 88); and Phileppus of
Croton for his beauty (Herod. v. 47). Here may be
the otherworldly memorials established to heroes
celebrities, among whom may be mentioned Homer,
Hesiod, Archilochus, Pindar, and Aeschylus. The
case of Sophocles was peculiar. He was enstated
in his home, and honoured him with
regular and formal worship, and consequently
he was himself worshipped as a hero after death,
beneath the title of Deceylon, 'the Entertainer' (Etym. Mag. 226).
The philosophical schools were
organised as religious societies (θηατρος), and it
became the rule to honour the founder as a hero
(Wilamowitz, 'Aegleos ex Hermes', Berlin,
1881, p. 293 f.). There is less of historical certainty
in the heroism of Dracmas, the leader
of runaway slaves in Chios (Ath. 265 D), and
of Pizodorus, the Ephesian shepherd, who directed
the officials charged with the building of a temple
to a quarry of beautiful marble (Vitruv. x. 7).

Throughout historical times the inhabitants of
the Delphic oracle in recommending the establishment
of a heroic cult (e.g., Herod. i. 187) was very
commonplace; for the Delphian Apollo was regarded
by every Greek as the greatest of seers in all that
appertained to the worship of gods and heroes.
The priests, we may well believe, shared the
sacrifice of the age, even if they
pursued a policy of self-interest by spreading cults
which owed the charter of their establishment to
Delphi (Rohde, 180).

The belief was ultimately degraded by the
heroization of living men. The earliest recorded
example is perhaps the Syracusan Dion (Diocor.
iv. 29). The servility of the age
which was reflected in the extravagance of the rewards
showered upon Demetrius by the Sicyonians (ib.
xx. 105). Posthumous honours, not merely heroic,
but divine, were granted to the representatives of
dynasties of Ptolemy and Seleucus; and the
second Ptolemy took a further step forward by
permitting himself to be raised to the rank of a
god during his life.

An entirely different cause—the increase of
affectionate regard for the dead—contributed to
the secularization of hero-worship. The practice for religious corporations so to honour one
who had held high rank in the society, or even for
private individuals to endow a religious foundation in honour of themselves or members of their
family. The best-known example of the latter is
the will of Epicteta of Thasos, who left directions for the heroization of herself, her husband, and
her two dead sons (Hiller, Gesch. der Griech. und
veneration will be found in the heroic relics,
which—from prehistoric days to the last period of
Greek art maintain their connexion with the dead 1 (Bouke, 28). (For the details, see Deneken, in Ergebn. i, 18 ff.; Eitrem, 114 ff.; also Littmann, Thesm. 312.) In Bocotia and Thessaly the word 'hero' was used from an early date as a customary epithet of the dead (lheros xoq). Later, as the prestige of Roman power spread, it was applied even to children and to slaves. In this connexion may be mentioned the declared intention of Cicero to build a shrine in honour of his mother's dead (Cic. Att. ii. 18). The last phase of hero-worship returns to the point from which it started, the family-worship of the souls of the dead.

Here-worship was entirely alien to the native religion of Rome (Mommsen, Rom. Hist. i. 174, Eng. tr. [ed. 1877]), but the fully-developed notion of the hero as a warrior of Homeric epoch and as a superhuman or semi-divine being passed over to the Romans as part of the mental equipment which they borrowed in consequence of their contact with Greek civilization. As the Romans had no heroic past of their own, they re-established their ancient traditions by introducing Greek heroes into Italy, or by assimilating the forms of their native kings to the foreign pattern. The legends of the exposure of Romulus and Remus, of the translation of Romulus, and of his apotheosis, are demonstrably of Greek origin. The story of the assistance given to the Romans by Minerva at the battle of Lake Regillus is exactly typical of the epiphanies of Greek heroes; and it has been shown that the details were transferred directly from a Greek account of the battle at the river Lebetus, then between the Locrians and the people of Croton (G. Wissowa, Religions u. Kultur der Römer, Munich, 1902, p. 240. Later we build a city of heroes entirely after the Greek manner, as when Horace put Nummi and Cato on the same level as Hercules and the Tyndarids (Od. i. 12), or when Vergil propounded thoughts which a child would be born in Pollio's consularship would join the throng of gods and heroes on equal terms (Ed. iv. 18).

2. Traces of mythology.—So far, then, we have a historical fact, with which, as may be seen, a certain amount of mythical and legendary matter has in some cases been combined. Legend and myth, or speculation as to such, in the full sense of the word, first meet us when we ask about the answer the question whether, or in what specified instances belonging to the period preceding the conquest of Canaan, the hero was in the mind of the primitive Hebrew identical with one form or another of Deity.

HEROES AND HERO-GODS (Hebrew).—1. Hebrew heroes. —The record of heroes among the ancient Hebrews, viewed apart from the mythological idea attaching to the second part of the title at the head of this article, must be allowed to have been a particularly great one. The Book of Judges alone, with its long series of heroic struggles under the successive (and partly contemporary) leadership of men of extraordinary daring and valor, is sufficient to attest the presence of a very high degree of the heroic quality among the Israelitish settlers; 1 and the exploits of Saul, Jonathan, and David fitted round off the tale of deadly conflicts which ended in complete victory over the hostile forces on all sides.

In the history that follows this event the more distinctly spiritual type of heroism overthrows—

1 Even Wissler, whose mythological theories may be said to reach to the farthest possible limits (see under § 26), cannot help admitting the historical background of the history of the Judges (see K.A.P., 326-316). Concerning Samson, see note on p. 620.

2 No opinion is here, however, intended to be pronounced on the question whether in any given case an originally human hero became a divinity (in accordance with anachronistic principles), or whether an original deity later on acquired the character of a human hero. In many cases the question of priority in this problem is, in the present state of our knowledge, probably impossible. Our Biblical mythologists (Wissler, Sch. Mann, and others) as will be seen later, assume the second assumption.
the two aspects of the case appear, in a manner, combined.

(a) The myth in question is contained in Gn 6:4. It is there related that the sons of God (or, rather, "sons of the gods") took human wives, and that the offspring (Rv's giants), the same having been "the mighty men which were of old, the men of renown." The literal meaning of this passage was for a long time naturally acceptable to both Jewish and Christian interpreters. The former (in the Targums, etc.) therefore explained the term "sons of God" (בנֵי-הédom) to mean sons of judges, i.e., the noble and chieftains of the land, whilst to the latter the narrative referred to intermarriage between the godly men of the line of Seth and the sinful women of the line of Cain. Modern scholars are, however, undoubtedly right in regarding the passage as a genuine "torno" of ancient mythology. As Driver puts it (Westminster Com., in loco):

"The expression "sons of God" (or "sons of the gods") denotes elsewhere (Gen 6:2 NRSV) "a demi-god, supreme demi-god, the demi-god," e.g., as in Genesis 6:4, as in Genesis 6:4, as in Genesis 6:4, as in Genesis 6:4, as in Genesis 6:4. And this, which is also the oldest interpretation of Gen 6:2 (LXX 60 10 412), and as far as I am aware, is the only sense in which the expression can be legitimately understood today."

The Nephilim, who are in Nu 13:31 identified with the sons of Anak, therefore represented a race of giants1 who were believed by the Israelites—in common, no doubt, with others—to have been the offspring of gods and human women, thus blending in their persons the character of deity with that of the human hero. As they were not racially connected with the Israelites in the existence of these hero-gods cannot, of course, serve as a point d'appui for interpreting the nature of genuine Hebrew heroes on a similar principle; but the belief must all the same be regarded as a genuine part of the mythological ideas prevalent in Israelitish circles (on Hebrew ideas concerning giants among other nations, see also Gen 6:1-4, 11, 12).

(b) A mythological theme of a different kind confronts us in the cycle of ideas which several modern writers connect with the Biblical account of the patriarchs and other personages of early Hebrew history.

There are at present in the field three main modes of interpreting the history of Abraham, Isaac, and Jacob, and Joseph (to lay special emphasis on these great Biblical figures, without, however, intending to confine ourselves to them absolutely).

(1) They were real persons, and their histories are, in outline at any rate, true. If so, they lead the list of the genuine Hebrew heroes of the purely human type, such as lie before us in the history of the conquest of Canaan (2) They are historico-genalogical—that is to say, they originated, not individuals, but tribes or nations. In any case, they are absolutely, to be regarded as mythological figures whose

1 As the clause stands ("the sons of Anak are some of the Nephilim"), an identification, or rather a genealogical connection, is naturally intended; but the clause reads like a gloss (see Gen 4:26, Gen 5:24, etc.), and may represent a later genealogical interpretation. The word עֲבְרָי, app. means "originated in," a "people," in allusion to their gigantic height; cf. De 4:5, where the bedstead of Og, king of Bashan, is described, though that king is stated to have belonged to the Canaanites. For these are—like the דָּגָן—in all probability connected either racially or in the manner of descent with the דָּגָן. The etymology of the term עֲבְרָי is, however, very doubtful (see, e.g., F. Schwab, Das Land nach dem Tode, Giessen, 1896, p. 64 f.). On the whole subject, see, e.g., art. "Giant," in HDB II. 1006. The term דָּגָן, which is obviously related to the word דָּגָן, is also represented in the Semitic language generally read ʿakṣub and ʿebṣub in the List of Semites 1, and occurs in the Targum of Isaiah in the Midrash, and Jacob and Joseph were originally names of tribes or clans. The reference to his original mythological theory is that the narratives of Berosus and Ptolemy, which were collaboratively with him in the preparation of the papyri of the Dead Sea Scrolls (see p. 246 f.).
Meyer, and their respective associates and predecessors may differ as to the special form of the mythological scheme to be adopted, they are all in full agreement on the main point; the declaration that the patriarchs were originally divinities, and that the elaboration of their histories as human heroes is a late interpretation of the myths, the order of development being the exact reverse of that which is associated with the name of Euhemerus. The question as to the amount of probability with which the theories are regarded as an open one. A fine destructive criticism of Winckler's view was furnished by K. Budda (see *Das Alte Testament u. die Ausgrabungen*, p. 414). Cheyne expressed the following opinion (*EB* ii. 2312): 'That there are somewhat pale mythological elements in some of the Biblical narratives may be admitted; but to many minds Winckler's proof of his hypothesis will seem almost too laboured to be convincing.' The following argument (or, perhaps more fairly put, point d'opposition) used by Winckler in *Altertumswissenschaft*, iii. p. 406, will (though possibly one of the extreme instances) show how deeply steeped the mind must be, as a preliminary, be in the natural mythological mode of ideas, in order to admit even a slight degree of probability in favour of his method in interpreting the Biblical text. It is said in Gen 18 that Abraham was very rich in *qvey* (i.e. cattle). Withal he adds that in his *heem* word we have the root *rē-* in *xop*, but *xop* is nothing but an appellative of the *dōs summus*, i.e. the moon. The use of *qvey* therefore shows that Abraham was originally a moon god.

Meyer's theory is, of course, quite as much as that of Winckler at variance with the usual critical interpretations of the Jæta. This may be, who himself adopts the genealogical scheme of interpretation, pointedly speaks of it as Meyer's 'present view' (see *Review of Theology and Philosophy*, ii. (1885), pp. 141-153, and *Susa*) expressed in *Zacke Lituraturstudien*, 1907, pp. 1923-31), though not specially referring to this part of Meyer's thesis, throws doubt on the correctness of much in his method of interpretation in general. All that can be said at present is that it would be both un-critical and unfair definitely to negative the Palestinian names theory of the patriarchs; it is entirely simply because it may appear startling at first sight. Specially to be noted is that for the phrase *pēr *qvey* (the 'Pier of his father's house') in Gen 19 (see also Meyer adopts (p. 254) the very doubtful explanation which identifies Isaac himself with *pēr* (i.e. 'Pier' = divinity). The forms *Yaḵbaš* and *Yoseph* are found in the list of Palestinian place-names belonging to the reign of Thutmosis III. he would take to mean 'Yaḵbaš, the god' and 'Yoseph, the god' (p. 252), instead of *El applanteath* and *El adadeth.*

(c) Under (a) and (b) we considered respectively a myth concerning non-Israelites believed in by the Israelites, and certain mythological speculations regarding traditional Israelite heroes. We now come to a group of heroes belonging partly to pre-Israelite times and partly to purely Israelite traditions. It is clear to us, and to confuse ourselves to leading figures of the highest order. Enoch the son of Jared, Noah, Moses, and Elijah. It was shown in *EB* i. 441 ff. (see also p. 483) that there are, in the case of these ancestral heroes, clear indications of a kind of apotheosis; and it will be sufficient to add in this place that Winckler and Meyer only partially attempt to carry us here beyond the idea of the cosmic descent of the Biblical characters (as has been seen (§ 2 (b)), believes Moses to represent the sun in spring; and Meyer (p. 217) regards Enoch as 'Gott (oder Personifikation) des 305. bis 325. Jahre' (see *EB* 5th ed.; Enoch lived 365 years).

LITERATURE.—Besides the works named under the art. ARCHETYPE-WORSHIP (Hebrae) in vol. i., and the publication of the present article, the reader may specially consult: F. Lenormant, *Les Origines du Père* (Bouy. gr. of vol. i., London, 1839); K. Budda, *Die Stützpunkte* (Gleim, 1881); H. Grimal, *The Legends of Genesis* (ed. by H. E. Croxton, Chicago, 1903), particularly pp. 112-115; F. Schewy, 'Uber ein Balgoce, *Vehum. Zeitgbl.* (1908), 62 (1912); F. E. Sch., *Das Stammform u. die Sem. Stämme,* ed. by (1897); (expressing, for the time being, agreement with Sunday) genealogical theory advocated in *LH* ii. 185, i. 1. 166, *Reppermann,* and on the different patriarchs in *DB* and *EB*.

HEROES AND HERO-GODS (Indian).—In Sanskrit there is no word corresponding to the Greek *heto*, denoting a famous warrior or hero promoted to divine rank and worshipped as the patron of a town, district, gild, etc. But similar ideas, though not well defined and of a much wider application, have always been recognised in India. They have given rise to the belief in, and the worship of, a great variety of superhuman beings, of whom some are regarded as local patrons, saints, and gods; others have attained to the rank of supreme gods.

There is a class of Brahmanical heroes to be mentioned hereafter, who are duly recognised in the religious beliefs of India, but who are Indian heroes seem to have belonged to popular religion, to the undercurrent of the various forms of higher religion acknowledged and sanctioned by the Brahmanas. We therefore find only occasional notice of, or vague allusions to, them by Sanskrit writers. As a rule, those heroes only who had become the objects of the devotion and un-celebrated universal homage are mentioned by the Brahmanas and admitted into their pantheon. In order, therefore, to form an idea of the extent and nature of hero-worship in India, it will be well to advert first to the state of things in modern India. W. Crooke devotes the second chapter of his *Intro. to the Popular Religion and Folklore of Northern India* (London, 1896) to 'The Heroic and Village Gods,' whom we may regard as the equivalents of the ancient heroes. Such are Hanuman of the *Rāmdāyana*, Bhima and Bhīma of the *MB*, and, besides, a great number of local or village gods of whom Crooke believes 'that most, if not all, belong to the races whom it is convenient and safe to describe as least outside Brahmanism, though some of them may have been from time to time promoted into the orthodox pantheon.' In the fourth and fifth chapters ('The Worship of the Sacred Dead' and 'The Worship of the Malevolent Dead,' i. 175 ff., 230 ff.) he describes the class of semi-divine beings who in life had been men—warriors, chieftains, even robbers, or holy men—and after death had become the object of worship. Sir Alfred Lyall, in his suggestive account of the 'Religion of an Indian Province' (Bears), bears testimony to the dedication of famous men after their death. The process can be observed best, though not exclusively, with regard to saints and hermits. Of the numerous local gods known to have been living men, by far the greater portion derive from the ordinary canonisation of holy personages (i. 261). 'The number of saints thus raised to the divine status is almost incalculable,' and the number of ascetics (i. 260). The process of deification he describes as follows. But, in India, whatever be the original reason for venerating

1 Winckler's strikingly drawn parallel between Enoch, the seventh primeval patriarch, and Enoch, the seventh primeval patriarch of the Babylonian record (see *KAT* p. 140), need not necessarily move in the sphere of original hero-worship rather than that of original gods, though he also refers to the number 365 in *EB*.

A deceased man, his upward course toward defilement is the same. At first we have the grave of one whose name, birthplace, place of residence, etc., are well known in the district; if he died at home, his family often set up a shrine, placed themselves in possession of the things that were about it, and then, after a certain time, they become hereditary keepers of the sanctuary, if the shrine provides them with maintenance. Or, if the man wandered about, settled near some village or sacred spot, became renowned, and died, the neighboring villagers, on hearing him die, the neighbors that it great how he left to the tomb of a holy man within their borders, and the landholders administer the shrine by ministerial rights. In the course of a very few years, the recollection of the man's personality becomes misty, his origin forgotten to the last. The name and death were both supernatural; in the next generation the obscure names of the sages or gods get introduced into the story, and the marvelous tradition works itself into a myth, until nothing but a personal incarnation can account for such a series of prodigies.

These references to popular beliefs and religious practices in modern India will enable us to detect the traces of hero-worship in ancient India. That it always existed, and has been doubtless, for the Maghāyakas of Bihār, and the adjoining region worship Godha and make pilgrimages to his tomb. According to their traditions, he was hanged for his wild designs, and was long promised to help the Maghāyakas in time of trouble. He is worshiped by the whole tribe, and is invoked on all important occasions; but he is not essentially the god of them and a sacred road is always celebrated by a sacrifice and feast in his honor (Crooke, TC. 1906, p. 252). Of the same class is the Bālīkha (e.g.), a deity worshiped in Bihār and the neighboring districts: his temple is called a Bālīkha, and is visited by mission-travelers, preferably the former. Bālīkha, they say, was the first worship of the hill tribes, in whose honor boy's head is offered. The Bālīkha is worshiped in Bihār, Jhos, and Patna, to which members of all castes resort. The higher castes make offerings of meat, the lower sacrifices piper and other oblations of spirits on the ground. The cult of this deity is, however, not a general one, because the low-caste robber is now identified with the potter of Bihār, who is a respectable minor god, already occupying a niche in the Hindu pantheon. Doubtless the scene is repeated in all Bihār, and other Bālīkha will be accepted as manifestations of one or other of the Hindu gods who always exist (R. G. B. Crooke, The Eastern India, London, 1882, p. 192).

The Bālīkha (e.g.) tribe of carvers and smiths, again, have a similar deity, the fresh-water Mījānu Bālīkkhās. In every camp there is a hut set apart and devoted to the worship of the deity, which is distinguished by a white flag. When a criminal expedition is arranged, the members of the gang meet at night in this hut, and an image of the true flag is held in their hands. A white soaked in burnt siro is placed in a manor and lighted, and an appeal is made to the Bālīkha to guide the robbers and to protect them. When the expedition is about to start, the Bālīkha is sacrificed, and the head and flesh of the beast are burnt on the altar, and the food left in the hut. The tribal priest calls aloud, and assails the Mījānu Bālīkkhās for accepting the offering (Chumberdger, BHIK iv.).

This rite, then, are the Chumpās (the tribals) of the Brahmānical genies, and as such receive a

1. Ancestral heroes may be called the founders of families (genies), of clans, and of dynasties. Now the Indian genies, especially those of the Brahmān, are called gotras (e.g.). Max Müller says: "All Brahmanic families whose sages claim to be of the latter class are supposed to descend from the seven Rājas. The following are among the Brahmān, and the rest of a similar class are frequently present also in members of the other; e.g., many numerous Gotras have been formed within the scope of epic poetry, and are, therefore, also epic heroes in a wider sense.

kind of worship in prescribed forms. It may be added that some of them, especially those whom Max Müller calls the real ancestors, are the subject of legends related in the epics and Purāṇas, while about many tradition is silent except in so far as they are regarded as the authors of the hymns of the Rigveda. Not only the Brāhmaṇas but also the Kāśyapa and Manus seem to have had, in ancient times, gotras of their own, some of which at least were identical in name with those of the Brāhmaṇa. But we know practically nothing about them; they seem in the early centuries of our era to have fallen into disuse, probably because the Kāśyapa were split into a great many clans, and the Vaiśyas into an ever-increasing number of castes, and those divisions acquired a greater importance than the old-fashioned gotras.  

We pass now to such ancestral heroes as are regarded as the founders of cities and dynasties. The dynasties of ancient India belong either to the Solar race (Sūrya-vahana) or the Lunar race (Somavahana). Both races go back to Manu, the son of the Sun (Vivasvat), but with this difference, that the solar race contains the descendants of Manu’s sons, the lunar race those of his daughter Ila and Budha, the son of Soma, the Moon. In this way it is explained that the Sun (Vivasvat) and these Soma (Soma) are the progenitors of the solar and lunar races respectively, while to either belongs Manu, the father of famous hero of mankind. The nine sons of Manu, Ikṣvāku, etc., are said to have founded as many branches of the solar race, and must, therefore, be regarded as their ancestral heroes. But those genealogical traditions seem to have been fixed at a time when they were already on the point of dying out; for there is some confusion even about the number and the names of these nine sons, of which Ikṣvāku, the most ancient, has always been the accepted hero of the Bharata’s sons Takṣaṇa and Puṣkaloka, Takṣaṇa and Puṣikaloka; Lekṣmana’s sons Angada and Chandrakānta (vol. 102); Rāhva became the second founder of Ayodhya, after it had been deserted on the death of Rāma (vii. 111), etc. These epic notices about founders of towns, whether they be records of popular traditions or inventions of the poet, prove at least that this kind of hero was known in India, and we may assume that these heroes were not of divine rank, but of human or semi-divine rank. Epic poetry seems to remove from the everyday sphere all persons and things that make part of the narrative, and to invest them with an exalted character. Every beginner in Sanskrit remembers how, in the opening of the story of Nala, Indra inquires after the warriors and kings who used to visit him as his deities, but at that time stayed away on account of Nala’s anuvydhava. Thus, the principal persons of the epics have a tendency to become heroes in the technical sense of the word, and, once having entered upon their upward career, they may end with being regarded as gods. The most instructive instance is the hero of the oldest epic, the Rāmāyana. In the original parts of that work (vii. books ii.—vi.) Rāma is still a human hero, the best of men, the supreme model of morality and loyalty; notwithstanding his association with gods in the beginning, the gods and his fight with, and victory over, the demons (Rākṣasas), he remains essentially a man. But in the first and last books, which are decidedly later in origin and of a different

2 It may, however, be mentioned that the Jain writer Haribhadra (9th cent. A.D.) speaks of the gotra of the Brāhmaṇas, most of whom certainly did not belong to the caste of the Brāhmaṇas (Haribhadra, *Rig Veda*, p. 16, and the remarks of the commentator Muniandas on that passage).
modern popular religion and folklore. They seem to form a class of superhuman beings who are known as the chitrajivas, i.e. the long-living or immortal ones. A verse in the Pārśva enumerates seven chitrajivas: Asvatthāman, Bālī, Vyāsa, Hanumān, Viśiṣṭa, Ṙṣiṣṇu, and Pāruṣa; a quotation in the Sādha Kalpa Dravya adds an eighth—Mārkaṇḍeya. The belief in chitrajivas can, however, be traced back to comparatively early times. In the 108th sarga of the Uttarākṇaṇda of the Rāmdāsya, the Āraṇyakas, commands that Hanumān and Viśiṣṭa should live as long as the Rāmdāsyasya shall exist; verse 33 adds Jambavan, Mainda, and Dividva, and says that they will live 'till the Kali comes.' The commentator says that Hanumān and Viśiṣṭa will live till the destruction of the world, but Jambavan, Mainda, and Dividva will die during the incarnation of Ṛṣiṣṇu. It is, therefore, probable that the class of heroes continuing to live and removed to a higher sphere was originally more numerous than the verse alluded to above would make us believe.

Besides these never-dying heroes there probably were a great many others who were believed to have died, yet still received some kind of homage, though in most cases we know nothing about them. On the evidence of modern folklore, we may safely reckon among them Viśiṣṭa and the five Pārśva, especially Viśiṣṭa, who seems to have been a favourite of the people in many parts of India. 2. In modern India there is a third class of heroes—accumulative sages and ascetics. There can be no doubt that there were such in ancient India also; but, being of local importance only, they did not find their way into general literature, and were ousted, as it were, by the great epics. These, however, who might be included in this class have been treated of above among the ancestral heroes.

LITERATURE.—The necessary references have been given in the article itself. It may be mentioned that the Kārṇa has not been treated before.

HERMANN JACOBI.

HEROES AND HERO-GODS (Iranian).—In the conventional sense of the word, the Iranians possessed many heroes of whom more or less legendary tales were told; and several passages of the Avesta—notably Yasna ix., and Ysdt v., xili., xix.—record traditions of a number of them, such as Virahte, Yasna, Ahrīma, Urvan, Keresap, Haceyana, Thiradhana, Yazta, Hirs, Parsa, Jamasp, Axavand, Vasara, Yudh, Visap, Zair-vari, Urvan, Kanesha, Yasna, and Syāvand; and these heroic figures, with others, recur throughout Pahlavi literature and in the Sanskrit of Firdausi.

Of heroes in the technical sense, however, Zoroastrianism knows nothing, though in that religion marked traces of ancestor-worship exist (see art. ANCESTOR-WORSHIP AND CULT OF THE DEAD [Iranian]; FRAVASHI). In all Zoroastrian literature the nearest approach to anything in the least suggestive of a hero-cult is Yas xili. 17.

"They, the Fravashi of the righteous, give most help in battle fierce; the Fravashi of the righteous are most mighty, Spānta [Zarathushtra], those of the first teachers of the faith, or of men of whom the Spānta, the president of the world for the final restoration, may produce other living righteous men are more mighty, Spānta Zarathushtra, thus [these] of the dead." Old Persian literature is silent on the subject of heroes, but in Greek references to the Persians we find what seem at first blush to be allusions to these apotheosized men of renown. Upon arriving at Pergamum, on the river Sardis, Xerxes 2. He were the explanation of the Fravāhi of Xerxes 3. According to the word of Pārthi 1. quoted in Indian Antiquity, 1912, Supplement, p. 44, note.

"Chitrajīva."
Imperialism, by the 8th-century annals (see Kojiki, 187 ff., 173, 185, 189, etc.). The Emperor himself is often required, and consents, to worship local gods, who are called the Kami (see, for example, 7th, 8th, 9th, 10th, etc.). The honor thus paid to the gods of departed chiefs, like that given to Imperial ancestors, leads us to think that these chiefs must have been of the highest rank, just as the Emperor himself was. Besides, mythology is full of accounts of wars between 'gods,' or human beings (ib. 167, 176, 200 ff., 594, etc.). The worship of the Emperor was only the synthesis of the cults of these local chiefs, just as the Imperial power finally united in its own person all the separate local powers which had formerly existed.

The next in order are the sorcerers, who were originally, before the division of social work, often identified with the chiefs themselves; but on the day of his accession to the throne, we find Jimmu, the first legendary Emperor, instructing one of his followers in the magic formula (Nikongo, l. 135).

These sorcerers of the past comprised anything which seemed particularly wonderful to their neighbours, were naturally the object of an admiration which, along with the worship of the gods, continued at first during their lifetime, and, later, even after their death. Thus as the adoration of powerful chief was an instinctive homage paid by weak men to a superior, the adoration of a 'medicine-man,' famous for his miraculous gifts, is the natural homage paid by ignorance to superior intelligence. The Japanese gods and magicians (see Kojiki, 83 ff., 168 ff., etc.) and it may readily be conceived how, on the other hand, magicians may easily turn into gods. Thus, even to-day, by a 'tutelary' spirit of some ancient beliefs, the high-priest of Inari, in Iduumo, is called ite-gami ('living god').

In the same connexion we must mention also the inventors of all the importers of useful articles, and all the great benefactors whose intelligence or skill arouses gratitude and demands respect. In Shinto mythology, we find first of all the worship of the group of illustrious gods, who, under the direction of Omoch-kane, the god of cunning, invented the principal arts, beginning with the art of the blacksmith, whom the primitive people were most willing to consider as a veritable magician (Kojiki, 63-65).

Then comes the god Oho-kuni- nosukunashi, a powerful chief, and Sukanak-biko-na, a dwarf-wizard, who was the father-in-law of Magatari-nii, the founder of the construction of the country, begun by the Creator-Pair, but also taught men magic and medicine (see Nikongo, l. 135), then the great god Suno-no-wo, who had already gained fame, in a well-known myth, by delivering a young princess from the monster-serpent of Koshi, which was about to devour her, and who also, with the help of his son Itakenu, the 'deserving god' (Inosoko no kami), created, by tearing and dispersing the hairs of his body, the cedar trees and canopiferous forests for the construction of ships, the thuyas for the building of palaces, the podocarps for the manufacture of coffin, while at the same time he sowed and caused to grow all sorts of grain for the nourishment of human beings (Nikongo, l. 183). Along with these gods appears another beneficent being, Mi-wa-no-Kami, who sank wells in several parts of the country (Kojiki, 88).

All these gods, who were at the same time magicians and inventors, were without doubt originally real personages, whose fame was only increased by the souls of ancient chiefs (5. 179), mysterious dwarfs who were depicted as arriving on the crest of the waves in a tiny boat made out of a berry in the form of a long gourd, and dressed in the skin of a bird, and who, after having done

---

1 The sacrifice of a thousand kins (together with a hundred stallions and ten thousand sheep) has a genuinely Irinian ring; cf., for example, Tae v. 31, 35, etc. l.r. 3, 4, etc.
wonderful deeds, disappears by climbing up a stalk of millet, from which he is carried away to another world, no doubt finds his prototype in the mira-
culous events of the young hero Kojiki. Suddenly it seems as though there had been no appearance of the
brother, he asked his youngest son if he had ful-
filled his orders. Yamato-dake replied that he had
not failed to do so, calmly adding an explanation
of how he went about it: he sent his younger son
crushed him, and, pulling off his branches (i.e.
limbs), wrapped them in matting and flung them
away. It may be imagined that the Emperor showed himself somewhat alarmed at the valour
and ferocity of his august child's disposition. He
therefore sent him off to once to the West, to
fight against two warriors of the country of Kumano,
who were rebelling against the authority of the
Emperor. The manner in which the young prince
acquainted himself on this mission will be a
sufficient example of the general Chacter of
these heroes of primitive Japan, with whom
cunning occupies as large a place as courage.

On reaching the home of the Kumano braves, His August-ness Wos-won (the name given to Yamato-dake as a child) saw
that near the house there was a three-fold belt of warriors, who
had made a cave to dwell in. Hereupon they, no more than chasse-
ings a rejoicing for the augast cave (a house-warning),
were getting food ready. So he mused about this, while
waiting for the day of the rejoicing. Then, when the day of
the rejoicing came, having climbed down the
decent of girls his august hair which was bound up, and having put on
his aunt's (Yamato-hime, the Bird-princess) august
upper garment and august skirt, he looked quite like a
and, standing amidst the women (consonbines), went inside
the cave. Then the elder brother and the younger brother,
the two Kumano braves, delighted at the sight of the maiden,
saw her and rejoiced. Then, when they arrived at the feast was at its height, His Augustness Wos-won, drawing
the saber from his bosom, and catching the
Kumano by the collar of his garment, thrust the saber through
his chest, the weapon, alarmed at the sight, the younger brave
ran out. But pursuing after and overthrew him in the
formation of the steps of the cave, and catching him by the back.
Prince Wos-won threw the saber through his buttocks. Then the
Kumano brave spoke, saying, 'Do not move the sword; I have
something to say.' Then His Augustness Wos-won replied him for
a moment, breaking down as he lay prostrate. Here-
upon the Kumano brave spoke, saying: 'I am the augast child of Obo-tasuhi-biko-obhiro-ware
'the governing Lord, the prince perfect and great,' primitive
name of the Emperor Keklo, the Heavenly emperor who,
dwelling in the palace of Hishiro at Makimuki, rules the Land of
the Eight Great Islands; and my name is Kikushi-kuma-
gunu, the young man of Yamato, another name for the prince).
Bearing that you two fellows, the Kumano braves,
were unashamed and disrespectful, the Heavenly Sovereign
sent me with the command to take and slay you.' Then the
Kumano brave said: 'That must be true. There are no
persons in the West so brave and strong as we two. Yet in the Land of Great Yamato this is a man brave and
lusty. Therefore will I offer thee an augast name. From this time
forward it is right that thou hast been called as the Prince Yama-
wo-won (i.e. 'Yamato-Brave,' the Brave in Yamato'). As soon as he had finished saying this, the Prince
ripped him up like a ripe melon, and slew him. So thence-
forward he was praised by being called by the augast name of
His Augustness Yamato-dake.'

After this exploit, which reminds us of Zues, in
disguise, entering the dwelling of Lycaon, and then
killing him and his sons in the midst of a feast,
Yamato-dake triumphed, again by cunning.

another enemy, an Izumo warrior. Yamato-dake,
who was armed with a trusty saber,got his enemy
to fight against him with a hidden weapon which
had cunningly substituted for the weapon of his
adversary. That done, he returned to the capital,
but very soon after he sent him off to do battle in
the East. He set out, and to avoid the dangers which awaited him, his
aunt, the high-princess, gave him a weapon famous in
Japanese mythology, the 'Herb-Quelling-Sabre,' with an 'august beg,' the use of which will be
seen later on.

So then, when he reached the Land of Sagamn, the Ruler of the land said, saying: 'In the middle of the great
lagoon, and the Delty that dwells in the middle of the lagoon is a very violent Delty.' Hereupon Yamato-dake
had to sail to the Delty to see the Delty. Then the Ruler of the land set fire to the moon. So, knowing that he had been deceived, he opened the
mouth of the bag which he held, her Augustness Yamato-

As a typical example of these illustrious heroes, we
may quote Yamato-dake, 'the Brave of Japan,' the
most famous figure of legendary times. This hero, who,
without traditional chronology, lived about A.D. 100, was the third son of the Emperor
Keklo. The first of his exploits, while showing his
loyal respect for their father and sovereign, is
sufficient to indicate the value of character of the
mighty deeds which were to make his career
famous. He began by assaulting one of his
elder brothers, who had attempted to appear as the
'morning-and-evening-great-august-repeat.'
HEROES AND HERO-GODS (Slavio)

There was no corpse' (Nihongi, i. 520 f.). With this narrative may be compared another, found in the Nihongi (i. 297), where a guardian of the Shiratori-no-nissaagi, the 'Tomb of the White Bird,' erected to the memory of Yamato-taro, is transformed into a white deer under the eyes of the terrified Emperor—a story which is easily enough explained by the frequent presence of deer and plowers round these ancient tombs. The origin of such a legend, as far as Yamato-dake is concerned, may easily be imagined; some one is mourning over a tomb; suddenly, a bird flies off, and the idea naturally arises that it is the dead man that is escaping. At the same time it may be conceived how such an illusion must have favoured the deification of the hero.

We have laid special emphasis on this legend of Yamato-dake, because he is the most famous of all Japanese heroes. Naturally, after those primitive tribes, of which he is the typical example, other more civilized personages were deified in their turn. For example, Sugahara no Mihikane, a famous statesman and man of letters of the 9th cent., was afterwards deified under the name of Tenjin-sama, and is still worshipped, especially in a temple at Kyoto, as the god of wisdom and calligraphy. But it is probable that, if the Chinese cult of Confucius had not been introduced into Japan, the Japanese would never have thought of attributing to this minister of historical times the magic powers of action on Nature which are one of the causes of his deification. It is then safer, if we wish to confuse ourselves to Shintō pure and simple, not to attach too much importance to those apotheoses which follow the introduction of Chinese culture.

Nevertheless, we must note that the normal deification of heroes, particularly of warrior heroes, continues throughout the whole course of Japanese history, and that, until recent times, quite a number of personages were the object of a well-defined worship. While the obscure mass of the vulgar dead were regarded as descending to the darkness of the under world, certain heroes were considered as for ever haunting the land of the living, and soon of them were even raised to the stars. In 1877, when the famous Saigo Takamori, the chief of the Satsuma insurgents, committed suicide after a crushing defeat, popular imagination raised him to a place in the planet Mars.

HEROES (Slavio).—The Slavs as well as other nations have preserved the memory of the heroic period of their past and of their prominent national heroes, but the heroic legends were developed in epic songs only by some Slavic tribes. Heroic epic thrives mainly among the Russians, Southern Slavs, and Little Russians.

1. Russians.—Russian heroic songs are called byliiny (derived from the word byl—'the past event'). They began to appear in the 10th-12th centuries, and have been preserved—of course, in a form considerably altered—by oral tradition down to the present day. They were originally composed by professional bards (bogatarii) and sang the brave exploits of every hero of the prince's suite. From these, wandering minstrels (shomoroki=jongleurs) who considerably modified the contents of the original songs, enlarged them with new motifs, and partly composed new songs of a similar character. Through the medium of wandering minstrels these songs penetrated into the very heart of the nation, and popular singers (abasisti) took possession of
them. In the northern regions of Russia, especially in the government of Olonetz, Archangel, and in Siberia, Russian national epic has preserved its full vigour and freshness down to the present time. Some of the popular singers are acquainted with about 20 songs, containing in all some 3000 lines. The extant songs are considered as remnants of a rich epic repertory which was diffused many years ago, in the districts of Kieff and Novgorod.

The first collection of Russian epic songs was made by Richard James, an Oxford graduate, who came to Moscow in 1619 with the English embassy and had six epic songs written out for him. The manuscript of them is kept in Oxford, and was reprinted several times in the 19th century. The first collection of such songs was published in 1804. A later collection of them was published by Kiriš Daminov in Siberia in the 19th century. Other large collections were published by Pavel Blinove (1831-7), 4 vols.; Peter Krylovski (1860-74, 3 vols.); Alexander Guderski (1875); Tchouzov and V. Miller (1894); etc.

Russian heroic epic has frequently been the subject of careful study. Among its first investigators there appeared scholars (e.g. Buzlahov, Orest Miloradov) who made the attempt to classify the songs mythologically according to Grimm’s theory. Thinking that their original scheme was mythical, they saw in every hero a representative of pagan, especially solar, gods. Other scholars were influenced by Benfey’s theory of the Indian origin of European oral tradition; they derived the Russian heroic songs from Oriental legends and songs, and explained them accordingly. Minute analysis led other scholars to assume that in the heroic songs various subjects, both national and international, were blended. The luxury and wealth which the city had attained in the Middle Ages found its way to its wide-spread commerce. The city had a republic, a provincial aristocracy, and the foremost municipal posts were occupied by the nobility and the rich merchants. Quarra occasionally became the hero of two, which form topics of some of the songs. There are also descriptions of other scenes from public life, e.g. family disputes, love adventures, robberies of bridegrooms. The principal heroes are: Vasilij Buzlahov; Sadko, a rich merchant; Stevn Godinov; Ivan, a merchant’s son.

A separate group is formed by the songs which deal with fabulous and legendary subjects. For example, the song about Ivan Godinov is an expansion of the fabulous theme of an unfaithful wife; the songs on Poyly Ivanov and Michajlov have a similar subject. The song about Vanka, a widow’s son, is based upon the story of a princess who will marry only the man who manages to hide from her, etc.

The Russian heroic songs are penetrated with those deep religious and moral ideas which characterize the Russian people, and the symbols used are still unexplained. The renowned figure of the Russian epic is Svjatošogor, a huge giant, whose head touched the sky, who had such extraordinary strength that he could set the whole world in motion. When crossing the steps, he saw lying in front of him a little bag, filled with earth, and was about to lift it up; but the bag was so heavy that Svjatošogor broke through the ground and perished. As is explained in another variant of this song, what was hidden in the bag was the terrestrial gravity. By this poetic symbol the sway of the earth over mortal man is beautifully illustrated. The songs about Volch Sostavolokov and Mikula Salzaniut have some symbolical meanings. Volch, the hero of the Vladimir group, well instructed in all knowledge and wisdom, noticed the ploughman, Mikula Salzaniut, at work in a field, and conceived the notion of tearing his plough from the earth; he tried to do so, but failed. Then Mikula with one hand seized the plough, lifted it up easily, and threw it aside. The simple ploughman, the representative
of agriculture, triumphs over the knowledge and wisdom of the representative of military and princely power.

The typical figure of Russian epic is Ilja Muromets, in whom the people have incorporated their ideal of a national hero, democrat, and altruist. Born in a peasant family, Ilja remained all his life a man of simple customs, upright character, and noble mind. Although first among the heroes as regards power and fortune, he did not become proud of the glory he had gained, and never boasted of his deeds. He considered it his first duty to protect the oppressed, and to fight for his creed - for the people, and against the enemies who ravaged Russia. At the same time, he was pious, and fully trusted in the help of God. Deep moral meanings attach to the songs about the three expeditions he undertook before his death. Towards the end of his life, Ilja happened to encounter a stone where three roads divided. On the stone was written: 'Who goes the first road will be killed; who takes the second will marry; who enters the third will become rich.' Ilja chose the first road, and, having come to some high mountains, he met with robbers, who tried to kill him. Ilja took an arrow and shot it at an oak-tree with such force that it split to pieces. The robbers, terribly afraid, fell from their horses. Then Ilja returned again to the stone and set out along the second road. He came to a magnificent palace, where a beautiful queen lived. Ilja did not allow her beauty to seduce him, and put her in chains. He then set free the knights whom the cunning queen kept imprisoned in her palace, and distributed amongst them all the wealth that he had found in the palace. He returned once more to the stone and took the third road, where he found huge treasures of gold, silver, and pearls. Out of this treasure he ordered churches and monasteries to be built, and himself took nothing for himself. During the building, Ilja was carried over by the invisible power of an angel into the monastery of Pederak, near Kiev, where he breathed out his soul. It is surely impossible to imagine a more beautiful apotheosis than that with which the Russians have celebrated their well-beloved popular hero.

2. Southern Slava. - Popular epic flourished richly among the Southern Slavs (Serbs, Croats, and Bulgarians). When, at the beginning of the 19th century, these epic songs appeared, they aroused genuine admiration in advanced Europe, owing to their variety as well as their content and poetic form. They are from the Russian epic, especially in their contents, which are more simple: each song usually contains only one epic motif, whereas the Russian poems are, as a rule, compositions made up of different subjects, and represent a higher and more artistic degree of epic evolution. The greatest merit in the collection of the popular songs of the Southern Slavs is due to Vaclav Stepanovic Karadzic; his example was followed later by many other collectors.

There is no certainty as to the age of the epic of the Southern Slavs. Some scholars place the beginning of these epic productions as far back as the 12th and 13th centuries; others fix on the 16th century. It is probable that the epic creative faculty of the Southern Slavs did not begin to develop until after the great historical revolutions in the second half of the 14th century. Its highest development is to be placed, therefore, in the 15th century. As among the Russians, so among the Southern Slavs, heroic songs were composed at first by professional bard, and afterward by teachers in the schools. Afterwards they were taken up by popular singers, the guslarj, so called after the musical instrument gusla (a sort of violin) on which they accompanied their songs.

Historical events are the chief topics of the Southern Slavic epic; very few nations have preserved the image of their past events in their national poetry so vividly as the Serbs and Bulgarians. First of all, the songs celebrate certain monarachs of the Nemanid family (1168-1371), who are praised for their pious disposition, which they often evinced by founding churches and monasteries. Far richer is the cycle of songs whose central theme is the ill-fated battle on the field of Kosovo (1389), with which the Turkish supremacy began. The songs of this cycle describe partly single events in connection with that battle, partly the principal heroes who took part in the fight (Miloše Obilic, the Czar Lazar, Vuk Brankovic, the brothers Jurovic, etc.). It is curious that the defeat of Kosovo is related as a disaster predestined by God to the Serbian people.

The most beloved hero of the Southern Slavic epic is Primo Marko († 1394). Nearly a hundred songs about him are current, describing his life and heroic deeds, from his birth to his death. They contain very few historical reminiscences, but popular singers have connected various Biblical, legendary, and fabulous motifs with him, and transformed him into a semi-mythical being. He was educated by mythical beings, evil (fairies), who bestowed superhuman power on him. Marko makes use of this power for the benefit of his fellow-men, subduing the tyrannical principalities, and administering stern justice. He hates violence and loves liberty; he sets prisoners free, and willingly helps the unhappy. He is at the same time pious, and undertakes the hardest battles for the Christian faith. When dying, he bequeaths one part of his gold to him who will bury him, the second for the embellishment of churches, and the third to the blind bards that they may sing his glory.

Another cycle represents the historical events after the battle of Kosovo and describes the wars between the Serbs and the Turks down to the complete enslavement of Servia in 1521. The chief heroes of this cycle are the Servian monarchs of the family of Brankovic, and the Kings of Hungary who fought against the Turks. Under the cruel Turkish yoke, these songs took the place of history and poetry among the Southern Slavs. They celebrate their past, glorious past, but also contemporary events, especially the petty battles of the Slavs in revolt against the Turks. They differ from the Russian epic in many motifs, whereas the epic of the Southern Slavs takes its place high above all similar epic products of other nations.

Besides these historical subjects, which, of course, the popular singers changed and adorned in various ways according to their imagination, they were included in the living stream of South Slavic epic many motifs, partly apocryphal (creation of the world), partly legendary (about incest, imolation of one's own child), and partly fabulous (about the dead brother, enmurement of people in buildings, the serpent-bridgegroom, the unfailureful mother, etc.). Owing to this great variety of poetic motifs, the epic of the Southern Slavs takes its place high above all similar epic products of other nations.

The most notable names in the interpretation of the South Slavic songs are Vuk Stefanovic Jagodic, T. Maresic, M. Cholakaski, and Anem Soorenens.

3. Little Russians. — The heroic songs of the Little Russians (Ukrainian) are called dumy. They took their rise among the famous Cossacks, and their authors were professional minstrels, educated in vocal schools, the number of which was very considerable in the Ukraine. The music of the present singers of the dumy is kobari, from the musical instrument kobasa, similar to the guitar.
HEROES AND HERO-GODS (Teutonic)

The most explicit reference to the practice of hero-worship among Teutonic peoples occurs in the following passage from Jordanes (deGetarium Orientalis, v. 8):

"...processus moæs, quisque fortunis vincendæ, nos pluris hommes, sed semidies, id est Anses, vocavæ." (Hildesheim)

The practice of hero-worship in the Teutonic cultures is well documented. For example, a similar custom is found in the Saga of Hákon the Good (Heimskringla, iv. 10):

"Men drank also a cup to their dead kinsmen who had been buried at their funeral...and that was called the cup of memory."

An extreme case of the representation of a hero as a supernatural being is that of Dietrich von Bern, who becomes, not only a god, but a demon—a point of view due to ecclesiastical hostility towards the Arian king, and the slayer of the Pope. Hence he occurs in legend as the Wild Huntsman, and the connexion of his

name with places such as the Castle of Saint Angelo and the Amphitheatre of Verona shows him under the aspect of a local, though hardly tutelary, hero (ed. Deutsche Predigten, 4, 13; Antek, p. 76; Grimm, Deutsche Mythologie, Berlin, 1875-78, vol. iii. ch. xxxvi.). A classical parallel may possibly be found in the story of Minos. In Attic tradition—naturally unfavoured by us—this is generally represented as 'a tyrant... and violent, and an erector of tribute' (Strabo, x. 4. 8 (p. 478); while his sea-power, this connotes with the Minotaur, and his position as one of the judges in Hades after his death, combine to endow him with a semi-supernatural character.

In later times, up to the 10th and 11th centuries, we hear among the Scandianavian peoples of being, apparently human, receiving divine honours. In Landsmåbolok (pt. 1. ch. xiv.), mention is made of one Grim, who 'because of his popularity was worshipped when dead, and called Kamban.' By this name he is twice referred to elsewhere in the same work. Similarly in Flateyjarbók (Sagas hans heita, ch. vi.) an account is given of Ólaf, brother of Halfdan the Black, who after death is worshipped under the name of Geirrørkaskið, and receives sacrifices offered to ensure a good harvest. This mention of sacrifice in connexion with the barrow of a dead hero is reminiscent of the cult of the dead to which Burchard of Worms bears witness (Decretal, bk. x. ch. v., 'de Superstitione'); 'the offerings that in certain places are made at the tombs of the dead.' An illustration of the virtue so referred to is found from the dead body of a hero is found in the story of Halfdan the Black (Heimskringla, ii. 9), where we are told that his body was claimed by four districts, each 'thinking that it might expect to have plentiful seasons thereby.' To avoid discord, the body was then divided into four parts, and the resting-place of the head was specially mentioned.

An extreme case, amounting to more than hero-worship, is found in the dedication of King Eric of Sweden, narrated by Rimbert in his Life of Ansgar (ch. 20). Bishop Ansgar found his missionary efforts among the Swedes, in the middle of the 9th cent., temporarily checked by a man who claimed to have received a message from the gods. They deplored the decay of their sacrifices, and offered an inducement to renewal of worship:

'If you desire to have more gods, and we are not sufficient, then do we now, with unanimous decision, admit your former King Eric into our community, so that he henceforth is one of the gods.' The people, therefore, 'built a temple to King Eric, who had died long before, and began to offer to him vows and sacrifices as to a god.'

Reference is made to this by Adam of Bremen in his Gesta (iv. 20): the Swedes 'also worship gods made from men, to whom they sacrifice immortality because of their mighty deeds, as it is recorded that they did with King Eric in the life of Saint Ansgar.'

Dedication was probably by no means uncommon, but the circumstances in this case are somewhat unusual.

Reference is frequently found to some supernatural beings who may at one time have been regarded as human, or who have taken certain elements of heroic worship. The ethnographic account of Frey in Ynglingsaga (4. 13, and passim), and of his priest-kingship over the Swedes, if at all reliable, would point to a fusion of human and divine attributes—the priest-king combined with the deity of fertility. Members of the Swedish royal house claimed descent from Frey, and were called Yngvi, from the god's full name Yngvileifrey (Ynglingsaga, 20); since K. Roth, Leipzig, 1539, the eponymous ancestor of the Danish kings, the Skjoldungar or Skjoldingsa. The name Yngvi can be traced in Tacitus (Germ. 2), who, basing his account on ancient native poems, states that the
races of the Germani trace their descent from the god Tulsto and his son Mannus; from the latter spring 'three sons, from whose names those who are nearest to the Ocean are called Ingusonne (probably for Ingusonne), the central tribes Hermionis, and the rest Istusonne.' These names occur again in Pinyre as group-names of the Germani, while in the Frankish genealogy the descent of thirteen nations is traced to three brothers, Ermenus, Ingvo, and Istio. From the foregoing, we may possibly trace a human element in Thorgerdr, Holgerbrodt, and Yrpr, her sister. In Nylda Saga (88), where Hrapp committs sacrilege in their temple, and in Jomsvig Saga (44), where Earl Hakon, their votary, sacrifices his son to them in order to gain victory, they are obviously goddesses; but in Skaldahorn (Bk. III.), as in Sazko (Bk. III.), Thorgerdr appears in connexion with a character Helgi, who is apparently the eponymous hero of Halsalagand. The importance, among Germanic races, of women as prophetesses is attested by Strabo in his description of the part played by 'holy prophetesses' in the sacrifice of captives, and in divination from their blood (vii. 2). Tacitus (Germ. 8) says:

'These holy and prophetic powers ... many others are venerated, not out of servility, or as if they were beguiling mortals. As examples, he refers to Aturis (probably for Albruna) and to Veola, and a further account of the latter is found in his Historiae (vii. 61, 62):' Veola, a maiden of the tribe of the Franko, possessed prophetic power; she descended into a divine sleep, and was a messenger of a divinity, the questions and answers, &c. in her intercourse with the Roman ambassadors.

It is perhaps possible to regard the Germanic reverence for women, and the large part played by them in divination and sacrifice, as a parallel with the importance attached to the cult of the Matar. Though this is considered to have been originally a Celtic cult (cf. Roscher, s. v. 'Matres'), it was apparently common to Germany and Gaul. One aspect especially of the Matres, whereby they are associated with the Matres, &c., or guardians of the military camp (cf. M. Sieburg, de Sulcovia Compestribus Fata, Bonn, 1886), may be compared with the account by Tacitus. It must, however, be borne in mind that the function of the Matres is essentially protective, not warlike. If it were possible to connect Bede's interesting reference (de Tempore Ratione, 18) to the sacrifices on Modranicht, id est matrum noctem, on the one hand, with the Matres-cult, and, on the other hand, with the disibiit of the Scandinavians (cf. Ynglings Saga, 33), a link would be formed between the different phases of Germanic goddess-cult. Similarly, too, if the Æsir may be identified in part with the gods of the Franks, the human element reappears again, for certain of the Valkyries, e.g. Brynhildr, undoubtedly have some human characteristics.

With regard to the ethical aspect of non-deified heroes in the Teutonic epics, the extant accounts either date from Christian times or are so largely overlaid with Christian thought as to render it difficult to form a definite idea of any rules of conduct governing their lives. As far as we can gather from the records, the chief virtues throughout the Heroic Ages seem to have been courage and generosity: the combination of the two would appear to have been sufficient to win fame, and thus to attain the ideal object of a hero's existence, as Boewulf confesses:

'Let him who o'er the helm rides with me, and his heart holds the might that can come to a knight in after times, when he is no more.' (1897 R.)

The individual imperatives of all restraint resulted in faults of excess, and crimes of passion and savagery. Revenge was not only allowed, but was a duty, and was taken not only for shedding of blood, but also for lesser wrongs; thus Egil revenges himself on Arnor for scanty hospitality, by insulting him and blinding him in one eye (Egil Saga Skogafismannar, 76). The poet, however, does appear clearly—personal loyalty and honourable devotion, as that of a retainer to his lord. It may be objected that this was won and retained chiefly by gifts, but proof of its power is given even by foreign historians; thus, when Polchere (Pholoe) dies, overpowered by the Franks, 'upon his body his followers fell to a man' (Agamemn. i. 10). Treachery, invidility, and cunning were hated, but were probably largely practised, especially in the interests of self. The tendency of the age was individualistic, and its annals have many dark records; but it may be urged in externality that the aspect of the Teutonic hero and deeds which would naturally appear in history and song is one-sided, and omits far more than it records.

LITERATURE.—No definite literature on the subject exists. Compare the references quoted in the course of the article, and such general works as E. Mögk, in Pan. Grundzüge der germ. Philologie 4, (Stuttgart, 1890); E. H. Mayer, Germanische Mythologie, Berlin, 1891; Chantre de la Salamandre, Religions of the Teutons, Boston, 1895.

M. E. SEATON.

HESIOD.—For the Greeks of the 8th cent. B.C. Homer and Hesiod stood side by side as the two great poet masters: Homer the singer of war and adventure, Hesiod the inspired teacher of practical wisdom. Thus Aristophanes (Fros, 1030-36) puts into the mouth of Äsbylos these words:

"Consider from the beginning how the noble poets have been. Ophrynchus taught us mystic rites and to refrain from murder; Mousa taught us the healing of disease and granaries; Hesiod taught us the digging of the earth, the seasons of crops, ploughing; and the divine Homer, bestowed upon us honour and glory from this, that he taught men good things, and taught them to shift the massing of troops, deeds of valor, arming of men!"

The contrast between the Homeric and the Hesiodic epics is concisely put in the words which, as Hesiod tells us, the Muses addressed to him when they gave him his call to poetry (Theog. 28 fl.): 'Shepherds of the fields, evil things of shame, belles only! We speak to fill many things that wear the guise of truth, and know also when we will to utter truth. To tell true things is the characteristic of didactic poetry."

The locus classicus as to the poems attributed to Hesiod in antiquity is Pausanias, Description of Greece, Ix. 21. 1:"

"The Muses who dwell round Hecale report it as the traditional opinion that Hesiod wrote no other poem than the Works and Days; and that from them they take away the Fates (I. 1-10), saying that the poet begins with the lines on the Fates (I. 11)." And it is added that the fountain (Hippocrene) is, for the most part, destroyed by time, and on it is inscribed the Works. But there is another and different opinion, which states that Hesiod wrote no more epics, those on women, and the so-called Great Fates, and the Theogony, and a poem on oracles, now lost, and how Thebes descended into Hades along with Pithocides, the Address to Charon for the instruction of the deceased, and all that is embraced by the Works and Days. These same people say also that Hesiod received instruction in prophecy from the Aegyptians. And there exist prophetic verses which I myself have read, and Explorations of Portents."

Fragments of most of these poems have come down to us, and are approximately complete form the Works and Days, and the Theo-
gony, as well as the so-called Shield of Herakles, which may be a fragment from the Eosin.

It is impossible here to enter into minute questions of date and authenticity. The ancient sources of information are numerous. Homer is our principal authority. He says: "That as gods, they all existed forever, and what form particular gods have, they (the Greeks) did not say (or do) to the other day. For I consider that Hesiod and Homer lived four hundred years before my time, and no more. And it was they who created the theogony of the Greeks, and who gave it to our descendants, to their honour and their fame, and made them into immortal gods. And the poets who are said to have lived before Hesiod and Homer were, in my opinion, later."

Without dogmatizing about particular lines, if we assume that the bulk of the Works and Days of Hesiod and the Theogony belongs to about 800 B.C., we shall probably be sufficiently near the mark. It may be noted that in the Works (566 ff.), Hesiod says: "When Zeus hath completed sixty days after the turning of the sun, then the star Arcturus, leaving the sacred stream of Ocean, first riseth at even, and the evening or aconychial rising of Arcturus takes place sixty days after the winter solstice, which for lat. 38° gives a date 800 B.C. But, as there was a tendency to give constant dates for these changes, we cannot perhaps build too much on this.

In considering the theology of Hesiod, it is well to recall that, whatever we find either the lucidity or the consistency which we should require in a modern theologian. We shall expect to find elements of quite different dates and of quite different stages of spiritual advancement existing side by side, with no attempt at reconciliation. As some great river carries to the sea the gathered testimony of its long wandering from the source—the children of the gods, and assigned it birth—in his high mountain cradle in Paeon—and the poet, using the materials of his nameless and unknown predecessors, refining here, adding something there, creates at last the literary masterpiece which henceforth bears his name and his name only, though many a long-silent tongue, and many a long-drawn breath, has contributed to the common end. We shall find in Hesiod only a few traces of the conscious reflection, tending towards the reconciliation and purification of the ancient myths, which is so clearly seen in Pindar and Eschylus. Hence the reproach of Xenophon of Colophon (c. 360 B.C.): 'Homer and Hesiod accord to all gods the things that among men are a shame and a reproach—to steal, and to commit adultery, and to dissolve one another.' But men cleave piously to an ancient tradition long after the time of this and morally re-nounced it, and we shall form a truer conception of the ethical advancement of the early poet, if we judge him not by his lowest but by his highest.

The purpose of the Theogony is to give a systematic account of the genealogy of these gods, of Theog. 104 ff.: 'All daughters of Zeus, and great dactyle song. Sting ye the holy race of the deathless gods which are for ever; even them that were born of Earth, and the Heaven, and dayly Night, and those whom the breath of Ocean brought forth. And down from the beginning God and Earth came into being, and Rivers and the Infinite Sea with reeding flood, and the shining Stars, and the Wide Heaven above, and the Gods which sprang from them, of good things, and how they divided their wealth, and how they apportioned their honours; yes, and how at the first they potted them of manyfold Olympian. Things these, even from the beginning, declares ye upon which we shall go, to the walls of Olympus, and tell me which of them was first created.'

But it includes also some cases of the union of gods with mortal women (201 and 368 to end) somewhat more detailed account of the union of goddess mothers with mortal sires.

In broad outline the order of creation in the Theogony is as follows: First came Chaos, a

void space; then Earth and Eros (Love). From Chaos sprang Erebo and Night, and from Night in union with Erebo sprang Aether and Day. Earth first bore Oureanos (Heaven), and the Mountains and the Sea (Pontus). These and the deities that they existed forever, and what form particular gods have, they (the Greeks) did not say "the other day. For I consider that Hesiod and Homer lived four hundred years before my time, and no more. And it was they who created the theogony of the Greeks, and who gave it to our descendants, to their honour and their fame, and assigned them to their honours and arts, and marked their forms. And the poets who are said to have lived before Hesiod and Homer were, in my opinion, later."

Without dogmatizing about particular lines, if we assume that the bulk of the Works and Days and of the Theogony belongs about 800 B.C., we shall probably be sufficiently near the mark. It may be noted that in the Works (564 E.), Hesiod says: "When Zeus hath completed sixty days after the turning of the sun, then the star Arcturus, leaving the sacred stream of Ocean, first riseth at even, and the evening or aconychial rising of Arcturus takes place sixty days after the winter solstice, which for lat. 38° gives a date 800 B.C. But, as there was a tendency to give constant dates for these changes, we cannot perhaps build too much on this.

In considering the theology of Hesiod, it is well to recall that, whatever we find either the lucidity or the consistency which we should require in a modern theologian. We shall expect to find elements of quite different dates and of quite different stages of spiritual advancement existing side by side, with no attempt at reconciliation. We shall find in Hesiod only a few traces of the conscious reflection, tending towards the reconciliation and purification of the ancient myths, which is so clearly seen in Pindar and Eschylus. Hence the reproach of Xenophon of Colophon (c. 360 B.C.): 'Homer and Hesiod accord to all gods the things that among men are a shame and a reproach—to steal, and to commit adultery, and to dissolve one another.' But men cleave piously to an ancient tradition long after the time of this and morally re-nounced it, and we shall form a truer conception of the ethical advancement of the early poet, if we judge him not by his lowest but by his highest.

The purpose of the Theogony is to give a systematic account of the genealogy of these gods; of Theog. 104 ff.: 'All daughters of Zeus, and great dactyle song. Sting ye the holy race of the deathless gods which are for ever; even them that were born of Earth, and the Heaven, and dayly Night, and those whom the breath of Ocean brought forth. And down from the beginning God and Earth came into being, and Rivers and the Infinite Sea with reeding flood, and the shining Stars, and the Wide Heaven above, and the Gods which sprang from them, of good things, and how they divided their wealth, and how they apportioned their honours; yes, and how at the first they potted them of manyfold Olympian. Things these, even from the beginning, declares ye upon which we shall go, to the walls of Olympus, and tell me which of them was first created.'

But it includes also some cases of the union of gods with mortal women (201 and 368 to end) somewhat more detailed account of the union of goddess mothers with mortal sires.

In broad outline the order of creation in the Theogony is as follows: First came Chaos, a
(3) Next the gods created 'a far inferior race, a race of Silver, of silver-like beauty and of the Golden race.' These had a long childhood, but a short life.

"For a hundred years the child grew up by his good mother's side, playing in utter childhood in his home. But when he grew up to manhood and came to the full measure of age, for but a brief space they lived and in sorrow, by reason of their foolishness and the bringing of woe to the race. For neither would they worship the dead gods, nor do sacrifices on the holy altars of the Blessed Gods, as is the manner of men wherever they dwell."

So Zeus hid them, being wroth because they did not give honour to the blessed gods. They now dwelt beneath the earth and were called the blessed dead; of lower rank (i.e. than the Spirits of the Golden race), yet they too have their honour.

(3) Next Zeus created a third race—a race of Bronze, sprung from the Ash-tree nymphs, or Meliads. The men of the third race were fierce and warlike, strong of arm and of heart. They did not eat bread (i.e., apparently, they lived on flesh). "Of bronze was their armour, of bronze their dining-hall, of bronze their couches, right. Black iron was not yet." This race perished by their own hands and went down to the dark house of Hades, namely the Elysian Fields.

(5) Next Zeus created a fourth race, 'a juster race and a better, a godlike race of hero men who are called demi-gods (ἀνδρῶν ἄνθρωποι τετελέσθη, οἱ ἄνδροι θειότοτοι), the earlier race among man (i.e., the race which immediately preceded the present). This race is the men of the Heroic Age, who perished at Thebes and at Troy. These are now in the Islands of the Blest; "the gods, the sons of Kronos, gave them a life and an abode apart from men, and established them at the ends of the earth and far from the dead gods; among them Kronos is king. And they, with soul unclouded of sorrow, dwell in the Islands of the Blest because of the Oceans: happy heroes, for whom the bounteous earth bares honeyweet fruit fresh through the year."

(5) Then followed the fifth race (i.e. the present race), which 'is very near a race of iron, and Hesiod expresses the wish that he had either died before or been born afterwards.' It is destined to become progressively more wicked:

"Father shall not be like to his children, nor the children like to their father; nor shall a woman honour her husband or be her friend, nor brother to brother shall be dear as before; and they shall give no honour to their swiftest ageing parents, and shall chide them with words of bitter speech, mockful men, knowing not the fear of the gods. These will not return to their aged parents the fruits of their care; but might shall be right, and men shall seek the other's city. Neither shall there be any respect or obedience towards the father or of the god; rather they shall honour the dog of evil and the man of insouciance. Right shall be in man's hand, and Hesiod shall be no more; the bad shall wrong the better man, speaking crooked words and abusing the good, leading men astray, as the goddess of Hesiod's hate, of hateful counsels, shall follow all men to their sorrow. Then shall Revenence and Awe veil their fair bodies in white robes and depart from the wide-earth earth unto Olympus to join the company of the Immortals, forsaking men; but for men that die shall remain but miserable woes; and against evil there shall be no avail."

The end of this race—for whom also good shall be mingled with evil—'is foretold in the curious words: 'This race also of mortal men shall Zeus destroy when they shall be hoary-tempted at their birth.' The expression becomes quite intelligible if we remember that was said of the Golden and Silver races. The men of the Golden Age knew no old age. They remained 'unchanged in hand and food' (not some of Zeus fell asleep); the Silver race, again, had a childhood of a hundred years. The idea is that childhood becomes progressively shorter until finally men are grown before their birth; this shall be the sign of the end. It is interesting to compare the myth in Plato's Politicus (366 E–374 F; see J. Adam, Plato's Religion, London, 1902, Appendix to the text, p. 205 F.). Ridley (Early Age of Greece, Cambridge, 1901, L 628), that it 'is some sort of

oral utterance referring to fair-haired invaders of some Teutonic stock, 'is entirely fanciful."

In this account of the fall of man no reason is given for the fall. But in Works, 90, 95-108, and Theogony, 535 ff., we have another account of the history of human degeneration which, taking no account of the Five Races, ascribes the coming of evil into the world to the sinning of womankind (i.e., we read how, when the gods and mortal men were contending at Mekone (Sikyon), Prometheus 'put up a mighty ox and set it before them, and the mind of Zeus. For he set for them the flesh and the innards with rich fat upon a hide, and covered them with an ox paunch: but for Zeus he set the white bones, arraying them crustily, and covering them with glistening fat. Then the Father of Gods and men spake unto him: "Son of Iapetos, most notable of all princes, how unfairly, O food! hast thou divided the portions! So spake Zeus, who knewest counsels inscrutable, of the everlasting gods, of these portions choose whichever thy soul within by breast bidst thee." So spake he with crafty intent. But Zeus, who knewest counsels imperishable, knew not and failed not to remark the gulle, and in his heart moved, Zeus the Cloud-giver spake unto him: "Son of Iapetos, who knowest ancient counsel with all others, O food! thou best not yet forgotten thy crafty gulle." So in anger spake Zeus, who kneweth counsel inscrutable, of the everlasting gods. And thereonafter, remembering evermore that gulle, he gave not the right of the ox paunch to Iapetos, but sent it upon the earth. But the good son of Iapetos deceived him and stole the fair-hued gleam of unweary fire in a hollow fennel-stalk, and strong to the depth of the heart of Zeus who addressed him on high, and angered his heart when he beheld among men the bright-glimming fire of fire. And straightway he darted evil for men.""
